tion to his army on the 27th April, and two days afterwards another to the people of his own kingdom and to the people of Italy. . . . On the 30th April some French troops arrived at Turin. On the 13th May Napoleon III. disembarked at Genoa. . . . Although the Austrian armies proceeded to cross the Ticino and invade the Piedmontese territory, they failed to make a decisive march on Turin. Had Count Giúlay, the Austrian commander, done so without hesitation, he might well have reached the capital of Piedmont before the French had arrived in sufficient force to enable the little Piedmontese army to arrest the invasion. As it was, the opportunity was lost never to occur again. In the first engagements at Montebello and Palestro [May 20, 30 and 31] the advantage rested decidedly with the allies. . . . On the 4th June the French fought the battle of Magenta, which ended, though not without a hard struggle, in the defeat of the Austrians. On the 8th the Emperor Napoleon and King Victor Emmanuel entered Milan, where they were received with a welcome as sincere as it was enthusiastic. The rich Lombard capital hastened to recognise the king as its sovereign. While there he met in person, Garibaldi, who was in command of the volunteer corps, whose members had flocked from all parts of Italy to carry on under his command the war in the mountainous districts of the north against Austria. . . . The allied troops pursued their march onwards towards the River Mincio, upon whose banks two of the fortresses of the famous Quadrilateral are situated. On the 24th June they encountered the Austrian army at Solferino and San Martino. French, Piedmontese, and Austrians, fought with courage and determination. Nor was it until after ten or eleven hours of hard fighting that the allies forced their enemy to retreat and took possession of the positions he had occupied in the morning. While victory thus crowned the efforts of France and Piedmont in battle, events of no little importance were taking place in Italy. Ferdinand II. of Naples died on the 22nd May, just after he had received the news of the successes of the allies at Montebello and Palestro. He was succeeded by his son, Francis II. . . . Count Salmour was at once despatched by the Piedmontese Government . . . with the offer of a full and fair alliance between Turin and Naples. The offer was rejected. Francis determined to follow his father's example of absolutism at home while giving all his influence to Austria. Thus it was that the young Neapolitan king sowed, and as he sowed so he reaped. Leopold, the Grand Duke of Tuscany, had in April refused the proffered alliance of Piedmont. . . . Finally he left Florence and took refuge in the Austrian camp. A provisional Government was formed, which placed the Tuscan forces at the disposal of Victor Emmanuel. This change was effected in a few hours without bloodshed or violence. The Duchess of Parma went away to Switzerland with her young son, Duke Robert. Francis Duke of Modena betook himself, with what treasures he had time to lay his hands on, to the more congenial atmosphere of the head-quarters of the Austrian army. . . . 'The deputations which hastened from Tuscany, Parma, and Modena, to offer their allegiance to Victor Emmanuel, were received without difficulty. It was agreed that their complete annexation should be deferred until after the conclusion of

peace. In the meanwhile the Piedmontese Government was to assume the responsibility of maintaining order and providing for military action. . . . The French and Piedmontese armies had won the battle of Solferino, and driven the enemy across the Mincio; their fleets were off the lagoons of Venice, and were even visible from the lofty Campanile of St. Mark. Italy was throbbing with a movement of national life daily gathering volume and force. Europe was impatiently expecting the next move. It took the unexpected form of an armistice, which the Emperor of the French proposed, on his sole responsibility, to the Emperor Francis Joseph on the 8th July. On the 12th the preliminaries of peace were signed at Villafranca. Victor Emmanuel was opposed to this act of his ally, but was unable to prevent it. The Italians were bitterly disappointed, and their anger was only too faithfully represented by Cavour himself. He hastened to the head-quarters of the king, denounced in vehement language the whole proceeding, advised his majesty not to sign the armistice, not to accept Lombardy [see below], and to withdraw his troops from the Mincio to the Ticino. But Victor Emmanuel, though sympathising with the feelings of Italy and of his Minister, took a wiser and more judicious course than the one thus recommended. He accepted Cavour's resignation and signed the armistice, appending to his signature these words:—'J'accepte pour ce qui me concerne.' He reserved his liberty of action for the future and refused to pledge himself to anything more than a cessation of hostilities."—J. W. Probyn, *Italy from 1815 to 1890*, ch. 9-10.

A. D. 1859-1861.—The Treaty of Zurich and its practical negation.—Annexation of Central Italy to Sardinia by Plebiscite.—Revolution in Sicily and Naples.—Garibaldi's great campaign of liberation.—The Sardinian army in the Papal States.—The new Kingdom of Italy proclaimed.—"The treaty concluded at Zurich in November [1859] between the ambassadors of France, Austria, and Sardinia substantially ratified the preliminaries arranged at Villafranca. Lombardy passed to the king of Sardinia; Venetia was retained by Austria. The rulers of Modena and Parma were to be restored, the papal power again established in the Legations, while the various states of the peninsula, excepting Sardinia and the Two Sicilies, were to form a confederation under the leadership of the Pope. According to the terms of the treaty Lombardy was the only state directly benefited by the war. . . . The people of central Italy showed no inclination to resume the old régime. They maintained their position firmly and consistently, despite the decisions of the Zurich Congress, the advice of the French emperor, and the threatening attitude of Naples and Rome. . . . The year closed without definite action, leaving the provisional governments in control. In fact, matters were simply drifting, and it seemed imperative to take some vigorous measures to terminate so abnormal a condition of affairs. Finally the project of a European

congress was suggested. There was but one opinion as to who should represent Italy in such an event. . . . Cavour . . . returned to the head of affairs in January. This event was simultaneous with the removal of M. Walewski at Paris and a change in the policy of the French government. The emperor no longer advised the central Italians to accept the return of their rulers. His influence at Rome was exercised to induce the Pope to allow his subjects in the Legations to have their will. . . . The scheme of a European congress was abandoned. With France at his back to neutralize Austria, Cavour had nothing to fear. . . . He suggested to the emperor that the central Italians be allowed to settle their fate by plebiscite. This method was to a certain extent a craze with the emperor, . . . and Cavour was not surprised at the affirmative reply he received to his proposal. The elections took place in March, and by an overwhelming majority the people of Parma, Modena, Tuscany, and the Legations declared for annexation to Sardinia. Austria protested, but could do no more in the face of England and France. Naples followed the Austrian example, while almost simultaneously with the news of the elections there arrived at Turin the papal excommunication for Victor Emmanuel and his subjects. On the 2d of April the king opened the new parliament and addressed himself to the representatives of 12,000,000 Italians. The natural enthusiasm attending the session was seriously dampened by the royal announcement that, subject to the approval of their citizens and the ratification of parliament, Nice and Savoy were to be returned to France. It was, in fact, the concluding installment of the price arranged at Plombières to be paid for the French troops in the campaign of the previous year. . . . General Garibaldi, who sat in the parliament for Nice, was especially prominent in the angry debates that followed. . . . When the transfer had been ratified he withdrew to a humble retreat in the island of Caprera. . . . But the excitement over the loss of Nice and Savoy was soon diminished by the startling intelligence which arrived of rebellion in the Neapolitan dominions. Naples was mutinous, while in Sicily, Palermo and Messina were in open revolt. Garibaldi's time had come. Leaving Caprera, he made for Piedmont, and hastily organized a band of volunteers to assist in the popular movement. On the night of May 6, with about a thousand enthusiastic spirits, he embarked from the coast near Genoa in two steamers and sailed for Sicily. Cavour in the mean time winked at this extraordinary performance. He dispatched Admiral Persano with a squadron ostensibly to intercept the expedition, but in reality 'to navigate between it and the hostile Neapolitan fleet.' On the 11th Garibaldi landed safely at Marsala under the sleepy guns of a Neapolitan man-of-war. On the 14th he was at Salemi, where he issued the following proclamation: 'Garibaldi, commander-in-chief of the national forces in Sicily, on the invitation of the principal citizens, and on the deliberation of the free communes of the island, considering that in times of war it is necessary that the civil and military powers should be united in one person, assumes in the name of Victor Emmanuel, King of Italy, the Dictatorship in Sicily.' On the 26th Garibaldi attacked Palermo; on the 6th of June he was in possession of the city and

citadel; on the 25th of July Messina was surrendered to him. "Perhaps the excitement at Turin during these days was second only to that which animated the great Sicilian cities. The guns of Bomba's fleet at Palermo were no more active than the diplomatic artillery which the courts of Central Europe trained upon the government at Turin. . . . Cavour's position at this time was a trying, delicate, and from some points of view a questionable one. He had publicly expressed regret for Garibaldi's expedition, while privately he encouraged it. . . . Cavour's desire to see Garibaldi in Calabria was changed, a little later. La Farina was at Palermo in behalf of the Sardinian government, to induce Garibaldi to consent to the immediate annexation of Sicily to the new Italian kingdom. This Garibaldi declined to do, preferring to wait until he could lay the entire Neapolitan realm and Rome as well at the feet of Victor Emmanuel. This altered the aspect of affairs. It was evident that Garibaldi was getting headstrong. It was Cavour's constant solicitude to keep the Italian question in such a shape as to allow no foreign power a pretext for interference. Garibaldi's design against Rome garrisoned by French troops would be almost certain to bring on foreign complications and ruin the cause of Italian unity." On the 19th of August, Garibaldi crossed his army from Sicily to the mainland and advanced on Naples. "On the evening of September 6 the king embarked on a Spanish ship, and leaving his mutinous navy at anchor in the bay, quit forever those beautiful shores which his race had too long defiled." On the morning of September 7 Garibaldi was at Salerno; before night he had reached Naples, and its teeming thousands had run mad. . . . The Neapolitan fleet went over en masse to Garibaldi, and by him was placed under the orders of the Sardinian admiral. The Garibaldian troops came swarming into the city, some by land and others by sea. . . . Francis II. had shut himself up in the fortress of Gaeta with the remnants of his army, holding the line of the Volturno. . . . At Turin the state of unrest continued. Garibaldi's presence at Naples was attended with grave perils. Of course his designs upon Rome formed the principal danger, but his conspicuous inability as an organizer was one of scarcely less gravity. . . . Sardinian troops had become a necessity of the situation. . . . There was no time to lose. There could be no difficulty in finding an excuse to enter papal territory. The inhabitants of Umbria and the Marches, who had never ceased to appeal for annexation to the new kingdom, were suppressed by an army of foreign mercenaries that the Pope had mustered beneath his banner. . . . Cavour had interceded in vain with the Vatican to alter its course toward its disaffected subjects. At last, on September 7, the day Garibaldi entered Naples, he sent the royal ultimatum to Cardinal Antonelli at Rome. . . . On the 11th the unfavorable reply of Antonelli was received, and the same day the Sardinian troops crossed the papal frontier. . . . Every European power except England, which expressed open satisfaction, protested against this action. There was an imposing flight of ambassadors from Turin, and an ominous commotion all along the diplomatic horizon. Cavour had not moved, however, without a secret understanding with Napoleon. . . . The Sardinian

army advanced rapidly in two columns. General Fanti seized Perugia and Spoleto, while Cialdini on the east of the Apennines utterly destroyed the main papal army under the French general Lamoricière at Castelfidardo [September 17]. Lamoricière with a few followers gained Ancona, but finding that town covered by the guns of the Sardinian fleet, he was compelled to surrender. 'The pontifical mercenary corps' became a thing of the past, Cavour could turn his whole attention to Naples. He had obtained from parliament an enthusiastic permission to receive, if tendered, the allegiance of the Two Sicilies. The army was ordered across the Neapolitan frontier, and the king left for Ancona to take command. In the mean time on October 1 Garibaldi had inflicted another severe defeat to the royal Neapolitan army on the Volturno. The Sardinian advance was wholly unimpeded. . . . On November 7 the king entered Naples, and on the following day was waited upon by a deputation to announce the result of the election that Garibaldi had previously decreed. 'Sire,' said their spokesman, 'The Neapolitan people, assembled in Comitia, by an immense majority have proclaimed you their king.' . . . Then followed an event so sublime as to be without parallel in these times of selfish ambition. Garibaldi bade farewell to his faithful followers, and, refusing all rewards, passed again to his quiet home in Caprera. . . . The people of Umbria and the Marches followed the lead of Naples in declaring themselves subjects of Victor Emmanuel. Except for the patrimony of St. Peter surrounding the city of Rome and the Austrian province of Venetia, Italy was united under the tricolor. While Garibaldi returned to his humble life, Cavour went to Turin to resume his labors. . . . On the 18th of February, 1861, the first national parliament representing the north and south met at Turin. Five days before, the last stronghold of Francis II. had capitulated, and the enthusiasm ran high. The kingdom of Italy was proclaimed, and the king confirmed as 'Victor Emmanuel II., by the grace of God and the will of the nation King of Italy.' . . . The work was almost done. The scheme that a few years before would have provoked a smile in any diplomatic circle in Europe had been perfected almost to the capstone. But the man who had conceived the plan and carried it through its darkest days was not destined to witness its final consummation. Cavour was giving way. On May 29 he was stricken down with a violent illness." On June 6 he died. "To Mazzini belongs the credit of keeping alive the spirit of patriotism; Garibaldi is entitled to the admiration of the world as the pure patriot who fired men's souls; but Cavour was greater than either, and Mazzini and Garibaldi were but humble instruments in his magnificent plan of Italian regeneration."—H. Murdock, *The Reconstruction of Europe*, ch. 13.

A. D. 1862-1866.—The Roman question and the Venetian question.—Impatience of the nation.—Collision of Garibaldi with the government.—Alliance with Prussia.—War with Austria.—Liberation and annexation of Venetia.—"The new ministry was formed by Baron

Ricasoli. . . . In the month of July, Russia and Prussia followed the example of England and France, and acknowledged Italian unity. . . . Baron Ricasoli only held office about nine months; not feeling equal to the difficulties he had to encounter, he resigned in March, 1862, and Signor Ratazzi was empowered to form a new ministry. . . . The volunteer troops had become a source of serious embarrassment to the government. . . . It was found disagreeable and dangerous to have two standing armies under separate heads and a separate discipline, and it was proposed to amalgamate the Garibaldians with the royal troops. Endless disagreements arose out of this question. . . . As soon as this question was in a manner accommodated, a more serious one arose. The central provinces lost all patience in waiting so long for a peaceful solution of the Roman question. The leaders of the Young Italy party became more warlike in their language, and excited the peasantry to riotous proceedings, which the government had to put down forcibly, and this disagreeable fact helped to make the Ratazzi ministry unpopular. Garibaldi's name had been used as an incentive to those disturbances, and now the hot-headed general embarked for Sicily, to take the command of a troop who were bound for the Eternal City, resolved to cut with the sword the gordian knot of the Roman question. The government used energetic measures to maintain its dignity, and not allow an irregular warfare to be carried on without its sanction. The times were difficult, no doubt, and the ministry had a hard road to tread. . . . The Garibaldians were already in the field, and having crossed from Sicily, were marching through Calabria with ever-increasing forces and the cry of 'Rome or death' on their lips. Victor Emmanuel had now no choice left him but to put down rebellion by force of arms. General Cialdini's painful duty it was to lead the royal troops on this occasion. He encountered the Garibaldians at Aspromonte, in Calabria, and on their refusing to surrender to the king, a fight ensued in which the volunteers were of course defeated, and their officers arrested. Garibaldi, with a ball in his foot, from the effects of which he has never recovered, was carried a state prisoner to Piedmont. . . . This unhappy episode was a bitter grief to Victor Emmanuel. . . . Aspromonte gave a final blow to the Ratazzi ministry. Never very popular, it was utterly shaken by the reaction in favour of Garibaldi. . . . After a good deal of worry and consultation, the king decided to call Luigi Carlo Farini to office. . . . Unhappily his health obliged him to retire very soon from public life, and he was succeeded by Minghetti. On the whole this first year without Cavour had been a very trying one to Victor Emmanuel. . . . Meantime the Roman question remained in abeyance—to the great detriment of the nation, for it kept Central and Southern Italy in a state of fermentation which the government could not long hold in check. The Bourbon intrigues at Rome, encouraging brigandage in the Two Sicilies, destroyed all security of life and property, and impeded foreigners from visiting the country. The Emperor of the French, occupying the false position of champion of Italian independence and protector of the temporal power of the Pope, would not do anything, nor let the Italian Government do anything, towards settling the momentous question.

. . . Victor Emmanuel, who had his eye on Venice all the time, having a fixed impression that if it could be recovered he would find less difficulty in getting rid of the foreign occupation in Rome, now adopted energetic measures to bring about a settlement of this Venetian question, urging the English Government to use its influence with Austria to induce her to accept some compromise and surrender the Italian province peaceably. . . . Meantime the Italian Government continued to invite the French to withdraw their forces from the Roman States, and leave the Pope face to face with his own subjects without the aid of foreign bayonets. This the emperor, fearing to offend the papal party, could not make up his mind to do. But to make the road to Rome easier for the Italians, he proposed a transfer of the capital from Turin to some more southern town, Florence or Naples—he did not care which. The French minister, M. Drouyn de Lhuys, said:—'Of course in the end you will go to Rome. But it is important that between our evacuation and your going there, such an interval of time and such a series of events should elapse as to prevent people establishing any connection between the two facts. France must not have any responsibility.' . . . The king accepted the conditions, which provided that the French were to evacuate Rome in two years, and fixed on Florence as the residence of the court. . . . On November 18, 1865, the first Parliament was opened in Florence. . . . The quarrel between Austria and Prussia [see GERMANY: A. D. 1861-1866] was growing all this time, and Italy proposed an alliance defensive and offensive with the latter power. . . . The treaty was concluded April 8, 1866. When this fact became known, Austria, on the brink of war with Prussia, began to think that she must rid herself in some way of the worry of the Italians on her southern frontier, in order to be free to combat her powerful northern enemy. The cabinet of Vienna did not apply directly to the cabinet of Florence, but to that arbiter of the destinies of nations, Napoleon III., proposing to cede Venetia on condition that the Italian government should detach itself from the Prussian alliance. . . . After an ineffectual attempt to accommodate matters by a congress, war was declared against Austria, on June 20, 1866, and La Marmora, having appointed Ricasoli as his deputy at the head of the council, led the army northwards. . . . Victor Emmanuel appointed his cousin regent, and carried his sons along with him to the seat of war. . . . The forces of Austria were led by the able and experienced commander, the Archduke Albert, who had distinguished himself at Novara. On the ill-ordered field of Custoza, where the Italians had been defeated in 1849, the opposing armies met [June 24]; and both being in good condition, well disciplined and brave, there was fought a prolonged and bloody battle, in which the Italians were worsted, but not routed. . . . On July 20 the Italian navy suffered an overwhelming defeat at Lissa in the Adriatic, and these two great misfortunes plunged Victor Emmanuel into the deepest grief. He felt disabled from continuing the war: all the sacrifice of life had been in vain: national unity was as far off as ever. . . . Meantime the Prussian arms were everywhere victorious over Austria, and about ten days after the battle of Custoza it was announced in the

Moniteur that Austria had asked the Emperor Napoleon's mediation, offering to cede him Venice, and that he was making over that province to the King of Italy. Italy could not accept it without the consent of her ally Prussia; and while negotiations were going forward on the subject, the brief seven weeks' campaign was brought to a conclusion by the great victory of Sadowa, and on July 26 the preliminaries of peace were signed by the Austrian and Prussian plenipotentiaries. . . . Venice was restored to Italy by the Emperor of France, with the approval of Prussia. There was a sting in the thought that it was not wrung from the talons of the Austrian eagle by the valour of Italian arms, but by the force of diplomacy; still it was a delightful fact that Venice was free, with the tricolour waving on St. Mark's. The Italian soil was delivered from foreign occupation. . . . As soon as the treaty was signed at Vienna, October 2, the Venetian Assemblies unanimously elected Victor Emmanuel with acclamations, and begged for immediate annexation to the Kingdom of Italy. On November 4, in the city of Turin, Victor Emmanuel received the deputation which came to proffer him the homage of the inhabitants of Venetia. . . . On November 7 Victor Emmanuel made a solemn entry into the most beautiful, and, after Rome, the most interesting city of the Italian peninsula. . . . Hot upon the settlement of the Venetian question, came the discussion of that of Rome, which after the evacuation of the French troops [November, 1866] seemed more complicated than ever. The Catholic powers were now anxious to accommodate the quarrel between Italy and the Pope, and they offered to guarantee him his income and his independence if he would reconcile himself to the national will. But Pius IX. was immovable in his determination to oppose it to the last."—G. S. Godkin, *Life of Victor Emmanuel II.*, ch. 23-25 (v. 2).

ALSO IN: J. W. Probyn, *Italy from 1815 to 1890*, ch. 11.—G. Garibaldi, *Autobiography*, 4th period, ch. 1 (v. 2), and v. 3, ch. 8.

A. D. 1867-1870.—Settlement of the Roman question.—Defeat of Garibaldi at Mentana.—Rome in the possession of the king of Italy.—Progress made by diplomacy in the settlement of the Roman question "was too slow for Garibaldi. He had once more fallen under the influence of the extreme republicans, and in 1867 he declared that he would delay no longer in planting the republican banner on the Vatican. Between these hot-headed and fanatical republicans on the one side, the Italian ultramontanes on another, and the French Emperor on the third, the position of Victor Emmanuel was anything but enviable. In the autumn of 1867 Garibaldi was suddenly arrested by the Government, but released on condition that he would remain quietly at Caprera. But meanwhile the volunteers under Menotti Garibaldi (the great chief's son) had advanced into the Papal States. The old warrior was burning to be with them. On the 14th of October he effected his escape from Caprera, and managed eventually to join his son in the Romagna. Together they advanced on Rome, and won, after tremendous fighting, the great victory at Monte Rotundo. Meanwhile an army of occupation sent by the Government from Florence had crossed the Roman frontier, and a French force had landed on the coast. Garibaldi's posi-

tion was already critical, but his resolution was unbroken. 'The Government of Florence,' he said, in a proclamation to the volunteers, 'has invaded the Roman territory, already won by us with precious blood from the enemies of Italy; we ought to receive our brothers in arms with love, and aid them in driving out of Rome the mercenary sustainers of tyranny; but if base deeds, the continuation of the vile convention of September, in mean consort with Jesuitism, shall urge us to lay down our arms in obedience to the order of the 2d December, then will I let the world know that I alone, a Roman general, with full power, elected by the universal suffrage of the only legal Government in Rome, that of the republic, have the right to maintain myself in arms in this the territory subject to my jurisdiction; and then, if any of these my volunteers, champions of liberty and Italian unity, wish to have Rome as the capital of Italy, fulfilling the vote of parliament and the nation, they must not put down their arms until Italy shall have acquired liberty of conscience and worship, built upon the ruin of Jesuitism, and until the soldiers of tyrants shall be banished from our land.' The position taken up by Garibaldi is perfectly intelligible. Rome we must have, if possible, by legal process, in conjunction with the royal arms; but if they will stand aside, even if they will oppose, none the less Rome must be annexed to Italy. Unfortunately Garibaldi had left out of account the French force despatched by Napoleon III. to defend the Temporal dominions of the Pope, a force which even at this moment was advancing to the attack. The two armies met near the little village of Mentana, ill matched in every respect. The volunteers, numerous indeed but ill disciplined and badly armed, brought together, held together simply by the magic of a name, the French, admirably disciplined, armed with the fatal chassepots, fighting the battle of their ancient Church. The Garibaldians were terribly defeated. Victor Emmanuel grieved bitterly, like a true, warm-hearted father for the fate of his misguided but generous-hearted sons. . . . To the Emperor of the French he wrote an ardent appeal begging him to break with the Clericals and put himself at the head of the Liberal party in Europe, at the same time warning him that the old feeling of gratitude towards the French in Italy had quite disappeared. 'The late events have suffocated every remembrance of gratitude in the heart of Italy. It is no longer in the power of the Government to maintain the alliance with France. The chassepot gun at Mentana has given it a mortal blow.' At the same time the rebels were visited with condign punishment. Garibaldi himself was arrested, but after a brief imprisonment at Varignano was permitted to retire once more to Caprera. A prisoner so big as Garibaldi is always an embarrassment to gaolers. But the last act in the great drama . . . was near at hand. In 1870 the Franco-German War broke out. The contest, involving as it did the most momentous consequences, was as brief as it was decisive. The French, of course, could no longer maintain their position as champions of the Temporal power. Once more, therefore, the King of Italy attempted, with all the earnestness and with all the tenderness at his command, to induce the Pope to come to terms and accept the position, at once dignified and independent, which the Italian

Government was anxious to secure to him. . . . But the Pope still unflinchingly adhered to the position he had taken up. . . . A feint of resistance was made, but on the 20th of September [1870] the royal troops entered Rome, and the Tricolour was mounted on the palace of the Capitol. So soon as might be a plebiscite was taken. The numbers are significant—for the King, 40,788, for the Pope, 46. But though the work was thus accomplished in the autumn of 1870, it was not until 2d June 1871 that the King made his triumphal entry into the capital of Italy."—J. A. R. Marriott, *The Makers of Modern Italy*, pp. 72-76.

A. D. 1870-1894.—The tasks and burdens of the United Nation.—Military and colonial ambitions.—The Triple Alliance.—"Italy now [in 1870] stood before the world as a nation of twenty-five million inhabitants, her frontiers well defined, her needs very evident. Nevertheless, if her national existence was to be more than a name, she must have discipline in self-government, and she must as quickly as possible acquire the tools and methods of the civilization prevailing among those nations into whose company her victories had raised her. Two thirds of her people lagged behind the Western world not only in material inventions, but in education and civic training. Railroads and telegraphs, the wider application of steam to industries, schools, courts, the police, had all to be provided, and provided quickly. Improvements which England and France had added gradually and paid for gradually, Italy had to organize and pay for in a few years. Hence a levying of heavy taxes, and exorbitant borrowing from the future in the public debt. Not only this, but ancient traditions, the memories of feuds between town and town, had to be obliterated; the people had to be made truly one people, so that Venetians, or Neapolitans, or Sicilians should each feel that they were first of all Italians. National uniformity must supplant provincial peculiarity; there must be one language, one code of laws, one common interest; in a word, the new nation must be Italianized. The ease and rapidity with which the Italians have progressed in all these respects have no parallel in modern times. Though immense the undertaking, they have, in performing it, revealed an adaptability to new conditions, a power of transformation which are among the most remarkable characteristics of their race, and the strongest proofs that ruin will not now engulf them. Only a race incapable of readjusting itself need despair. Happy had Italy been if, undistracted by temptation, she had pursued the plain course before her; still happy, had she resisted such temptation. But nations, like individuals, are not made all of one piece: they, too, acknowledge the better reason, but follow the worse; they, too, through pride or vanity or passion, often forfeit the winnings from years of toil. . . . Italy was recognized as a great power by her neighbors, and she willingly persuaded herself that it was her duty to do what they did. In this civilized age, the first requisite of a great power is a large standing army. . . . A large standing army being the first condition of ranking among the great powers, Italy set about preparing one. . . . Perhaps more than

any other European nation she was excusable in desiring to show that her citizens could become soldiers, for she had been taunted time out of mind with her effeminacy, her cowardice. It might be argued, too, that she received a larger dividend in indirect compensation for her capital invested in the army than her neighbors received from theirs. Uniform military service helped to blot out provincial lines and to Italianize all sections; it also furnished rudimentary education to the vast body of illiterate conscripts. These ends might have been reached at far less cost by direct and natural means; but this fact should not lessen the credit due to the Italian military system for furthering them. Tradition, example, national sensitiveness, all conspired in this way to persuade Italy to saddle an immense army on her back. . . . One evidence of being a 'great power,' according to the political standard of the time, consists in ability to establish colonies, or at least a protectorate, in distant lands; therefore Italian Jingoism goaded their government on to plant the Italian flag in Africa. France was already mistress of Algiers; Spain held a lien on Morocco; Italy could accordingly do no less than spread her influence over Tunis. For a few years Italy complacently imagined that she was as good as her rivals in the possession of a foreign dependency. Then a sudden recrudescence of Jingoism in France caused the French to occupy Tunis. The Italians were very angry; but when they sounded the situation, they realized that it would be folly to go to war over it. . . . Not warned by this experience, Italy, a few years later, plunged yet more deeply into the uncertain policy of colonization. England and France having fallen out over the control of Egypt, then England, having virtually made the Khedive her vassal, suggested that it would be a very fine thing for Italy to establish a colony far down on the coast of the Red Sea, whence she could command the trade of Abyssinia. Italian Jingoism jumped at the suggestion, and for ten years the red-white-and-green flag has waved over Massaua. But the good that Italy has derived from this acquisition has yet to appear. . . . Equally slow have they been to learn that their partnership in the Triple Alliance [see TRIPLE ALLIANCE] has entailed upon them sacrifices out of all proportion to the benefits. To associate on apparently even terms with Germany and Austria was doubtless gratifying to national vanity, . . . but who can show that Italy has been more secure from attack since she entered that league than she was before? . . . For the sake . . . of a delusive honor,—the honor of posing as the partner of the arbiters of Europe,—Italy has, since 1882, seen her army and her debt increase, and her resources proportionately diminish. None of her ministers has had the courage to suggest quitting a ruinous policy; on the contrary, they have sought hither and thither to find means to perpetuate it without actually breaking the country's back. . . . Yet not on this account shall we despair of a country which, in spite of folly, has achieved much against great odds, and which has shown a wonderful capacity for sloughing off her past. Hardship itself, though it be the penalty of error, may, by restricting her ability to go astray, lead her back to the path of reason."—W. R. Thayer, *Some Causes of the Italian Crisis (Atlantic, April, 1894)*.—See, also, IRREDENTISTS.

ITHACA.—One of the seven Ionian islands, small and unimportant, but interesting as being the Homeric island-kingdom of Ulysses—the principal scene of the story of the *Odyssey*. The island has been more or less explored, with a view to identifying the localities mentioned in the epic, by Sir William Gell, by Col. Leake, and by Dr. Schliemann. Some account of the latter's work and its results is given in the introduction to his "*Ilios*."—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 3, note I (v. 1).

JACOBITE CHURCH, The.—The great religious dispute of the 5th century, concerning the single or the double nature of Christ, as God and as man, left, in the end, two extreme parties, the Monophysites and the Nestorians, exposed alike to the persecutions of the orthodox church, as established in its faith by the Council of Chalcedon, by the Roman Pope and by the emperors Justin and Justinian. The Monophysite party, strongest in Syria, was threatened with extinction; but a monk named James, or Jacobus, Baradaeus—"Al Baradai," "the man in rags,"—imparted new life to it by his zeal and activity, and its members acquired from him the name of Jacobites. Jacobite patriarchs and remains so to this day. Abulpharagius, the oriental historian of the 13th century, was their most distinguished scholar, and held the office of Mafrian or vice-patriarch, so to speak, of the East. Their communities are mostly confined at present to the region of the Euphrates and the Tigris, and number less than 200,000 souls.—H. F. Tozer, *The Church and the Eastern Empire*, ch. 5.—See NESTORIAN AND MONOPHYSITE CONTROVERSY.

JACOBITES.—After the revolution of 1688 in England, which expelled James II. from the throne, his partisans, who wished to restore him, were called Jacobites, an appellation derived from the Latin form of his name—Jacobus. The name adhered after James' death to the party which maintained the rights of his son and grandson, James Stuart and Charles Edward, the "Old Pretender" and the "Young Pretender," as they were respectively called. See SCOTLAND: A. D. 1707–1708. The Jacobites rose twice in rebellion. See SCOTLAND: A. D. 1715; and 1745–1746.

A. D. 1655.—The English conquest and colonization.—In the spring of 1655, having determined upon an alliance with France and war with Spain, Cromwell fitted out an expedition under admirals Venables and Pen, secretly commissioned to attack Cuba and St. Domingo. Frustrated in an attempt against the latter island, the expedition made a descent on the island of Jamaica with better success. "This great gain was yet held insufficient to balance the first defeat; and on the return of Pen and Venables they were both committed to the Tower. I may pause for an instant here to notice a sound example of Cromwell's far-seeing sagacity. Though men scouted in that day the acquisition of Jamaica, he saw its value in itself, and its importance in relation to future attempts on the continent of America. Exerting the inhuman power of a despot—occasionally, as hurricanes and other horrors, necessary for the purification of the world—he ordered his son Henry to seize on 1,000 young girls in Ireland and send them over to Jamaica, for the purpose of increasing population there. A year later, and while the Italian Sagredo was in London, he issued an order that all females of disorderly lives should be arrested and shipped for Barbadoes for the like purpose. Twelve hundred were accordingly sent in three ships."—J. Forster, *Statesmen of the Commonwealth: Cromwell*.

A. D. 1655-1796.—Development of the British colony.—The Buccaneers.—The Maroon wars.—"Cromwell set himself to maintain and develop his new conquest. He issued a proclamation encouraging trade and settlement in the island by exemption from taxes. In order to 'people and plant' it, he ordered an equal number of young men and women to be sent over from Ireland, he instructed the Scotch government to apprehend and transport the idle and vagrant, and he sent agents to the New England colonies and the other West Indian islands in order to attract settlers. After the first three or four years this policy of encouraging emigration, continued in spite of the Protector's death, bore due fruit, and Jamaica became to a singular extent a receptacle for the most varied types of settlers, for freemen as well as for political offenders or criminals from Newgate, and for immigrants from the colonies as well as from the mother country. . . . The death of Cromwell brought over adherents of the Parliamentary party, ill content with the restoration of the Stuarts; the evacuation of Surinam in favour of the Dutch brought in a contingent of planters in 1675; the survivors of the ill-fated Scotch colony at Darien came over in 1699; and the Rye House Plot, Sedgemoor, and the risings of 1715 and 1745 all contributed to the population of the island. Most of all,

however, the buccancers made Jamaica great and prosperous. . . . Situated as the island was, well inside the ring of the Spanish possessions, the English occupation of Jamaica was a god-send to the buccancers, while their privateering trade was exactly suited to the restless soldiers who formed the large bulk of the early colonists. So Port Royal became in a few years a great emporium of ill-gotten wealth, and the man who sacked Panama became Sir Henry Morgan, Lieutenant-Governor of Jamaica. . . . In 1661 Charles II. sanctioned the beginnings of civil government. . . . Municipal institutions were introduced, judges and magistrates were appointed, land grants were issued, and the island began to take the form and substance of an English colony. The constitution thenceforward consisted of a Governor, a nominated Council, and an elected Assembly; and the first Assembly, consisting of 30 persons, met in January, 1664. . . . It was not long before the representative body began to assert its independence by opposition to the Crown, and in 1678 the Home government invited conflict by trying to apply to Jamaica the system which had been introduced into Ireland by the notorious Poyning's law. Under this system no Assembly could be summoned for legislative purposes except under special directions from home, and its functions would have been limited to registering consent to laws which had already been put into approved shape in England." Conflict over this attempt to deal with Jamaica as "a conquered and tributary dependency" did not end until 1728, when the colonists bought relief from it by settling on the Crown an "irrevocable revenue" of £8,000 per annum. "About the time when the constitutional difficulty was settled, the Maroon question was pressing itself more and more upon the attention of the colonial government. The penalty which Jamaica paid for being a large and mountainous island was, that it harboured in its forests and ravines a body of men who, throughout its history down to the present century, were a source of anxiety and danger. The original Maroons, or mountaineers, for that is the real meaning of the term, were . . . the slaves of Spaniards who retreated into the interior when the English took the island, and sallied out from time to time to harass the invaders and cut off stragglers and detached parties. . . . Maroon or Maron is an abbreviation of Cimaron, and is derived from the Spanish or Portuguese 'Cima,' or mountain top. Skeat points out that the word is probably of Portuguese origin, the 'C' having been pronounced as 'S.' Benzoni (edited by the Hakluyt Society), who wrote about 1565, speaks of 'Cimaroni' as being the Spanish name for outlawed slaves in Hispaniola. . . . It is probable that the danger would have been greater if the outlaws had been a united band, but there were divisions of race and origin among them. The Maroons proper, the slaves of the Spaniards and their descendants, were mainly in the east of the island among the Blue Mountains, while the mountains of the central district were the refuge of runaways from English masters, including Africans of different races, as well as Madagascars or Malays. Towards the end of the seventeenth century the newer fugitives had found in a negro named Cudjoe an able and determined leader, and thenceforward the resistance to the government became more organised and systematic. . . . Finally, in 1738, Governor Trelawny

made overtures of peace to the rebels, which were accepted. . . . By this treaty the freedom of the negroes was guaranteed, special reserves were assigned to them, they were left under the rule of their own captains assisted by white superintendents, but were bound over to help the government against foreign invasion from without and slave rebellions from within. A similar treaty was made with the eastern Maroons, and the whole of these blacks, some 600 in number, were established in five settlements. . . . Under these conditions the Maroons gave little trouble till the end of the 18th century. . . . The last Maroon war occurred in 1795." When the insurgent Maroons surrendered, the next year, they were, in violation of the terms made with them, transported to Nova Scotia, and afterwards to the warmer climate of Sierra Leone. "Thus ended the last Maroon rebellion; but . . . it affected only one section of these negro freemen, and even their descendants returned in many cases to Jamaica at a later date."—C. P. Lucas, *Hist. Geog. of the British Colonies*, v. 2, sect. 2, ch. 3, with foot-note.

A. D. 1865.—Governor Eyre's suppression of Insurrection.—In October, 1865, there occurred an insurrection among the colored people of one district of Jamaica, the suppression of which throws "a not altogether pleasant light upon English methods, when applied to the government of a subject race. . . . The disturbances were confined to the district and parish of St. Thomas in the East. There were local grievances arising from a dispute between Mr. Gordon, a native [colored] proprietor, and Baron Ketelholdt, the custos of the parish. Mr. Gordon, a dissenter, and apparently a reformer of abuses and unpopular among his fellows, had been deprived of his place among the magistrates, and prevented from filling the office of churchwarden to which he was elected. The expenses of the suits against him had been defrayed from the public purse. The native Baptists, the sect to which he belonged, were angry with what they regarded as at once an act of persecution and a misappropriation of the public money. Indignation meetings had been held. . . . Behind this quarrel, which would not of itself have produced much result, there lay more general grievances. . . . There was a real grievance in the difficulty of obtaining redress through law administered entirely by landlords; and as a natural consequence there had grown up a strong mistrust of

the law itself, and a complete alienation between the employer and the employed. To this was added a feeling on the part of the class above the ordinary labourer, known as the free settlers, that they were unduly rented, and obliged to pay rent for land which they should have held free; and there was a very general though vague expectation that in some way or other the occupiers would be freed from the payment of rent. The insurrection broke out in October;" a small riot, at first, at Morant Bay, in which a policeman was beaten; then an attempt to arrest one of the alleged rioters, a colored preacher, Paul Bogle by name, and a formidable resistance to the attempt by 400 of his friends. "On the next day, when the Magistrates and Vestry were assembled in the Court-House at Morant Bay, a crowd of insurgents made their appearance, the volunteers were called out, and the Riot Act read; and after a skirmish the Court-House was taken and burnt, 18 of the defenders killed and 30 wounded. The jail was broken open and several stores sacked. There was some evidence that the rising was premeditated, and that a good deal of drilling had been going on among the blacks under the command of Bogle. From Morant Bay armed parties of the insurgents passed inland through the country attacking the plantations, driving the inhabitants to take refuge in the bush, and putting some of the whites to death. The Governor of the Island at the time was Mr. Eyre [former explorer of Australia]. He at once summoned his Privy Council, and with their advice declared martial law over the county of Surrey, with the exception of the town of Kingston. Bodies of troops were also at once despatched to surround the insurgent district. . . . 439 persons fell victims to summary punishment, and not less than 1,000 dwellings were burnt; besides which, it would appear that at least 600 men and women were subjected to flogging, in some instances with circumstances of unusual cruelty. But the event which chiefly fixed the attention of the public in England was the summary conviction and execution of Mr. Gordon. He was undoubtedly a troublesome person, and there were circumstances raising a suspicion that he possessed a guilty knowledge of the intended insurrection. They were however far too slight to have secured his conviction before a Court of Law. But Governor Eyre caused him to be arrested in Kingston, where martial law did not exist, hurried on board ship and carried to Morant Bay, within the proclaimed district. He was there tried by a court-martial, consisting of three young officers," was sentenced to death, and immediately hanged.—J. F. Bright, *Hist. of Eng.: period 4*, pp. 413-415.—"When the story reached England, in clear and trustworthy form, two antagonistic parties were instantly formed. The extreme on the one side glorified Governor Eyre, and held that by his prompt action he had saved the white population of Jamaica from all the horrors of triumphant negro insurrection. The extreme on the other side denounced him as a mere fiend. The majority on both sides were more reasonable; but the difference between them was only less wide. An association called the Jamaica Committee was formed for the avowed purpose of seeing that justice was done. It comprised some of the most illustrious Englishmen. . . . Another association was founded, on the opposite side,

for the purpose of sustaining Governor Eyre; and it must be owned that it too had great names. Mr. Mill may be said to have led the one side, and Mr. Carlyle the other. The natural bent of each man's genius and temper turned him to the side of the Jamaica negroes, or of the Jamaica Governor. Mr. Tennyson, Mr. Kingsley, Mr. Ruskin, followed Mr. Carlyle; we know now that Mr. Dickens was of the same way of thinking. Mr. Herbert Spencer, Professor Huxley, Mr. Goldwin Smith, were in agreement with Mr. Mill. . . . No one needs to be told that Mr. Bright took the side of the oppressed, and Mr. Disraeli that of authority." A Commission of Inquiry sent out to investigate the whole matter, reported in April, 1866, commending the vigorous promptitude with which Governor Eyre had dealt with the disturbances at the beginning, but condemning the brutalities which followed, under cover of martial law, and especially the infamous execution of Gordon. The Jamaica Committee made repeated efforts to bring Governor Eyre's conduct to judicial trial; but without success. "The bills of indictment never got beyond the grand jury stage. The grand jury always threw them out. On one memorable occasion the attempt gave the Lord Chief Justice [Cockburn] of England an opportunity of delivering . . . to the grand jury . . . a charge entitled to the rank of a historical declaration of the law of England, and the limits of the military power even in cases of insurrection."—J. McCarthy, *Hist. of Our Own Times*, ch. 49 (v. 4).

JAPAN: Sketch of history to 1869.—"To the eye of the critical investigator, Japanese history, properly so-called, opens only in the latter part of the 5th or the beginning of the 6th century after Christ, when the gradual spread of Chinese culture, filtering in through Korea, had sufficiently dispelled the gloom of original barbarism to allow of the keeping of records. The whole question of the credibility of the early history of Japan has been carefully gone into during the last ten years by Aston and others, with the result that the first date pronounced trustworthy is A. D. 461, and it is discovered that even the annals of the 6th century are to be received with caution. We have ourselves no doubt of the justice of this negative criticism, and can only stand in amazement at the simplicity of most European writers, who have accepted without sifting them the uncritical statements of the Japanese annalists. . . . Japanese art and literature contain frequent allusions to the early history (so-called) of the country . . . as preserved in the works entitled *Kojiki* and *Nihongi*, both dating from the 8th century after Christ. . . . We include the mythology under the same heading, for the reason that it is absolutely impossible to separate the two. Why, indeed, attempt to do so, where both are equally fabulous? . . . Arrived at A. D. 600, we stand on terra firma. . . . About that time occurred the greatest event of Japanese history, the conversion of the nation to Buddhism (approximately A. D. 552-621). So far as can be gathered from the accounts of the early Chinese travellers, Chinese civilisation had slowly—very slowly—been gaining ground in the archipelago ever since the 3rd century after Christ. But when the Buddhist missionaries crossed the water, all Chinese institutions followed them and came in with a rush. Mathematical instruments and calendars were introduced; books began to be written (the earliest that has survived, and indeed nearly the earliest of all, is the already mentioned *Kojiki*, dating from A. D. 712); the custom of abdicating the throne in order to spend old age in prayer was adopted—a custom which, more than anything else, led to the effacement of the Mikado's authority during the Middle Ages. Sweeping changes in political arrangements began to be made in the year 645, and before the end of the 8th century, the government had been entirely remodelled on the Chinese centralised bureaucratic plan, with a regular system of ministers responsible to the sovereign, who, as 'Son of Heaven,' was theoretically absolute. In practice this absolutism lasted but a short time, because the entourage and mode of life of the Mikados were not such as to make of them able rulers. They passed their time surrounded only by women and priests, oscillating between indolence and debauchery, between poetastering and gorgeous temple services. This was the brilliant age of Japanese classical literature, which lived and moved and had its being in the atmosphere of an effeminate court. The Fujiwara family engrossed the power of the state during this early epoch (A. D. 670-1050). While their sons held all the great posts of government, the daughters were married to puppet emperors. The next change resulted from the impatience of the always manly and warlike Japanese gentry at the sight of this sort of petticoat government. The great clans

of Taira and Minamoto arose, and struggled for and alternately held the reins of power during the second half of the 11th and the whole of the 12th century. . . . By the final overthrow of the Taira family at the sea fight of Dan-no-Ura in A. D. 1185, Yoritomo, the chief of the Minamotos, rose to supreme power, and obtained from the Court at Kyoto the title of Shogun [converted by western tongues into Tycoon], literally 'Generalissimo,' which had till then been applied in its proper meaning to those generals who were sent from time to time to subdue the Ainos or rebellious provincials, but which thenceforth took to itself a special sense, somewhat as the word Emperor (also meaning originally 'general') did in Rome. The coincidence is striking. So is the contrast. For, as Imperial Rome never ceased to be theoretically a republic, Japan contrariwise, though practically and indeed avowedly ruled by the Shoguns from A. D. 1190 to 1867, always retained the Mikado as theoretical head of the state, descendant of the Sun-Goddess, fountain of all honour. There never were two emperors, acknowledged as such, one spiritual and one secular, as has been so often asserted by European writers. There never was but one emperor—an emperor powerless it is true, seen only by the women who attended him, often a mere infant in arms, who was discarded on reaching adolescence for another infant in arms. Still, he was the theoretical head of the state, whose authority was merely delegated to the Shogun as, so to say, Mayor of the Palace. By a curious parallelism of destiny, the Shogunate itself more than once showed signs of fading away from substance into shadow. Yoritomo's descendants did not prove worthy of him, and for more than a century (A. D. 1205-1333) the real authority was wielded by the so-called ' Regents ' of the Hojo family. . . . Their rule was made memorable by the repulse of the Mongol fleet sent by Kublai Khan with the purpose of adding Japan to his gigantic dominions. This was at the end of the 13th century, since which time Japan has never been attacked from without. During the 14th century, even the dowager-like calm of the Court of Kyoto was broken by internecine strife. Two branches of the Imperial house, supported each by different feudal chiefs, disputed the crown. One was called the Hokucho, or 'Northern Court,' the other the Nancho, or 'Southern Court.' After lasting some sixty years, this contest terminated in A. D. 1392 by the triumph of the Northern dynasty, whose cause the powerful Ashikaga family had espoused. From 1338 to 1565, the Ashikagas ruled Japan as Shoguns. . . . Meanwhile Japan had been discovered by the Portuguese (A. D. 1542); and the imprudent conduct of the Portuguese and Spanish friars (bateren, as they were called—a corruption of the word padre) made of the Christian religion an additional source of discord. Japan fell into utter anarchy. Each baron in his fastness was a law unto himself. Then, in the latter half of the 16th century, there arose successively three great men—Ota Nobunaga, the Taiko Hideyoshi, and Tokugawa Ieyasu. The first of these conceived the idea of centralising all the authority of the state in a single person; the second, Hideyoshi, who has been called the Napoleon of Japan, actually put the idea into practice, and joined the conquest of Korea (A. D. 1592-1598)

to his domestic triumphs. Death overtook him in 1598, while he was revolving no less a scheme than the conquest of China. Ieyasu, setting Hideyoshi's youthful son aside, stepped into the vacant place. An able general, unsurpassed as a diplomat and administrator, he first quelled all the turbulent barons, then bestowed a considerable portion of their lands on his own kinsmen and dependents, and either broke or balanced, by a judicious distribution of other fiefs over different provinces of the Empire, the might of those greater feudal lords, such as Satsuma and Choshu, whom it was impossible to put altogether out of the way. The Court of Kyoto was treated by him respectfully, and investiture as Shogun for himself and his heirs duly obtained from the Mikado. In order further to break the might of the daimyos, Ieyasu compelled them to live at Yedo, which he had chosen for his capital in 1590, during six months of the year, and to leave their wives and families there as hostages during the other half. What Ieyasu sketched out, the third Shogun of his line, Iemitsu, perfected. From that time forward, 'Old Japan,' as we know it from the Dutch accounts, from art, from the stage, was crystallised for two hundred and fifty years. . . . Unchangeable to the outward eye of contemporaries, Japan had not passed a hundred years under the Tokugawa régime before the seeds of the disease which finally killed that régime were sown. Strangely enough, the instrument of destruction was historical research. Ieyasu himself had been a great patron of literature. His grandson, the second Prince of Mito, inherited his taste. Under the auspices of this Japanese Maecenas, a school of literati arose to whom the antiquities of their country were all in all—Japanese poetry and romance as against the Chinese Classics; the native religion, Shinto, as against the foreign religion, Buddhism; hence, by an inevitable extension, the ancient legitimate dynasty of the Mikados, as against the upstart Shoguns. . . . When Commodore Perry came with his big guns (A. D. 1853-4), he found a government already tottering to its fall, many who cared little for the Mikado's abstract rights, caring a great deal for the chance of aggrandising their own families at the Shogun's expense. The Shogun yielded to the demands of Perry and of the representatives of the other foreign powers—England, France, Russia—who followed in Perry's train, and consented to open Yokohama, Hakodate, and certain other ports to foreign trade and residence (1857-9). He even sent embassies to the United States and to Europe in 1860 and 1861. The knowledge of the outer world possessed by the Court of Yedo, though not extensive, was sufficient to assure the Shogun and his advisers that it was vain to refuse what the Western powers claimed. The Court of Kyoto had had no means of acquiring even this modicum of worldly wisdom. According to its view, Japan, 'the land of the gods,' should never be polluted by outsiders, the ports should be closed again, and the 'barbarians' expelled at any hazard. What specially tended to complicate matters at this crisis was the independent action of certain daimyos. One of them, the Prince of Choshu, acting, as is believed, under secret instructions from the Court of Kyoto, fired on ships belonging to Great Britain, France, Holland, and the United States—this, too, at the very moment (1863)

when the Shogun's government . . . was doing its utmost to effect by diplomacy the departure of the foreigners whom it had been driven to admit a few years before. The consequence of this act was what is called 'the Shimonoseki Affair,' namely, the bombardment of Shimonoseki, Choshu's chief sea-port, by the combined fleets of the powers that had been insulted, and the exaction of an indemnity of \$3,000,000. Though doubtless no feather, this broke the Shogunate's back. The Shogun Iemochi attempted to punish Choshu for the humiliation which he had brought on Japan, but failed, was himself defeated by the latter's troops, and died. Hitotsu-bashi, the last of his line, succeeded him. But the Court of Kyoto, prompted by the great daimyos of Choshu and Satsuma, suddenly decided on the abolition of the Shogunate. The Shogun submitted to the decree, and those of his followers who did not were routed — first at Fushimi near Kyoto (17th January, 1868), then at Ueno in Yedo (4th July, 1868), then in Aizu (6th November, 1868), and lastly at Hakodate (27th June, 1869), where some of them had endeavoured to set up an independent republic. The government of the country was reorganised during 1867-8, nominally on the basis of a pure absolutism, with the Mikado as sole wielder of all authority both legislative and executive. Thus the literary party had triumphed. All their dreams were realised. They were henceforth to have Japan for the Japanese. . . . From this dream they were soon roughly wakened. The shrewd clansmen of Satsuma and Choshu, who had humoured the ignorance of the Court and the fads of the scholars only as long as their common enemy, the Shogunate, remained in existence, now turned round, and declared in favour, not merely of foreign intercourse, but of the Europeanisation of their own country. History has never witnessed a more sudden 'volte-face.' History has never witnessed a wiser one." — B. H. Chamberlain, *Things Japanese*, pp. 143-160.

A. D. 1549-1686. — Jesuit Missions. — The Century of Christianity. — Its introduction and extirpation. — Francis Xavier, "the Apostle of the Indies, was both the leader and director of a widely spread missionary movement, conducted by a rapidly increasing staff, not only of Jesuits, but also of priests and missionaries of other orders, as well as of native preachers and catechists. Xavier reserved for himself the arduous task of travelling to regions as yet unvisited by any preachers of Christianity; and his bold and impatient imagination was carried away by the idea of bearing the Cross to the countries of the farthest East. The islands of Japan, already known to Europe through the travels of Marco Polo, had been reached by the Portuguese only eight years before, namely, in 1541, and Xavier, while at Malacca, had conversed with navigators and traders who had visited that remote coast. A Japanese, named Angero (Hansiro), pursued for homicide, had fled to Malacca in a Portuguese ship. He professed a real or feigned desire to be baptized, and was presented to Xavier at Malacca, who sent him to Goa. There he learned Portuguese quickly, and was baptized under the name of Paul of the Holy Faith. . . . Having

carefully arranged the affairs of the Seminary of the Holy Faith at Goa and the entire machinery of the mission, Francis Xavier took ship for Malacca on the 14th April, 1549. On the 24th of June he sailed for Japan, along with Angero and his two companions, in a Chinese junk belonging to a famous pirate, an ally of the Portuguese, who left in their hands hostages for the safety of the apostle on the voyage. After a dangerous voyage they reached Kagosima, the native town of Angero, under whose auspices Xavier was well received by the governor, magistrates, and other distinguished people. The apostle was unable to commence his mission at once, though, according to his biographers, he possessed the gift of tongues. 'We are here,' he writes, 'like so many statues. They speak to us, and make signs to us, and we remain mute. We have again become children, and all our present occupation is to learn the elements of the Japanese grammar.' His first impressions of Japan were very favourable. . . . Xavier left Japan on the 20th November, 1551, after a stay of two years and four months. In his controversies with the Japanese, Xavier had been continually met with the objection — how could the Scripture history be true when it had escaped the notice of the learned men of China? It was Chinese sages who had taught philosophy and history to the Japanese, and Chinese missionaries who had converted them to Buddhism. To China, then, would he go to strike a blow at the root of that mighty superstition. Accordingly he sailed from Goa about the middle of April, 1552. . . . Being a prey to continual anxiety to reach the new scene of his labours, Xavier fell ill, apparently of remittent fever, and died on the 2nd of December, 1552. . . . The result of Xavier's labours was the formation of a mission which, from Goa as a centre, radiated over much of the coast of Asia from Ormuz to Japan. . . . The two missionaries, whom Xavier had left at Japan, were soon after joined by three others; and in 1556 they were visited by the Provincial of the Order in the Indies, Melchior Nunez, who paid much attention to the Japanese mission and selected for it the best missionaries, as Xavier had recommended. . . . The Jesuits attached themselves to the fortunes of the King of Bungo, a restless and ambitious prince, who in the end added four little kingdoms to his own, and thus became master of a large part of the island of Kiusiu. In his dominions Christianity made such progress that the number of converts began to be counted by thousands. . . . The missionaries perseveringly sought to spread their religion by preaching, public discussion, the circulation of controversial writings, the instruction of the youth, the casting out of devils, the performance of those mystery plays so common in that age, by the institution of 'confréries' like those of Avignon, and, above all, by the well-timed administration of alms. Nor need we be surprised to learn that their first converts were principally the blind, the infirm, and old men one foot in the grave. There are, however, many proofs in their letters that they were able both to attract proselytes of a better class and to inspire them with an enthusiasm which promised well for the growth of the mission. In those early days the example of Xavier was still fresh; and his immediate successors seem to have inherited his energetic and self-

denying disposition, though none of them could equal the great mental and moral qualities of the Apostle of the Indies. They kept at the same time a watchful eye upon the political events that were going on around them, and soon began to bear a part in them. The hostility between them and the Bonzes became more and more bitter."—*The Hundred Years of Christianity in Japan* (Quarterly Rev., April, 1871).—"In several of the provinces of Kyushu the princes had become converts and had freely used their influence, and sometimes their authority, to extend Christianity among their subjects. In Kyoto and Yamaguchi, in Osaka and Sakai, as well as in Kyushu, the Jesuit fathers had founded flourishing churches and exerted a wide influence. They had established colleges where the candidates for the church could be educated and trained. They had organized hospitals and asylums at Nagasaki and elsewhere, where those needing aid could be received and treated. It is true that the progress of the work had met with a severe setback in A. D. 1587, when Taiko Sama issued an edict expelling all foreign religious teachers from Japan. In pursuance of this edict nine foreigners who had evaded expulsion were burnt at Nagasaki. The reason for this decisive action on the part of Taiko Sama is usually attributed to the suspicion which had been awakened in him by the loose and unguarded talk of a Portuguese sea captain. But other causes undoubtedly contributed to produce in him this intolerant frame of mind. . . . In several of the provinces of Japan where the Jesuits had attained the ascendancy, the most forcible measures had been taken by the Christian princes to compel all their subjects to follow their own example and adopt the Christian faith. Takeyama, whom the Jesuit fathers designate as Justo Ucondono, carried out in his territory at Akashi a system of bitter persecution. He gave his subjects the option of becoming Christians or leaving his territory. Kouishi Yukinaga, who received part of the province of Higo as his fief after the Korean war, enforced with great persistency the acceptance of the Christian faith, and robbed the Buddhist priests of their temples and their lands. The princes of Omura and Arima, and to a certain extent the princes of Bungo, followed the advice of the Jesuit fathers in using their authority to advance the cause of Christianity. The fathers could scarcely complain of having the system of intolerance practised upon them, which, when circumstances were favorable, they had advised to be applied to their opponents. . . . During the first years of Ieyasu's supremacy the Christians were not disturbed. . . . He issued in 1606 what may be called a warning proclamation, announcing that he had learned with pain that, contrary to Taiko Sama's edict, many had embraced the Christian religion. He warned all officers of his court to see that the edict was strictly enforced. He declared that it was for the good of the state that none should embrace the new doctrine; and that such as had already done so must change immediately. . . . In the meantime both the English and Dutch had appeared on the scene. . . . Their object was solely trade, and as the Portuguese monopoly hitherto had been mainly secured by the Jesuit fathers, it was natural for the new-comers to represent the motive of these fathers in an unfavorable and suspicious light.

'Indeed,' as Hildreth says, 'they had only to confirm the truth of what the Portuguese and Spanish said of each other to excite in the minds of the Japanese rulers the gravest distrust as to the designs of the priests of both nations.' Whether it is true as charged that the minds of the Japanese rulers had been poisoned against the Jesuit fathers by misrepresentation and falsehood, it may be impossible to determine definitely; but it is fair to infer that the cruel and intolerant policy of the Spanish and Portuguese would be fully set forth and the danger to the Japanese empire from the machinations of the foreign religious teachers held up in the worst light. . . . Ieyasu, evidently having made up his mind that for the safety of the empire Christianity must be extirpated, in 1614 issued an edict that the members of all religious orders, whether European or Japanese, should be sent out of the country; that the churches which had been erected in various localities should be pulled down, and that the native adherents of the faith should be compelled to renounce it. In part execution of this edict all the members of the Society of Jesus, native and foreign, were ordered to be sent to Nagasaki. Native Christians were sent to Tsugaru, the northern extremity of the Main island. . . . In accordance with this edict, as many as 300 persons are said to have been shipped from Japan October 25, 1614. All the resident Jesuits were included in this number, excepting eighteen fathers and nine brothers, who concealed themselves and thus escaped the search. Following his deportation of converts the most persistent efforts continued to be made to force the native Christians to renounce their faith. The accounts given, both by the foreign and by the Japanese writers, of the persecutions which now broke upon the heads of the Christians are beyond description horrible. . . . Rewards were offered for information involving Christians of every position and rank, even of parents against their children and of children against their parents. . . . The persecution began in its worst form about 1616. This was the year in which Ieyasu died, but his son and successor carried out the terrible programme with heartless thoroughness. It has never been surpassed for cruelty and brutality on the part of the persecutors, or for courage and constancy on the part of those who suffered. . . . Mr. Gubbins . . . says: 'We read of Christians being executed in a barbarous manner in sight of each other, of their being hurled from the tops of precipices, of their being buried alive, of their being torn asunder by oxen, of their being tied up in rice-bags, which were heaped up together, and of the pile thus formed being set on fire. Others were tortured before death by the insertion of sharp spikes under the nails of their hands and feet, while some poor wretches by a refinement of horrid cruelty were shut up in cages and there left to starve with food before their eyes. Let it not be supposed that we have drawn on the Jesuit accounts solely for this information. An examination of the Japanese records will show that the case is not overstated.'—D. Murray, *Story of Japan*, ch. 11.—"The persecutions went on, the discovery of Christians occasionally occurring for several years, but in 1686 'the few remaining had learnt how to conceal their belief and the practice of their religion so well, that the Council issued a circular to the chief Daimios of the

south and west, stating that none of the Kirishitan sect had been discovered of late years, owing perhaps to laziness on the part of those whose duty it was to search for them, and enjoining vigilance' (Satow). Traces of the Christian religion and people lingered in the country down to our own time."—Sir E. J. Reed, *Japan*, p. 301.

A. D. 1852-1888.—Opening the ports to foreigners.—The treaty with the United States and the other treaties which followed.—"It is estimated that about the middle of the present century, American capital to the amount of seventeen million dollars was invested in the whaling industry in the seas of Japan and China. We thus see that it was not a mere outburst of French enthusiasm when M. Michelet paid this high tribute to the service of the whale to civilization: 'Who opened to men the great distant navigation? Who revealed the ocean and marked out its zones and its liquid highways? Who discovered the secrets of the globe? The Whale and the Whaler.' . . . There were causes other than the mere safety of whalers which led to the inception of the American expedition to Japan. On the one hand, the rise of industrial and commercial commonwealths on the Pacific, the discovery of gold in California, the increasing trade with China, the development of steam navigation—necessitating coal depots and ports for shelter, the opening of highways across the Isthmus of Central America, the missionary enterprises on the Asiatic continent, the rise of the Hawaiian Islands,—on the other hand, the knowledge of foreign nations among the ruling class in Japan, the news of the British victory in China, the progress of European settlements in the Pacific, the dissemination of western science among a progressive class of scholars, the advice from the Dutch government to discontinue the antiquated policy of exclusion—all these testified that the fulness of time for Japan to turn a new page in her history was at hand. . . . About this time, a newspaper article concerning some Japanese waifs who had been picked up at sea by the barque *Auckland*—Captain Jennings—and brought to San Francisco, attracted the attention of Commodore Aulick. He submitted a proposal to the government that it should take advantage of this incident to open commercial relations with the Empire, or at least to manifest the friendly feelings of the country. This proposal was made on the 9th of May, 1851. Daniel Webster was then Secretary of State, and in him Aulick found a ready friend. . . . Clothed with full power to negotiate and sign treaties, and furnished with a letter from President Fillmore to the Emperor, Commodore Aulick was on the eve of departure when for some reason he was prevented. Thus the project which began at his suggestion was obstructed when it was about to be accomplished, and another man, perhaps better fitted for the undertaking, entered into his labors. . . . Commodore [Matthew Calbraith] Perry shared the belief in the expediency of sending a special mission for the purpose. When Commodore Aulick was recalled, Perry proposed to the U. S. Government an immediate expedition. The proposal was accepted, and an expedition on the most liberal scale was resolved upon. He was invested with extraordinary powers, naval and diplomatic. The East India and China Seas and Japan were the official desig-

nation of the field of service, but the real object in view was the establishment of a coal depot in Japan. The public announcement of the resolution was followed by applications from all quarters of Christendom for permission to accompany the expedition; all these were, however, refused on prudential grounds. . . . Impatient of the delay caused by the tardy preparations of his vessels, Perry sailed from Norfolk on the 24th of November, 1852, with one ship, the *Mississippi*, leaving the rest to follow as soon as ready. . . . The *Mississippi* . . . touching at several ports on her way, reached Loo Choo in May, where the squadron united. . . . In the afternoon of the 8th of July, 1853, the squadron entered the Bay of Yedo in martial order, and about 5 o'clock in the evening was anchored off the town of Uraga. No sooner had 'the black ships of the evil mien' made their entry into the Bay, than the signal guns were fired, followed by the discharge of rockets; then were seen on the shore companies of soldiers moving from garrison to garrison. The popular commotion in Yedo at the news of 'a foreign invasion' was beyond description. The whole city was in an uproar. In all directions were seen mothers flying with children in their arms, and men with mothers on their backs. Rumors of an immediate action, exaggerated each time they were communicated from mouth to mouth, added horror to the horror-stricken. . . . As the squadron dropped anchor, it was surrounded by junks and boats of all sorts, but there was no hostile sign shown. A document in French was handed on board, which proved to be a warning to any foreign vessel not to come nearer. The next day was spent in informal conference between the local officials of Uraga and the subordinate officers of the squadron. It was Commodore Perry's policy to behave with as much reserve and exclusiveness as the Japanese diplomats had done and would do. He would neither see, nor talk with, any except the highest dignitary of the realm. Meanwhile, the governor of Uraga came on board and was received by captains and lieutenants. He declared that the laws forbade any foreign communication to be held elsewhere than Nagasaki; but to Nagasaki the squadron would never go. The vexed governor would send to Yedo for further instructions, and the 12th was fixed as a day for another conference. Any exchange of thought was either in the Dutch language, for which interpreters were provided on both sides, or in Chinese, through Dr. S. Wells Williams, and afterward in Japanese, through Manjiro Nakahama. . . . On the 12th, the Governor of Uraga again appeared on board and insisted on the squadron's leaving the Yedo Bay for Nagasaki, where the President's letter would be duly received through the Dutch or the Chinese. This the Commodore firmly refused to do. It was therefore decided at the court of Yedo that the letter be received at Kurihama, a few miles from the town of Uraga. This procedure was, in the language of the commissioners, 'in opposition to the Japanese law;' but, on the ground that 'the Admiral, in his quality as Ambassador of the President, would be insulted by any other course,' the original of Mr. Fillmore's letter to the Japanese Emperor, enclosed in a golden box of one thousand dollars in value, was delivered on the 14th of July to the commissioners appointed by the Shogun.

... Fortunately for Japan, the disturbed state of affairs in China made it prudent for Perry to repair to the ports of that country, which he did as though he had consulted solely the diplomatic convenience of our country. He left word that he would come the ensuing spring for our answer. . . . It was the Taiping Rebellion, which called for Perry's presence in China. The American merchants had large interests at stake there—their property in Shanghai alone amounting, it is said, to \$1,200,000. . . . While in China, Commodore Perry found that the Russian and French admirals, who were staying in Shanghai, contemplated a near visit to Japan. That he might not give any advantage to them, he left Macao earlier than he had intended, and, on the 13th of February, found himself again in the Bay of Yedo, with a stately fleet of eight ships. As the place where the conference had been held at the previous visit was out of the reach of gun-shot from the anchorage, Perry expressed a desire of holding negotiations in Yedo, a request impossible for the Japanese to comply with. After some hesitation, the suburb Kanagawa was mutually agreed upon as a suitable site, and there a temporary building was accordingly erected for the transaction of the business. On the 8th of May, Commodore Perry, arrayed in the paraphernalia befitting his rank, was ushered into the house. The reply of the Shogun to the President's letter was now given—the purport of which was, decidedly in word but reluctantly in spirit, in favor of friendly intercourse. Conferences were repeated in the middle and latter part of the month, and after many evasions and equivocations, deliberations and delays, invitations to banquets and exchanges of presents, at last, on Friday, the 31st of May, the formal treaty was signed; a synopsis of which is here presented: 1. Peace and friendship. 2. Ports of Shimoda and Hakodate open to American ships, and necessary provisions to be supplied them. 3. Relief to shipwrecked people; expenses thereof not to be refunded. 4. Americans to be free as in other countries, but amenable to just laws. 5. Americans at Shimoda and Hakodate not to be subject to restrictions; free to go about within defined limits. 6. Careful deliberation in transacting business which affects the welfare of either party. 7. Trade in open ports subject to local regulations. 8. Wood, water, provisions, coal, etc., to be procured through Japanese officers only. 9. Most-favored nation clause. 10. U. S. ships restricted to ports of Shimoda and Hakodate, except when forced by stress of weather. 11. U. S. Consuls or agents to reside at Shimoda. 12. Ratifications to be exchanged within eighteen months. . . . His labors at an end, Perry bade the last farewell to Japan and started on his home-bound voyage. This was in June, 1854. . . . No sooner had Perry left, carrying off the trophy of peaceful victory—the treaty (though the Yedo government was in no enjoyment of peaceful rest), than the Russian Admiral Pontiatine appeared in Nagasaki. He urged that the same privileges be granted his country as were allowed the Americans. . . . Soon, the English Rear Admiral, Sir James Stirling, arrives at the same harbor, very kindly to notify the government that there may be some fighting in Japanese waters between Russians and his countrymen. . . . The British convention was signed

October 14, 1854, and followed, in 1858, by the Elgin treaty. The treaty with Russia was signed January 26, 1855; Netherlands, 9th of November the same year; France, October 9, 1858; Portugal, 3rd of August, 1860; German Customs Union, 25th of January, 1861. The other nations which followed the United States were Italy, Spain, Denmark, Belgium, Switzerland, Austria-Hungary, Sweden and Norway, Peru, Hawaii, China, Corea and Siam; lastly Mexico, with whom we concluded a treaty on terms of perfect equality (Nov. 30, 1888).”—Inazo (Ota) Nitobe, *The Intercourse between the U. S. and Japan*, ch. 2.

A. D. 1869-1890.—Constitutional development.—"In 1869 was convened the Kogisho or 'Parliament,' as Sir Harry Parkes translates it in his despatch to the Earl of Clarendon. . . . The Kogisho was composed mostly of the retainers of the Daimios, for the latter, having no experience of the earnest business of life, 'were not eager to devote themselves to the labors of an onerous and voluntary office.' . . . The object of the Kogisho was to enable the government to sound public opinion on the various topics of the day, and to obtain the assistance of the country in the work of legislation by ascertaining whether the projects of the government were likely to be favorably received. The Kogisho, like the Councils of Kuges and Daimios, was nothing but an experiment, a mere germ of a deliberative assembly, which only time and experience could bring to maturity. . . . It was a quiet, peaceful, obedient debating society. It has left the record of its abortive undertakings in the 'Kogisho Nishi' or journal of 'Parliament.' The Kogisho was dissolved in the year of its birth. And the indifference of the public about its dissolution proves how small an influence it really had. But a greater event than the dissolution of the Kogisho was pending before the public gaze. This was the abolition of feudalism. . . . The measure to abolish feudalism was much discussed in the Kogisho before its dissolution. . . . In the following noted memorial, after reviewing the political history of Japan during the past few hundred years, these Daimios said: 'Now the great Government has been newly restored and the Emperor himself undertakes the direction of affairs. This is, indeed, a rare and mighty event. We have the name (of an Imperial Government), we must also have the fact. Our first duty is to illustrate our faithfulness and to prove our loyalty. . . . The place where we live is the Emperor's land and the food which we eat is grown by the Emperor's men. How can we make it our own? We now reverently offer up the list of our possessions and men, with the prayer that the Emperor will take good measures for rewarding those to whom reward is due and for taking from those to whom punishment is due. Let the imperial orders be issued for altering and remodeling the territories of the various clans. Let the civil and penal codes, the military laws down to the rules for uniform and the construction of engines of war, all proceed from the Emperor; let all the affairs of the empire, great and small, be referred to him.' This memorial was signed by the Daimios of Kago, Hizen, Satsuma, Choshu, Tosa, and some other Daimios of the west. But

the real author of the memorial is believed to have been Kido, the brain of the Restoration. Thus were the fiefs of the most powerful and most wealthy Daimios voluntarily offered to the Emperor. The other Daimios soon followed the example of their colleagues. And the feudalism which had existed in Japan for over eight centuries was abolished by the following laconic imperial decree of August, 1871: 'The clans are abolished, and prefectures are established in their places.' . . . While the government at home was thus tearing down the old framework of state, the Iwakura Embassy in foreign lands was gathering materials for the new. This was significant, inasmuch as five of the best statesmen of the time, with their staff of forty-four able men, came into association for over a year with western peoples, and beheld in operation their social, political and religious institutions. . . . In 1873, Count Itagaki with his friends had sent in a memorial to the government praying for the establishment of a representative assembly, but they had not been heeded by the government. In July, 1877, Count Itagaki with his Ri-shi-sha again addressed a memorial to the Emperor, 'praying for a change in the form of government, and setting forth the reasons which, in the opinion of the members of the society, rendered such a change necessary.' These reasons were nine in number and were developed at great length. . . . The civil war being ended, in 1878, the year which marks a decade from the establishment of the new régime, the government, persuaded that the time for popular institutions was fast approaching, not alone through representations of the Tosa memorialists, but through many other signs of the times, decided to take a step in the direction of establishing a national assembly. But the government acted cautiously. Thinking that to bring together hundreds of members unaccustomed to parliamentary debate and its excitement, and to allow them a hand in the administration of affairs of the state, might be attended with serious dangers, as a preparation for the national assembly the government established first local assemblies. Certainly this was a wise course. These local assemblies have not only been good training schools for popular government, but also proved reasonably successful. . . . The qualifications for electors (males only) are: an age of twenty years, registration, and payment of a land tax of \$5. Voting is by ballot, but the names of the voters are to be written by themselves on the voting papers. There are now 2,172 members who sit in these local assemblies. . . . The gulf between absolute government and popular government was thus widened more and more by the institution of local government. The popular tide raised by these local assemblies was swelling in volume year by year. New waves were set in motion by the younger generation of thinkers. Toward the close of the year 1881 the flood rose so high that the government thought it wise not to resist longer. His Imperial Majesty, hearing the petitions of the people, graciously confirmed and expanded his promise of 1868 by the famous proclamation of October 12, 1881: 'We have long had it in view to gradually establish a constitutional form of government. . . . It was with this object in view that in the eighth year of Meiji (1875) we established the Senate, and in the eleventh year of Meiji (1878) authorized the

formation of local assemblies. . . . We therefore hereby declare that we shall, in the twenty-third year of Meiji (1890) establish a parliament, in order to carry into full effect the determination we have announced; and we charge our faithful subjects bearing our commissions to make, in the meantime, all necessary preparations to that end."—T. Iyenaga, *The Constitutional Development of Japan, 1853-1881* (*Johns Hopkins Univ. Studies, 9th series, no. 9*).—See CONSTITUTION OF JAPAN.

JAYHAWKERS AND RED LEGS.—During the conflict of 1854-1859 in Kansas, certain "Free-state men in the Southeast, comparatively isolated, having little communication with [the town of] Lawrence, and consequently almost wholly without check, developed a successful if not very praiseworthy system of retaliation. Confederated at first for defense against pro-slavery outrages, but ultimately falling more or less completely into the vocation of robbers and assassins, they have received the name—whatever its origin may be—of jayhawkers."—L. W. Spring, *Kansas*, p. 240.—"The complaints in former years of Border Ruffian forays from Missouri into Kansas [see KANSAS: A. D. 1854-1859], were, as soon as the civil war began, paid with interest by a continual accusation of incursions of Kansas 'Jayhawkers' and 'Red Legs' into Missouri."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 6, p. 370.

JERUSALEM: Early history.—"The first site of Jerusalem was the hill now erroneously called Sion, and which we shall designate . . . as Pseudo-Sion, the plateau of rock at the southwest, surrounded on all sides by ravines, viz., by the Valley of Hinnom on the west and south, and by the Tyropæon, or Cheesemakers' Valley, on the north and east. Parallel to this lay the real Sion, the less elevated eastern hill, shut in on the west by the Tyropæon Valley, which divided it from Pseudo-Sion, and on the east by the Valley of Jehoshaphat, and ending southward in a wedge-like point opposite to the south-east corner of Pseudo-Sion. The town on the westernmost of these two ridges was known first as Jebus, and afterwards as the High Town, or Upper Market; and the accretion to it on the eastern hill was anciently called Salem, and subsequently the Low Town and Acra. In the days of lawless violence, the first object was safety; and, as the eastern hill was by nature exposed on the north, it was there protected artificially by a citadel and fosse. The High Town and Low Town were originally two distinct cities, occupied by the Amorites and Hittites, whence the taunt of the prophet to Jerusalem: 'Thy birth and thy nativity is of the land of Canaan; thy father was an Amorite and thy mother a Hittite.' Hence, also, the dualistic form of the name Jerusalem in Hebrew, signifying 'Twin-Jerusalem.' Indeed the opinion has been broached that Jerusalem is the compound of the two names, Jebus and Salem, softened 'euphonia gratia' into Jerusalem. It is remarkable that to the very last the quarter lying between the High Town and Low Town, though in the very heart of the city when the different parts were united into one compact body, was called the Suburb. The first notice of Jerusalem is in the time of Abraham. The king of Shinar and his confederates captured Sodom and Gomorrah, and carried away Lot, Abraham's brother's son; when Abraham, collecting his trainbands, followed after the enemy and rescued Lot; and on his return 'at the valley of Shaveh, which is the king's vale, Melchizedek, king of Salem—the priest of the Most High God—blessed Abram.' The king's vale was the Valley of Jehoshaphat; and Salem was identical with the eastern hill, the real Zion as we learn from the Psalms, 'In Salem is his tabernacle, and his dwelling-place in Zion;' where Salem and Zion are evidently used as synonymous. Whether Moriah, on which Abram offered his sacrifice, was the very mount on which the Temple was afterwards built, must be left to conjecture. But when the Second Book of Chronicles was written, the Jews had at least a tradition to that effect, for we read that 'Solomon began to build the house of the Lord at Jerusalem in Mount Moriah.' On the exodus of the Israelites from Egypt, we find distinct mention made of Jerusalem by that very name; for after Joshua's death, 'the children of Judah fought against Jerusalem, and took it . . . and set the city on fire.' But Josephus is probably right in understanding this to apply to the Low Town only, i. e., the eastern hill, or Sion, as opposed to the western hill, the High Town, or Pseudo-Sion. The men of Judah had only a temporary occupation even of the Low Town, for it was not until the time of David that Jerusalem was brought permanently under the dominion of the Israelites."—T. Lewin, *Jerusalem*, ch. 1.

Conquest and occupation by David.—"David had reigned seven years and a half in Hebron over the tribe of Judah alone [see JEWS: THE KINGDOMS OF ISRAEL AND JUDAH]. He was now solemnly installed as king by the elders of all Israel, and 'made a league with them before Jehovah in Hebron.' This was equivalent to what we now call a 'coronation oath,' and denoted that he was a constitutional, not an arbitrary monarch. The Israelites had no intention to resign their liberties, but in the sequel it will appear, that, with paid foreign troops at his side, even a most religious king could be nothing but a despot. Concerning David's military proceedings during his reign at Hebron, we know nothing in detail, though we read of Joab bringing in a large spoil, probably from his old enemies the Amalekites. David had an army to feed, to exercise, and to keep out of mischief; but it is probable that the war against Abner generally occupied it sufficiently. Now however he determined to signalize his new power by a great exploit. The strength of Jerusalem had been sufficiently proved by the long secure dwelling of Jebusites in it, surrounded by a Hebraized population. Hebron was no longer a suitable place for the centre of David's administration; but Jerusalem, on the frontier of Benjamin and Judah, without separating him from his own tribe, gave him a ready access to the plains of Jericho below, and thereby to the eastern districts; and although by no means a central position, it was less remote from Ephraim than Hebron. Of this Jebusite town he therefore determined to possess himself. . . . The Jebusites were so confident of their safety, as to send to David an enigmatical message of defiance; which may be explained,—that a lame and blind garrison was sufficient to defend the place. David saw in this an opportunity of displacing Joab from his office of chief captain,—if indeed Joab formally held that office as yet, and had not merely assumed authority as David's eldest nephew and old comrade in arms. The king however now declared, that whoever should first scale the wall and drive off its defenders, should be made chief captain; but his hopes were signally disappointed. His impetuous nephew resolved not to be outdone, and triumphantly mounting the wall, was the immediate means of the capture of the town. . . . Jerusalem is henceforth its name in . . . history; in poetry only, and not before the times of king Hezekiah, is it entitled Salem, or peace; identifying it with the city of the legendary Melchisedek. David's first care was to provide for the security of his intended capital, by suitable fortifications. Immediately to the north of Mount Zion, and separated from it by a slighter depression which we have named, was another hill, called Millo in the Hebrew. . . . In ancient times this seems to have been much loftier than now; for it has been artificially lowered. David made no attempt to include Millo (or Acra) in his city, but fortified Mount Zion separately; whence it was afterwards called, 'The city of David.'—F. W. Newman, *A Hist. of the Hebrew Monarchy*, ch. 3.—"The Jebusite city was composed of the fortress of Sion, which must have been situated where the mosque of El Akasa now stands, and of a lower town (Ophel) which runs down from there to the well which they called Gihon. David took the fortress of Sion, and gave the

greater portion of the neighbouring lands to Joab, and probably left the lower town to the Jebusites. That population, reduced to an inferior situation, lost all energy, thanks to the new Israelitish influx, and played no important part in the history of Jerusalem. David rebuilt the upper town of Sion, the citadel or millo, and all the neighbouring quarters. This is what they called the city of David. . . . David in reality created Jerusalem."—E. Renan, *Hist. of the People of Israel*, bk. 2, ch. 18 (v. 1).

Early sieges.—Jerusalem, the ancient stronghold of the Jebusites, which remained in the hands of that Canaanite people until David reduced it and made it the capital of his kingdom, was the object of many sieges in its subsequent history and suffered at the hands of many ruthless conquerors. It was taken, with no apparent resistance, by Shishak, of Egypt, in the reign of Rehoboam, and Solomon's temple plundered. Again, in the reign of Amaziah, it was entered by the armies of the rival kingdom of Israel and a great part of its walls thrown down. It was besieged without success by the tartan or general of Sennacherib, and captured a little later by Pharaoh Necho. In B. C. 586 the great calamity of its conquest and destruction by Nebuchadnezzar befell, when the survivors of its chief inhabitants were taken captive to Babylon. Rebuilt at the return from captivity, it enjoyed peace under the Persians; but in the troubled times which followed the dissolution of Alexander's Empire, Jerusalem was repeatedly pillaged and abused by the Greeks of Egypt and the Greeks of Syria. Its walls were demolished by Ptolemy I. (B. C. 320) and again by Antiochus Epiphanes (B. C. 168), when a great part of the city was likewise burned.—Josephus, *Antiq. of the Jews*.

A. D. 615.—Siege, sack and massacre by the Persians.—In the last of the wars of the Persians with the Romans, while Heraclius occupied the throne of the Empire, at Constantinople, and Chosroës II. filled that of the Sassanides, the latter (A. D. 614) "sent his general, Shahr-Barz, into the region east of the Antilibanus and took the ancient and famous city of Damascus. From Damascus, in the ensuing year, Shahr-Barz advanced against Palestine, and, summoning the Jews to his aid, proclaimed a Holy War against the Christian misbelievers, whom he threatened to enslave or exterminate. Twenty-six thousand of these fanatics flocked to his standard; and having occupied the Jordan region and Galilee,

Shahr-Barz in A. D. 615 invested Jerusalem, and after a siege of eighteen days forced his way into the town and gave it over to plunder and rapine. The cruel hostility of the Jews had free vent. The churches of Helena, of Constantine, of the Holy Sepulchre, of the Resurrection, and many others, were burnt or ruined; the greater part of the city was destroyed; the sacred treasures were plundered; the relics scattered or carried off; and a massacre of the inhabitants, in which the Jews took the chief part, raged throughout the whole city for some days. As many as 17,000, or, according to another account, 90,000, were slain. Thirty-five thousand were made prisoners. Among them was the aged patriarch, Zacharias, who was carried captive into Persia, where he remained till his death. The Cross found by Helena, and believed to be 'the True Cross,' was at the same time transported to Ctesiphon, where it was preserved with care and duly venerated by the Christian wife of Chosroës."—G. Rawlinson, *The Seventh Great Oriental Monarchy*, ch. 24.—See, also, *ROME*: A. D. 565-628.

A. D. 637.—Surrender to the Moslems.—In the winter of 637, the Arabs, then masters of the greater part of Syria, laid siege to Jerusalem. After four months of vigorous attack and defense, the Christian Patriarch of Jerusalem held a parley from the walls with the Arab general, Abu Obeidah. "'Do you not know,' said he, 'that this city is holy, and that whoever offers violence to it draws upon his head the vengeance of heaven?' 'We know it,' replied Abu Obeidah, 'to be the house of the prophets, where their bodies lie interred; we know it to be the place whence our prophet Mahomet made his nocturnal ascent to heaven; and we know that we are more worthy of possessing it than you are, nor will we raise the siege until Allah has delivered it into our hands, as he has done many other places.' Seeing there was no further hope, the patriarch consented to give up the city, on condition that the Caliph would come in person to take possession and sign the articles of surrender." This proposal being communicated to Omar, the Caliph, he consented to make the long journey from Medina to Jerusalem, and, in due time, he entered the Holy City, not like a conqueror, but on foot, with his staff in his hand and wearing his simple, much-patched Arab garb. "The articles of surrender were drawn up in writing by Omar, and served afterwards as a model for the Moslem leaders in other conquests. The Christians were to build no new churches in the surrendered territory. The church doors were to be set open to travellers, and free ingress permitted to Mahometans by day and night. The bells should only toll, and not ring, and no crosses should be erected on the churches, nor shown publicly in the streets. The Christians should not teach the Koran to their children; nor speak openly of their religion; nor attempt to make proselytes; nor hinder their kinsfolk from embracing Islam. They should not assume the Moslem dress, either caps, slippers, or turbans, nor part their hair like Moslems, but should always be distinguished by girdles. They should not use the Arabian language in inscriptions on their signets, nor salute after the Moslem manner, nor be called by Moslem surnames. They should rise on the entrance of a Moslem, and remain standing until he should be seated. They

should entertain every Moslem traveller three days gratis. They should sell no wine, bear no arms, and use no saddle in riding; neither should they have any domestic who had been in Moslem service. . . . The Christians having agreed to surrender on these terms, the Caliph gave them, under his own hand, an assurance of protection in their lives and fortunes, the use of their churches, and the exercise of their religion."—W. A. D. 1099.—The Bloody "Deliverance" of the Holy City by the Crusaders.—The armies of the First Crusade (see *CRUSADES*: A. D. 1096-1099)—the surviving remnant of them—reached Jerusalem in June, A. D. 1099. They numbered, it is believed, but 20,000 fighting men, and an equal number of camp followers,—women, children, non-militant priests, and the like. "Immediately before the arrival of the Crusaders, the Mohammedans deliberated whether they should slaughter all the Christians in cold blood, or only fine them and expel them from the city. It was decided to adopt the latter plan; and the Crusaders were greeted on their arrival not only by the flying squadrons of the enemy's cavalry, but also by exiled Christians telling their piteous tales. Their houses had been pillaged, their wives kept as hostages; immense sums were required for their ransom; the churches were desecrated; and, even worse still, the Infidels were contemplating the entire destruction of the Church of the Holy Sepulchre. This last charge, at least, was not true. But it added fuel to a fire which was already beyond any control, and the chiefs gave a ready permission to their men to carry the town, if they could, by assault." They were repulsed with heavy loss, and driven to the operations of a regular siege, for which their resources were limited in the extreme. But overcoming all difficulties, and enduring much suffering from lack of water, at the end of little more than a month they drove the Moslems from the walls and entered the city—on Friday, the 15th of July, A. D. 1099. "The city was taken, and the massacre of its defenders began. The Christians ran through the streets slaughtering as they went. At first they spared none, neither man, woman, nor child, putting all alike to the sword; but when resistance had ceased, and rage was partly appeased, they began to bethink them of pillage, and tortured those who remained alive to make them discover their gold. As for the Jews within the city, they had fled to their synagogue, which the Christians set on fire, and so burned them all. The chroniclers relate, with savage joy, how the streets were encumbered with heads and mangled bodies, and how in the Haram Area, the sacred enclosure of the Temple, the knights rode in blood up to the knees of their horses. Here upwards of ten thousand were slaughtered, while the whole number of killed amounted,

according to various estimates, to forty, seventy, and even a hundred thousand. . . . Evening fell, and the clamour ceased, for there were no more enemies to kill, save a few whose lives had been promised by Tancred. Then from their hiding-places in the city came out the Christians who still remained in it. They had but one thought, to seek out and welcome Peter the Hermit, whom they proclaimed as their liberator. At the sight of these Christians, a sudden revulsion of feeling seized the soldiers. They remembered that the city they had taken was the city of the Lord, and this impulsive soldiery, sheathing swords reeking with blood, followed Godfrey to the Church of the Holy Sepulchre, where they passed the night in tears and prayers and services. In the morning the carnage began again. Those who had escaped the first fury were the women and children. It was now resolved to spare none. Even the three hundred to whom Tancred had promised life were slaughtered in spite of him. Raymond alone managed to save the lives of those who capitulated to him from the tower of David. It took a week to kill the Saracens, and to take away their dead bodies. Every Crusader had a right to the first house he took possession of, and the city found itself absolutely cleared of its old inhabitants, and in the hands of a new population. The true Cross, which had been hidden by the Christians during the siege, was brought forth again, and carried in joyful procession round the city, and for ten days the soldiers gave themselves up to murder, plunder—and prayers! And the first Crusade was finished.”—W. Besant and E. H. Palmer, *Jerusalem*, ch. 6.

ALSO IN: C. Mills, *Hist. of the Crusades*, v. 1, ch. 6.—J. F. Michaud, *Hist. of the Crusades*, bk. 4.

A. D. 1099-1144.—**The Founding of the Latin kingdom.**—Eight days after their bloody conquest of the Holy City had been achieved, “the Latin chiefs proceeded to the election of a king, to guard and govern their conquests in Palestine. Hugh the Great [count of Vermandois] and Stephen of Chartres had retired with some loss of reputation, which they strove to regain by a second crusade and an honourable death. Baldwin was established at Edessa, and Bohemond at Antioch; and two Roberts—the Duke of Normandy and the Count of Flanders—preferred their fair inheritance in the West to a doubtful competition or a barren sceptre. The jealousy and ambition of Raymond [of Toulouse] were condemned by his own followers; and the free, the just, the unanimous voice of the army proclaimed Godfrey of Bouillon the first and most worthy of the champions of Christendom. His magnanimity accepted a trust as full of danger as of glory; but in the city where his Saviour had been crowned with thorns the devout pilgrim rejected the name and ensigns of royalty, and the founder of the kingdom of Jerusalem contented himself with the modest title of Defender and Baron of the Holy Sepulchre. His government of a single year, too short for the public happiness, was interrupted in the first fortnight by a summons to the field by the approach of the vizir or sultan of Egypt, who had been too slow to prevent, but who was impatient to avenge, the loss of Jerusalem. His total overthrow in the battle of Ascalon sealed the establishment of the Latins in Syria, and

signalized the valour of the French princes, who in this action bade a long farewell to the holy wars. . . . After suspending before the holy sepulchre the sword and standard of the sultan, the new king (he deserves the title) embraced his departing companions, and could retain only, with the gallant Tancred, 300 knights and 2,000 foot soldiers, for the defence of Palestine.”—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 58.—Godfrey lived not quite a year after his election, and was succeeded on the throne of Jerusalem by his brother Baldwin, the prince of Edessa, who resigned that Mesopotamian lordship to his cousin, Baldwin du Bourg, and made haste to secure the more tempting sovereignty. Godfrey, during his short reign, had permitted himself to be made almost a vassal and subordinate of the patriarch of Jerusalem—one Daimbert, a domineering prelate from Italy. But Baldwin matched the priest in his own grasping qualities and soon established the kingship on a more substantial footing. He reigned eighteen years, and when he died, in 1118, the fortunate cousin, Baldwin du Bourg, received his crown, surrendering the principality of Edessa to another. This Baldwin II. died in 1131, and was succeeded by Fulk or Foulque, count of Anjou, who had lately arrived in Palestine and married Baldwin's daughter. “The Latin dominions in the East attained their greatest extent in the reign of King Baldwin II. . . . The entire sea-coast from Tarsus in Cilicia to El-Arish on the confines of Egypt was, with the exception of Ascalon and Gaza, in the possession of the Franks. In the north their dominions extended inland to Edessa beyond the Euphrates; the mountains of Lebanon and their kindred ranges bounded them on the east as they ran southwards; and then the Jordan and the desert formed their eastern limits. They were divided into four states, namely, the kingdom of Jerusalem, the county of Tripolis, the principality of Antioch, and the county of Edessa; the rulers of the three last held as vassals under the king.” King Fulk died in 1143 or 1144, and was succeeded by his son, Baldwin III. Edessa was lost in the following year.—T. Keightley, *The Crusaders* [ch. 2].—See, also, *CRUSADES*: A. D. 1104-1111.

A. D. 1099-1291.—**The constitution of the kingdom.**—“Godfrey was an elected king; and we have seen that his two immediate successors owed their crowns rather to personal merit and intrigue than to principles of hereditary succession. But after the death of Baldwin du Bourg, the foundation of the constitution appears to have been settled; and the Latin state of Jerusalem may be regarded as a feudal hereditary monarchy. There were two chief lords of the kingdom, namely, the patriarch and the king, whose cognizance extended over spiritual and temporal affairs. . . . The great officers of the crown were the seneschal, the constable, the marshal, and the chamberlain. . . . There were four chief baronies of the kingdom, and many other lordships which had the privileges of administering justice, coining money, and, in short, most of those powers and prerogatives which the great and independent nobility of Europe possessed. The first great barony comprised the counties of Jaffa and Ascalon, and the lordships of Ramula, Mirabel, and Ibelin. The second was the principality of Galilee. The third included the lordships of Sajetta, Cesarea, and Nazareth; and the

fourth was the county of Tripoli. . . . But the dignity of these four great barons is shewn by the number of knights which they were obliged to furnish, compared with the contributions of other nobles. Each of the three first barons was compelled to aid the king with five hundred knights. The service of Tripoli was performed by two hundred knights; that of the other baronies by one hundred and eighty-three knights. Six hundred and sixty-six knights was the total number furnished by the cities of Jerusalem, Naplousa, Acre, and Tyre. The churches and the commercial communities of every part of the kingdom provided five thousand and seventy-five serjeants or serving men."—C. Mills, *Hist. of the Crusades*, v. 1, ch. 8.

A. D. 1147-1149.—The note of alarm and the Second Crusade. See CRUSADES: A. D. 1147-1149.

A. D. 1149-1187.—Decline and fall of the kingdom.—The Rise of Saladin and his conquest of the Holy City.—King Fulk was succeeded in 1144 by his son, a boy of thirteen, who took the title of Baldwin III. and with whom his mother associated herself on the throne. It was early in this reign of the boy-king that Edessa was taken by Zenghi, sultan of Aleppo, and an appeal made to Europe which called out the miserably abortive Second Crusade. The crusade "did nothing towards the maintenance of the waning ascendancy of the Latins. Even victories brought with them no solid result, and in not a few instances victory was misused with a folly closely allied to madness. . . . The interminable series of wars, or rather of forays and reprisals, went on; and amidst such contests the life of Baldwin closed [A. D. 1162] in early manhood. . . . He died childless, and although some opposition was made to his choice, his brother Almeric [or Amaury] was elected to fill his place. Almost at the beginning of his reign the affairs of the Latin kingdom became complicated with those of Egypt; and the Christians are seen fighting by the side of one Mahomedan race, tribe, or faction against another." The Fatimite caliphs of Egypt had become mere puppets in the hands of their viziers, and when one grand vizier, Shawer, deposed by a rival, Dargham, appealed to the sultan of Aleppo (Noureddin, son of Zenghi), the latter embraced eagerly the opportunity to stretch his strong hand towards the Fatimite throne. Among his generals was Shiracouh, a valiant Koord, and he sent Shiracouh to Egypt to restore Shawer to power. With Shiracouh went a young nephew of the Koordish soldier, named Salah-ud-deen—"better known in history as Saladin. Shawer, restored to authority, quickly quarrelled with his protectors, and endeavored to get rid of them—which proved not easy. He sought and obtained help from the Latin king of Jerusalem, in whose mind, too, there was the ambition to pluck this rotten-ripe plum on the Nile. After a war of five years duration, in which king Almeric was encouraged and but slightly helped by the Byzantine emperor, while Noureddin was approved and supported by the caliph of Bagdad, Noureddin's Koord general, Shiracouh, secured the prize. Grand vizier Shawer was put to death, and the wretched Fatimite caliph made young Saladin

his vizier, fancying he had chosen a young man too fond of pleasure to be dangerously ambitious. He was speedily undeceived. Saladin needed only three years to make himself master of Egypt, and the caliph, then dying, was stripped of his title and his sovereignty. The bold Koord took the throne in the name of the Abbasside Caliph, at Bagdad, summarily ending the Fatimite schism. He was still nominally the servant of the sultan of Aleppo; but when Nouredin died, A. D. 1178, leaving his dominions to a young son, Saladin was able, with little resistance, to displace the latter and to become undisputed sovereign of Mahometan Syria, Egypt, and a large part of Mesopotamia. He now resolved to expel the Latins from Palestine and to restore the authority of the prophet once more in the holy places of Jerusalem. King Almeric had died in 1173, leaving his crown to a son, Baldwin IV., who was an unfortunate leper. The leper prince died in 1185, and the only makeshift for a king that Jerusalem found in this time of serious peril was one Guy of Lusignan, a vile and despised creature, who had married the last Baldwin's sister. The Holy Land, the Holy City and the Holy Sepulchre had this pitiful kinglet for their defender when the potent Saladin led his Moslems against them. The decisive battle was fought in July, A. D. 1187, near the city of Tiberias, and is known generally in Christian history as the Battle of Tiberias, but was called by Mahometan annalists the Battle of Hittin. The Christians were defeated with great slaughter; the miserable King Guy was taken prisoner—but soon released, to make trouble; the "true cross," most precious of all Christian relics, fell into Saladin's irreverent hands. Tiberias, Acre, Casarea, Jaffa, Berytos, Ascalon, submitted to the victor. Jerusalem was at his mercy; but he offered its defenders and inhabitants permission to depart peacefully from the place, having no wish, he said, to defile its hallowed soil with blood. When his offer was rejected, he made a vow to enter the city with his sword and to do as the Christians had done when they waded to their knees in blood through its streets. But when, after a short siege of fourteen days, Jerusalem was surrendered to him, he forgot his angry oath, and forgot the vengeance which might not have seemed strange in that age and that place. The sword of the victor was sheathed. The inhabitants were ransomed at a stipulated rate, and those for whom no ransom was paid were held as slaves. The sick and the helpless were permitted to remain in the city for a year, with the Knights of the Hospital—conspicuous among the enemies of Saladin and his faith—to attend upon them. The Crescent shone Christian-like as it rose over Jerusalem again. The Cross—the Crusaders' Cross—was shamed. The Latin kingdom of Jerusalem was now nearly extinct; Tyre alone held out against Saladin and constituted the most of the kingdom of King Guy of Lusignan.—G. W. Cox, *The Crusades*, ch. 6.

A. D. 1188-1192.—Attempted recovery.—The Third Crusade. See CRUSADES: A. D. 1188-1192.

A. D. 1192-1229.—The succession of nominal kings.—Guy de Lusignan, the poor creature whom Sybille, daughter of King Amaury, married and made king of Jerusalem, lost his kingdom fairly enough on the battle-field of Tiberias. To win his freedom from Saladin, moreover, he renounced his claims by a solemn oath and pledged himself to quit the soil of Palestine forever. But oaths were of small account with the Christian Crusaders, and with the priests who kept their consciences. Guy got easy absolution for the trifling perjury, and was a king once more,—waiting for the Crusaders to recover his kingdom. But when, in 1190, his queen Sybille and her two children died, King Guy's royal title wore a faded look to most people and was wholly denied by many. Presently, Conrad of Montferrat, who held possession of Tyre—the best part of what remained in the actual kingdom of Jerusalem—married Sybille's sister, Isabella, and claimed the kingship in her name. King Richard of England supported Guy, and King Philip Augustus of France, in sheer contrariness, took his side with Conrad. After long quarrelling it was decided that Guy should wear the crown while he lived, and that it should pass when he died to Conrad and Conrad's children. It was Richard's wilfulness that forced this settlement; but, after all, on quitting Palestine, in 1192, the English king did not dare to leave affairs behind him in such worthless hands. He bought, therefore, the abdication of Guy de Lusignan, by making him king of Cyprus, and he gave the crown of Jerusalem to the strong and capable Conrad. But Conrad was murdered in a little time by emissaries of the Old Man of the Mountain (see ASSASSINS), who accused Richard of the instigation of the deed, and Count Henry of Champagne, Richard's nephew, accepted his widow and his crown. Henry enjoyed his titular royalty and his little hand-breadth of dominion on the Syrian coast for four years, only. Then he was killed, while defending Jaffa, and his oft-widowed widow, Isabella, brought the Lusignans back into Palestinian history again by marrying, for her fourth husband, Amaury de Lusignan, who had succeeded his brother Guy, now deceased, as king of Cyprus. Amaury possessed the two crowns, of Cyprus and Jerusalem, until his death, when the latter devolved on the daughter of Isabella, by her second husband, Conrad. The young queen accepted a husband recommended by the king of France, and approved by her barons, thus bringing a worthy king to the worthless throne. This was John de Brienne, a good French knight, who came to Palestine (A. D. 1210) with a little following of three hundred knights and strove valiantly to reconquer a kingdom for his royally entitled bride. But he strove in vain, and fragment after fragment of his crumbling remnant of dominion fell away until he held almost nothing except Acre. In 1217 the king of Hungary, the duke of Austria and a large army of crusaders came, professedly, to his help, but gave him none. The king of Hungary got possession of the head of St. Peter, the right hand of St. Thomas and one of the wine vessels of the marriage feast at Cana, and hastened home with his precious relics. The other crusaders went away to attack Egypt and brought their enterprise to a miserable end. Then King John de Brienne married his daughter Yolante, or Iolanta, to the

German emperor, or King of the Romans, Frederick II., and surrendered to that prince his rights and claims to the kingship of Jerusalem. Frederick, at war with the Pope, and under the ban of the Church, went to Palestine, with 600 knights, and contrived by clever diplomacy and skilful pressure to secure a treaty with the sultan of Egypt (A. D. 1229), which placed Jerusalem, under some conditions, in his hands, and added other territory to the kingdom which he claimed by right of his wife. He entered Jerusalem and there set the crown on his own head; for the patriarch, the priests, and the monk-knights, of the Hospital and the Temple, shunned him and refused recognition to his work. But Frederick was the only "King of Jerusalem" after Guy de Lusignan, who wore a crown in the Holy City, and exercised in reality the sovereignty to which he pretended. Frederick returned to Italy in 1229 and his kingdom in the East was soon as shadowy and unreal as that of his predecessors had been.—W. Besant and E. H. Palmer, *Jerusalem*, ch. 15 and 18.

A. D. 1242.—Sack and massacre by the Carismians.—After the overthrow of the Khwarezmiau (Korasmiau or Carismian) empire by the Mongols, its last prince, Gelaeddin, or Jalalu-d-Din, implacably pursued by those savage conquerors, fought them valiantly until he perished, at last, in Kurdistan. His army, made up of many mercenary bands, Turkish and other, then scattered, and two, at least, among its wandering divisions played important parts in subsequent history. Out of one of those Khwarezmian squadrons rose the powerful nation of the Ottoman Turks. The other invaded Syria. "The Mussulman powers of Syria several times united in a league against the Carismians, and drove them back to the other side of the Euphrates. But the spirit of rivalry which at all times divided the princes of the family of Saladin, soon recalled an enemy always redoubtable notwithstanding defeats. At the period of which we are speaking, the princes of Damascus, Carac, and Emessa had just formed an alliance with the Christians of Palestine; they not only restored Jerusalem, Tiberias, and the principality of Galilee to them, but they promised to join them in the conquest of Egypt, a conquest for which the whole of Syria was making preparations. The sultan of Cairo, to avenge himself upon the Christians who had broken the treaties concluded with him, to punish their new allies, and protect himself from their invasion, determined to apply for succour to the hordes of Carismia; and sent deputies to the leaders of these barbarians, promising to abandon Palestine to them, if they subdued it. This proposition was accepted with joy, and 20,000 horsemen, animated by a thirst for booty and slaughter, hastened from the further parts of Mesopotamia, disposed to be subservient to the vengeance or anger of the Egyptian monarch. On their march they ravaged the territory of Tripoli and the principality of Galilee, and the flames which everywhere accompanied their steps announced their arrival to the inhabitants of Jerusalem. Fortifications scarcely commenced, and the small number of warriors in the holy city, left not the least hope of being able to repel the unexpected

attacks of such a formidable enemy. The whole population of Jerusalem resolved to fly, under the guidance of the knights of the Hospital and the Temple. There only remained in the city the sick and a few inhabitants who could not make their minds up to abandon their homes and their infirm kindred. The Carismians soon arrived, and having destroyed a few intrenchments that had been made in their route, they entered Jerusalem sword in hand, massacred all they met, and . . . had recourse to a most odious stratagem to lure back the inhabitants who had taken flight. They raised the standards of the cross upon every tower, and set all the bells ringing." The retreating Christians were deceived. They persuaded themselves that a miracle had been wrought; "that God had taken pity on his people, and would not permit the city of Christ to be defiled by the presence of a sacrilegious horde. Seven thousand fugitives, deceived by this hope, returned to Jerusalem and gave themselves up to the fury of the Carismians, who put them all to the sword. Torrents of blood flowed through the streets and along the roads. A troop of nuns, children, and aged people, who had sought refuge in the church of the Holy Sepulchre, were massacred at the foot of the altars. The Carismians finding nothing among the living to satisfy their fury, burst open the sepulchres, and gave the coffins and remains of the dead up to the flames; the tomb of Christ, that of Godfrey of Bouillon, the sacred relics of the martyrs and heroes of the faith,—nothing was respected, and Jerusalem then witnessed within its walls such cruelties and profanations as had never taken place in the most barbarous wars, or in days marked by the anger of God." Subsequently the Christians of Palestine rallied, united their forces with those of the Moslem princes of Damascus and Emessa, and gave battle to the Carismians on the plains of Gaza; but they suffered a terrible defeat, leaving 30,000 dead on the field. Nearly all Palestine was then at the mercy of the savages, and Damascus was speedily subjugated. But the sultan of Cairo, beginning to fear the allies he had employed, turned his arms sharply against them, defeated them in two successive battles, and history tells nothing more of the career of these last adventurers of the Carismian or Khwarezmian name.—J. F. Michaud, *Hist. of the Crusades*, bk. 13.

A. D. 1291.—The end of the Christian kingdom.—The surviving title of "King of Jerusalem."—"Since the death of the Emperor Frederic II. [A. D. 1250], the baseless throne of Jerusalem had found a claimant in Hugh de Lusignan, King of Cyprus, who, as lineally descended from Alice, daughter of Queen Isabella, was, in fact, the next heir, after failure of issue by the marriage of Frederic and Iolanta de Brienne. His claims were opposed by the partisans of Charles of Anjou, King of the Sicilies,—that wholesale speculator in diadems. . . . He rested his claim upon the double pretensions of a papal title to all the forfeited dignities of the imperial house of Hohenstauffen, and of a bargain with Mary of Antioch; whose rights, although she was descended only from a younger sister of Alice, he had eagerly purchased. But the prior title of the house of Cyprus was more generally recognised

in Palestine; the coronation of Hugh had been celebrated at Tyre; and the last idle pageant of regal state in Palestine was exhibited by the race of Lusignan. At length the final storm of Mussulman war broke upon the phantom king and his subjects. It was twice provoked by the aggressions of the Latins themselves, in plundering the peaceable Moslem traders, who resorted, on the faith of treaties, to the Christian marts on the Syrian coast. After a vain attempt to obtain redress for the first of these violations of international law, Keladun, the reigning sultan of Egypt and Syria, revenged the infraction of the existing ten years' truce by a renewal of hostilities with overwhelming force; yearly repeated his ravages of the Christian territory; and at length, tearing the city and county of Tripoli—the last surviving great fief of the Latin kingdom—from its dilapidated crown, dictated the terms of peace to its powerless sovereign (A. D. 1289)." Two years later, a repetition of lawless outrages on Moslem merchants at Acre provoked a last wrathful and implacable invasion. "At the head of an immense army of 200,000 men, the Mameluke prince entered Palestine, swept the weaker Christian garrisons before him, and encamped under the towers of Acre (A. D. 1291). That city, which, since the fall of Jerusalem, had been for a century the capital of the Latin kingdom, was now become the last refuge of the Christian population of Palestine. Its defences were strong, its inhabitants numerous; but any state of society more vicious, disorderly, and helpless than its condition, can scarcely be imagined. Within its walls were crowded a promiscuous multitude, of every European nation, all equally disclaiming obedience to a general government, and enjoying impunity for every crime under the nominal jurisdiction of independent tribunals. Of these there were no less than seventeen; in which the papal legate, the king of Jerusalem, the despoiled great feudatories of his realm, the three military orders, the colonies of the maritime Italian republics, and the representatives of the princes of the West, all arrogated sovereign rights, and all abused them by the venal protection of offenders. . . . All the wretched inhabitants who could find such opportunities of escape, thronged on board the numerous vessels in the harbour, which set sail for Europe; and the last defence of Acre was abandoned to about 12,000 men, for the most part the soldiery of the three military orders. From that gallant chivalry, the Moslems encountered a resistance worthy of its ancient renown and of the extremity of the cause for which its triple fraternity had sworn to die. But the whole force of the Mameluke empire, in its yet youthful vigour, had been collected for their destruction." After a fierce siege of thirty-three days, one of the principal defensive works, described in contemporary accounts as "the Cursed Tower," was shattered, and the besiegers entered the city. The cowardly Lusignan had escaped by a stolen flight the night before. The Teutonic Knights, the Templars and the Hospitallers stood their ground with hopeless valor. Of the latter only seven escaped. "Bursting through the city, the savage victors pursued to the strand the unarmed and fleeing population, who had wildly sought a means of escape, which was denied not less by the fury of the elements than by the want of sufficient shipping. By the relentless cruelty of

their pursuers, the sands and the waves were dyed with the blood of the fugitives; all who survived the first horrid massacre were doomed to a hopeless slavery; and the last catastrophe of the Crusades cost life or liberty to 60,000 Christians. . . . The Christian population of the few maritime towns which had yet been retained fled to Cyprus, or submitted their necks, without a struggle, to the Moslem yoke; and, after a bloody contest of two hundred years, the possession of the Holy Land was finally abandoned to the enemies of the Cross. The fall of Acre closes the annals of the Crusades."—Col. G. Procter, *Hist. of the Crusades*, ch. 5, sect. 5.—J. F. Michaud, *Hist. of the Crusades*, bk. 15 (v. 3).—Actual royalty in the legitimate line of the Lusignan family ends with a queen Charlotte, who was driven from Cyprus in 1464 by her bastard brother James. She made over to the house of Savoy (one of the members of which she had married) her rights and the three crowns she wore,—the crown of Armenia having been added to those of Jerusalem and Cyprus in the family. "The Dukes of Savoy called themselves Kings of Cyprus and Jerusalem from the date of Queen Charlotte's settlement; the Kings of Naples had called themselves Kings of Jerusalem since the transfer of the rights of Mary of Antioch [see above], in 1277, to Charles of Anjou; and the title has run on to the present day in the houses of Spain and Austria, the Dukes of Lorraine, and the successive dynasties of Naples. . . . The Kings of Sardinia continued to strike money as Kings of Cyprus and Jerusalem, until they became Kings of Italy. There is no recognized King of Cyprus now; but there are two or three Kings of Jerusalem; and the Cypriot title is claimed, I believe, by some obscure branch of the house of Lusignan, under the will of King James II."—W. Stubbs, *Seventeen Lectures on the Study of Medieval and Modern Hist.*, lect. 8.

JESUATES, The.—"The Jesuates, so called from their custom of incessantly crying through the streets, 'Praised be Jesus Christ,' were founded by John Colombino, . . . a native of Siena. . . . The congregation was suppressed . . . by Clement IX., because some of the houses of the wealthy 'Padri dell' acqua vite,' as they were called, engaged in the business of distilling liquors and practising pharmacy (1668)."—J. Alzog, *Manual of Universal Church Hist.*, v. 3, p. 149.

JESUITS: A. D. 1540-1556.—Founding of the Society of Jesus.—System of its organization.—Its principles and aims.—"Experience had shown that the old monastic orders were no longer sufficient. . . . About 1540, therefore, an idea began to be entertained at Rome that a new order was needed; the plan was not to abolish the old ones, but to found new ones which should

better answer the required ends. The most important of them was the Society of Jesus. But in this case the moving cause did not proceed from Rome. Among the wars of Charles V. we must recur to the first contest at Navarra, in 1521. It was on this occasion, in defending Pamplona against the French, that Loyola received the wound which was to cause the monkish tendency to prevail over the chivalrous element in his nature. A kind of Catholicism still prevailed in Spain which no longer existed anywhere else. Its vigour may be traced to the fact that during the whole of the Middle Ages it was always in hostile contact with Islam, with the Mohammedan infidels. The crusades here had never come to an end. . . . As yet untainted by heresy, and suffering from no decline, in Spain, Catholicism was as eager for conquest as it had been in all the West in the eleventh and twelfth centuries. It was from the nation possessing this temperament that the founder of the order of the Jesuits sprang. Ignatius Loyola (born 1491) was a Spanish knight, possessing the twofold tendencies which distinguish the knighthood of the Middle Ages. He was a gallant swordsman, delighting in martial feats and romantic love adventures; but he was at the same time animated by a glowing enthusiasm for the Church and her supremacy, even during the early period of his life. These two tendencies were striving together in his character, until the event took place which threw him upon a bed of suffering. No sooner was he compelled to renounce his worldly knighthood, than he was sure that he was called upon to found a new order of spiritual knighthood, like that of which he had read in the chivalrous romance, 'Amadis.' Entirely unaffected by the Reformation, what he understood by this was a spiritual brotherhood in the true mediæval sense, which should convert the heathen in the newly-discovered countries of the world. With all the zeal of a Spaniard he decided to live to the Catholic Church alone; he chastised his body with penances and all kinds of privations, made a pilgrimage to Jerusalem, and, in order to complete his defective education, he visited the university of Paris; it was among his comrades there that he formed the first associations out of which the order was afterwards formed. Among these was Jacob Lainez; he was Loyola's fellow-countryman, the organizing head who was to stamp his impress upon the order. . . . Then came the spread of the new doctrines, the mighty progress of Protestantism. No one who was heartily attached to the old Church could doubt that there was work for such an association, for the object now in hand was not to make Christians of the aboriginal inhabitants of Central America, but to reconquer the apostate members of the Romish Church. About 1539 Loyola came with his fraternity to Rome. He did not find favour in all circles; the old orders regarded the new one with jealousy and mistrust; but Pope Paul III. (1534-49) did not allow himself to be misled, and in 1540 gave the fraternity his confirmation, thus constituting Loyola's followers an order, which, on its part, engaged 'to obey in all things the reigning Pope—to go into any country, to Turks, heathen, or heretics, or to whomsoever he might send them, at once, unconditionally, without question or reward.' It is from this time that the special history of the

order begins. During the next year Loyola was chosen the first general of the order, an office which he held until his death (1541-56). He was succeeded by Lainez. He was less enthusiastic than his predecessor, had a cooler head, and was more reasonable; he was the man for diplomatic projects and complete and systematic organization. The new order differed in several respects from any previously existing one, but it entirely corresponded to the new era which had begun for the Romish Church. . . . The construction of the new order was based and carried out on a monarchical-military system. The territories of the Church were divided into provinces; at the head of each of these was a provincial; over the provincials, and chosen by them, the general, who commanded the soldiers of Christ, and was entrusted with dictatorial power, limited only by the opinions of three judges, assistants or admonitors. The general has no superior but the Pope, with whom he communicates directly; he appoints and dismisses all officials, issues orders as to the administration of the order, and rules with undisputed sway. The absolute monarchy which was assigned to the Pope by the Council of Trent, was conferred by him on the general of the Jesuits. Among the four vows of poverty, chastity, obedience, and subjection to the Pope, obedience was the soul of all. To learn and practise this physically and mentally, up to the point where, according to the Jesuit expression, a man becomes 'tanquam lignum et cadaver,' was the ruling principle of the institution. . . . Entire renunciation of the will and judgment in relation to everything commanded by the superior, blind obedience, unconditional subjection, constitute their ideal. There was but one exception, but even in this there was a reservation. It was expressly stated that there can be no obligation 'ad peccatum mortale vel veniale,' to sinful acts of greater or less importance, 'except when enjoined by the superior, in the name of Jesus Christ,' 'vel in virtute obedientie,'—an elastic doctrine which may well be summed up in the dictum that 'the end justifies the means.' Of course, all the members of this order had to renounce all ties of family, home, and country, and it was expressly enjoined. . . . Of the vow of poverty it is said, in the 'Summarium' of the constitution of the order, that it must be maintained as a 'muris religionis.' No one shall have any property; every one must be content with the meanest furniture and fare, and, if necessity or command require it, he must be ready to beg his bread from door to door ('ostium mendicare'). The external aspect of members of the order, their speech and silence, gestures, gait, garb, and bearing shall indicate the prescribed purity of soul. . . . On all these and many other points, the new order only laid greater stress on the precepts which were to be found among the rules of other orders, though in the universal demoralisation of the monastic life they had fallen into disuse. But it decidedly differed from all the others in the manner in which it aimed at obtaining sway in every sphere and every aspect of life. Himself without home or country, and not holding the doctrines of any political party, the disciple of Jesus renounced everything which might alienate him among varying nationalities, pursuing various political aims. Then he did not confine his labours to the pulpit and the confessional; he gained an in-

fluence over the rising generation by a systematic attention to education, which had been shamefully neglected by the other orders. He devoted himself to education from the national schools up to the academic chair, and by no means confined himself to the sphere of theology. This was a principle of immense importance. . . . It is a true saying, that 'he who gains the youth possesses the future'; and by devoting themselves to the education of youth, the Jesuits secured a future to the Church more surely than by any other scheme that could have been devised. What the schoolmasters were for the youth, the confessors were for those of riper years; what the clerical teachers were for the common people, the spiritual directors and confidants were for great lords and rulers—for the Jesuits aspired to a place at the side of the great, and at gaining the confidence of kings. It was not long before they could boast of astonishing success."—L. Häusser, *The Period of the Reformation*, ch. 20.—"The Society, in 1556, only 16 years after its commencement, counted as many as twelve provinces, 100 houses, and upwards of 1,000 members, dispersed over the whole known world. Their two most conspicuous and important establishments were the Collegio Romano and the German College. They already were in possession of many chairs, and soon monopolised the right of teaching, which gave them a most overwhelming influence."—G. B. Nicolini, *Hist. of the Jesuits*, p. 90.

A. D. 1542-1649.—The early Jesuit Missionaries and their labors.—"In 1542, Xavier landed at Goa, the capital of the Portuguese colony, on the western coast of Hindostan. He took lodgings at the hospital, and mingled with the poor. He associated also with the rich, and even played with them at cards, acting piously upon the motto of the order, 'Ad maiorem Dei gloriam.' Having thus won good-will to himself, he went into the streets, with his hand-bell and crucifix, and, having rung the one, he held up the other, exhorting the multitudes to accept that religion of which it was the emblem. His great facility in acquiring foreign languages helped him much. He visited several times the pearl-fisheries on the Malabar coast, remaining at one time thirteen months, and planting forty-five churches. Cape Comorin, Travancore, Meliapore, the Moluccas, Malacca, and other ports of India, and finally the distant island of Japan—where Christianity was [accepted—see JAPAN: A. D. 1549-1686]. . . .—received his successive visits. Leaving two Jesuits on the island, he returned to settle some matters at Goa, which done, he sailed for China, but died at the island of Sancian, a few leagues from the city of Canton, in 1552—ten years only after his arrival in India. He had in this time established an inquisition and a college at Goa. Numbers of the society, whom he had wisely distributed, had been sent to his aid; and the Christians in India were numbered by hundreds of thousands before the death of this 'Apostle of the Indies.' It has even been said, that he was the means of converting more persons in Asia than the church had lost by the Reformation in Europe. The empire of China, which

Xavier was not allowed to enter, was visited, half a century later, by the Jesuit Matthew Ricci, who introduced his religion by means of his great skill in science and art, especially mathematics and drawing [see CHINA: A. D. 1294-1882]. He assumed the garb of a mandarin—associated with the higher classes—dined with the Emperor—allowed those who received Christianity to retain any rites of their own religion to which they were attached—and died in 1610, bequeathing and recommending his policy to others. This plan of accommodation was far more elaborately carried out by Robert Nobili, who went to Madura, in southern Hindostan, as a missionary of the order in 1606. He had observed the obstacle which caste threw in the way of missionary labor, and resolved to remove it. He presented himself as a foreign Brahmin, and attached himself to that class. They had a tradition, that there once had been four roads to truth in India, one of which they had lost. This he professed to restore. He did no violence to their existing ideas or institutions, but simply gave them other interpretations, and in three years he had seventy converted Brahmins about him. From this time he went on gathering crowds of converts, soon numbering 150,000. This facile policy, however, attracted the notice of the other religious orders, was loudly complained of at Rome, and, after almost an entire century of agitation, was condemned in 1704 by a special legation, appointed by Clement XI. to inquire into the matter of complaint. . . . The attention of the society was early directed to our own continent, and its missions everywhere anticipated the settlements. The most remarkable missions were in South America. Missionaries had been scattered over the whole continent, everywhere making converts, but doing nothing for the progress of the order. Aquaviva was general. This shrewd man saw the disadvantage of the policy, and at once applied the remedy. He directed, that, leaving only so many missionaries scattered over the continent as should be absolutely necessary, the main force should be concentrated upon a point. Paraguay was chosen. The missionaries formed what were called reductions—that is, villages into which the Indians were collected from their roving life, taught the rudiments of civilization, and some of the rites and duties of the Christian religion. These villages were regularly laid out with streets, running each way from a public square, having a Church, work-shops and dwellings. Each family had a small piece of land assigned for cultivation, and all were reduced to the most systematic habits of industry and good order. . . . The men were trained to arms, and all the elements of an independent empire were fast coming into being. In 1632, thirty years after the starting of this system, Paraguay had twenty reductions, averaging 1,000 families each, which at a moderate estimate, would give a population of 100,000, and they still went on prospering until three times this number are, by some, said to have been reached. The Jesuits started, in California, in 1642, the same system, which they fully entered upon in 1679. This, next to Paraguay, became their most successful mission.”—*A Historical Sketch of the Jesuits (Putnam's Mag., September, 1856).*—In 1632 the Jesuits entered on their mission work in Canada, or New France, where they supplanted the Récollet friars. “In

1640 Montreal, the site of which had been already indicated by Champlain in 1611, was founded, that there might be a nearer rendezvous than Quebec for the converted Indians. At its occupation a solemn mass was celebrated under a tent, and in France itself the following February a general supplication was offered up that the Queen of Angels would take the Island of Montreal under her protection. In the August of this year a general meeting of French settlers and Indians took place at Montreal, and the festival of the Assumption was solemnised at the island. The new crusading spirit took full possession of the enthusiastic French people, and the niece of Cardinal Richelieu founded a hospital for the natives between the Kennebec and Lake Superior, to which young and nobly-born hospital nuns from Dieppe offered their services. Plans were made for establishing mission posts, not only on the north amongst the Algonquins, but to the south of Lake Huron, in Michigan and at Green Bay, and so on as far as the regions to the west. The maps of the Jesuits prove that before 1660 they had traced the waters of Lake Erie and Lake Superior and had seen Lake Michigan. The Huron mission embraced principally the country lying between Lake Simcoe and Georgian Bay, building its stations on the rivers and shores. But the French missionaries, however much they might desire it, could not keep outside the intertribal strifes of the natives around them. Succeeding to Champlain's policy, they continued to aid the Algonquins and Hurons against their inveterate enemies the Iroquois. The Iroquois retaliated by the most horrible cruelty and revenge. There was no peace along the borders of this wild country, and missionaries and colonists carried their lives in their hands. In 1648 St. Joseph, a Huron mission town on the shores of Lake Simcoe, was burned down and destroyed by the Iroquois, and Père Daniel, the Jesuit leader, killed under circumstances of great atrocity. In 1649 St. Ignace, a station at the corner of Georgian Bay, was sacked, and there the pious Brebeuf met his end, after having suffered the most horrible tortures the Indians could invent. Brebeuf, after being hacked in the face and burnt all over the body with torches and red-hot iron, was scalped alive, and died after three hours' suffering. His companion, the gentle Gabriel Lallemant, endured terrible tortures for seventeen hours.”—W. P. Greswell, *Hist. of the Dominion of Canada*, ch. 6. —The Hurons were dispersed and their nation destroyed by these attacks of the Iroquois. “With the fall of the Hurons fell the best hope of the Canadian mission. They, and the stable and populous communities around them, had been the rude material from which the Jesuit would have formed his Christian empire in the wilderness; but, one by one, these kindred peoples were uprooted and swept away, while the neighboring Algonquins, to whom they had been a bulwark, were involved with them in a common ruin. The land of promise was turned to a solitude and a desolation. There was still work in hand, it is true,—vast regions to explore, and countless heathens to snatch from perdition; but these, for the most part, were remote and scattered hordes, from whose conversion it was vain to look for the same solid and decisive results. In a measure, the occupation of the Jesuits was gone. Some of them went home, ‘well resolved,’

writes the Father Superior, 'to return to the combat at the first sound of the trumpet'; while of those who remained, about twenty in number, several soon fell victims to famine, hardship, and the Iroquois. A few years more, and Canada ceased to be a mission; political and commercial interests gradually became ascendant, and the story of Jesuit propagandism was interwoven with her civil and military annals."—F. A. D. 1573-1592.—Change in the statutes of the Order on demands from Spain.—"At the first establishment of the Order, the elder and already educated men, who had just entered it, were for the most part Spaniards; the members joining it from other nations were chiefly young men, whose characters had yet to be formed. It followed naturally that the government of the society was, for the first ten years, almost entirely in Spanish hands. The first general congregation was composed of twenty-five members, eighteen of whom were Spaniards. The first three generals belonged to the same nation. After the death of the third, Borgia, in the year 1573, it was once more a Spaniard, Polanco, who had the best prospect of election. It was however manifest that his elevation would not have been regarded favourably, even in Spain itself. There were many new converts in the society who were Christianized Jews. Polanco also belonged to this class, and it was not thought desirable that the supreme authority in a body so powerful, and so monarchically constituted, should be confided to such hands. Pope Gregory XIV., who had received certain intimations on this subject, considered a change to be expedient on other grounds also. When a deputation presented itself before him from the congregation assembled to elect their general, Gregory inquired how many votes were possessed by each nation; the reply showed that Spain held more than all the others put together. He then asked from which nation the generals of the order had hitherto been taken. He was told that there had been three, all Spaniards. 'It will be just, then,' replied Gregory, 'that for once you should choose one from among the other nations.' He even proposed a candidate for their election. The Jesuits opposed themselves for a moment to this suggestion, as a violation of their privileges, but concluded by electing the very man proposed by the pontiff. This was Eberhard Mercurianus. A material change was at once perceived, as the consequence of this choice. Mercurianus, a weak and irresolute man, resigned the government of affairs, first indeed to a Spaniard again, but afterwards to a Frenchman, his official admonitor; factions were formed, one expelling the other from the offices of importance, and the ruling powers of the Order now began to meet occasional resistance from its subordinate members. But a circumstance of much higher moment was, that on the next vacancy—in the year 1581—this office was conferred on Claudius Acquaviva, a Neapolitan, belonging to a house previously attached to the French party, a man of great energy, and only thirty-eight years old.

The Spaniards then thought they perceived that their nation, by which the society had been founded and guided on its early path, was now to be forever excluded from the generalship. Thereupon they became discontented and refractory, and conceived the design of making themselves less dependent on Rome. . . . They first had recourse to the national spiritual authority of their own country—the Inquisition. . . . One of the discontented Jesuits, impelled, as he affirmed, by a scruple of conscience, accused his order of concealing, and even remitting, transgressions of the kind so reserved, when the criminal was one of their society. The Inquisition immediately caused the Provincial implicated, together with his most active associates, to be arrested. Other accusations being made in consequence of these arrests, the Inquisition commanded that the statutes of the order should be placed before it, and proceeded to make further seizures of parties accused. . . . The Inquisition was, however, competent to inflict a punishment on the criminal only: it could not prescribe changes in the regulations of the society. When the affair, therefore, had proceeded thus far, the discontented members applied to the king also, assailing him with long memorials, wherein they complained of the defects in their constitution. The character of this constitution had never been agreeable to Philip II.; he used to say that he could see through all the other orders, but that the order of Jesuits he could not understand. . . . He at once commanded Manrique, bishop of Carthage, to subject the Order to a visitation, with particular reference to these points. . . . The character of Sixtus V. made it particularly easy for Acquaviva to excite the antipathies of that pontiff against the proceedings of the Spaniards. Pope Sixtus had formed the hope, as we know, of rendering Rome, more decidedly than it ever yet was, the metropolis of Christendom. Acquaviva assured him, that the object really laboured for in Spain was no other than increased independence of Rome. Pope Sixtus hated nothing so much as illegitimate birth; and Acquaviva caused him to be informed that Manrique, the bishop selected as 'Visitor' of the Jesuits, was illegitimate. These were reasons sufficient to make Sixtus recall the assent he had already given to the visitation. He even summoned the case of the provincial before the tribunals of Rome. From his successor, Gregory XIV., the general succeeded in obtaining a formal confirmation of the rule of the order. But his antagonists also were unyielding and crafty. They perceived that the general must be attacked in the court of Rome itself. They availed themselves of his momentary absence. . . . In the summer of 1592, at the request of the Spanish Jesuits and Philip II., but without the knowledge of Acquaviva, the pontiff commanded that a general congregation should be held. Astonished and alarmed, Acquaviva hastened back. To the generals of the Jesuits these 'Congregations' were no less inconvenient than were the Convocations of the Church to the popes; and if his predecessors were anxious to avoid them, how much more cause had Acquaviva, against whom there prevailed so active an enmity! But he was soon convinced that the arrangement was irrevocable; he therefore resumed his composure and said, 'We are obedient sons; let the will of the holy father be done.'

... Philip of Spain had demanded some changes, and had recommended others for consideration. On two things he insisted: the resignation of certain papal privileges; those of reading forbidden books, for example, and of granting absolution for the crime of heresy; and a law, by virtue of which every novice who entered the order should surrender whatever patrimonial rights he might possess, and should even resign all his benefices. These were matters in regard to which the order came into collision with the Inquisition and the civil government. After some hesitation, the demands of the king were complied with, and principally through the influence of Acquaviva himself. But the points recommended by Philip for consideration were of much higher moment. First of all came the questions, whether the authority of the superiors should not be limited to a certain period; and whether a general congregation should not be held at certain fixed intervals? The very essence and being of the institute, the rights of absolute sovereignty, were here brought into question. Acquaviva was not on this occasion disposed to comply. After an animated discussion, the congregation rejected these propositions of Philip; but the pope, also, was convinced of their necessity. What had been refused to the king was now commanded by the pope. By the plenitude of his apostolic power, he determined and ordained that the superiors and rectors should be changed every third year; and that, at the expiration of every sixth year, a general congregation should be assembled. It is, indeed, true that the execution of these ordinances did not effect so much as had been hoped from them. ... It was, nevertheless, a very serious blow to the society, that it had been compelled, by internal revolt and interference from without, to a change in its statutes."—L. Ranke, *Hist. of the Popes*, bk. 6, sect. 9 (v. 2).

A. D. 1757-1773.—Suppression of the Society in Portugal and the Portuguese dominions.—In 1757, a series of measures intended to break the power, if not to end the existence, of the Society of Jesus, in Portugal and the Portuguese dominions, was undertaken by the great Portuguese minister, Carvalho, better known by his later title as the Marquis of Pombal. "It is not necessary to speculate on the various motives which induced Carvalho to attack the Jesuits, but the principal cause lay in the fact that they were wealthy and powerful, and therefore a dangerous force in an absolutist monarchy. It must be remembered that the Jesuits of the 18th century formed a very different class of men to their predecessors. They were no longer intrepid missionary pioneers, but a corporation of wealthy traders, who made use of their spiritual

position to further the cause of their commerce. They had done a great work in America by opening up the interior of Brazil and converting the natives, and their administration of Paraguay, one of the most interesting achievements in the whole history of Christianity, was without doubt a blessing to the people. But by the middle of the 18th century they had gone too far. It was one thing to convert the natives of Brazil, and another to absorb much of the wealth of that country, in doing which they prejudiced not only the Crown but the Portuguese people, whom they kept from settling in the territory under their rule. Whether it was a sufficient reason for Carvalho to attack the order, because it was wealthy and powerful, and had departed from its primitive simplicity, is a question for every one to decide for themselves, but that this was the reason, and that the various excuses alleged by the admirers of the great minister are without foundation, is an undoubted fact. On September 19, 1757, the first important blow was struck, when the king's Jesuit confessor was dismissed, and all Jesuits were forbidden to come to Court. Carvalho, in the name of the King of Portugal, also formally denounced the order at Rome, and Benedict XIV., the then Pope, appointed the Cardinal de Saldanha, a friend of the minister, Visitor and Reformer of the Society of Jesus. The cardinal did not take long in making up his mind, and May 15, 1758, he forbade the Jesuits to engage in trade. An attempt upon the king's life, which shortly followed this measure, gave the minister the opportunity he wanted for urging the suppression of the famous society. The history of the Tavora plot, which culminated in this attempt, is one of the most mysterious affairs in the whole history of Portugal. ... The three leaders of the plot were the Duke of Aveiro, a descendant of John II., and one of the greatest noblemen in Portugal, the Marquis of Tavora, who had filled with credit the post of Governor-general of India, and the Count of Atouguia, a descendant of the gallant Dom Luis de Athaide, the defender of Goa; but the heart and soul of the conspiracy was the Marchioness of Tavora, a beautiful and ambitious woman, who was bitterly offended because her husband had not been made a duke. The confessor of this lady was a Jesuit named Gabriel Malagrida. ... The evidence on all sides is most contradictory, and all that is certain is that the king was fired at and wounded on the night of September 3, 1758; and that in the following January, the three noblemen who have been mentioned, the Marchioness of Tavora, Malagrida with seven other Jesuits, and many other individuals of all ranks of life, were arrested as implicated in the attempt to murder. The laymen had but a short trial and, together with the marchioness, were publicly executed ten days after their arrest. King Joseph certainly believed that the real culprits had been seized, and in his gratitude he created Carvalho Count of Oeyras, and encouraged him to pursue his campaign against the Jesuits. On January 19, 1759, the estates belonging to the society were sequestered; and on September 3rd, all its members were expelled from Portugal, and directions were sent to the viceroys of India and Brazil to expel them likewise. The news of this bold stroke was received with admiration everywhere, except at Rome, and it became noised

abroad that a great minister was ruling in Portugal. . . . In 1764 the Jesuit priest Malagrida was burnt alive, not as a traitor but as a heretic and imposter, on account of some crazy tracts he had written. The man was regarded as a martyr, and all communication between Portugal and the Holy See was broken off for two years, while the Portuguese minister exerted all his influence with the Courts of France and Spain to procure the entire suppression of the society which he hated. The king supported him consistently, and after another attempt upon his life in 1769, which the minister as usual attributed to the Jesuits, King Joseph created his faithful servant Marquis of Pombal, by which title he is best known to fame. The prime ministers of France and Spain cordially acquiesced in the hatred of the Jesuits, for both the Duc de Choiseul and the Count d'Aranda had something of Pombal's spirit in them, and imitated his policy; in both countries the society, which on its foundation had done so much for Catholicism and Christianity, was proscribed, and the worthy members treated with as much rigour as the unworthy; and finally in 1773 Pope Clement XIV. solemnly abolished the Society of Jesus. King Joseph did not long survive this triumph of his minister, for he died on February 24, 1777, and the Marquis of Pombal, then an old man of 77, was at once dismissed from office."—H. M. Stephens, *The Story of Portugal*, ch. 16.

A. D. 1761-1769.—Proceedings against the Order in the Parliament of Paris.—Suppression in France, Spain, Bavaria, Parma, Modena, Venice.—Demands on the Pope for the abolition of the Society.—"Father Antoine Lavalette, 'procureur' of the Jesuit Missions in the Antilles, resided in that capacity at St. Pierre in the island of Martinique. He was a man of talent, energy, and enterprise; and, following an example by no means uncommon in the Society, he had been for many years engaged in mercantile transactions on an extensive scale, and with eminent success. It was an occupation expressly prohibited to missionaries; but the Jesuits were in the habit of evading the difficulty by means of an ingenious fiction. Lavalette was in correspondence with the principal commercial firms in France, and particularly with that of Lioney Brothers and Gouffre, of Marseilles. He made frequent consignments of merchandise to their house, which were covered by bills of exchange, drawn in Martinique and accepted by them. For a time the traffic proceeded prosperously; but it so happened that upon the breaking out of the Seven Years' War, several ships belonging to Lavalette, richly freighted with West Indian produce, were captured by the English cruisers, and their cargoes confiscated. The immediate loss fell upon Lioney and Gouffre, to whom these vessels were consigned," and they were driven to bankruptcy, the General of the Society of Jesus refusing to be responsible for the obligations of his subordinate, Father Lavalette. "Under these circumstances the creditors determined to attack the Jesuit community as a corporate body," and the latter were so singularly unwary, for once, as not only to contest the claim before the Parliament of Paris, but to appeal to the constitutions of their Society in support of their contention, that each college was

independent in the matter of temporal property, and that no corporate responsibility could exist. "The Parliament at once demanded that the constitutions thus referred to should be examined. The Jesuits were ordered to furnish a copy of them; they obeyed. . . . The compulsory production of these mysterious records, which had never before been inspected by any but Jesuit eyes, was an event of crucial significance. It was the turning-point of the whole affair; and its consequences were disastrous." As a first consequence, "the court condemned the General of the Jesuits, and in his person the whole Society which he governed, to acquit the bills of exchange still outstanding, together with interest and damages, within the space of a year from the date of the 'arrêt.' In default of payment the debt was made recoverable upon the common property of the Order, excepting only the endowments specially restricted to particular colleges. The delight of the public, who were present on the occasion in great numbers, 'was excessive,' says Barbier, 'and even indecent.'" As a second consequence, the Parliament, on the 6th of August, 1761, "condemned a quantity of publications by the Jesuits, dating from the year 1590 downwards, to be torn and burnt by the executioner; and the next day this was duly carried out in the court of the Palais de Justice. Further, the 'arrêt' prohibited the king's subjects from entering the said Society; forbade the fathers to give instruction, private or public, in theology, philosophy, or humanity; and ordered their schools and colleges to be closed. The accusation brought against their books was . . . that of teaching 'abominable and murderous doctrine,' of justifying sedition, rebellion, and regicide. . . . The Government replied to these bold measures by ordering the Parliament to suspend the execution of its 'arrêts' for the space of a year. The Parliament affected to obey, but stipulated, in registering the letters-patent, that the delay should not extend beyond the 1st of April, 1762, and made other provisions which left them virtually at liberty to proceed as they might think proper. The Jesuits . . . relied too confidently on the protection of the Crown. . . . But the prestige of the monarchy was now seriously impaired, and it was no longer wise or safe for a King of France to undertake openly the defence of any institution which had incurred a deliberate sentence of condemnation from the mass of his people." In November, 1761, a meeting of French prelates was summoned by the Royal Council to consider and report upon several questions relative to the utility of the Society of Jesus, the character of its teaching and conduct, and the modifications, if any, which should be proposed as to the extent of authority exercised by the General of the Society. The bishops, by a large majority, made a report favorable to the Jesuits, but recommended, "as reasonable concessions to public opinion, certain alterations in its statutes and practical administration. . . . This project of compromise was forwarded to Rome for the consideration of the Pope and the General; and Louis gave them to understand, through his ambassador, that upon no other conditions would it be possible to stem the tide of opposition, and to maintain the Jesuits as a body corporate in France. It was now that the memorable reply was made, either by the General Ricci, or, according to other accounts,

by Pope Clement XIII. himself—'Sint ut sunt, aut non sint'; 'Let them remain as they are, or let them exist no longer.' Even had the proposed reform been accepted, 'its success was problematical; but its rejection sealed the fate of the Order. Louis, notwithstanding the ungracious response from Rome, proposed his scheme of conciliation to the Parliament in March, 1762, and annulled at the same time all measures adverse to the Jesuits taken since the 1st of August preceding. The Parliament, secretly encouraged by the Duc de Choiseul, refused to register this edict; the king, after some hesitation, withdrew it; and no available resource remained to shield the Order against its impending destiny. The Parliaments, both of Paris and the Provinces, laid the axe to the root without further delay. By an 'arrêt' of the 1st of April, 1762, the Jesuits were expelled from their 84 colleges in the ressort of the Parliament of Paris, and the example was followed by the provincial tribunals of Rouen, Rennes, Metz, Bordeaux, and Aix. The Society was now assailed by a general chorus of invective and execration. . . . The final blow was struck by the Parliament of Paris on the 6th of August, 1762. . . . The sentence then passed condemned the Society as 'inadmissible, by its nature, in any civilized State, inasmuch as it was contrary to the law of nature, subversive of authority spiritual and temporal, and introduced, under the veil of religion, not an Order sincerely aspiring to evangelical perfection, but rather a political body, of which the essence consists in perpetual attempts to attain, first, absolute independence, and in the end, supreme authority.' . . . The decree concludes by declaring the vows of the Jesuits illegal and void, forbidding them to observe the rules of the Order, to wear its dress, or to correspond with its members. They were to quit their houses within one week, and were to renounce, upon oath, all connection with the Society, upon pain of being disqualified for any ecclesiastical charge or public employment. The provincial Parliaments followed the lead of the capital, though in some few instances the decree of suppression was opposed, and carried only by a small majority; while at Besançon and Douai the decision was in favour of the Society. In Lorraine, too, under the peaceful government of Stanislas Leczinski, and in Alsace, where they were powerfully protected by Cardinal de Rohan, Bishop of Strasburg, the Jesuits were left unmolested. . . . The suppression of the Jesuits—the most important act of the administration of the Duc de Choiseul—was consummated by a royal ordinance of November, 1764, to which Louis did not give his consent without mistrust and regret. It decreed that the Society should cease to exist throughout his Majesty's dominions; but it permitted the ex-Jesuits to reside in France as private citizens, and to exercise their ecclesiastical functions under the jurisdiction of the dioceses. . . . Almost immediately afterwards, on the 7th of January, 1765, appeared the bull 'Apostolicum,' by which Clement XIII. condemned, with all the weight of supreme and infallible authority, the measure which had deprived the Holy See of its most valiant defenders. . . . The only effect of the intervention of the Roman Curia was to excite further ebullitions of hostility against the prostrate Order. Charles III. of Spain, yielding, as it is alleged, to the

exhortations of the Duc de Choiseul, abolished it throughout his dominions by a sudden mandate of April 2, 1767. . . . The Pope precipitated the final catastrophe by a further act of imprudence. The young Duke of Parma, a prince of the house of Bourbon, had excluded the Jesuits from his duchy, and had published certain ecclesiastical regulations detrimental to the ancient pretensions of the Roman See. Clement XIII., reviving an antiquated title in virtue of which Parma was claimed as a dependent fief of the Papacy, was rash enough to launch a bull of excommunication against the Duke, and deprived him of his dominions as a rebellious vassal. All the Bourbon sovereigns promptly combined to resent this insult to their family. The Papal Bull was suppressed at Paris, at Madrid, at Lisbon, at Parma, at Naples. The Jesuits were expelled from Venice, from Modena, from Bavaria. The Pontiff was summoned to revoke his 'monitorium'; and on his refusal French troops took possession of Avignon and the Comtat Venaissin, while the King of Naples seized Benevento and Pontecorvo. On the 16th of January, 1769, the ambassadors of Spain, France, and Naples presented a joint note to the Holy Father, demanding that the Order of Jesus should be secularised and abolished for ever. Clement, who had suffered severely from the manifold humiliations and reverses of his Pontificate, was overwhelmed by this last blow, from the effects of which he never rallied. He expired almost suddenly on the 2nd of February, 1769."—W. H. Jervis, *Hist. of the Church of France*, v. 2, ch. 10.

Also in: T. Griesinger, *The Jesuits*, bk. 6, ch. 6, and bk. 7, ch. 1.

A. D. 1769-1871.—Papal suppression and restoration of the Order.—"The attitude of the Roman Catholic Courts was so threatening, and their influence with the Conclave so powerful, that Lorenzo Ganganelli was selected [1769] for the triple crown, as the man best suited for their purposes. Belonging to the Franciscans, who had ever been antagonistic to the Jesuits, he had been a follower of the Augustinian theology, and was not altogether free from Jansenism. The Jesuits even went so far as to pray publicly in their churches for the conversion of the Pope. The pontificate of Clement XIV. has been rendered memorable in history by the Papal decree of July 21, 1773, which in its policy adopted the maxim of Lorenzo Ricci, the inflexible General of the Jesuits, 'Sint ut sunt, aut non sunt'—Let us be as we are, or let us not be! That decree declared that, from the very origin of the Order, sorrow, jealousies, and dissensions arose, not only among its own members but between them and the other religious orders and their colleges. After further declaring that, urged as its head by a sense of duty to restore the harmony of the Church, and feeling convinced that the Society could no longer subserve the uses for which it was created, and on other grounds of prudence and governmental wisdom, he by his decree abolished the Order of Jesuits, its offices, houses, and institutes. . . . The other religious orders at Rome were jealous that Jesuits should have been the confessors of Sovereigns at Westminster, Madrid, Vienna, Versailles, Lisbon, and Naples. The influences of the Dominicans, the Benedictines, and the Oratorians were accordingly exercised for their suppression. . . . The Papal Bull 'Dominus Redemptor noster' was at first resisted

by the Jesuits, and their General, Lorenzo Ricci, was sent to the Castle of St. Angelo. Bernardino Renzi, a female Pythoress, having predicted the death of the Pope, two Jesuits, Coltrano and Venissa, who were suspected of having instigated her prophecies, were consigned to the same prison. All that follows relating to the fate of Ganganelli is of mere historic interest; his end is shrouded in mystery, which has been as yet, and is likely to continue, impenetrable. According to the revelations of Cardinal de Bernis, Ganganelli was himself apprehensive of dying by poison, and a sinister rumour respecting a cup of chocolate with an infusion of 'Aqua de Tofana,' administered by a pious attendant, was generally prevalent throughout Europe; but the time has long since passed for an inquest over the deathbed of Clement XIV."—*The Jesuits and their Expulsion from Germany (Fraser's Mag., May, 1873)*.—"All that follows the publication of the brief—the death of Ganganelli, the fierce and yet unexhausted disputes about the last year of his life, and the manner of his death—are to us indescribably melancholy and repulsive. . . . We have conflicting statements, both of which cannot be true—churchman against churchman—cardinal against cardinal—even, it should seem, pope against pope. On the one side there is a triumph, hardly disguised, in the terrors, in the sufferings, in the madness, which afflicted the later days of Clement; on the other, the profoundest honour, the deepest commiseration, for a wise and holy Pontiff, who, but for the crime of his enemies, might have enjoyed a long reign of peace and respect and inward satisfaction. There a protracted agony of remorse in life and anticipated damnation—that damnation, if not distinctly declared, made dubious or averted only by a special miracle:—here an apotheosis—a claim, at least, to canonization. There the judgment of God pronounced in language which hardly affects regret; here more than insinuations, dark charges of poison against persons not named, but therefore involving in the ignominy of possible guilt a large and powerful party. Throughout the history of the Jesuits it is this which strikes, perplexes, and appals the dispassionate student. The intensity with which they were hated surpasses even the intensity with which they hated. Nor is this depth of mutual animosity among those or towards those to whom the Jesuits were most widely opposed, the Protestants, and the adversaries of all religion; but among Roman Catholics—and those not always Jansenists or even Gallicans—among the most ardent assertors of the papal supremacy, monastics of other orders, parliaments, statesmen, kings, bishops, cardinals. Admiration and detestation of the Jesuits divide, as far as feeling is concerned, the Roman Catholic world, with a schism deeper and more implacable than any which arrays Protestant against Protestant, Episcopacy and Independency, Calvinism and Arminianism, Puseyism and Evangelicism. The two parties counterwork each other, write against each other in terms of equal acrimony, misunderstand each other, misrepresent each other, accuse and recriminate upon each other, with the same reckless zeal, in the same unmeasured language—each inflexibly, exclusively identifying his own cause with that of true religion, and involving its adversaries in one sweeping and remorseless condemnation. To us the question

of the death of Clement XIV. is purely of historical interest. It is singular enough that Protestant writers are cited as alone doing impartial justice to the Jesuits and their enemies: the Compurgators of the 'Company of Jesus' are Frederick II. and the Encyclopedists. Outcast from Roman Catholic Europe, they found refuge in Prussia, and in the domains of Catherine II., from whence they disputed the validity and disobeyed the decrees of the Pope."—*Clement XIV. and the Jesuits (Quarterly Rev., Sept., 1848)*.—"The Jesuit Order remained in abeyance for a period of forty-two years, until Pius VII. on his return to Rome, after his liberation from the captivity he endured under Napoleon I. at Fontainebleau, issued his brief of August 7, 1814, 'solicitudo omnium,' by which he authorised the surviving members of the Order again to live according to the rules of their founder, to admit novices, and to found colleges. With singular fatuity the Papal Edict for the restoration of the Jesuits, contradicting its own title, assigns on the face of the document as the principal reason for its being issued the recommendation contained in the gracious despatch of August 11, 1800, received from Paul, the then reigning Emperor of the Russias. We have the histories of all nations concurring that Paul was notoriously mad, and within six months from the date of that gracious despatch he was strangled in his palace by the members of his own Court, as the only possible means, as they conceived, of rescuing the Empire from his insane and vicious despotism. In return probably for the successful intercession of Paul, Thadeus Brzozowski, a Pole by birth but a Russian subject, was elected the first General of the restored order. We find a striking comment on his recommendation in the Imperial Ukase of his successor, the Emperor Alexander, by which, in June 1817, he banished the Jesuits from all his dominions. Spain, the scene of their former ignominious treatment, was, under the degraded rule of the Ferdinandian dynasty, the first country to which they were recalled; but they were soon again expelled by the National Cortes. Our limits here confine us to a simple category of their subsequent expulsions from Roman Catholic States: from France in 1831, from Saxony in the same year, from Portugal again in 1834, from Spain again in 1835, from France again in 1845, from the whole of Switzerland, including the Roman Catholic Cantons, in 1847, and in 1848 from Bavaria and other German States. In the Revolution of 1848, they were expelled from every Italian State, even from the territories of the Pope; but on the counter Revolution they returned, to be again expelled in 1859 from Lombardy, Parma, Modena and the Legations. They have had to endure even a more recent vicissitude, for, in December 1871, a measure relating to the vexed question, the Union of Church and State, received the sanction of the National Council (Bundesrath) of Switzerland, by which the Jesuits were prohibited from settling in the country, from interfering even in education, or from founding or re-establishing colleges throughout the Federal territories. They have thus within a recent period received sentence of banishment from almost every Roman Catholic Government, but they still remain in Rome."—*The Jesuits and their Expulsion from Germany (Fraser's Mag., May, 1873)*.

The National Names.—There have been two principal conjectures as to the origin of the name Hebrews, by which the descendants of Abraham were originally known. One derives the name from a progenitor, Eber; the other finds its origin in a Semitic word signifying “over,” or “crossed over.” In the latter view, the name was applied by the Canaanites to people who came into their country from beyond the Euphrates. Ewald, who rejects this latter hypothesis, says: “While there is nothing to show that the name emanated from strangers, nothing is more manifest than that the nation called themselves by it and had done so as long as memory could reach; indeed this is the only one of their names that appears to have been current in the earliest times. The history of this name shows that it must have been most frequently used in the ancient times, before that branch of the Hebrews which took the name of Israel became dominant, but that after the time of the Kings it entirely disappeared from ordinary speech, and was only revived in the period immediately before Christ, like many other names of the primeval times, through the prevalence of a learned mode of regarding antiquity, when it came afresh into esteem through the reverence then felt for Abraham.”—H. Ewald, *Hist. of Israel*, v. 1, p. 284.—After the return of the Israelites from the Babylonian captivity—the returned exiles being mostly of the tribes of Judah and Benjamin—“the name of Judah took the predominant place in the national titles. As the primitive name of ‘Hebrew’ had given way to the historical name of Israel, so that of Israel now gave way to the name of ‘Judaean’ or ‘Jew,’ so full of praise and pride, of reproach and scorn. ‘It was born,’ as their later historian [Josephus] truly observes, ‘on the day when they came out from Babylon.’”—A. P. Stanley, *Lects. on the Hist. of the Jewish Church*, v. 3, p. 101.

The early Hebrew history.—“Of course, in the abstract, it is possible that such persons as Abraham, Isaac, and Jacob should have existed. One can imagine that such and such incidents in the accounts regarding them really took place, and were handed down by tradition. . . . But our present investigation does not concern the question whether there existed men of those names, but whether the progenitors of Israel and of the neighbouring nations who are represented in Genesis are historical personages. It is this question which we answer in the negative. Must we then deny all historical value to the narratives of the patriarchs? By no means. What we have to do is to make proper use of them. They teach us what the Israelites thought as to their affinities with the tribes around them, and as to the manner of their own settlement in the land of their abode. If we strip them of their genealogical form, and at the same time

take into consideration the influence which Israel’s self-love must have exercised over the representation of relationships and facts, we have an historical kernel left. . . . The narratives in Genesis, viewed and used in this way, lead us to the following conception of Israel’s early history. Canaan was originally inhabited by a number of tribes—of Semitic origin, as we shall perceive presently—who applied themselves to the rearing of cattle, to agriculture, or to commerce, according to the nature of the districts in which they were established. The countries which were subsequently named after Edom, Ammon, and Moab, also had their aboriginal inhabitants, the Horites, the Zamzummmites, and the Emites. Whilst all these tribes retained possession of their dwelling-places, and the inhabitants of Canaan especially had reached a tolerably high stage of civilization and development, there occurred a Semitic migration, which issued from Arrapachitis (Arphacsad, Ur Casdim), and moved on in a south-westerly direction. The countries to the east and the south of Canaan were gradually occupied by these intruders, the former inhabitants being either expelled or subjugated; Ammon, Moab, Ishmael, and Edom became the ruling nations in those districts. In Canaan the situation was different. The tribes which—at first closely connected with the Edomites, but afterwards separated from them—had turned their steps towards Canaan, did not find themselves strong enough either to drive out, or to exact tribute from, the original inhabitants; they continued their wandering life among them, and lived upon the whole at peace with them. But a real settlement was still their aim. When, therefore, they had become more numerous and powerful, through the arrival of a number of kindred settlers from Mesopotamia—represented in tradition by the army with which Jacob returns to Canaan—they resumed their march in the same south-westerly direction, until at length they took possession of fixed habitations in the land of Goshen, on the borders of Egypt.”—A. Kuenen, *The Religion of Israel*, ch. 2 (v. 1).—“In the oldest extant record respecting Abraham, Gen. xiv., . . . we see him acting as a powerful domestic prince, among many similar princes, who like him held Canaan in possession; not calling himself King, like Melchizedek, the priest-king of Salem, because he was the father and protector of his house, living with his family and bondmen in the open country, yet equal in power to the petty Canaanite kings. . . . Detached as this account may be, it is at least evident from it that the Canaanites were at that time highly civilised, since they had a priest-king like Melchizedek, whom Abraham held in honour, but that they were even then so weakened by endless divisions and by the emasculating influence of that culture itself, as either to

pay tribute to the warlike nations of the north-east (as the five kings of the cities of the Dead Sea had done for twelve years before they rebelled, ver. 4), or to seek for some valiant descendants of the northern lands living in their midst, who in return for certain concessions and services promised them protection and defence. . . . This idea furnishes the only tenable historical view of the migration of Abraham and his kindred. They did not conquer the land, nor at first hold it by mere force of arms, like the four north-eastern kings from whose hand Abraham delivered Lot, Gen. xiv. They advanced as leaders of small bands, with their fencible servants and the herds, at first rather sought or even invited by the old inhabitants of the land, as good warriors and serviceable allies, than forcing themselves upon them. Thus they took up their abode and obtained possessions among them, but were always wishing to migrate farther, even into Egypt. . . . Little as we are able to prove all the details of that migration from the north towards Egypt, which probably continued for centuries, it may with great certainty be conceived as on the whole similar to the gradual advance of many other northern nations; as of the Germans towards Rome, and of the Turks in these same regions in the Middle Ages. . . . We now understand that Abraham's name can designate only one of the most important and oldest of the Hebrew immigrations. But since Abraham had so early attained a name glorious among the Hebrews advancing towards the south, and since he was everything especially to the nation of Israel which arose out of this immigration, and to their nearest kindred, his name came to be the grand centre and rallying-point of all the memory of those times."—H. Ewald, *Hist. of Israel*, bk. 1, sect. 1, C, pt. 3.

The Children of Israel in Egypt.—"It has been very generally supposed that Abraham's visit to Egypt took place under the reign of one of the kings of the twelfth dynasty [placed by Brugsch B. C. 2466-2266], but which king has not yet been satisfactorily made out. . . . Some Biblical critics have considered that Amenemha III. was king of Egypt when Abraham came there, and others that Usertsen I. was king, and that Amenemha was the Pharaoh of the time of Joseph. . . . It is generally accepted now that Joseph was sold into Egypt at the time when the Hyksos were in power [and about 1750 B. C.]; and it is also generally accepted that the Exodus took place after the death of Rameses II. and under the reign of Merenptah, or Menephtah. Now the children of Israel were in captivity in Egypt for 400 or 430 years; and as they went out of Egypt after the death of Rameses II., it was probably some time about the year 1350 B. C. There is little doubt that the Pharaoh who persecuted the Israelites so shamefully was Rameses II."—E. A. W. Budge, *The Dwellers on the Nile*, ch. 4.—"It is stated by George the Syncellus, a writer whose extensive learning and entire honesty are unquestionable, that the synchronism of Joseph with Apepi, the last king of the only known Hyksos dynasty, was 'acknowledged by all.' The best modern authorities accept this view, if not as clearly established, at any rate as in the highest degree probable, and believe that it was Apepi who made the gifted Hebrew his prime minister, who invited his father and his brethren to settle in Egypt with

their households, and assigned to them the land of Goshen for their residence."—G. Rawlinson, *Hist. of Ancient Egypt*, ch. 19 (v. 2).—"The new Pharaoh, 'who knew not Joseph,' who adorned the city of Ramses, the capital of the Tanitic nome, and the city of Pithom, the capital of what was afterwards the Sethroitic nome, with temple-cities, is no other, can be no other, than Ramesse II. or Rameses—the Sesostris of the Greeks, B. C. 1350, of whose buildings at Zoan the monuments and the papyrus-rolls speak in complete agreement. . . . Ramesse is the Pharaoh of the oppression, and the father of that unnamed princess, who found the child Moses exposed in the bulrushes on the bank of the river. . . . If Ramesse-Sesostris . . . must be regarded beyond all doubt as the Pharaoh under whom the Jewish legislator Moses first saw the light, so the chronological relations—having regard to the great age of the two contemporaries, Ramesse II. and Moses—demand that Mineptah [his son] should in all probability be acknowledged as the Pharaoh of the Exodus."—H. Brugsch-Bey, *Hist. of Egypt under the Pharaohs*, ch. 14.—The quotations given above represent the orthodox view of early Jewish history, in the light of modern monumental studies,—the view, that is, which accepts the Biblical account of Abraham and his seed as a literal family record, authentically widening into the annals of a nation. The more rationalizing views are indicated by the following: "There can be no doubt . . . as to the Semitic character of these Hyksos, or 'Pastors,' who, more than 2,000 years B. C., interrupted in a measure the current of Egyptian civilisation, and founded at Zoan (Tanis), near the Isthmus, the centre of a powerful Semitic state. These Hyksos were to all appearances Canaanites, near relations of the Hittites of Hebron. Hebron was in close community with Zoan, and there is a tradition, probably based upon historical data, that the two cities were built nearly at the same time. As invariably happens when barbarians enter into an ancient and powerful civilisation, the Hyksos soon became Egyptianised. . . . The Hyksos of Zoan could not fail to exercise a great influence upon the Hebrews who were encamped around Hebron, the Dead Sea, and in the southern districts of Palestine. The antipathy which afterwards existed between the Hebrews and the Canaanites was not as yet very perceptible. . . . There are the best of reasons for believing that the immigration of the Beni-Israel took place at two separate times. A first batch of Israelites seems to have been attracted by the Hittites of Egypt, while the bulk of the tribe was living upon the best of terms with the Hittites of Hebron. These first immigrants found favour with the Egyptianised Hittites of Memphis and Zoan; they secured very good positions, had children, and constituted a distinct family in Israel. This was what was afterwards called the 'clan of the Josephel,' or the Beni-Joseph. Finding themselves well off in Lower Egypt, they sent for their brethren, who, impelled perhaps by famine, joined them there, and were received also favourably by the Hittite dynasties. These new-comers never went to Memphis. They remained in the vicinity of Zoan, where there is a land of Goshen, which was allotted to them. . . . The whole of these ancient days, concerning which Israel possesses only legends and contradictory traditions, is enveloped in doubt; one

thing, however, is certain, viz., that Israel entered Egypt under a dynasty favourable to the Semites, and left it under one which was hostile. The presence of a nomad tribe upon the extreme confines of Egypt must have been a matter of very small importance for this latter country. There is no certain trace of it in the Egyptian texts. The kingdom of Zoan, upon the contrary, left a deep impression upon the Israelites. Zoan became for them synonymous with Egypt. The relations between Zoan and Hebron were kept up, and . . . Hebron was proud of the synchronism, which made it out seven years older than Zoan. The first-comers, the Josephites, always assumed an air of superiority over their brethren, whose position they had been instrumental in establishing. . . . Their children, born in Egypt, possibly of Egyptian mothers, were scarcely Israelites. An agreement was come to, however; it was agreed that the Josephites should rank as Israelites with the rest. They formed two distinct tribes, those of Ephraim and Manasseh. . . . It is not impossible that the origin of the name of Joseph (addition, adjunction, annexation) may have arisen from the circumstance that the first emigrants and their families, having become strangers to their brethren, needed some sort of adjunction to become again part and parcel of the family of Israel."—E. Renan, *Hist. of the People of Israel*, bk. 1, ch. 10 (a. 1).—See, also, EGYPT: THE HYKSOS, and ABOUT B. C. 1400-1200.

The Route of the Exodus.—It is said of the oppressed Israelites in Egypt that "they built for Pharaoh treasure cities, Pithom and Raamses." (Exodus i. 11.) One of those "treasure cities," or "store-cities," has been discovered, in a heap of ruins, at a place which the Arabs call "Tell el Maskhutah," and it was supposed at first to be the Raamses of the Biblical record. But explorations made in 1883 by M. Naville seem to have proved that it is the store-city of Pithom which lies buried in the mounds at Tell el Maskhutah and that Raamses is still to be found. As Raamses or Ramses was the starting point of the Exodus, something of a controversy concerning the route of the latter turns upon the question. It is the opinion of M. Naville that Succoth, where the Children of Israel made their first halt, was the district in which Pithom is situated, and that the Land of Goshen, their dwelling-place in Egypt, was a region embracing that district. The site of Pithom, as identified by Naville, is "on the south side of the sweet water canal which runs from Cairo to Suez through the Wadi Tumilat, about 12 miles from Ismailiah." The excavations made have brought to light a great number of chambers, with massive walls of brick, which are conjectured to have been granaries and storehouses, for the provisioning of caravans and armies to cross the desert to Syria, as well as for the collecting of tribute and for the warehousing of trade. Hence the name of store-city, or treasure-city. Under the Greeks Pithom changed its name to Heropolis, and a new city called Arsinoë was built near it.—E. Naville, *The Store-City of Pithom*.—"I submit that Goshen, properly speaking, was the land which afterwards became the Arabian nome, viz., the country round Saft el Henneh east of the canal Abu-l-Munagge, a district comprising Belbeis and Abbaseh, and probably extending further north than the Wadi Tumilat.

The capital of the nome was Pa Sopt, called by the Greeks Phacusa, now Saft el Henneh. At the time when the Israelites occupied the land, the term 'Goshen' belonged to a region which as yet had no definite boundaries, and which extended with the increase of the people over the territory they inhabited. The term 'land of Ramses' applies to a larger area, and covers that part of the Delta which lies to the eastward of the Tanitic branch. . . . As for the city of Ramses, it was situate in the Arabian nome. Probably it was Phacusa."—The same, *Shrine of Saft el Henneh and the Land of Goshen*.—The Israelites leaving Succoth, a region which we now know well, the neighbourhood of Tell-el-Maskhutah, push forward towards the desert, skirting the northern shore of the gulf, and thus reach the wilderness of Etham; but there, because of the pursuit of Pharaoh, they have to change their course, they are told to retrace their steps, so as to put the sea between them and the desert. . . . 'And the Lord spake unto Moses, saying: Speak unto the children of Israel that they turn and encamp before Pi-hahiroth, between Migdol and the sea, over against Baalzephon; before it shall ye encamp by the sea.' . . . The question is now, Where are we to look for Migdol and Pi-lahiroth? As for Migdol, the ancient authors, and particularly the Itinerary, mention a Migdol, or Magdolon, which was twelve Roman miles distant from Pelusium. It is not possible to admit that this is the same Migdol which is spoken of in Exodus, for then it would not be the Red Sea, but the Mediterranean, which the Israelites would have before them, and we should thus have to fall in with MM. Schleiden and Brugsch's theory, that they followed the narrow track which lies between the Mediterranean and the Serbonian Bog. However ingenious are the arguments on which this system is based, I believe it must now be dismissed altogether, because we know the site of the station of Succoth. Is it possible to admit that, from the shore of the Arabian Gulf, the Israelites turned to the north, and marched forty miles through the desert in order to reach the Mediterranean? The journey would have lasted several days; they would have been obliged to pass in front of the fortresses of the north; they would have fallen into the way of the land of the Philistines, which they were told not to take; and, lastly, the Egyptians, issuing from Tanis and the northern cities, would have easily intercepted them. . . . All these reasons induce me to give up definitively the idea of the passage by the north, and to return to the old theory of a passage of the Red Sea, but of the Red Sea as it was at that time, extending a great deal farther northward, and not the Red Sea of to-day, which occupies a very different position. The word Migdol, in Egyptian, . . . is a common name. It means a fort, a tower. It is very likely that in a fortified region there have been several places so called, distinguished from each other, either by the name of the king who built them, or by some local circumstance; just as there are in Italy a considerable number of Torre. I should therefore, with M. Ebers, place Migdol at the present station of the Serapeum. There the sea was not wide, and the water probably very shallow; there also the phenomenon which took place on such a large scale when the Israelites went through must have been well known, as it is often seen

now in other parts of Egypt. As at this point the sea was liable to be driven back under the influence of the east wind, and to leave a dry way, the Pharaohs were obliged to have there a fort, a Migdol, so as to guard that part of the sea, and to prevent the Asiatics of the desert from using this temporary gate to enter Egypt, to steal cattle, and to plunder the fertile land which was round Pithom."—The same, *The Store-City of Pithom and the Route of the Exodus (Egypt Expl. Fund, 1885)*.—"Modern critics prefer an intelligent interpretation, according to known natural laws, of the words of Exod. xiv. 21, 22, which lay stress upon the 'east wind' as the direct natural agent by which the sea bottom was for the time made dry land. . . . The theory, which dates from an early period, that the passage was in some sense tidal, miraculously aided by the agency of wind, has thus come to be very generally adopted."—H. S. Palmer, *Sinai (Ancient Hist. from the Monuments)*, ch. 6.

The conquest of Canaan.—"The first essay [west of Jordan] was made by Judah in conjunction with Simeon and Levi, but was far from prosperous. Simeon and Levi were annihilated; Judah also, though successful in mastering the mountain land to the west of the Dead Sea, was so only at the cost of severe losses which were not again made up until the accession of the Kenite families of the south (Caleb). As a consequence of the secession of these tribes, a new division of the nation into Israel and Judah took the place of that which had previously subsisted between the families of Leah and Rachel; under Israel were included all the tribes except Simeon, Levi, and Judah, which three are no longer mentioned in Judg. v., where all the others are carefully and exhaustively enumerated. This half-abortive first invasion of the west was followed by a second, which was stronger and attended with much better results. It was led by the tribe of Joseph, to which the others attached themselves, Reuben and Gad only remaining behind in the old settlements. The district to the north of Judah, inhabited afterwards by Benjamin, was the first to be attacked. It was not until after several towns of this district had one by one fallen into the hands of the conquerors that the Canaanites set about a united resistance. They were, however, decisively repulsed by Joshua in the neighbourhood of Gibeon [or Beth-horon]; and by this victory the Israelites became masters of the whole central plateau of Palestine. The first camp, at Gilgal, near the ford of Jordan, which had been maintained until then, was now removed, and the ark of Jehovah brought further inland (perhaps by way of Bethel) to Shiloh, where henceforward the headquarters were fixed, in a position which seemed as if it had been expressly made to favour attacks upon the fertile tract lying beneath it on the north. The Bne Rachel now occupied the new territory which up to that time had been acquired—Benjamin, in immediate contiguity with the frontier of Judah, then Ephraim, stretching to beyond Shiloh, and lastly Manasseh, furthest to the north, as far as to the plain of Jezreel. The centre of gravity, so to speak, already lay in Ephraim, to which belonged Joshua and the ark. It is mentioned as the last achievement of Joshua that at the waters of Merom he defeated Jabin, king of Hazor, and the allied princes of Galilee, thereby opening up the north for Israelitish set-

tlers. . . . Even after the united resistance of the Canaanites had been broken, each individual community had still enough to do before it could take firm hold of the spot which it had searched out for itself or to which it had been assigned. The business of effecting permanent settlement was just a continuation of the former struggle, only on a diminished scale; every tribe and every family now fought for its own hand after the preliminary work had been accomplished by a united effort. Naturally, therefore, the conquest was at first but an incomplete one. The plain which fringed the coast was hardly touched; so also the valley of Jezreel with its girdle of fortified cities stretching from Acco to Bethshean. All that was subdued in the strict sense of that word was the mountainous land, particularly the southern hill-country of 'Mount Ephraim'; yet even here the Canaanites retained possession of not a few cities, such as Jebus, Shechem, Thebez. It was only after the lapse of centuries that all the lacunæ were filled up, and the Canaanite enclaves made tributary. The Israelites had the extraordinarily disintegrated state of the enemy to thank for the ease with which they had achieved success."—J. Wellhausen, *Sketch of the Hist. of Israel and Judah*, ch. 2.—"Remnants of the Canaanites remained everywhere among and between the Israelites. Beside the Benjamites the Jebusites (a tribe of the Amorites) maintained themselves, and at Gibeon, Kirjath-jearim, Chephirah, and Beeroth were the Hivites, who had made peace with the Israelites. In the land of Ephraim, the Canaanites held their ground at Geser and Bethel, until the latter—it was an important city—was stormed by the Ephraimites. Among the tribe of Manasseh the Canaanites were settled at Beth Shean, Dan, Taanach, Jibleam, Megiddo and their districts, and in the northern tribes the Canaanites were still more numerous. It was not till long after the immigration of the Hebrews that they were made in part tributary. The land of the Israelites beyond the Jordan, where the tribe of Manasseh possessed the north, Gad the centre, and Reuben the south as far as the Arnon, was exposed to the attacks of the Ammonites and Moabites, and the migratory tribes of the Syrian desert, and must have had the greater attraction for them, as better pastures were to be found in the heights of Gilead, and the valleys there were more fruitful. To the west only the tribe of Ephraim reached the sea, and became master of a harbourless strip of coast. The remaining part of the coast and all the harbours remained in the hands of the powerful cities of the Philistines and the Phenicians. No attempt was made to conquer these, although border-conflicts took place between the tribes of Judah, Dan, and Asher, and Philistines and Sidonians. Such an attempt could only have been made if the Israelites had remained united, and even then the powers of the Israelites would hardly have sufficed to overthrow the walls of Gaza, Ascalon, and Ashdod, of Tyre, Sidon, and Byblus. Yet the invasion of the Israelites was not without results for the cities of the coast: it forced a large part of the population to assemble in them, and we shall see . . . how rapid and powerful is the growth of the strength and importance of Tyre in the time immediately following the incursion of the Israelites, i. e., immediately after the middle of the thirteenth century. As the population and in

consequence the power of the cities on the coast increased, owing to the collection of the ancient population on the shore of the sea, those cities became all the more dangerous neighbours for the Israelites. It was a misfortune for the new territory which the Israelites had won by the sword that it was without the protection of natural boundaries on the north and east, that the cities of the Philistines and Phenicians barred it towards the sea, and in the interior remnants of the Canaanites still maintained their place. Yet it was a far more serious danger for the immigrants that they were without unity, connection, or guidance, for they had already given up these before the conflict was ended. Undoubtedly a vigorous leadership in the war of conquest against the Canaanites might have established a military monarchy which would have provided better for the maintenance of the borders and the security of the land than was done in its absence. But the isolated defence made by the Canaanites permitted the attacking party also to isolate themselves. The new masters of the land lived, like the Canaanites before and among them, in separate cantons; the mountain land which they possessed was much broken up, and without any natural centre, and though there were dangerous neighbours, there was no single concentrated aggressive power in the neighbourhood, now that Egypt remained in her borders. The cities of the Philistines formed a federation merely, though a federation far more strongly organised than the tribes of the Israelites. Under these circumstances political unity was not an immediately pressing question among the Israelites." — M. Duncker, *Hist. of Antiquity*, bk. 2, ch. 11 (v. 1).

Israel under the Judges.—The wars of the Period.—Conquest of Gilead and Bashan.—Founding of the kingdom.—"The office which gives its name to the period [between the death of Joshua and the rise of Samuel] well describes it. It was occasional, irregular, uncertain, yet gradually tending to fixedness and perpetuity. Its title is itself expressive. The Ruler was not regal, but he was more than the mere head of a tribe, or the mere judge of special cases. We have to seek for the origin of the name, not amongst the Sheykhs of the Arabian desert, but amongst the civilised settlements of Phœnicia. 'Shophet,' 'Shophetim,' the Hebrew word which we translate 'Judge,' is the same as we find in the 'Suffes,' 'Suffetes,' of the Carthaginian rulers at the time of the Punic wars. As afterwards the office of 'king' was taken from the nations round about, so now, if not the office, at least the name of 'judge' or 'shophet' seems to have been drawn from the Canaanitish cities, with which for the first time Israel came into contact. . . . Finally the two offices which, in the earlier years of this period, had remained distinct — the High Priest and the Judge — were united in the person of Eli." — Dean Stanley, *Lect's on the Hist. of the Jewish Church*, lect. 13. — "The first war mentioned in the days of the Judges is with the Syrians, at a time when the Israelites, or a northern portion of them, were held in servitude for eight years by a king whose name, Cushan-rishathaim, which may be translated the 'Most Wicked Negress,' seems to place him in the region of imaginary tradition rather than of his-

tory. . . . The next war mentioned was an invasion by the Moabites, who, being joined with a body of Ammonites and Amalakites, harassed the Israelites of the neighbourhood of Gilgal and Jericho. . . . After a servitude of 18 years under the Moabites, Ehud, a Benjamite, found an opportunity of stabbing Eglon, the king of Moab; and shortly afterwards the Benjamites were relieved by a body of their neighbours from the hill country of Ephraim. The Israelites then defeated the Moabites, and seized the fords of the Jordan to stop their retreat, and slew them all to a man. While this war was going on on one side of the land, the Philistines from the south were harassing those of the Israelites who were nearest to their country. . . . The history then carries us back to the northern Israelites, and we hear of their struggle with the Canaanites of that part of the country which was afterwards called Galilee. These people were under a king named Jabin, who had 900 chariots of iron, and they cruelly oppressed the men of Naphtali and Zebulun, who were at that time the most northerly of the Israelites. After a suffering of 20 years, the two tribes of Zebulun and Naphtali, under the leadership of Barak, rallied against their oppressors, and called to their help their stronger neighbours, the men of Ephraim. The tribe of Ephraim was the most settled portion of the Israelites, and they had adopted some form of government, while the other tribes were stragglers scattered over the land, every man doing what was right in his own eyes. The Ephraimites were at that time governed, or, in their own language, judged, by a brave woman of the name of Deborah, who led her followers, together with some of the Benjamites, to the assistance of Barak, the leader of Zebulun and Naphtali; and, at the foot of Mount Tabor, near the brook Kishon, their united forces defeated Sisera, the general of the Canaanites. Sisera fled, and was murdered by Jael, a woman in whose tent he had sought for refuge. . . . The next war that we are told of is an invasion by the Midianites and Amalakites and Children of the East. They crossed the Jordan to attack the men of Manasseh, who were at the same time struggling with the Amorites, the natives who dwelt amongst them. Gideon, the leader of Manasseh, called together the fighting men of his own tribe, together with those of Asher, Zebulun, and Naphtali. The men of Gilead, who had come over to help him, seem to have deserted him. Gideon, however, routed his enemies, and then he summoned the Ephraimites to guard the fords of the Jordan, and to cut off the fugitives. . . . This victory of Gideon, or Jerubbaal, as he was also named, marked him out as a man fit to be the ruler of Israel, and to save them from the troubles that arose from the want of a single head to lead them against the enemies that surrounded them and dwelt among them. Accordingly, he obtained the rank of chief of all the northern Israelites. Gideon had dwelt at Ophrah, in the land of Manasseh; but his son Abimelech, who succeeded him in his high post, was born in Shechem, in the land of Ephraim, and had thus gained the friendship of some of that tribe. Abimelech put to death all but one of his brethren, the other sons of Gideon, and got himself made king at Shechem; and he was the first who bore that title among the Israelites.

But his thus violently seizing upon the power was the cause of a long civil war between Ephraim and Manasseh, which ended in the death of the usurper Abimelech, and the transfer of the chieftainship to another tribe. Tola, a man of Issachar, was then made Judge, or ruler of the northern tribes. . . . After Tola, says the historian, Jair of Gilead judged Israel. . . . Jair and his successors may have ruled in the east at the same time that Deborah and Gideon and their successors were ruling or struggling against their oppressors in the west. Jephtha of Gilead is the next great captain mentioned. . . . The Ammonites, who dwelt in the more desert country to the east of Gilead, had made a serious incursion on the Israelites on both sides of the Jordan; and the men of Gilead, in their distress, sent for Jephtha, who was then living at Tob, in Syria, whither he had fled from a quarrel with his brethren. . . . It seems that the Ammonites invaded Gilead on the plea that they had possessed that land before the Israelites arrived there, to which Jephtha answered that the Israelites had dispossessed the Amorites under Sihon, king of Heshbon, and that the Ammonites had not dwelt in that part of the country. In stating the argument, the historian gives a history of their arrival on the banks of the Jordan. On coming out of Lower Egypt, they crossed the desert to the Red Sea, and then came to Kadesh. From thence they asked leave of the Edomites and Moabites to pass through their territory; but, being refused, they went round Moab till they came to the northern bank of the river Arnon, an eastern tributary of the Jordan. There they were attacked by Sihon, king of the Amorites; and on defeating him they seized his territory, which lay between the Arnon and the Jabbok. There the Israelites had dwelt quietly for 300 years, without fighting against either the Moabites or the Ammonites, who were both too strong to be attacked. This is a most interesting narrative, both for what it tells and for what it omits, as compared with the longer narrative in the Pentateuch. . . . It omits all mention of the delivery of the Law, or of the Ark, or of any supernatural events as having happened on the march, and of the fighting with Og, king of Bashan. Og, or Gog, as it is spelled by other writers, was the name of the monarch whose imaginary castles, seen upon the mountains in the distance, the traveller thought it not wise to approach. They were at the limits of all geographical knowledge. At this early time this fabulous king held Mount Bashan; in Ezekiel's time he had retreated to the shores of the Caspian Sea; and ten centuries later the Arabic travellers were stopped by him at the foot of the Altai Mountains, in Central Asia. His withdrawing before the advance of geographical explorers proves his unreal character. He is not mentioned in this earlier account of the Israelites settling in the land of the Amorites; it is only in the more modern narrative in the Book of Numbers that he is attacked and defeated in battle, and only in the yet more modern Book of Deuteronomy that we learn about his iron bedstead of nine cubits in length."—S. Sharpe, *Hist. of the Hebrew Nation*, pp. 4-9.—"At the close of the period of the Judges the greater part of the Israelites had quite lost their pastoral habits. They were an agricultural people living in cities and villages, and their oldest civil laws

are framed for this kind of life. All the new arts which this complete change of habit implies they must have derived from the Canaanites, and as they learned the ways of agricultural life they could hardly fail to acquire many of the characteristics of their teachers. To make the transformation complete only one thing was lacking—that Israel should also accept the religion of the aborigines. The history and the prophets alike testify that to a great extent they actually did this. Canaanite sanctuaries became Hebrew holy places, and the vileness of Canaanite nature-worship polluted the Hebrew festivals. For a time it seemed that Jehovah, the ancestral God of Israel, who brought their fathers up out of the house of bondage and gave them their goodly land, would be forgotten or transformed into a Canaanite Baal. If this change had been completed Israel would have left no name in the world's history; but Providence had other things in store for the people of Jehovah. Henceforth the real significance of Israel's fortunes lies in the preservation and development of the national faith, and the history of the tribes of Jacob is rightly set forth in the Bible as the history of that divine discipline by which Jehovah maintained a people for Himself amidst the seductions of Canaanite worship and the ever-new backslidings of Israel. . . . In the end Jehovah was still the God of Israel, and had become the God of Israel's land. Canaan was His heritage, not the heritage of the Baalim, and the Canaanite worship appears henceforth, not as a direct rival to the worship of Jehovah, but as a disturbing element corrupting the national faith, while unable to supplant it altogether. This, of course, in virtue of the close connection between religion and national feeling, means that Israel had now risen above the danger of absorption in the Canaanites, and felt itself to be a nation in the true sense of the word. We learn from the books of Samuel how this great advance was ultimately and permanently secured. The earlier wars recorded in the book of Judges had brought about no complete or lasting unity among the Hebrew tribes. But at length a new enemy arose, more formidable than any whom they had previously encountered. The Philistines from Caphtor, who, like the Israelites, had entered Canaan as emigrants, but coming most probably by sea had displaced the aboriginal Avvim in the rich coastlands beneath the mountains of Judah (Deut. ii. 23; Amos ix. 7), pressed into the heart of the country, and broke the old strength of Ephraim in the battle of Ebenezer. This victory cut the Hebrew settlements in two, and threatened the independence of all the tribes. The common danger drew Israel together."—W. Robertson Smith, *The Prophets of Israel*, lect. 1.

The Kingdoms of Israel and Judah.—"No one appeared again in the character at once of judge and warrior, to protect the people by force of arms. It was the Levite Samuel, a prophet dedicated to God even before his birth, who recalled them to the consciousness of religious feeling. He succeeded in removing the emblems of Baal and Astarte from the heights, and in paving the way for renewed faith in Jehovah. . . . It was the feeling of the people that they could only carry on the war upon the system employed by all their neighbors. They demanded a king—a request very intelligible under existing circum-

stances, but one which nevertheless involved a wide and significant departure from the impulses which had hitherto moved the Jewish community and the forms in which it had shaped itself. . . . The Israelites demanded a king, not only to go before them and fight their battles, but also to judge them. They no longer looked for their preservation to the occasional efforts of the prophetic order and the ephemeral existence of heroic leaders. . . . The argument by which Samuel, as the narrative records, seeks to deter the people from their purpose, is that the king will encroach upon the freedom of private life which they have hitherto enjoyed, employing their sons and daughters in his service, whether in the palace or in war, exacting tithes, taking the best part of the land for himself, and regarding all as his bondsmen. In this freedom of tribal and family life lay the essence of the Mosaic constitution. But the danger that all may be lost is so pressing that the people insist upon their own will in opposition to the prophet. Nevertheless, without the prophet nothing can be done, and it is he who selects from the youth of the country the man who is to enjoy the new dignity in Israel. . . . At first the proceeding had but a doubtful result. Many despised a young man sprung from the smallest family of the smallest tribe of Israel, as one who could give them no real assistance. In order to make effective the conception of the kingly office thus assigned to him, it was necessary in the first place that he should gain for himself a personal reputation. A king of the Ammonites, a tribe in affinity to Israel, laid siege to Jabesh in Gilead, and burdened the proffered surrender of the place with the condition that he should put out the right eyes of the inhabitants. . . . Saul, the son of Kish, a Benjamite, designated by the prophet as king, but not as yet recognized as such, was engaged, as Gideon before him, in his rustic labors, when he learned the situation through the lamentations of the people. . . . Seized with the idea of his mission, Saul cuts in pieces a yoke of oxen, and sends the portions to the twelve tribes with the threat, 'Whosoever cometh not forth after Saul and after Samuel, so shall it be done unto his oxen.' . . . Thus urged, . . . Israel combines like one man; Jabesh is rescued and Saul acknowledged as king. . . . With the recognition of the king, however, and the progress of his good-fortune, a new and disturbing element appears. A contest breaks out between him and the prophet, in which we recognize not so much opposition as jealousy between the two powers. . . . On the one side was the independent power of monarchy, which looks to the requirements of the moment, on the other the prophet's tenacious and unreserved adherence to tradition. . . . The relations between the tribes have also some bearing on the question. Hitherto Ephraim had led the van, and jealously insisted on its prerogative. Saul was of Benjamin, a tribe nearly related to Ephraim by descent. He had made the men of his own tribe captains, and had given them vineyards. On the other hand, the prophet chose Saul's successor from the tribe of Judah. This successor was David, the son of Jesse. . . . In the opposition which now begins we have on the one side the prophet and his anointed, who aim at maintaining the religious authority in all its aspects, on the other the champion and deliverer of the nation, who, abau-

doned by the faithful, turns for aid to the powers of darkness and seeks knowledge of the future through witchcraft. Saul is the first tragic personage in the history of the world. David took refuge with the Philistines. Among them he lived as an independent military chieftain, and was joined not only by opponents of the king, but by others, ready for any service, or, in the language of the original, 'men armed with bows, who could use both the right hand and the left in hurling stones and shooting arrows out of a bow.' . . . In any serious war against the Israelites, such as actually broke out, the Sarim of the Philistines would not have tolerated him amongst them. David preferred to engage in a second attack upon the Amalekites, the common enemy of Philistines and Jews. At this juncture Israel was defeated by the Philistines. The king's sons were slain; Saul, in danger of falling into the enemy's hands, slew himself. Meanwhile David with his freebooters had defeated the Amalekites, and torn from their grasp the spoil they had accumulated, which was now distributed in Judah. Soon after, the death of Saul is announced. . . . David, conscious of being the rightful successor of Saul—for on him too, long ere this, the unction had been bestowed—betook himself to Hebron, the seat of the ancient Canaanitish kings, which had subsequently been given up to the priests and made one of the cities of refuge. It was in the province of Judah; and there, the tribe of Judah assisting at the ceremony, David was once more anointed. This tribe alone, however, acknowledged him; the others, especially Ephraim and Benjamin, attached themselves to Ishbosheth, the surviving son of Saul. . . . The first passage of arms between the two hosts took place between twelve of the tribe of Benjamin and twelve of David's men-at-arms. It led, however, to no result; it was a mutual slaughter, so complete as to leave no survivor. But in the more serious struggle which succeeded this the troops of David, trained as they were in warlike undertakings of great daring as well as variety, won the victory over Ishbosheth; and as the unanointed king could not rely upon the complete obedience of his commander-in-chief, who considered himself as important as his master, David, step by step, won the upper hand. . . . The Benjamites had been the heart and soul of the opposition which David experienced. Nevertheless, the first action which he undertook as acknowledged king of all the tribes redounded specially to their advantage, whilst it was at the same time a task of the utmost importance for the whole Israelitish commonwealth. Although Joshua had conquered the Amorites, one of their strongholds, Jebus, still remained unsubdued, and the Benjamites had exerted all their strength against it in vain. It was to this point that David next directed his victorious arms. Having conquered the place, he transferred the seat of his kingdom thither without delay [see JERUSALEM]. This seat is Jerusalem; the word Zion has the same meaning as Jebus.—L. von Ranke, *Universal History: The Oldest Historical Groups of Nations*, ch. 2.—“After Saul's death it was at first only in Judah, where David maintained his government, that a new Kingdom of Israel could be established at all, so disastrous were the consequences of the great Philistine victory. The Philistines, who must have already conquered the central terri-

tory, now occupied that to the north, also, while the inhabitants of the cities of the great plain of Jezreel and of the western bank of the Jordan, fled, we are very distinctly informed, across the river."—H. Ewald, *Hist. of Israel*, bk. 3.—But Abner, the strong warrior and the faithful kinsman of Saul's family, took Ishbosheth, the oldest surviving son of his dead king, and throned him in the city of Mahanaim, beyond the Jordan, proceeding gradually to gather a kingdom for him by reconquest from the Philistines. Thus the Israelite nation was first divided into the two kingdoms of Israel and Judah, and there was bitter war between them. But that first division was not to endure long. Abner and Ishbosheth fell victims to treachery, and the tribes which had held by them offered allegiance to David, who then became king over "all Israel and Judah." By the conquest of the city of Jebus from its Canaanite founders and possessors, he acquired a new, impregnable capital, which, under the name of Jerusalem, grew to be the most reverently looked upon of all the cities of the world. "History has been completely distorted in representing David as the head of a powerful kingdom, which embraced nearly the whole of Syria. David was king of Judah and of Israel, and that was all; the neighboring peoples, Hebrews, Canaanites, Arameans and Philistines, as far as Mahul Hermon and the desert, were sternly subjected, and were more or less its tributaries. In reality, with the exception, perhaps, of the small town of Ziklag, David did not annex any non-Israelite country to the domain of Israel. The Philistines, the Edomites, the Moabites, the Ammonites, and the Arameans of Zoba, of Damascus, of Rehob and of Maacah were, after his day, very much what they were before, only a little weaker. Conquest was not a characteristic of Israel; the taking possession of the Canaanite lands was an act of a different order, and it came to be more and more regarded as the execution of a decree of Jahveh. As this decree did not extend to the lands of Edom, of Moab, of Ammon and of Aram, the Israelites deemed themselves justified in treating the Edomites, the Moabites, the Ammonites and the Arameans with the utmost severity, in carrying off their precious stones and objects of price, but not in taking their land, or in changing their dynasty. None of the methods employed by great empires such as Assyria was known to these small peoples, which had scarcely got beyond the status of tribes. They were as cruel as Assur, but much less politic and less capable of a general plan. The impression produced by the appearance of this new royalty was none the less extraordinary. The halo of glory which enveloped David remained like a star upon the forehead of Israel."—E. Renan, *Hist. of the People of Israel*, bk. 3, ch. 4 (v. 2).—David died about 1000 B. C. and was succeeded by his son Solomon, whose mother, Bathsheba, secured the throne for him by intrigue. "Solomon was a younger son, to whom the throne had been allotted contrary to ordinary laws of succession, whilst Adonijah, whom a portion of the people had recognised as king, was considered the rightful heir. So long as the latter lived, Solomon's government could not be on a firm basis, and he could never feel himself secure. Adonijah had therefore to be removed; the leader of the body guard, Benaiah, forcibly entered his house and

killed him. As an excuse for this act of violence, it was asserted that Adonijah had attempted to win the hand of Abishag, the young widow of David, and thus had revealed his traitorous intention of contesting the throne with his brother. No sooner had he fallen than Joab, the former adherent of Adonijah, feared that a similar fate would overtake him. This exemplary general, who had contributed so considerably to the aggrandisement of the people of Israel and to the power of the house of David, fled to the altar on Mount Zion, and clung to it, hoping to escape death. Benaiah, however, refused to respect his place of refuge, and shed his blood at the altar. In order to excuse this crime, it was circulated that David himself, on his death-bed, had impressed on his successor the duty of preventing Joab's grey head from sinking in peace to its last rest. . . . Adonijah's priestly partisan, Abiathar, whom Solomon did not dare to touch, was deprived of his office as high priest, and Zadok was made the sole head of the priesthood. His descendants were invested with the dignity of high priest for over a thousand years, whilst the offspring of Abiathar were neglected. The Benjamite Shimei, who had attacked David with execrations on his flight from Jerusalem, was also executed, and it was only through this threefold deed of blood that Solomon's throne appeared to gain stability. Solomon then directed his attention to the formation of a court of the greatest magnificence."—H. Graetz, *Hist. of the Jews*, v. 1, ch. 9.—"The main characteristic of Solomon's reign was peace. The Philistines, allies of the new dynasty, and given profitable employment by it as mercenaries, were no longer tempted to cross the frontier. . . . The decay of military strength was only felt in the zone of countries which were tributary to the kingdom. Hadad, or Hadar, the Edomite, who had been defeated by Joab and had taken refuge in Egypt, having heard of David's death, and that of Joab as well, left Pharaoh, whose sister-in-law he had married. We have no details of this war. . . . We only know that Hadad braved Israel throughout the whole of Solomon's reign, that he did it all the injury he could, and that he was an independent ruler over a great part at all events of Edom. A still more formidable adversary was Rezon, son of Eliadah, an Aramean warrior who, after the defeat of his lord, Hadadezer, king of Zobah, had assembled about him those who had fled before the sword of David. . . . A lucky 'coup-de-main' placed the city of Damascus at their mercy, and they succeeded in maintaining themselves there. During the whole of Solomon's reign Rezon continued to make war against Israel. The kingdom of Zobah does not appear, however, to have been re-established. Damascus became henceforth the centre and capital of that part of Aramea which adjoined Mount Hermon. David's horizon never extended beyond Syria. With Solomon, fresh perspectives opened up for the Israelites, especially for Jerusalem. Israel is no longer a group of tribes, continuing to lead in its mountains the patriarchal life of the past. It is a well-organised kingdom, small according to our ideas, but rather large judged by the standard of the day. The worldly life of the people of Jahveh is about to begin. If Israel had no other life but that it would not have found a place in history. . . . An alliance with Egypt was the first step in that career of

profane politics which the prophets afterwards interlarded with so much that was impossible. . . . The king of Egypt gave Gezer as a dowry to his daughter, and married her to Solomon. . . . It is not too much to suppose that the tastes of this princess for refined luxury had a great influence upon the mind of her husband. . . . The relations of Solomon with Tyre exercised a still more civilising influence. Tyre, recently separated from Sidon, was then at the zenith of its activity, and, so to speak, in the full fire of its first foundation. A dynasty of kings named Hiram, or rather Ahiram, was at the head of this movement. The island was covered with constructions imitated from Egypt. . . . Hiram is the close ally of the king of Israel; it is he who provides Solomon with the artists who were lacking at Jerusalem; the precious materials for the buildings in Zion; seamen for the fleet of Ezion-geber. The region of the upper Jordan, conquered by David, appears to have remained tributary to Solomon. What has been related as to a much larger extension of the kingdom of Solomon is greatly exaggerated. . . . The fables as to the pretended foundation of Palmyra by Solomon come from a letter intentionally added to the text of the ancient historiographer by the compiler of the Chronicles. The construction of Baalbec by Solomon rests upon a still more inadmissible piece of identification. . . . In reality, the dominion of Solomon was confined to Palestine. . . . What was better than peoples kept under by force, the Arab brigands were held in check from pillage. The Amalekites, the Midianites, the Beni-Quedem and other nomads were confronted with an impassable barrier all around Israel. The Philistines preserved their independence. . . . When it is surmised that Solomon reigned over all Syria, the size of his kingdom is exaggerated at least fourfold. Solomon's kingdom was barely a fourth of what is now called Syria. . . . Solomon . . . built 'cities of store,' or warehouses, the commercial or military object of which cannot well be defined. There was, more especially, a place named Tamar, in the direction of Petra, of which Solomon made a city, and which became a calling-place for the caravans. . . . With very good reason, too, Solomon had his attention constantly fixed upon the Red Sea, a broad canal which placed the dawning civilisation of the Mediterranean in communication with India, and thus opened up a new world, that of Ophir. The Bay of Suez belonged to Egypt, but the Gulf of Akaba was, one may say, at the mercy of any one who cared to take it. Elath and Asiongaber, according to all appearances, had been of very little importance in earlier times. Without regularly occupying the country, Solomon secured the route by the Valley of Araba. He built a fleet at Asiongaber, though the Israelites had never much liking for the sea. Hiram provided Solomon with sailors, or, what is more probable, the two fleets acted together. On leaving the Straits of Aden, they went to Ophir, that is to say, to Western India, to Guzarate, or to the coast of Malabar."—E. Renan, *Hist. of the People of Israel*, bk. 3, ch. 10 (v. 2).—The government of Solomon was extravagant and despotic; it imposed burdens upon the people which were borne impatiently until his death; and when his son Rehoboam refused to lessen them, the nation was instantly broken again on the lines of the earlier

rupture. The two tribes of Judah and Benjamin, only, remained faithful to the house of David and constituted the kingdom of Judah. The other ten tribes made Jeroboam their king and retained the name of Israel for their kingdom. The period of this division is fixed at 978 B. C. Jerusalem continued to be the capital of the kingdom of Judah. In the kingdom of Israel several changes of royal residence occurred during the first half century, until Samaria was founded by King Omri and thenceforth became the capital city. "Six miles from Shechem, in the same well-watered valley, here opening into a wide basin, rises an oblong hill, with steep yet accessible sides, and a long level top. This was the mountain of Samaria, or, as it is called in the original, Shōmeron, so named after its owner Shemer, who there lived in state, and who sold it to the King for the great sum of two talents of silver."—Dean Stanley, *Lectures on the Hist. of the Jewish Church*, lect. 29-30 (v. 2).—For two centuries, until the overthrow of the kingdom, Samaria continued to be the queen of the land, and the seat of government, often giving its name to the whole state, so that the kings were called "Kings of Samaria." "Under the dynasties of Omri and Jehu [10th-8th centuries, B. C.] the Northern Kingdom took the leading part in Israel; even to the Judæan Amos it was Israel 'par excellence.' Judah was not only inferior in political power, but in the share it took in the active movements of national life and thought. In tracing the history of religion and the work of the prophets, we have been almost exclusively occupied with the North; Amos himself, when charged with a message to the whole family that Jehovah brought up out of Egypt, leaves his home to preach in a Northern sanctuary. During this whole period we have a much fuller knowledge of the life of Ephraim than of Judah; the Judæan history consists of meagre extracts from official records, except where it comes into contact with the North, through the alliance of Jehoshaphat with Ahab; through the reaction of Jehu's revolution in the fall of Athaliah, the last scion of the house of Ahab, and the accompanying abolition of Baal worship at Jerusalem, or, finally, through the presumptuous attempt of Amaziah to measure his strength with the powerful monarch of Samaria. While the house of Ephraim was engaged in the great war with Syria, Judah had seldom to deal with enemies more formidable than the Philistines or the Edomites; and the contest with these foes, renewed with varying success generation after generation, resolved itself into a succession of forays and blood-feuds such as have always been common in the lands of the Semites (Amos i.), and never assumed the character of a struggle for national existence. It was the Northern Kingdom that had the task of upholding the standard of Israel: its whole history presents greater interest and more heroic elements; its struggles, its calamities, and its glories were cast in a larger mould. It is a trite proverb that the nation which has no history is happy, and perhaps the course of Judah's existence ran more smoothly than that of its greater neighbor, in spite of the raids of the slave-dealers of the coast, and the lawless hordes of the desert. But no side of national existence is likely to find full development where there is little political activity; if the life of the North was

more troubled, it was also larger and more intense. Ephraim took the lead in literature and religion as well as in politics; it was in Ephraim far more than in Judah that the traditions of past history were cherished, and new problems of religion became practical and called for solution by the word of the prophets. So long as the Northern Kingdom endured Judah was content to learn from it for evil or for good. It would be easy to show in detail that every wave of life and thought in Ephraim was transmitted with diminished intensity to the Southern Kingdom. In many respects the influence of Ephraim upon Judah was similar to that of England upon Scotland before the union of the crowns, but with the important difference that after the accession of Omri the two Hebrew kingdoms were seldom involved in hostilities. . . . The internal condition of the [Judean] state was stable, though little progressive; the kings were fairly successful in war, though not sufficiently strong to maintain unbroken authority over Edom, the only vassal state of the old Davidic realm over which they still claimed suzerainty, and their civil administration must have been generally satisfactory according to the not very high standard of the East; for they retained the affections of their people, the justice and mercy of the throne of David are favourably spoken of in the old prophecy against Moab quoted in Isaiah xv., xvi., and Isaiah contrasts the disorders of his own time with the ancient reputation of Jerusalem for fidelity and justice (i. 21). . . . The religious conduct of the house of David followed the same general lines. Old abuses remained untouched, but the cultus remained much as David and Solomon had left it. Local high places were numerous, and no attempt was made to interfere with them; but the great temple on Mount Zion, which formed part of the complex of royal buildings erected by Solomon, maintained its prestige, and appears to have been a special object of solicitude to the kings, who treated its service as part of their royal state. It is common to imagine that the religious condition of Judah was very much superior to that of the North, but there is absolutely no evidence to support this opinion."—W. Robertson Smith, *The Prophets of Israel*, lect. 5.—In the year B. C. 745 the throne of Assyria was seized by a soldier of great ability, called Pul, or Pulu, who took the name of Tiglath-pileser III. and who promptly entered on an ambitious career of conquest, with imperial aims and plans. "In B. C. 738 we find him receiving tribute from Menahem of Samaria, Rezon of Damascus, and Hiram of Tyre. . . . The throne of Israel was occupied at the time by Pekah, a successful general who had murdered his predecessor, but who was evidently a man of vigour and ability. He and Rezon endeavoured to form a confederacy of the Syrian and Palestinian states against their common Assyrian foe. In order to effect their object they considered it necessary to displace the reigning king of Judah, Ahaz, and substitute for him a creature of their own. . . . They were aided by a party of malcontents in Judah itself (Is. viii. 6), and the position of Ahaz seemed desperate. . . . In this moment of peril Isaiah was instructed to meet and comfort Ahaz. He bade him 'fear not, neither be fainthearted,' for the confederacy against the dynasty of David should be broken and overthrown. . . . But Ahaz . . . had no

faith either in the prophet or in the message he was commissioned to deliver. He saw safety in one course only—that of invoking the assistance of the Assyrian king, and bribing him by the offer of homage and tribute to march against his enemies. In vain Isaiah denounced so suicidal and unpatriotic a policy. In vain he foretold that when Damascus and Samaria had been crushed, the next victim of the Assyrian king would be Judah itself. The infatuated Ahaz would not listen. He 'sent messengers to Tiglath-pileser king of Assyria, saying, I am thy servant and thy son: come up and save me out of the hand of the king of Syria, and out of the hand of the king of Israel, which rise up against me.'" The king of Assyria responded to the call (B. C. 734). He defeated Rezon in battle, laid siege to Damascus, swept the tribes east of the Jordan into captivity, overran the territory of Israel, captured Samaria and put to death Pekah the king. In place of Pekah he set up a vassal-king Hoshea. Six years later, Tiglath-pileser having died, and the Assyrian throne having been seized by another strong soldier, Shalmaneser IV., Hoshea attempted a revolt, looking to Egypt for help. But before Sabako king of Egypt could move to his assistance, "Hoshea was defeated by the Assyrian king or his satraps, and thrown into chains. The ruling classes of Samaria, however, still held out. An Assyrian army, accordingly, once more devastated the land of Israel, and laid siege to the capital. For three years Samaria remained untaken. Another revolution had meanwhile broken out in Assyria; Shalmaneser had died or been put to death, and a fresh military adventurer had seized the crown, taking the name of Sargon, after a famous monarch of ancient Babylonia. Sargon had hardly established himself upon the throne when Samaria fell (B. C. 722). . . . He contented himself with transporting only 27,280 of its inhabitants into captivity, only the upper classes, in fact, who were implicated in the revolt of Hoshea. An Assyrian satrap, or governor, was appointed over Samaria, while the bulk of the population was allowed to remain peaceably in their old homes."—A. H. Sayce, *Life and Times of Isaiah*, ch. 3.—"Much light is thrown upon the conditions of the national religion then and upon its subsequent development by the single fact that the exiled Israelites were absorbed by the surrounding heathenism without leaving a trace behind them, while the population of Judah, who had the benefit of a hundred years of respite, held their faith fast throughout the period of the Babylonian exile, and by means of it were able to maintain their own individuality afterwards in all the circumstances that arose. The fact that the fall of Samaria did not hinder but helped the religion of Jehovah is entirely due to the prophets."—J. Wellhausen, *Sketch of the Hist. of Israel and Judah*, ch. 6.—"The first generation of the exiles lived to see the fall of their conquerors. . . . After this it is difficult to discover any distinct trace of the northern tribes. Some returned with their countrymen of the southern kingdom. . . . The immense Jewish population which made Babylonia a second Palestine was in part derived from them; and the Jewish customs that have been discovered in the Nestorian Christians, with the traditions of the sect itself, may indicate at any rate a mixture of Jewish descent. That they [the 'lost Ten

Tribes'] are concealed in some unknown region of the earth, is a fable with no foundation either in history or prophecy."—Dean Stanley, *Lectures on the Hist. of the Jewish Church*, lect. 34 (c. 2).—See, also, JERUSALEM.

B. C. 724-604.—The kingdom of Judah to the end of the Egyptian domination.—Three years before Sargon's destruction of Samaria, "Hezekiah had succeeded his father Ahaz upon the throne of Jerusalem. . . . Judah was tributary to Assyria, and owed to Assyria its deliverance from a great danger. But the deliverer and his designs were extremely dangerous, and made Judah apprehensive of being swallowed up presently, when its turn came. The neighbouring countries,—Phœnicia on the north, Moab, Ammon, and the Arabian nations on the east, Philistia on the west, Egypt and Ethiopia on the south,—shared Judah's apprehensions. There were risings, and they were sternly quelled; Judah, however, remained tranquil. But the scheme of an anti-Assyrian alliance was gradually becoming popular. Egypt was the great pillar of hope. By its size, wealth, resources, pretensions, and fame, Egypt seemed a possible rival to Assyria. Time went on. Sargon was murdered in 705; Sennacherib succeeded him. Then on all sides there was an explosion of revolts against the Assyrian rule. The first years of Sennacherib's reign were spent by him in quelling a formidable rising of Merodach Balandan, king of Babylon. The court and ministers of Hezekiah seized this opportunity for detaching their master from Assyria, for joining in the movement of the insurgent states of Palestine and its borders, and for allying themselves with Egypt. . . . In the year 701, Sennacherib, victorious in Babylonia, marched upon Palestine."—M. Arnold, *Isaiah of Jerusalem*, introd.—Sennacherib advanced along the Phœnician coast. "Having captured Ascalon, he next laid siege to Ekron, which, after the Egyptian army sent to its relief had been defeated at Eltekeh, fell into the enemy's hand, and was severely dealt with. Simultaneously various fortresses of Judah were occupied, and the level country was devastated (Isa. i.). The consequence was that Hezekiah, in a state of panic, offered to the Assyrians his submission, which was accepted on payment of a heavy penalty, he being permitted, however, to retain possession of Jerusalem. He seemed to have got cheaply off from the unequal contest. The way being thus cleared, Sennacherib pressed on southwards, for the Egyptians were collecting their forces against him. The nearer he came to the enemy the more undesirable did he find it that he should leave in his rear so important a fortress as Jerusalem in the hands of a doubtful vassal. Notwithstanding the recently ratified treaty, therefore, he demanded the surrender of the city, believing that a policy of intimidation would be enough to secure it from Hezekiah. But there was another personality in Jerusalem of whom his plans had taken no account. Isaiah had indeed regarded the revolt from Assyria as a rebellion against Jehovah Himself, and therefore as a perfectly hopeless undertaking, which could only result in the utmost humiliation and sternest chastisement for Judah. But much more distinctly than Amos and Hosea before him did he hold firm as an article of faith the conviction that the kingdom would not be utterly annihilated; all his speeches of solemn

warning closed with the announcement that a remnant should return and form the kernel of a new commonwealth to be fashioned after Jehovah's own heart. . . . Over against the vain confidence of the multitude Isaiah had hitherto brought into prominence the darker obverse of his religious belief, but now he confronted their present depression with its bright reverse; faint-heartedness was still more alien to his nature than temerity. In the name of Jehovah he bade King Hezekiah be of good courage, and urged that he should by no means surrender. The Assyrians would not be able to take the city, not even to shoot an arrow into it, nor to bring up their siege train against it. 'I know thy sitting, thy going, and thy standing,' is Jehovah's language to the Assyrian, 'and also thy rage against Me. And I will put my ring in thy nose, and my bridle in thy lips, and I will turn thee back by the way by which thou camest.' And thus it proved in the issue. By a still unexplained catastrophe, the main army of Sennacherib was annihilated on the frontier between Egypt and Palestine, and Jerusalem thereby freed from all danger. The Assyrian king had to save himself by a hurried retreat to Nineveh; Isaiah was triumphant. A more magnificent close of a period of influential public life can hardly be imagined."—J. Wellhausen, *Sketch of the History of Israel and Judah*, ch. 7.—"We possess in duplicate, on the Taylor Cylinder, found at Nineveh in 1830, and now in the British Museum, and on the Bull-inscription of Kouyunjik, Sennacherib's own account of the stages of his campaign. Sidon and the cities of Phœnicia were the first to be attacked; and, after reducing these, and receiving homage from several of the kings of the countries bordering on Palestine, who apparently were not this time implicated in the plan of revolt, Sennacherib started southwards, aiming to recover similarly Ashkelon, Ekron, and Jerusalem. In Ashkelon he deprived Zedek of his crown, which he bestowed upon Sarludari, the son of a former king, doubtless on the ground that he was friendly to Assyrian interests: at the same time four subject-cities belonging to Zedek, Beth-dagon, Joppa, Bene-Barak, and Azuru were captured and plundered. Sennacherib next proceeds to deal with Ekron. The people of Ekron, in order to carry through their plan for the recovery of independence without hindrance, had deposed their king Padi, who remained loyal to Assyria, and sent him bound in chains to Hezekiah. Upon news of the approach of the Assyrians, they had summoned the Egyptians to their aid; they arrive now 'with forces innumerable'; the encounter takes place at Altaku (probably not far from Ekron); victory declares for the Assyrian, and the Egyptians retire without effecting the desired relief. After this Sennacherib soon reduces Ekron; he obtains, moreover, the surrender of Padi from Jerusalem, and restores him to his throne. Now follows the account of the aggressive measures adopted by him against Judah and Jerusalem. 'And Hezekiah of Judah, who had not submitted to my yoke, forty-six of his strong cities, fortresses and smaller towns round about their border without number, with laying low of the walls, and with open (?) attack, with battle . . . of feet, . . . hewing about and trampling down (?), I besieged, I took 200,150 people, small and great, male and female, horses, mules,

asses, camels, oxen, and sheep without number, from the midst of them I brought out, and I counted them as spoil. Himself, as a bird in a cage, in the midst of Jerusalem, his royal city, I shut up. Siege-works against him I erected, and the exit of the great gate of his city I blocked up. His cities which I had plundered, from his domain I cut off; and to Mitinti, king of Ashdod, to Padi, king of Ekron, and to Zilbel, king of Gaza, I gave them; I diminished his territory. To the former payment of their yearly tribute, the tribute of subjection to my sovereignty I added; I laid it upon them. Himself, Hezekiah, the terror of the splendour of my sovereignty overwhelmed: the Arabians and his dependents, whom he had introduced, for the defence of Jerusalem, his royal city, and to whom he had granted pay, together with 30 talents of gold, 800 talents of silver, bullion (?) . . . precious (?) stones of large size, conches of ivory, lofty thrones of ivory, elephant-skins, ivory, . . . wood, . . . woods of every kind, an abundant treasure, and in addition, his daughters, the women of his palace, his male and female harem(?) attendants unto Nineveh, my royal city, he caused to be brought after me. For the payment of tribute, and the rendering of homage, he sent his envoy.' Here the account on the Inscription closes, the lines which follow relating to the campaign of the subsequent year.—S. R. Driver, *Isaiah: His Life and Times*, ch. 7.—'Between the retreat of Sennacherib's army and the capture of the capital by Nebuchadrezzar there was an interval of little more than a century, yet, meanwhile, upon the basis of the prophetic teaching, the foundations of Judaism were laid. . . . But though Sennacherib had retreated from Palestine, Judah still remained the vassal of Assyria. The empire of Assyria was scarcely affected by the event which was to change the face of the world, and for more than half-a-century its power was undiminished and supreme. Yet, as regards the internal condition of Judah, the great deliverance was the occasion of a reform which at first may well have made Isaiah's heart beat high. . . . Influential as he was at the court and with the king, and with reputation enormously enhanced by the fulfilment of his promise of deliverance, he probably urged and prompted Hezekiah to the execution of a religious reform. The meagre verse in the Book of Kings which describes this reform is both inaccurate and misplaced. There is no hint in the authentic writings of Isaiah or Micah that any religious innovations had been attempted before the Assyrian war. It was the startling issue of Sennacherib's invasion which afforded the opportunity and suggested the idea. Moreover, wider changes are attributed to Hezekiah than he can actually have effected. . . . The residuum of fact contained in the 18th chapter of the Second Book of Kings must be probably limited to the destruction of the Nehushtan, or brazen serpent, that mysterious image in which the contemporaries of Hezekiah, whatever may have been its original significance, doubtless recognized a symbol of Yahveh. Yet indirect evidence would incline us to believe that Hezekiah's reform involved more than the annihilation of a single idol; it is more probably to be regarded as an attempt at a general abolition of images, as well as a suppression of the new Assyrian star-worship and

of the 'Moloch' sacrifices which had been introduced into Judah in the reign of Ahaz. Whether this material iconoclasm betokened or generated any wide moral reformation is more than doubtful. . . . Hezekiah's reign extended for about fourteen years after the deliverance of Jerusalem in 701. To the early part of this, its second division, the religious reformation must be assigned. A successful campaign against the Philistines, alluded to in the Book of Kings, probably fell within the same period. Beyond this, we know nothing, though we would gladly know much, of these fourteen concluding years of an eventful reign. In 686 Hezekiah died, and was succeeded by his son Manasseh, who occupied the throne for forty-five years (686-641). The Book of Kings does not record a single external incident throughout his long reign. It must have been a time of profound peace and of comparative prosperity. Manasseh remained the vassal of Assyria, and the Assyrian inscriptions speak of him as paying tribute to the two kings, Esarhaddon (681-669), Sennacherib's successor, and Assurbanipal (669-626), till whose death the supremacy of Assyria in Palestine was wholly undisputed. Uneventful as Manasseh's reign was in foreign politics, it was all the more important in its internal and religious history. In it, and in the short reign of Amon, who maintained the policy of his father, there set in a period of strong religious reaction, extending over nearly half-a-century (686-638). Manasseh is singled out by the historian for special and repeated reprobation. In the eyes of the exilic redactor, his iniquities were the immediate cause of the destruction of the national life. Not even Josiah's reformation could turn Yahveh 'from the fierceness of his great wrath, wherewith his anger was kindled against Judah, because of all the provocations that Manasseh had provoked him withal.' Jeremiah had said the same. Exile and dispersion are to come 'because of Manasseh, the son of Hezekiah, king of Judah, for that which he did in Jerusalem.' . . . What were the sins of Manasseh? It has already been indicated that the Assyrians made their influence felt, not only in politics, but also in religion. It was the old Babylonian worship of the luminaries of heaven which was introduced into Judah in the eighth century, and which, after receiving a short check during the reign of Hezekiah, became very widely prevalent under his son. . . . There are many tokens in the literature of the seventh century that the idolatrous reaction of Manasseh penetrated deep, making many converts. . . . Manasseh would apparently brook no opposition to the idolatrous proclivities of his court; he met the indignation of Isaiah's disciples and of the prophetic party by open and relentless persecution. . . . The older historian of the Book of Kings speaks of 'Manasseh shedding innocent blood very much, till he had filled Jerusalem from one end to another.' This innocent blood must have mainly flowed from those who opposed his idolatrous tendencies. . . . From the accession of Manasseh to the death of Amon (686-638), a period of forty-eight years, this internal conflict continued; and in it, as always, the blood of martyrs was the seed of the Church. In 638, Amon was succeeded by his son Josiah, then only eight years old. It is possible that his accession brought about some amelioration in the condition of the prophetic

party, and that active persecution ceased. But the syncretistic and idolatrous worship was still maintained for another eighteen years, though those years are passed over without any notice in the Book of Kings. They were, however, years of great importance in the history of Asia, for they witnessed the break-up of the Assyrian empire, and the inroads of the Scythians. The collapse of Assyria followed hard upon the death of Asurbanipal in 626: Babylon revolted, the northern and north-western provinces of the empire fell into the hands of the Medes, and the authority of Assyria over the vassal kingdoms of the west was gradually weakened."—C. G. Montefiore, *Lects. on the Origin and Growth of Religion, as illustrated by the Religion of the ancient Hebrews* (Hibbert Lects., 1892), lect. 4.—"The Assyrian empire was much weakened and the king could not think of maintaining his power in the more distant provinces. . . . In the year 610 B. C., Nineveh was again besieged, this time by the Medes and Babylonians in league together. In the same year Psammetichus, king of Egypt, died and was succeeded by his son Necho. If Psammetichus had already tried to enlarge his kingdom at the expense of Assyria, Necho was not the man to miss the golden opportunity that now presented itself: he proposed to seize Syria and Palestine, the Assyrian provinces that bordered on his own kingdom, and thus to obtain his share of the spoil, even if he did not help to bring down the giant. By the second year after his accession to the throne he was on the march to Syria with a large army. Probably it was transported by sea and landed at Acco, on the Mediterranean, whence it was to proceed overland. But in carrying out this plan he encountered an unexpected obstacle: Josiah went to meet him with an army and attempted to prevent his march to Syria. . . . Josiah must have firmly believed that Jahveh would fight for his people and defeat the Egyptian ruler. From what Jeremiah tells us of the attitude of the prophets in the reigns of Jehoiakim and Zedekiah, we must infer that many of them strengthened the king in his intention not to endure an encroachment such as that of the Pharaoh. The Chronicler relates that Necho himself endeavored to dissuade Josiah from the unequal contest. But [uselessly]. . . . The decisive battle was fought in the valley of Megiddo: Judah was defeated; Josiah perished. . . . After the victory in the valley of Megiddo and the death of Josiah, Necho was master of the kingdom of Judah. Before he arrived there, 'the people of the land' made Jehoahaz, a younger son of Josiah, king, presumably because he was more attached than his elder brother to his father's policy. At all events, Necho hastened to depose him and send him to Egypt. He was superseded by Eliakim, henceforward called Jehoiakim. At first Jehoiakim was a vassal of Egypt, and it does not appear that he made any attempt to escape from this servitude. But it was not long before events occurred elsewhere in Asia that entirely changed his position. Nineveh had fallen; the Medes and the Chaldeans or Babylonians now ruled over the former territory of the Assyrians; Syria and Palestine fell to the share of the Babylonians. Of course, the Egyptians were not inclined to let them have undisputed possession. A battle was fought at Carchemish (Circesium), on the Euphrates, between the armies of Necho and

Nebuchadnezzar, who then commanded in the name of his father, Nabopolassar, but very shortly afterwards succeeded him. The Egyptians sustained a crushing defeat (604 B. C.). This decided the fate of Western Asia, including Judea."—A. Kuenen, *The Religion of Israel*, ch. 6 (c. 2).

B. C. 604-536.—Fall of the kingdom of Judah.—The Babylonian captivity.—"In the fourth year of Jehoiakim (B. C. 604) the mightiest monarch who had wielded the Assyrian power, Nebuchadnezzar, was associated in the empire with his father, and assumed the command of the armies of Assyria. Babylon now takes the place of Nineveh as the capital of the Assyrian empire. . . . Vassalage to the dominion of Egypt or of Babylon is now the ignominious doom of the king of Judah. . . . Nebuchadnezzar, having retaken Carchemish (B. C. 601), passed the Euphrates, and rapidly overran the whole of Syria and Palestine. Jerusalem made little resistance. The king was put in chains to be carried as a prisoner to Babylon. On his submission, he was reinstated on the throne; but the Temple was plundered of many of its treasures, and a number of well-born youths, among whom were Daniel, and three others, best known by their Persian names, Shadrach, Meshech, and Abednego. From this date commence the seventy years of the Captivity. Jehoiakim had learned neither wisdom nor moderation from his misfortunes. Three years after, he attempted to throw off the yoke of Chaldea. . . . At length this weak and cruel king was slain (B. C. 598). . . . Jehoiachin (Jeconias or Coniah), his son, had scarcely mounted the throne, when Nebuchadnezzar himself appeared at the gates of Jerusalem. The city surrendered at discretion. The king and all the royal family, the remaining treasures of the Temple, the strength of the army and the nobility, and all the more useful artisans, were carried away to Babylon. Over this wreck of a kingdom, Zedekiah (Mattaniah), the younger son of Josiah, was permitted to enjoy an inglorious and precarious sovereignty of eleven years, during which he abused his powers, even worse than his imbecile predecessors. In his ninth year, notwithstanding the remonstrances of the wise Jeremiah, he endeavoured to assert his independence; and Jerusalem, though besieged by Nebuchadnezzar in person, now made some resistance. . . . At length, in the city, famine reduced the fatal obstinacy of despair. Jerusalem opened its gates to the irresistible conqueror. The king, in an attempt to break through the besieging forces, or meditating flight towards his ally, the king of Ammon, was seized on the plain of Jericho. His children were slain before his face, his eyes put out, and thus the last king of the royal house of David, blind and childless, was led away into a foreign prison. The capture of Jerusalem took place on the ninth day of the fourth month: on the seventh day of the fifth month (two days on which Hebrew devotion still commemorates the desolation of the city by solemn fast and humiliation) the relentless Nebuzaradan executed the orders of his master by levelling the city, the palaces, and the Temple, in one common ruin. The few remaining treasures, particularly the two brazen pillars which stood before the Temple, were sent to Babylon; the chief priests were put to death, the rest carried into captivity. . . .

The miserable remnant of the people were placed under the command of Gedaliah, as a pasha of the great Assyrian monarch; the seat of government was fixed at Mizpeh. . . . Nebuzaradan (the general of Nebuchadnezzar) only left, according to the strong language of the Second Book of Kings, xxv. 12, 'of the poor of the land, to be vine-dressers and husbandmen.' . . . In general it seems that the Jewish exiles [in Babylonia] were allowed to dwell together in considerable bodies, not sold as household or personal or prædial slaves, at least not those of the better order of whom the Captivity chiefly consisted. They were colonists rather than captives, and became by degrees possessed of considerable property. . . . They had free enjoyment of their religion, such at least as adhered faithfully to their belief in Jehovah. We hear of no special and general religious persecution. The first deportation of chosen beautiful youths, after the earlier defeat of Jehoiakim, for hostages, or as a kind of court-pages, was not numerous. The second transportation swept away the king, his wife, all the officers and attendants of his court, 7,000 of the best of the army, 1,000 picked artisans, armourers, and others, amounting to 10,023 men. The last was more general: it comprehended the mass of the people, according to some calculations towards 300,000 or 400,000 souls."—H. H. Milman, *Hist. of the Jews*, bk. 8-9, with foot-note (v. 1).—The inhabitants left behind in Judæa "formed but a pitiful remnant of the former kingdom of Judah. Part of them had grown wild and led the lives of freebooters. Others busied themselves with agriculture, but they had much to suffer from the hands of Chaldean soldiers that roved about the land, and from the neighbouring tribes, who took advantage of Israel's abasement to extend their territories. . . . We do not know with certainty the number of the exiles carried off by Nebuchadnezzar: the returns given in the Old Testament are evidently incomplete. But that their number was very considerable, can be gathered from the number of those who afterwards went back. For their intrinsic worth, even more than for their numerical strength, these exiles had a right to be regarded as the real representatives of the kingdom of Judah and thus of all Israel. . . . It was . . . the kernel of the nation that was brought to Babylonia. Our information as to the social condition of the exiles is very defective. Even to the question, where they had to settle, we can only return an imperfect answer. We meet with a colony of exiles, companions of Jeconiah, at Tel-abib, in the neighbourhood of the river Chebar, usually supposed to be the Chaboras, which runs into the Euphrates not far from Circesium, but considered by others to be a smaller river, nearer to Babylon. It lay in the nature of the case, that the second and third company of captives received another destination. Even had it been possible, prudence would have opposed their settling in the immediate vicinity of their predecessors. We are not surprised therefore that Ezekiel, who lived at Tel-abib, does not mention their arrival there. Where they did go we are not told. The historian says 'to Babylon,' to which place, according to him, the first exiles (597 B. C.) were also brought; probably he does not, in either passage, mean only the capital of the Chaldean kingdom, but rather the province of that name to which the city of course be-

longed. . . . Nebuchadnezzar's purpose, the prevention of fresh disturbances, having been attained by their removal from Judæa, he could now leave them to develop their resources. It was even for the interest of the districts in which they settled, that their development should not be obstructed. Many unnecessary and troublesome conflicts were avoided and the best provision was made for the maintenance of order, by leaving them free, within certain limits, to regulate their own affairs. So the elders of the families and tribes remained in possession of the authority which they had formerly exercised."—A. Kuenen, *The Religion of Israel*, ch. 7 (v. 2).—"About the middle of the sixth century before Christ, Cyrus, King of Elam, began the career of conquest which left him master of Western Asia. Greek writers of history have done full justice to the character of this extraordinary man, but what they tell of his origin, his early adventures and rise to power, is for the most part mere fable. . . . Within recent years a new light has been thrown on one of the dimmest figures of the old world by the discovery of contemporary documents, in which the Conqueror of Babylon himself records his victories and the policy of his reign. . . . It appears from the Inscriptions that the founder of the Persian Empire was by no means the parvenu prince described by Herodotus. Cyrus was a king's son, and in early youth, by legitimate succession, himself became a king. From Susa (Shushan) on the Choaspes, his capital city, he ruled over the fertile and populous region lying eastward of the Lower Tigris which bore the name of Elam or Susiana. This realm was one of the most ancient in Western Asia. . . . Nabonidus became king of Babylon in the year 555 B. C. He had raised himself to the throne by conspiracy and murder, and his position at first was insecure. The eastern provinces, Syria and Phœnicia, rose in revolt against the usurper, while the Medes on the north began a harassing warfare and threatened an invasion of Babylonia. This latter danger was averted for the time by an unlooked-for deliverance. In the sixth year of Nabonidus (550 B. C.) Cyrus led his army against Astyages, the Median king. The discontented soldiery of Astyages mutinied on the eve of battle, seized the person of their sovereign, and delivered him up to the enemy. . . . This bloodless victory added Media to the dominions of Cyrus, gave him Ecbatana as a second capital and place of arms, and more than doubled his military strength. . . . The real aim of Cyrus was the overthrow of Babylon, and the construction of a new and still wider empire on the ruins of the old. . . . Within the two years following his conquest of the Medes he had extended his sway over the kindred race of the Persians, from which he himself had sprung. The wild tribes of Iran had long looked greedily on the rich Chaldean plains and cities, and only waited a leader before swooping down like ravenous birds on their prey. This leader appeared in Cyrus. . . . Forty years had passed since the destruction of Jerusalem and the deportation of the great mass of the Jewish people to Babylonia (588 B. C.). During this period, under Nebuchadnezzar and his immediate successors on the throne, the exiles had lived in peace, following without interference their own customs, religious and social. . . . Nothing hindered them from leading a quiet and comfortable

life among the Chaldeans, if only they were content to break with their past and give up hope for the future. But this was impossible for all true Israelites. They could not forget what they had been, or reconcile themselves to be what they now were. They had the means of livelihood in abundance, but to them their drink was as vinegar, their meat as gall. . . . The home-sickness of the people finds manifold expression in the literature of the Exile. . . . Now, as at every crisis in the national history, the Prophets stood forth, the true leaders of Israel. They kept the people constantly in mind of their high destinies, and comforted and encouraged them in their darkest hours. . . . Among the Jewish exiles, enlightened by the prophetic word, the name Korsh passed from lip to lip, and the movements of this new Conqueror were followed with straining eyes. . . . In the month Nisan (March) of the year 547 B. C., the ninth year of Nabonidus, Cyrus crossed the Tigris at the fords of Arbela, eastward of the modern Mosul, and began his first invasion of Babylonia. . . . Meanwhile the fainting king Nabonidus lingered in his palace near Babylon, leaving the defence of the empire to his eldest son, the Prince Royal Belshazzar. Whether worsted in battle or, as is more likely, baffled by the difficulties in the way of an invader—the country seamed with water-courses, the numerous fortified towns, the Median Wall—Cyrus was forced to retreat. . . . In the seventeenth year of Nabonidus (539 B. C.) the King of Elam once more took the field against Babylon. This time the attack was made from the south-east. An opportune revolt of the southern provinces, probably fomented by Cyrus himself, opened the way for him into the heart of the land. . . . On all sides the disaffected subjects of Nabonidus went over to the invader, who passed on at the head of his 'vast army, innumerable, like the waters of a river,' without meeting any serious resistance. The last hope of Nabonidus rested on his Army of the North. In the month Tammuz (June) a pitched battle was fought near Routou, a town in Accad, and ended in the defeat of the Babylonians. A revolution followed at once. . . . Some days later the victorious army, under a lieutenant of the King, appeared before the walls of Babylon. The collapse of all authority made useless defences which were the wonder of the world; friendly hands threw open the brazen gates, and without a struggle the great city fell. . . . Four months later Cyrus entered Babylon in triumph. . . . The hitherto accepted opinion that Cyrus was an Aryan monotheist, a worshipper of Ormazd, and therefore so far in religious sympathy with the Jews, is seriously shaken if not overthrown by the Inscriptions which record his Babylonian conquest. Even if allowance be made for the fact that these are state documents, and reveal only what the monarch professed, not necessarily what he believed, there still remains the strong probability that Cyrus was not Zoroastrian in creed, but polytheist like his people of Elam. The Cyrus of the Inscriptions is either a fanatical idolater or simply an opportunist in matters of religion. The latter alternative is the more probable."—P. H. Hunter, *After the Exile*, pt. 1, ch. 1-2.

B. C. 537.—The return from Babylon.—"The fall of the metropolis had decided the fortune of the Babylonian kingdom, and the

provinces. The most important of these was Syria, with the great trading places of the Phenicians on the Mediterranean. . . . The hopes of the Jews were at last fulfilled. The fall of Babylon had avenged the fall of Jerusalem, and the subjugation of Syria to the armies of Babylon opened the way for their return. Cyrus did not belie the confidence which the Jews had so eagerly offered him; without hesitation he gave the exiles permission to return and erect again their shrine at Jerusalem. The return of the captives and the foundation of a new state of the Jews was very much to his interest; it might contribute to support his empire in Syria. He did not merely count on the gratitude of the returning exiles, but as any revival of the Babylonian kingdom, or rebellion of the Syrians against the Persian empire, imperilled the existence of this community, which had not only to be established anew, but would never be very strong, it must necessarily oppose any such attempts. Forty-nine years—seven Sabbatical years, instead of the ten announced by Jeremiah—had passed since the destruction of Jerusalem, and more than sixty since Jeremiah had first announced the seventy years of servitude to Babylon. Cyrus commissioned Zerubbabel, the son of Salathiel, a grandson of Jechoniah, the king who had been carried away captive, and therefore a scion of the ancient royal race, and a descendant of David, to be the leader of the returning exiles, to establish them in their abode, and be the head of the community; he bade his treasurer Mithridates give out to him the sacred vessels, which Nebuchadnezzar had carried away as trophies to Babylon, and placed in the temple of Bel; there are said to have been more than 5,000 utensils of gold and silver, baskets, goblets, cups, knives, etc. But all the Jews in Babylon did not avail themselves of the permission. Like the Israelites deported by Sargon into Media and Assyria some 180 years previously, many of the Jews brought to Mesopotamia and Babylonia at the time of Jechoniah and Zedekiah, had found there a new home, which they preferred to the land of their fathers. But the priests (to the number of more than 3,000), many of the families of the heads of the tribes, all who cared for the sanctuary and the old country, all in whom Jehovah 'awoke the spirit,' as the Book of Ezra says, began the march over the Euphrates. With Zerubbabel was Joshua, the high priest, the most distinguished among all the Jews, a grandson of the high priest, Zeraiah, whom Nebuchadnezzar had executed after the capture of Jerusalem. . . . It was a considerable multitude which left the land 'beyond the stream,' the waters of Babylon, to sit once more under the fig-tree in their ancient home, and build up the city of David and the temple of Jehovah from their ruins; 42,360 freemen, with 7,337 Hebrew men-servants and maid-servants; their goods were carried by 435 camels, 736 horses, 250 mules, and 6,720 asses (537 B. C.). The exodus of the Jews from Babylon is accompanied by a prophet with cries of joy, and announcements filled with the wildest hopes. . . . 'Go forth from Babylon,' he cries; 'fly from the land of the Chaldeans! Proclaim it with shouts of joy, tell it to the end of the earth and say: "Jehovah hath redeemed his servant Jacob." 'How beautiful upon the mountains are the feet of him that bringeth glad tidings,

that publisheth peace, that saith unto Zion, Thy God reigneth. Up, up, go forth, touch no unclean person; go forth from among them. Cleanse yourselves, ye that bear Jehovah's vessels. Ye shall go forth in joy, and be led in peace; the mountains and the hills shall break forth before you into singing, and all the trees shall clap their hands. Jehovah goes before you, and the God of Israel brings up the rear. . . . Jehovah calls thee as an outcast sorrowful woman, and thy God speaks to thee as to a bride who has been put away; thy ruins, and deserts, and wasted land, which was destroyed from generation to generation—thy people build up the ruins, and renew the ancient cities. Behold, I will make thy desert like Eden, and thy wilderness like the garden of the Lord; I will lay thy stones with bright lead, and thy foundations with sapphires, and make thy towers of rubies and thy gates of carbuncles. Joy and delight is in them, thanksgiving and the sound of strings. The wealth of the sea shall come to thee, and the treasures of the nations shall be thine; like a stream will I bring salvation upon Israel, and the treasures of the nations like an overflowing river. Thy sons hasten onward; those that laid thee waste go forth from thee. Lift up thine eyes and see; thy sons come from far, and I will gather them to those that are gathered together. The islands and the ships of Tarshish wait to bring thy children from afar, their gold and their silver with them. The land will be too narrow for the inhabitants; widen the place for thy tent, let the carpets of thy habitation be spread—delay not. Draw out the rope; to the right and to the left must thou be widened. I will set up my banner for the nations, that they bring thy sons in their arm, and thy daughters shall be carried on the shoulders. Kings shall be thy guardians, and queens thy nursing-mothers; I will bow them to the earth before thee, and they shall lick the dust of thy feet, and thou shalt know that I am Jehovah, and they who wait patiently for me shall not be put to shame.' Such expectations and hopes were far from being realised. The Edomites had, in the mean-time, extended their borders and obtained possession of the South of Judah, but the land immediately round Jerusalem was free and no doubt almost depopulated. As the returning exiles contented themselves with the settlement at Jerusalem, the towns to the North, Anathoth, Gebah, Michmash, Kirjath-Jearim, and some others—only Bethlehem is mentioned to the South—they found nothing to impede them. Their first care was the restoration of the worship, according to the law and the custom of their fathers. . . . Then voluntary gifts were collected from all for the rebuilding of the temple; contributions even came in from those who had remained in Babylonia, so that 70,000 pieces of gold and 5,000 minæ of silver are said to have been amassed. Tyrian masons were hired, and agreements made with Tyrian carpenters, to fell cedars in Lebanon, and bring them to Joppa, for which Cyrus had given his permission. The foundation of the temple was laid in the second year of the return (536 B. C.). . . . The fortunate beginning of the restoration of the city and temple soon met with difficulties. The people of Samaria, who were a mixture of the remnant of the Israelites and the strangers whom Sargon had brought there after the capture of Samaria, . . . and Esarhaddon at a later

date, . . . came to meet the exiles in a friendly spirit, and offered them assistance, from which we must conclude that in spite of the foreign admixture the Israelitish blood and the worship of Jehovah were preponderant in Samaria. The new temple would thus have been the common sanctuary of the united people of Israel. But the 'sons of captivity' were too proud of the sorrows which they had undergone, and the fidelity which they had preserved to Jehovah, and their pure descent, to accept this offer. Hence the old quarrel between Israel and Judah broke out anew, and the exiles soon felt the result. After their repulse the Samaritans set themselves to hinder the building by force; 'they terrified the exiles that they built no more, and hired counsellors to make the attempt vain during the whole of the remainder of the reign of Cyrus.'—M. Duncker, *Hist. of Antiquity*, bk. 8, ch. 8 (v. 6).—The duration of the Captivity, strictly speaking, 'was only forty-seven years, if we reckon by the Canon of Ptolemy, from the 19th year of Nabuchodrozzor to the first of Cyrus; or, better, forty-nine years, if we add on, as we probably ought to do, the two years' reign of the Median king whom Cyrus set on the throne of Babylon.'—H. Ewald, *Hist. of Israel*, bk. 5, *introd.*—'The decree of Cyrus, at the close of the captivity, extended only to the rebuilding of the Temple. 'Thus saith Cyrus, king of Persia, The Lord God of heaven . . . hath charged me to build him an house at Jerusalem.' And under this decree Jeshua and Zerubbabel 'built the altar of the God of Israel. . . . But the foundation of the Temple of the Lord was not yet laid.' Afterwards they 'laid the foundation of the Temple of the Lord,' including, apparently, the outer wall, for their enemies made a representation to the king of Persia that the Jews were rebuilding the walls of their city: 'The Jews which came up from thee to us are . . . building the rebellious and the bad city, and have set up the walls thereof, and joined the foundations.' And as the wall of the Temple, which was about twelve feet thick, gave a colour to the charge, a decree was issued by Artaxerxes to prohibit the further prosecution of the work. 'Then ceased the work of the house of God, which is at Jerusalem.' On the accession of Darius to the throne of Persia, Jeshua and Zerubbabel recommenced the restoration of the Temple, including the wall of the Outer Temple, for they 'began to build the house of God,' when their enemies again stepped forward, saying, 'Who hath commanded you to build this house, and to make up this wall?' And on a renewed complaint to the king of Persia, search was made for the decree of Cyrus, and when it was found, Darius permitted the Jews to proceed with the Temple; 'Let the governor of the Jews and the elders of the Jews build this house of God in his place;' and thereupon the structure and the outer walls thereof (the square of 600 feet) were completed: 'They builded and finished it . . . on the third day of the month Adar, which was in the sixth year of the reign of Darius the king.' Thus far the rebuilding extended to the Temple only, and not to the walls of the city. Ezra afterwards obtained a decree to restore the nationality of the Jews, viz., to 'set magistrates and judges, which might judge all the people;' and afterwards Nehemiah, the cupbearer to the king, was enabled in a favourable moment to

win from him express permission to rebuild the Baris, or Vestry, afterwards Antonia, and also the city: 'Send me unto Judah, unto the city of my fathers' sepulchres, that I may build it;' and a direction was given to the governors beyond the Euphrates to forward Nehemiah and his company to Jerusalem; and the king's forester was required to supply the necessary timber."—T. Lewin, *Jerusalem*, ch. 2.—"The Jews returned home sobered and improved by their sufferings in exile, and entirely cured of their early hankering after idolatry. Having no political independence, and living under a governor, they devoted themselves all the more to religion, the only source and support of their nationality, and became zealots for the law, and for a devout carrying out of all its precepts, as far as practicable. All, indeed, could not be again restored. The most holy of the new temple was empty, for it was without the lost and irreplaceable ark of the covenant; the oracular ornaments of the high-priest had disappeared. As Jerusalem was now, far more than formerly, the head and heart of the nation, the high-priesthood . . . was the authority to which the nation willingly submitted; it served as the representative and pillar of unity, and the sons of David were forgotten. Another of the abiding consequences of their exile was, the altered mode of life which the nation led. At first they had been exclusively devoted to agriculture; but after mixing with strangers they learnt to engage in trade, and this inclination went on always increasing; it contributed essentially to their being spread far beyond the borders of Palestine, and to their multiplying their settlements in foreign lands."—J. J. I. Dollinger, *The Gentile and the Jew in the Courts of the Temple of Christ*, bk. 10, sect. 1 (v. 2).

B. C. 536-A. D. 50.—The Babylonian Jews.—"There is something very remarkable in the history of this race, for the most part descendants of those families which had refused to listen to the summons of Zorobabel, Ezra, and Nehemiah, and to return to the possession of their native country. . . . The singular part of their history is this, that, though willing aliens from their native Palestine, they remained Jews in character and religion; they continued to be a separate people, and refused to mingle themselves with the population of the country in which they were domiciliated. While those who returned to the Holy Land were in danger of forming a mixed race, by intermarriages with the neighbouring tribes, which it required all the sternest exercise of authority in their rulers to prevent, the Babylonian Jews were still as distinct a people as the whole race of Israel has been since the final dispersion. . . . Nor did they, like the Jews of Alexandria, become in any degree independent of the great place of national worship; they were as rigid Jews as if they had grown up within sight of the Temple. . . . The Temple became what the Caaba of Mecca is to the Mohammedans, the object of the profoundest reverence, and sometimes of a pious pilgrimage; but the land of their fathers had lost its hold on their affections; they had no desire to exchange the level plains of Babylonia for the rich pastures, the golden cornfields, or the rocky vineyards of Galilee and Judæa. This Babylonian settlement was so numerous and flourishing, that Philo more than once intimates the possibility of their

marching in such force to the assistance of their brethren in Palestine, in case the Roman oppression was carried to excess, as to make the fate of the war very doubtful. Their chief city, Nearda, was strongly situated in a bend of the river Euphrates, which almost surrounded the town." About the middle of the first century (of the Christian era) a band of freebooters, formed by two brothers of this Jewish community, gave great provocation to the Babylonians, and to the Parthian king whose subjects they then were. They were finally, but with much difficulty, destroyed, and the Babylonians then "began to commit dreadful reprisals on the whole Jewish population. The Jews, unable to resist, fled in great numbers to Seleucia; six years after many more took refuge from a pestilence in the same city. Seleucia happened to be divided into two factions: one of the Greeks, the other of the Syrians. The Jews threw themselves into the scale of the Syrians, who thus obtained a superiority, till the Greeks came to terms with the Syrians; and both parties agreed to fall upon the unhappy Jews. As many as 50,000 men were slain. The few who escaped fled to Ctesiphon. Even there the enmity of the Selencians pursued them; and at length the survivors took refuge in their old quarters, Nearda and Nisibis."—H. H. Milman, *Hist. of the Jews*, bk. 12 (v. 2).

B. C. 433-332.—The century of Silence.—"The interval between the Testaments has been called 'The Centuries of Silence.' The phrase is most untrue; for, as a whole, this time was vocal with the cry of a battle in which empire contended with empire, and philosophy with philosophy: it was an age of earnest and angry contention. But the hundred years succeeding the death of Nehemiah are for us, so far as any record remains of that Judæan history, a century of silence. For some reason which does not appear, the period from the death of this sturdy old captain at Jerusalem to the time of the Greek conquest of Persia has no Jewish history. That it was a period of growth and development with the Judæans—especially in their theological and ecclesiastical life—is evident from the changes which the close of the century shows. The stress of external events made it a time of heavy taxation and distress,—a time of struggle with Samaria, and of internal conflict for the control of the high priest's office."—T. R. Slicer, *Between the Testaments (The New World, March, 1892)*.

B. C. 413-332.—The rule of the High Priests.—"After the death of Nehemiah and the high priest, Eliashib (413 B. C.), the Persian Court did not appoint governors of Judea. Samaria was the seat of the Persian Satrap for Syria, Phœnicia and Palestine. The sons of David had lost prestige under Nehemiah (Psalm lxxxix.). The ruler acknowledged by the Law, the prophet (Deuter. xviii. 15), was no more; the last prophets under Nehemiah, with the exception of Malachi, had proved unworthy of their illustrious predecessors. Therefore, the high priest was now the first man in the theocracy, and, contrary to the Laws of Moses (Leviticus x. 3), he was acknowledged the chief ruler of the nation, although he was no longer the bearer of the Urim and Thumim (Ezra ii. 63). He presided over the Great Synod, was the representative of the people before the king and his

satrap, and gradually he established himself in the highest dignity of the nation."—I. M. Wise, *Hist. of the Hebrews' Second Commonwealth*, 1st period, ch. 4.

B. C. 332-167.—The Greek domination.—Jewish dispersion.—Hellenism.—On the fall of the Persian monarchy, Judea, with all the rest of western Asia, was gathered into the empire of Alexander the Great (see MACEDONIA: B. C. 334-330, and after), Jerusalem submitting to him without a siege, and so avoiding the fate of Tyre. In the wars between Alexander's generals and successors, which followed his death, Palestine changed masters several times, but does not seem to have been much disturbed. The High Priests continued to be the chiefs of the nation, and neither the religion nor the internal government of the Hebrew state suffered much interference. The final partition made among the new Macedonian kings (B. C. 302), gave Palestine to Ptolemy of Egypt, and it remained subject to Egypt for a century. This period was a happy one, on the whole, for the Jews. The Ptolemies were friendly to them, with one exception, respecting their religion and laws. Large numbers of them settled in Egypt, and especially in the rising new capital and emporium of trade—Alexandria. But in 201 B. C. Antiochus the Great, king of the Syrian or Seleucid monarchy, wrested Coelosyria and Palestine from the Ptolemies and added it to his own dominions (see SELEUCIDÆ: B. C. 224-187). Antiochus dealt favorably with the Jews, but his successors proved harder masters than the Egyptian Greeks.—H. Ewald, *Hist. of Israel*, bk. 5, sect. 2 (v. 5).—"These kings promoted the settlement of Greeks and Syrians in Palestine, so that it was by degrees all covered with cities and towns of Grecian nomenclature. The narrow territory of Judea alone kept free of them, but was surrounded with settlers whose speech, customs, and creed were Greek. On the other hand, the Jews went on spreading in lands where Greek was spoken. A good many of these were planted in Egypt, in the newly founded capital Antioch, in Lydia and Phrygia. Led on by their love of trade, they soon became numerous in the commercial cities of western Asia, Ephesus, Pergamus, Miletus, Sardis, &c. From Egypt and Alexandria, in which city, at a later period, they formed two-fifths of the inhabitants, they drew along the coast of Africa to Cyrene and the towns of the Pentapolis, and from Asia Anterior to the Macedonian and Greek marts; for the national love of commerce became more and more developed, till it absorbed all other occupations, and to this certainly the general inclination for commercial intercourse, prevalent at that period, greatly contributed. Thus it happened that two movements, identical in their operation, crossed each other, viz., an influx of Greek, or of Asiatic but hellenised, settlers into Palestine, and an outpouring of Jews and Samaritans into the cities speaking the Greek tongue. In olden times, while the Israelites still possessed a national kingdom, they felt their isolation from other people as a burden. It was as an oppressive yoke to them, which they bore impatiently, and were always trying to shake off. They wanted to live like other nations, to eat, drink, and intermarry with them, and, together with their own God, to honour the gods of the stranger also; for many raw and carnally-minded Jews

only looked upon the one special God and protector of their nation as one god amongst many. But now there was a complete change in this respect. The Jews everywhere lived and acted upon the fundamental principle, that between them and all other nations there was an insurmountable barrier; they shut themselves off, and formed in every town separate corporations, with officers of their own; while at the same time they kept up a constant connexion with the sanctuary at Jerusalem. They paid a tribute to the temple there, which was carefully collected everywhere, and from time to time conveyed in solemn procession to Jerusalem. There alone, too, could the sacrifices and gifts which were demanded by the law be offered. In this wise they preserved a centre and a metropolis. And yet there followed from all this an event, which in its consequences was one of the most important in history, namely, the hellenising of the Jews who were living out of Judea, and even, in a degree, of those who remained in their own land. They were a people too gifted intellectually to resist the magnetic power by which the Hellenistic tongue and modes of thought and action worked even upon such as were disposed to resist them on principle. The Jews in the commercial towns readily acquired the Greek, and soon forgot their mother tongue; and as the younger generation already in their domestic circle were not taught Greek by natives, as might be supposed, this Jewish Greek grew into a peculiar idiom, the Hellenistic. During the reign of the second Ptolemy, 284-247 B. C., the law of Moses was translated at Alexandria into Greek, probably more to meet the religious wants of the Jews of the dispersion than to gratify the desire of the king. The necessity of a knowledge of Hebrew for the use of the holy Scriptures was thereby done away with, and Greek language and customs became more and more prevalent. Individuals began to join this or that school of philosophy, according to predilection and intellectual bias. The Platonic philosophy had necessarily most attractions for the disciples of Moses. The intrusion of Hellenism into Judea itself met with a much more considerable resistance from the old believing and conservative Jews. Those of the heathen dispersion were obliged to be satisfied with mere prayer, Bible readings and expositions, in their proseuchæ and synagogues, and to do without the solemn worship and sacrifices of the temple; but in Jerusalem the temple-worship was carried out with all its ancient usages and symbols. There presided the Sopherim, the Scribes or skilled expounders of the law, a title first appropriated to Esdras (about 450 B. C.). He was one of the founders of the new arrangements in the restored state, and was a priest, and at the same time a judge appointed by the king of Persia. . . . From that time forth dependence on the law, pride in its possession as the pledge of divine election, and the careful custody of this wall of partition, sank deep into the character of the nation, and became the source of many advantages as well as of serious faults. . . . The later Jewish tradition makes much mention of the great synagogue believed to have existed already in the time of Esdras, or to have been founded by him. It is supposed to have mustered 120 members, and, under the presidency of the high-priest, was to be the guardian of the

law and doctrine. One of its last rulers was Simon the Just, who was high-priest, and the most distinguished doctor of his time (that of the first Ptolemys). Afterwards this threefold dignity or function of high-priest, scribe or rabbi, and of Nasi or prince of the synagogue, were never united in one person. . . . The high-priesthood fell into contempt, the more it served foreign rulers as the venal instrument of their caprice; but the Scribes flourished as being the preservers of all theological and juridical knowledge, and were supported by the respect and confidence of the people. . . . By the year 170 B. C., Hellenism had undoubtedly made such progress among the Jews, in Palestine even, that the Assyrian king, Antiochus Epiphanes, was able to plan the extirpation of the Jewish religion, and the conversion of the temple at Jerusalem into a temple of Jupiter Olympius."

—J. J. I. Dollinger, *The Gentile and the Jew in the Courts of the Temple of Christ*, bk. 10, sect. 1 (c. 2).—Twice, Antiochus Epiphanes crushed rebellion in Jerusalem with awful ferocity. On the last occasion, the slain were believed to number 80,000, while 10,000 captives were led away and sold as slaves. The city was sacked and partly burned; the Temple was plundered and polluted. "Not content with these enormities, Antiochus determined to abolish altogether the Jewish religion, and, if possible, entirely to exterminate the race. With this intention, he issued an edict throughout his dominions, calling upon all the nations who were subject to his authority to renounce their religion and worship his gods, and this order he enforced with the most severe pains and penalties. The Jews were the only people who ventured to disobey the edict, whereupon, Antiochus ordered them to be treated with the utmost rigour, and sent to Jerusalem an old man named Athenas, who was well versed in the rites of the Greek worship, as commissioner, to enforce obedience to his commands. This old pagan dedicated the Temple to Jupiter Olympus, and placed a statue of that false deity upon the altar of burnt offering. This desecration was not confined to Jerusalem, for everywhere throughout the Syrian empire groves and temples were dedicated, and statues and altars erected, to the heathen deities, and the worship of the true God was everywhere prohibited, and punished as the worst of crimes. That the chief fury of Antiochus's impious rage was directed against the Jews is evident from the fact that, whilst a general edict was published, condemning to death or torture all those who refused to worship the idols, a special decree was promulgated, by which it was made death to offer sacrifices to the God of Israel, observe the Sabbath, practise circumcision, or indeed to conform in the smallest degree to the precepts of the Mosaic law. Every effort was also made to destroy the copies of the Holy Scriptures; and persons refusing to deliver them up were punished by death. In this terrible distress, many of the Jews abandoned their homes and took shelter in the wilderness, where 'they lived in the mountains after the manner of beasts, and fed on herbs continuously lest they should be partakers of the pollution' (Mace. v.). Of those who remained behind, some few yielded to the temptation, and saved themselves by apostasy, but the majority remained faithful to the God of their forefathers, Who, in His own good time,

hearkened to the prayers of His people, and sent them a deliverer."—E. H. Palmer, *Hist. of the Jewish Nation*, ch. 7.

B. C. 166-40.—Revolt of the Maccabees.—**Reign of the Asmoneans.—Rise of Herod.**—The heroic family called The Maccabees, which began and led the revolt of the Jewish people against the oppression and persecution of the Selencidean kings, bore, also, the name of the Asmonean or Hasmonian family, derived from the name of "its chief of four generations back, Chasmon, or Asmon, 'the magnate.'" The head of the family at the time of the outbreak of the revolt, and who precipitated it, was Mattathias. He had five sons, the third of whom, Judas, became the military leader and great hero of the nation in its struggle. To Judas was given the surname or appellation of Makkabi, from whence came his historical name of Judas Maccabeus, and the general name of The Maccabees by which his family at large is commonly designated. The surname "Makkabi" is conjectured to have had the same meaning as that of Charles the "Martel"—viz., the "Hammerer"; but this is questioned. "Under Judas the revolt assumed larger proportions, and in a short time he was able to meet and defeat the Syrians in the open field. The situation which the Romans had created in Syria was favourable to the Jewish cause. In order to find money to pay the tribute imposed by Rome upon his house, Antiochus had to undertake an expedition into the Far East, which depleted Syria of a large number of troops. During the king's absence the government of the country was entrusted to a high functionary named Lysias. Lysias took a serious view of the rebellion in Judaea, and despatched a force under the command of three generals to suppress it. But this army met with alarming reverses at the hands of Judas, and Lysias was obliged to go to Palestine in person to conduct the campaign. Meanwhile Antiochus had been apprised of the disasters which had befallen his captains, and was hastening homewards to assume the supreme direction of affairs, when death put a termination to his career (B. C. 164). The pressure of Roman policy upon Antiochus was the indirect cause of the Jewish revolt, and the immediate cause of the king's inability to suppress it. After the death of Antiochus, the distracted state of Syria and the struggles of rival pretenders for the crown strengthened the position of the Jewish patriots. Antiochus V., son of the late king, was only nine years old when he began to reign (B. C. 164). His father had appointed a courtier named Philip regent during his son's minority. But this arrangement did not satisfy Lysias, who had the young king in his custody, and who was carrying on the campaign in Palestine when the news of his supersession by Philip arrived. Lysias immediately left off the contest with Judas, and devoted his energies to the task of resisting Philip's claims. At this juncture, if any historic value can be attached to a statement in the Second Book of the Maccabees, two Roman envoys, Quintus Memmius and Titus Manlius, who were probably on their way from Alexandria to Antioch, offered to take charge of Jewish interests at the Syrian capital. Peace is said to have been the outcome of their efforts (B. C. 162). But it was a peace which did not endure. In the following year the Syrian king once more invaded Palestine at the head of a

great army, and, in spite of the strenuous opposition of Judas, laid siege to the Holy City. Famine soon reduced the garrison to the last extremities, and their fate would have been a hard one had not the disordered condition of Syria compelled the besiegers to accept honourable terms. Whilst the siege was in progress news came to the Syrian camp that Philip had put himself at the head of a large army, with the intention of enforcing his claims to the regency. No time was to be lost, and the king, acting on the advice of Lysias, accorded the Jews religious liberty. Jerusalem capitulated; and the same order of things was established as had existed previous to the insurrection. Soon after these events Antiochus V. was dethroned and executed by his relative, Demetrius I. In Judæa the new monarch allowed the people to retain the religious liberties granted them by his predecessor, and had he exercised more judgment in the selection of a High Priest it would have been impossible for Judas to renew the struggle against Syria with any prospect of success. The Assideans, or Pious Ones, who afterwards developed into the party known as the Pharisees, and who, while their religion was at stake, were devoted followers of Judas, were satisfied with the attainment of religious freedom. But Judas and his friends, who formed the party which afterwards became the Sadducees, . . . were unwilling to relax their efforts till the country was completely independent. The Assideans, consisting of the scribes and the bulk of the population, accepted Alcimus, the High Priest whom Demetrius had appointed, and were disposed for peace. But the senseless barbarities of Alcimus threw the Assideans once more into the arms of the war party, and the struggle began afresh. The High Priest was obliged to flee from Jerusalem; Demetrius sent an army to reinstate him, but Judas defeated the Syrian forces, and the Jews enjoyed a short period of repose. . . . Two Jewish delegates, Eupolemos and Jason, were sent to Italy to form an alliance with Rome. The Senate, which never neglected an opportunity of crippling the Syrian monarchy, accorded a favourable reception to the Jewish envoys, and acknowledged the independence of their country. . . . While these negotiations were taking place the Syrian army again invaded Palestine. Judas went forth to meet them, and, after a desperate conflict, was defeated and slain [at Beer-Zath] (B. C. 161). The death of their leader shattered the party of freedom, and the Romans, probably because they saw no distinct centre of authority left standing in the country, ignored the treaty they had just made with the Jewish envoys, and left Judæa to its fate. It was not by direct intervention that the Romans helped the Jews forward on the path of independence; it was by the disintegrating action of Roman policy on the kingdom of Syria. The Jewish leaders did not fail to take advantage of the opportunities which were thus afforded them. About nine years after the death of Judas Maccabæus, the Romans started a new pretender to the Syrian crown in the person of Alexander Balas, a young man of unknown origin (B. C. 152). Supported by the allies of Rome, Balas was able to take the field against Demetrius, who became alarmed at the threatening aspect of affairs. Jonathan, a brother of Judas, was then at the head of the Jewish

patriots (B. C. 161-142), and Demetrius attempted by concessions to win him over to his side. When the pretender Balas heard of this, he immediately outbade Demetrius, and offered Jonathan the High Priesthood as the price of his support. Jonathan sold himself to the highest bidder, and, notwithstanding further profuse promises from Demetrius, the Jewish leader remained true to his allegiance. The war between the two rivals did not last long; Demetrius was overthrown and slain (B. C. 151), and at the marriage of the new king, Jonathan was appointed civil and military governor of Judæa. The spiritual and the temporal government of the Jews was now united in the office of High Priest. Jonathan, captured and murdered by one of the Syrian pretenders, was succeeded in the office (B. C. 142), by another brother, Simon, who was assassinated, B. C. 135, by an ambitious son-in-law. Simon's son, John Hyrcanus, took his place.—W. D. Morrison, *The Jews under Roman Rule*, ch. 1.—The Asmonean family had now become so established in its princely character that the next of the line, Judas (who took the Greek name Aristobulus), assumed the crown and title of King (B. C. 105). Aristobulus reigned less than two years, and was succeeded by his brother Jonathan (Jannæus) Alexander. "These Jewish princes were as wide apart in character as in name from the house whose honours they inherited. Aristobulus, the bloody, . . . starved in prison his mother, whom John had left as regent. . . . Alexander, named Jannæus, in a reign of five and twenty years, was mostly occupied in petty wars,—generally unsuccessful, but indefatigable to begin afresh. He signalized himself in successive revolts of his people, first by the barbarous slaughter of 6,000, then by a civil war of some six years, which cost 10,000 lives, and finally by crucifying 800. . . . A restless, dissolute, ambitious man, called 'the Thracian' for his barbarities, his rule abhorred except for the comparative mercy he showed in the cities he had conquered, he died [B. C. 79] before the age of fifty, having done the one service of confirming the Jewish power upon the soil of Palestine."—J. H. Allen, *Hebrew Men and Times*, ch. 10.—"When . . . Jannæus Alexander died, the Jewish kingdom stretched towards the south over the whole Philistian territory as far as the Egyptian frontier; towards the south-east as far as the Nabataean kingdom of Petra, from which Jannæus had wrested considerable tracts on the right bank of the Jordan and the Dead Sea; towards the north over Samaria and the Decapolis up to the lake of Gennesareth; here he was already making arrangements to occupy Ptolemais (Acco) and victoriously to repel the aggressions of the Ityræans. The coast obeyed the Jews from Mount Carmel as far as Rhinocorura, including the important Gaza—Ascalon alone was still free; so that the territory of the Jews, once almost cut off from the sea, could now be enumerated among the asylums of piracy. Now that the Armenian invasion, just as it approached the borders of Judæa, was averted by the intervention of Lucullus, . . . the gifted rulers of the Hasmonæan house would probably have carried their arms still further, had not the development of the power of that remarkable conquering sacerdotal state been arrested by internal divisions. The spirit of religious independence and

the national patriotism—the energetic union of which had called the Maccabee state into life—very soon became dissociated and even antagonistic. The Jewish orthodoxy [or Pharisaism] gaining fresh strength in the times of the Maccabees, . . . proposed as its practical aim a community of Jews composed of the orthodox in all lands essentially irrespective of the secular government—a community which found its visible points of union in the tribute to the temple at Jerusalem obligatory on every conscientious Jew and in the schools of religion and spiritual courts, and its canonical superintendence in the great temple consistory at Jerusalem, which was reconstituted in the first period of the Maccabees and may be compared as respects its sphere of jurisdiction to the Roman pontifical college. Against this orthodoxy, which was becoming more and more ossified into theological formalism and a painful ceremonial service, was arrayed the opposition of the so-called Sadducees—partly dogmatic, in so far as these innovators acknowledged only the sacred books themselves and conceded authority merely, not canonicity, to the ‘bequests of the scribes,’ that is canonical tradition; partly political, in so far as instead of a fatalistic waiting for the strong arm of the Lord of Zebaoth they taught that the salvation of the nation was to be expected from the weapons of this world, and above all from the internal and external strengthening of the kingdom of David as re-established in the glorious times of the Maccabees. The partisans of orthodoxy found their support in the priesthood and the multitude. . . . Jannæus had kept down the priesthood with a strong hand; under his two sons there arose . . . a civil and fraternal war, since the Pharisees opposed the vigorous Aristobulus and attempted to obtain their objects under the nominal rule of his brother, the good-natured and indolent Hyrcanus. This dissension not merely put a stop to the Jewish conquests, but gave also foreign nations opportunity to interfere and to obtain a commanding position in southern Syria. This was the case first of all with the Nabateans. This remarkable nation has often been confounded with its eastern neighbours, the wandering Arabs, but it is more closely related to the Aramean branch than to the proper children of Ishmael. This Aramean, or, according to the designation of the Occidentals, Syrian, stock must have in very early times sent forth from its most ancient settlements about Babylon a colony, probably for the sake of trade, to the northern end of the Arabian gulf; these were the Nabateans on the Sinaitic peninsula, between the gulf of Suez and Aila, and in the region of Petra (Wadi Mousa). In their ports the wares of the Mediterranean were exchanged for those of India; the great southern caravan-route, which ran from Gaza to the mouth of the Euphrates and the Persian gulf, passed through the capital of the Nabateans—Petra—whose still magnificent rock-palaces and rock-tombs furnish clearer evidence of the Nabatean civilization than does an almost extinct tradition. The party of the Pharisees, to whom after the manner of priests the victory of their faction seemed not too dearly bought at the price of the independence and integrity of their country, solicited Aretas the king of the Nabateans for aid against Aristobulus, in return for which they promised to give back to him all the conquests

wrested from him by Jannæus. Thereupon Aretas had advanced with, it was said, 50,000 men into Judæa and, reinforced by the adherents of the Pharisees, he kept king Aristobulus besieged in his capital.”—T. Mommsen, *History of Rome*, bk. 5, ch. 4 (v. 4).—“While this was going on, Pompey had meanwhile begun his victorious campaign in Asia [see *ROME*: B. C. 69-63]. He had conquered Mithridates in B. C. 66, and had in the same year received the voluntary submission of Tigranes. While he himself now pressed on farther into Asia, he sent Scaurus to Syria in B. C. 65. When that general arrived at Damascus he heard of the war between the brothers in Judæa, and pushed forward without delay to see how he might turn to account this strife between the rival princes. He had scarcely reached Judæa when ambassadors presented themselves before him, both from Aristobulus and from Hyrcanus. They both sought his favour and support. Aristobulus offered him in return four hundred talents; and Hyrcanus could not be behind, and so promised the same sum. But Scaurus trusted Aristobulus rather because he was in a better position to fulfil his engagement, and so decided to take his side. He ordered Aretas to withdraw if he did not wish to be declared an enemy of the Romans. Aretas did not venture to show opposition. He therefore raised the siege, and thereupon Scaurus returned to Damascus. But Aristobulus pursued Aretas on his way homeward, and inflicted upon him a crushing defeat. But the Roman favour which Aristobulus had so exerted himself to secure, under the protection of which he believed himself to be safe, soon proved fatal to his well-being and that of his country. He himself left no stone unturned in order to win the goodwill of Pompey as well as of Scaurus. He sent Pompey a costly present, a skillfully wrought golden vine worth five hundred talents, which Strabo found still on view at Rome in the temple of Jupiter Capitolinus. But all this could not save Aristobulus, whenever Pompey found it to be for his advantage to withdraw his favour and take the side of Hyrcanus. In the spring of B. C. 63, Pompey proceeded from his winter quarters into Syria, subdued the greater and smaller princes in the Lebanon, and advanced by way of Heliopolis and Chalcis upon Damascus. There he was met at one and the same time by representatives of three Jewish parties. Not only did Aristobulus and Hyrcanus appear, but the Jewish people also sent an embassy. Hyrcanus complained that Aristobulus, in defiance of all law, had violently assumed the government; Aristobulus justified his conduct by pointing out the incapacity of Hyrcanus. But the people wished to have nothing to do with either, asked for the abolition of the monarchy and the restoration of the old theocratic constitution of the priests. Pompey heard them, but cautiously deferred any decision, and declared that he would put all things in order when he had accomplished his contemplated expedition against the Nabateans. Till then all parties were to maintain the peace. Aristobulus, however, was by no means satisfied with this arrangement, and betrayed his discontent by suddenly quitting Dium, whither he had accompanied Pompey on his expedition against the Nabateans. Pompey grew suspicious, postponed his campaign against the Nabateans, and marched immediately against Aristobulus. He

... pursued him through Jericho, and soon appeared in the neighbourhood of Jerusalem. But now Aristobulus lost heart. He betook himself to the camp of Pompey, gave him further presents, and promised to surrender to him the city if Pompey would suspend hostilities. Pompey was satisfied with this, and sent his general Gabinius to take possession of the city, while he retained Aristobulus in the camp. But Gabinius returned without having obtained his object, for the people in the city had shut the gates against him. Pompey was so enraged at this that he put Aristobulus in prison, and immediately advanced against the city. . . . The city was surrendered to Pompey, who sent in his legate Piso, and without drawing sword took possession of it. But the war faction gathered together on the temple mount and there prepared themselves for resistance. The temple mount was then, as afterwards, the strongest point in Jerusalem. It presented to the east and the south a sheer precipice. Also on the west it was separated from the city by a deep ravine. Only on the north was there a gradual slope; but even there approach was made almost impossible by the construction of strong fortifications. In this fortress, well nigh impregnable, the adherents of Aristobulus had now taken refuge, and Pompey, whether he would or not, had to engage upon a regular siege. . . . After a three months' siege, a breach was made in the wall. A son of the dictator Sulla was the first to make way through it with his troops. Others quickly followed. Then began a frightful massacre. The priests, who were then engaged offering sacrifice, would not desist from the execution of their office, and were hewn down at the altar. No less than 12,000 Jews are said to have lost their lives in this general butchery. It was towards the close of autumn of the year B. C. 63, under Cicero's consulship, according to Josephus on the very day of atonement, according to Dio Cassius on a Sabbath, that this holy city bowed its head before the Roman commander. Pompey himself forced his way into the Most Holy Place, into which only the feet of the high priest had ever before entered. But he left the treasures and precious things of the temple untouched, and also took care that the service of God should be continued without interruption. On the besieged he passed a severe sentence. Those who had promoted the war were beheaded; the city and the country were made tributary. . . . The boundaries of the Jewish territories were greatly curtailed. All the coast towns from Raphia to Dora were taken from the Jews; and also all non-Jewish towns on the east of the Jordan, such as Hippos, Gadara, Pella, Dium, and others; also Scythopolis and Samaria, with the regions around them. All these towns were immediately put under the rule of the governor of the newly-formed Roman province of Syria. The contracted Jewish territory was given over to Hyrcanus II., who was recognised as high priest, without the title of king. . . . With the institutions of Pompey the freedom of the Jewish people, after having existed for scarcely eighty years, if we reckon it as beginning in B. C. 142, was completely overthrown. Pompey, indeed, was acute enough to insist upon no essential change in the internal government of the country. He suffered the hierarchical constitution to remain intact, and gave the people as their high

priest Hyrcanus II., who was favoured by the Pharisees. But the independence of the nation was at an end, and the Jewish high priest was a vassal of the Romans."—E. Schürer, *Hist. of the Jewish People in the Time of Jesus Christ*, div. 1. v. 1, pp. 317-324.—Hyrcanus II. was not merely the vassal of the Romans; he was the puppet of one of his own partisans—the able Idumean, Antipater, who gathered the reins of government into his own hands. "Antipater ruled without interfering with Hyrcanus; he rebuilt the walls of Jerusalem, and appointed Phasaël, the eldest of his four heroic sons (whose mother was Kypros, an Arabian), to be ruler of the district of the holy city, and Herod the younger to be ruler of Galilee. This young man, who was at that time scarcely twenty-five years old, was soon able to surpass even his father. . . . He purified Galilee from the robber-bands, of which Hezekiah was the most dreaded leader, and by so doing, although he was already a mark for the hatred borne by the national and priestly party against the Edomites, as friends of their new tyrants the Romans, he distinguished himself by dealing summarily with the robbers, without appealing to the legal authorities. He therefore appeared before the Sanhedrim of Jerusalem, to which he was summoned by Hyrcanus, with a military escort, wearing purple, with his head anointed, and bearing a letter of safe-conduct from his patron Sextus Cæsar, the ruler of Syria. . . . Hyrcanus allowed him to withdraw in defiance: he hastened to Syria, bought the governments of Cœle-Syria and Samaria (B. C. 46), marched thence with an army towards Jerusalem, and when he had with difficulty been persuaded by his father and brother to return, he rejoiced that he had at least menaced the country. Neither the death of Julius Cæsar (B. C. March 44), the civil war at Rome, nor the poisoning of his father Antipater at the table of Hyrcanus in the year 43, interfered with Herod's success. He bought the favour of Cæsar's murderers by the unexampled haste with which he brought in large contributions, amounting to a hundred talents (more than £20,000) from Galilee alone, so that Cassius appointed him Procurator of Syria, and promised him the dignity of king, in the event of a victory over Anthony and Octavianus, a prospect which indeed cost his father his life. Nor was Herod's power destroyed by the unfortunate battle of Philippi in the autumn of B. C. 42. He succeeded in gaining Anthony by the influence of his person and of his wealth; and in spite of all the embassies of the Jews, Phasaël and Herod were appointed tetrarchs of the whole of Judea in the year B. C. 41. His betrothal to Mariamne, grand-child of Hyrcanus, which took place at the same time, added the illusion of national and hereditary right to Herod's previous good fortune. But there was first an interval of hardship. Immediately afterwards, the Parthian armies overran Upper Asia, while Anthony remained in Egypt, ensnared by Cleopatra: they took Jerusalem [B. C. 40], and to please that place as well as the Jews of Babylon, they installed Antigonus, the son of Aristobulus, as king, taking Phasaël and Hyrcanus prisoners, while Herod escaped with difficulty. All was ended with a blow, Herod was put to flight, Phasaël killed himself, and Antigonus cut off the ears of Hyrcanus the high priest. Herod landed in Italy as an adventurer.

He met Anthony, and by his means also gained over Octavianus. Fear and hatred of the Parthians effected even more than old acquaintance and new engagements: and beyond his most daring hopes a decree of the senate [B. C. 40] bestowed the kingdom of Judea upon him." —T. Keim, *Hist. of Jesus of Nazara*, v. 1, p. 231.

B. C. 40—A. D. 44.—Herod and the Herodians.—Roman rule.—Returning to Judæa with his new rank and the confirmed support of Rome, "Herod slowly obtained possession of the country, not without the help of Roman legions, and in a third campaign, in June (Sivan), B. C. 37, occupied Jerusalem [after a siege of half a year] and the Temple, in the halls of which fire raged, contrary to his wish, and blood streamed through its courts. This was the second Roman occupation of Jerusalem, after an interval of twenty-six years, even to a day. Antigonus fell, by the king's wish, beneath the axe of Anthony, and the Maccabean house had ceased to reign. The new kingdom underwent its final crisis in the war between Octavianus and Anthony, in which Herod was constrained to take part with Anthony. . . . The frankness with which, after the battle of Actium (Sept., B. C. 31), he proclaimed his friendship for Anthony to Octavianus at the island of Rhodes, in order to set before him the prospect of a like faithfulness, procured the crown for him afresh, which Octavianus set upon his head." Octavianus "restored to him all the possessions which his intriguing enemy Cleopatra had obtained at his expense in the south of the country and on its western coast, giving to him Gadra, Hippo, Samaria, and on the coast Gaza, Anthedon, Joppa, the tower of Strato, and in short the whole country, and even more than he had lost by Pompey's conquests. A few years later the same benefactor enlarged the kingdom on the north-east, by making over to Herod, between the years B. C. 24-21, the wide extent of territory reaching to Anti-Lebanon, and Damascus, in order to protect that city from attacks on the side of the desert. He was appointed Procurator-General of Syria, and afterwards nearly obtained the government of Arabia. It was in fact almost the kingdom of David which was again united under Herod. Herod enjoyed the favour of Octavianus, with few intervals, to the last. . . . Herod did not merely owe his success to that officious attention which displayed the greatness of Rome in costly hospitalities, gifts, and edifices of every kind, but to his genuine fidelity and manly heroism, his pre-eminent wisdom and readiness to accept the culture of the West, qualities which were recognized as adapting him to be a most useful ally in the territory which bounded the eastern empire of Rome, where the inhabitants were so ready to take offence. Herod, in a certain sense, emulated his friend in Rome, in introducing an Augustan era into his land. He, as well as Octavianus, put an end to war, and the dominion which had been cemented together by the blood of its citizens enjoyed a long peace, lasting for almost forty years. . . . The prosperity of the country increased so much in these quiet times that Herod, when he began to build the Temple, boasted of the wealth and income which had accumulated in an unprecedented manner, so as to confirm the most fabulous accounts of the luxurious expenditure of his reign. . . . Herod was not devoid of nobler qualities, even although they have

been forgotten by the Jews and Christians. He was not merely a brave leader in war, a bold hunter and rider, and a sagacious ruler; there was in him a large-heartedness and an innate nobility of mind which enabled him to be a benefactor of his people. This fundamental characteristic of his nature, inherited from his father, is admitted by the Jewish historian, times out of number, and has been shown by his affection for his father, mother, and brothers, and also for his friends, by his beneficence in good fortune, and even in adversity. . . . When in the thirteenth year of his reign (B. C. 25), some years before the building of the Temple, famine and sickness devastated the land, he sold the gold and silver treasures in his house, and himself became poor, while he bespoke great quantities of grain from Egypt, which he dispensed, and caused to be made into bread: he clothed the poor, and fed 50,000 men at his own expense: he himself sent help to the towns of Syria, and obtained the immediate, and indeed the enduring gratitude of the people as a second Joseph. Yet it was only the large-heartedness of a barbarian, without true culture, or deeper morality. Hence came the unscrupulousness, the want of consideration for the national peculiarities which he opposed, the base cunning and vanity which coloured all his actions, and hence again, especially in later life, he became subject to caprices, to anger and repentance, to mistrust and cruelty, to the wiles of women and of eunuchs. He was, in short, only the petty tyrant, the successful upstart who was self-seeking, and at once rash and timid; a beggar before Augustus; a foolish time-server before the Greek and Roman world; a tyrant in his own house, and incapable either of resisting influence or of enduring contradiction. . . . The dangerous position of the upstart, with respect to the earlier royal family and to the national aversion, the divisions of his numerous family, the intrigues of a court of women, eunuchs, barbers, and frivolous flatterers of every description, drew him on, as if with demoniacal power, from one stage of cruelty to another. . . . Daily executions began on his entry into Jerusalem in the year B. C. 37 with the execution of Antigonus, of the nephew of Hyrcanus, and of his own dependants. . . . He pardoned no one whom he suspected: he enforced obedience by an oath, and whoever would not swear forfeited his life. Innumerable people disappeared mysteriously in the fortress of Hyrcania. Life was forfeited even for the offence of meeting or standing together, when it was noticed by the countless spies in the city and on the highways, and indeed by himself in his rounds by night. The bloody decimation of his own family was most revolting. About the year B. C. 35 he caused his wife's brother Aristobulus, who had been high priest for eighteen years, to be stifled by his Gallic guards in a pond at Jericho, because he was popular, and belonged to the old family: in the year B. C. 31, after the battle of Actium, he murdered his grandfather-in-law Hyrcanus, aged eighty years, and in the year B. C. 30 or 29 his wife Mariamne, and a little later her intriguing mother Alexandra, since they had become objects of suspicion to him: in the year B. C. 25 his brother-in-law, Kostobar, and a long line of friends were slain: about the year B. C. 6, the sons of Mariamne, Alexander and Aristobulus, were judicially condemned and strangled in

Samaria: and finally the diabolical Antipater, the son of the first marriage, who, together with Salome, Herod's sister, and with Alexandra, his mother-in-law, had taken the greatest part in the crimes of the family."—T. Keim, *Hist. of Jesus of Nazara*, v. 1, pp. 233-246.—Herod died within the year (B. C. 4) which has been most generally agreed upon as that of the birth of Jesus. By ten wives he had had many children, and had slain not a few; but a large family survived, to quarrel over the heritage, disputing a will which Herod left. There was a hearing of the disputants at Rome, and also a hearing given to deputies of the Jewish people, who prayed to be delivered from the Herodian family, all and singly. The latter prayer, however, received small consideration. The imperial judgment established Archelaus, eldest son of Herod's sixth wife, Malthace, in the sovereignty of Judæa, Idumæa, and Samaria, with the title of Ethnarch. To Herod Antipas, second son of the same mother, it gave Galilee and Peræa. Philip, another son, by a seventh wife, was made tetrarch of a small principality. Archelaus governed so oppressively that, after some years (A. D. 6), he was deposed by the Romans and banished to Gaul. Judæa was then joined to the prefecture of Syria, under a succession of Roman governors, the fifth of whom was Pontius Pilate. "Judæa thus became in the year 6 A. D. a Roman province of the second rank, and, apart from the ephemeral restoration of the kingdom of Jerusalem under Claudius in the years 41-44, thenceforth remained a Roman province. Instead of the previous native princes holding office for life and, under reservation of their being confirmed by the Roman government, hereditary, came an official of the equestrian order, nominated and liable to recall by the emperor. The port of Caesarea rebuilt by Herod after a Hellenic model became, probably at once, the seat of Roman administration. The exemption of the land from Roman garrison, as a matter of course, ceased, but, as throughout in provinces of second rank, the Roman military force consisted only of a moderate number of cavalry and infantry divisions of the inferior class; subsequently one ala and five cohorts—about 3,000 men—were stationed there. These troops were perhaps taken over from the earlier government, at least in great part formed in the country itself, mostly, however, from Samaritans and Syrian Greeks. The province did not obtain a legionary garrison, and even in the territories adjoining Judæa there was stationed at the most one of the four Syrian legions. To Jerusalem there came a standing Roman commandant, who took up his abode in the royal castle, with a weak standing garrison; only during the time of the Passover, when the whole land and countless strangers flocked to the temple, a stronger division of Roman soldiers was stationed in a colonnade belonging to the temple. . . . For the native authorities in Judæa as everywhere the urban communities were, as far as possible, taken as a basis. Samaria, or as the town was now called, Sebaste, the newly laid out Caesarea, and the other urban communities contained in the former kingdom of Archelaus, were self-administering, under superintendence of the Roman authority. The government also of the capital with the large territory belonging to it was organised in a similar way. Already in the pre-

Roman period under the Seleucids there was formed . . . in Jerusalem a council of the elders, the Synhedrion, or as Judaised, the Sanhedrin. The presidency in it was held by the high priest, whom each ruler of the land, if he was not possibly himself high priest, appointed for the time. To the college belonged the former high priests and esteemed experts in the law. This assembly, in which the aristocratic element preponderated, acted as the supreme spiritual representative of the whole body of Jews, and, so far as this was not to be separated from it, also as the secular representative in particular of the community of Jerusalem. It is only the later Rabbinism that has by a pious fiction transformed the Sanhedrion of Jerusalem into a spiritual institute of Mosaic appointment. It corresponded essentially to the council of the Greek urban constitution, but certainly bore, as respected its composition as well as its sphere of working, a more spiritual character than belonged to the Greek representations of the community. To this Synhedrion and its high priest, who was now nominated by the procurator as representative of the imperial auzerain, the Roman government left or committed that jurisdiction which in the Hellenic subject communities belonged to the urban authorities and the common councils. With indifferent short-sightedness it allowed to the transcendental Messianism of the Pharisees free course, and to the by no means transcendental land-consistory—acting until the Messiah should arrive—tolerably free sway in affairs of faith, of manners, and of law, where Roman interests were not directly affected thereby. This applied in particular to the administration of justice. It is true that, as far as Roman burgesses were concerned in the matter, justice in civil as in criminal affairs must have been reserved for the Roman tribunals even already before the annexation of the land. But civil justice over the Jews remained even after that annexation chiefly with the local authority. Criminal justice over them was exercised by the latter probably in general concurrently with the Roman procurator; only sentences of death could not be executed by it otherwise than after confirmation by the imperial magistrate. In the main those arrangements were the inevitable consequences of the abolition of the principality, and when the Jews had obtained this request of theirs, they in fact obtained those arrangements along with it. . . . The local coining of petty moneys, as formerly practised by the kings, now took place in the name of the Roman ruler; but on account of the Jewish abhorrence of images the head of the emperor was not even placed on the coins. Setting foot within the interior of the temple continued to be forbidden in the case of every non-Jew under penalty of death. . . . In the very beginning of the reign of Tiberius the Jews, like the Syrians, complained of the pressure of the taxes; especially the prolonged administration of Pontius Pilatus is charged with all the usual official crimes by a not unfair observer. But Tiberius, as the same Jew says, had during the twenty-three years of his reign maintained the time-hallowed holy customs, and in no part set them aside or violated them. This is the more to be recognised, seeing that the same emperor in the West interfered against the Jews more emphatically than any other, and thus the long-suffering and caution shown by him in Judæa cannot be

traced back to personal favour for Judaism. In spite of all this both the opposition on principle to the Roman government and the violent efforts at self-help on the part of the faithful developed themselves even in this time of peace."—T. Mommsen, *Hist. of Rome: The Provinces, from Caesar to Diocletian*, bk. 8, ch. 11.—In the year 41 A. D. the house of Herod rose to power again, in the person of his grandson, Herod Agrippa, descendant of the unfortunate Mariamne. Agrippa had lived long at Rome and won the favor of two successive emperors, Caligula and Claudius. Caligula deposed Herod Antipas from the tetrarchy of Galilee and conferred it on Agrippa. Claudius, in 41, added Judæa and Samaria to his dominions, establishing him in a kingdom even greater than that of his grandfather. He died suddenly in 44 A. D. and Judæa again relapsed to the state of a Roman province. His young son, also named Herod Agrippa, was provided, after a few years, with a small kingdom, that of Chalcis, exchanged later for one made up of other districts in Palestine. After the destruction of Jerusalem he retired to Rome, and the line of Herod ended with him.—H. H. Milman, *Hist. of the Jews*, bk. 12.

B. C. 8—A. D. 1.—Uncertainty of the date of the birth of Jesus.—"The reigning Christian computation of time, that sovereign authority in accordance with which we reckon our life, and which is surely above the assault of any critical doubts, goes, be it remembered, but a very little way towards the settlement of this question [as to the year of the birth of Jesus] in as much as its inventor, a Scythian by birth, Dionysius the Less, Abbot of a Roman monastery (died 556 A. D.) [see ERA, CHRISTIAN], . . . had certainly no entire immunity from human frailty. . . . The comparatively best assured and best supported account places the birth of Jesus in the reign of King Herod the Great. Matthew knows no other chronology: Luke gives the same, along with another, or, if we will, along with two others. Matthew more particularly, in his own account, puts the birth in the last years of that king. Jesus is a little child at the time of the coming of the Magi, and he is still a child at the return of Joseph from the flight into Egypt, after the death of Herod has taken place. We shall hit the sense of the writer most exactly if we assume that Jesus, at the time of the coming of the Magi, who gave King Herod ground for conjecturing a Messiah of about the age of two,—was about two years old; at the time of Herod's death, about four. . . . Now since Herod died . . . shortly before Easter of the year 750 A. U. C., i. e., 4 years before the Christian era, Jesus must have been born four years before, 746 A. U. C., or 8 years before the reputed Christian era, a view which is expressly espoused in the fifth Christian century; according to Apocrypha, 3 years before Herod's death, 747 A. U. C., 7 years B. C. If we are able in addition to build upon Kepler's Conjunction of Planets, which Bishop Mûnter, in his book, 'The Star of the Wise Men,' 1827, called to remembrance, we get with complete certainty 747 or 748, the latter, that is, if we attach any value to the fact that in that year Mars was added to Jupiter and Saturn. Desirable however as such certainty might be, it is nevertheless hard to

abandon oneself to it with enthusiastic joy. . . . An actual reminiscence on the part of the Christian community of the approximate point of time at which the Lord was born, would be hard to call in question, even though it might have overlooked or forgotten every detail of the youth of Jesus besides. Finally, there is after all a trace of such reminiscence independent of all legendary formation. The introductory history of Luke without any appreciable historical connexion, rather in conflict with the world of legend represented in his Gospel, places the birth of John the Baptist and of Jesus in Herod's time. At the same time there is just as little, or even less, sign than elsewhere in Luke's preliminary story, of any dependence on the account in Matthew, or any world of legend like his. We should thus still be inclined to infer that Jesus, according to ancient Christian tradition, was born under King Herod, and more particularly, according to the legend of Matthew, which after all is the better guaranteed of the two, towards the close of his reign. . . . Luke appears . . . so far to give the most precise boundary line to the birth of Jesus, inasmuch as he brings it into immediate connexion with the first taxing of Judæa by the Romans, which admits of exact historical computation. The Roman taxing was indeed the occasion of Joseph and Mary's journey to Bethlehem, and of the birth of Jesus in the inn there. This taxing took place, as Luke quite rightly observes, for the first time in Judæa, under the Emperor Augustus, and more precisely, under Quirinius' Governorship of Syria, and moreover, . . . not only after the death of Herod, but also after his son Archelaos had been reigning about ten years, in consequence of the dethronement of Archelaos and the annexation of Judæa and Samaria by the Romans in the year 760 A. U. C. 7 A. D. But here too at once begins the difficulty. According to this statement Jesus would have been born from ten to fourteen years later than the Gospels otherwise assert, Luke himself included. This late birth would not only clash with the first statement of the Gospels themselves, but equally with all probability, inasmuch as Jesus would then not have been as much as thirty years old at his death, which in any case took place before the recall of the Procurator Pilate (781 A. U. C. 35 A. D.). We are here therefore compelled to acknowledge a simple error of the writer. . . . Once more . . . does Luke incidentally compute the time of the birth of Jesus. By describing the time of John the Baptist's appearance and speaking of Jesus at that period as about thirty years old, he favours the assumption, that Jesus was born about thirty years before the fifteenth year of the reign of the Emperor Tiberius. . . . We shall . . . see grounds for considering the commencement of the Baptist's ministry, as fixed far too early anywhere near the date 28 A. D. But if after all we assume the figure, as it stands, the fifteenth year of Tiberius, reckoning his reign from the 19th of August, 767, or 14 A. D., was the year 781-782, or 28-29 A. D. In that case Jesus must have been born, reckoning about 30 years backwards, towards the year 751-752, i. e., 2-3 years before our reputed era. . . . Of the later attempts to restore the year of Jesus' birth, those of antiquity and of modern times claim our attention in different ways. . . . Irenæus, followed by Tertullian, Hippolytus, Jerome, gives

the forty-first year of the Emperor Augustus, Clement of Alexandria the twenty-eighth year of the same, as the year of birth: much the same in both cases, viz. (751-752), inasmuch as the former reckons from the first consulate of Augustus after the death of Cæsar (731 A. U. C.); Clement from his conquest of Egypt (724). Later authorities since Eusebius, the first Church historian, marked the forty-second year of Augustus, following a notice of their predecessors, that is 752-753, which date however Eusebius would make out to agree with the year of Clement, with the twenty-eighth year from the occupation of Egypt. But how many other years besides were possible! Here Sulpicius Severus (400 A. D.) pushed back beyond the limit set by Irenæus, naming at one time 746-747 as the time of Jesus' birth, at another the consuls of 750, and the later date has also been found . . . by the Arabic Gospel of the Infancy. Here again the date was shifted lower down than the figure of Eusebius to the forty-third year of Augustus, i. e., 753-754. This date is found already in Tertullian in one reading, though in conflict with the year 41; the Chronograph of the year 354 puts it down with the express mention of the Consuls Cæsar and Paulus at 754 A. U. C., the Egyptian monk Panodorus (400 A. D.) has so reckoned it; and the founder of the Christian reckoning, the Abbot Dionysius (Easter Table 525 A. D.) introduced it for all time. . . . What is certain is that this year 754 A. U. C. 1 A. D., this official Christian calendar, does not hit the tradition of the Gospels. In modern times, thanks to the efforts of great astronomers and chronologists, Kepler, Ideler, and Münter, the year 747 or 748 has found the greatest favour as the year of the Wise Men's star. But since people have come back from their enthusiasm for the discovery of this conjunction to a more faithful regard for the Gospels, it has always commended itself afresh, to place the birth of Jesus at latest in the first beginning of the year 750 (4 B. C.), i. e., before the death of King Herod, but if possible from two to four years earlier still 746-748, or 8-6 B. C. Thus Ewald inclines half to the year 748, and half to 749; Petavius, Usher, Lichtenstein to 749; Bengel, Anger, Winer, Wieseler to 750, Wurm indeed following Scaliger to 751, finally in latest times Rösch, attaching great weight to the statements of the Fathers, as well as to the Chinese star, actually gets by a multifariously laborious method, at 751-752, in which year, as he decides, even Herod must have been alive in spite of Josephus, and on the strength of an innocuous observation by a Jewish Rabbi. If it was hard enough to arrive at any certainty, or, at all events, probability with respect to the year of Jesus' birth, we must entirely waive all pretensions to tell the month or the day, however justifiable may be our curiosity on this head. Our traditional observance of the Day of Jesus on the 25th of December is not prescribed in any ancient calendar."—Dr. T. Keim, *Hist. of Jesus of Nazara*, v. 2, pp. 109-126.

A. D. 26.—Political situation of Judæa at the time of the appearance of Jesus.—“Let us recall, in a few outlines, the political situation of Judæa at the exact moment when Jesus appeared before His countrymen. The shadow of independence, which had been left to it under

the vassal kingdom of Herod the Great, had long vanished. Augustus had annexed Judæa to the Roman empire, not by making it one of those senatorial provinces governed by proconsuls, but as a direct dependant on his authority. He associated it with the government of Syria, the capital of which was Antioch, the residence of the imperial legate. In consequence, however, of its importance, and the difficulties presented by the complete subjection of such a people, the procurator of Judæa enjoyed a certain latitude in his administration; he at the same time managed the affairs of Samaria, but as a second department, distinct from the first. Faithful to the wise policy which it had pursued with so much success for centuries, Rome interfered as little as possible with the usages and institutions of the conquered province. The Sanhedrim was, therefore, allowed to continue side by side with the procurator, but its power was necessarily very limited. Its jurisdiction was confined to matters of religion and small civil causes; the procurator alone had the right of decreeing capital punishment. The high-priestly office had lost much of its importance. The Asmoneans and Herods had reduced it to a subordinate magistracy, of which they made a tool for their own purposes. Herod the Great had constituted himself guardian of the sacerdotal vestments, under pretext that he had had them restored to their first magnificence, on the Levitical model; he bestowed them only on the men of his choice. The Romans hastened to follow his example, and thus to keep in their hands an office which might become perilous to them. The procurator of Judæa resided at Cæsarea. He only came to Jerusalem for the solemn feasts, or in exceptional cases, to administer justice. His prætorium stood near the citadel of Antonia. The Roman garrison in the whole of Palestine did not exceed one legion. The levying of imposts on movable property, and on individuals, led to perpetual difficulties; no such objection was raised to the tribute of two drachms for the temple, which was levied by the Sanhedrim. The tax-gatherers in the service of the Romans were regarded as the representatives of a detested rule; thus the publicans—for the most part Jews by birth—were the objects of universal contempt. The first rebellion of any importance took place on the occasion of the census under Cyrenius. At the period at which we have arrived, Judæa was governed by Pilate, the third procurator since the annexation to the empire; he had found in the high-priestly office John, surnamed Caiaphas, son-in-law of Annas, the son of Seth, who had for a long time filled the same office under Valerius Gratus. Pilate had an ally rather than a rival in the Sadducee Caiaphas, who acted on no higher principle than the interest of his order, and the maintenance of his power. Pontius Pilate was wanting in the political tact which knows how to soften in form the severities of a foreign rule; he was a man of vulgar ambition, or rather, one of those men without patriotism, who think only of using their authority for their own advantage. He took no heed of the peculiar dispositions and aversions of the people whom he was to govern. Thus he sent to Jerusalem a Roman garrison with standards; the Jews regarded this as a horrible profanation, for the eagles were worshipped as gods. Assailed in his prætorium at Cæsarea by a suppliant

crowd, which no violence could disperse, the procurator was compelled to yield to prayers, which might soon be changed into desperate resistance. From that moment his influence was gone in Judæa; he compromised it still further when he caused shields of gold, bearing his name engraved beside that of the emperor Tiberias, to be suspended from the outer walls of the citadel of Antonia. This flattery to the sovereign, which might have been unaccompanied with peril elsewhere, was received at Jerusalem as a gratuitous provocation, and he was obliged to recall a measure, persistence in which would have led to a terrible tumult. Having thus made himself an object of general aversion, he could not even do good without danger: his plan to build an aqueduct, a thing peculiarly needed on the burning soil of Judæa, created opposition so violent, that it could only be put down by force. Under such a governor, the national passions were in a perpetual state of agitation. This increase of patriotic fanaticism created great obstacles to a purely spiritual work like that of Jesus. Gaulonitis, Peræa, and Galilee still belonged, at this time, to the family of Herod. The tetrarch Philip governed the north-west of the country for thirty-seven years, and was distinguished for his moderation. . . . Galilee and Peræa were the portion of Herod Antipas, the murderer of John the Baptist. His divorce from the daughter of Aretas, after his marriage with Herodias, his brother's wife, had brought war upon the wide provinces which he governed. He was about soon to undergo a humiliating defeat. Like his brother, he was childless. Under the influence of such a prince, surrounded by a licentious court, evil propensities had free play, and the corruption of manners was a bad preparation for a religion of purity and self-denial. In the lowliness of the times, the Herods, though of the family of the vile despots who had sold the independence of the Jews, were regarded as in some measure a national dynasty. They had a party which bore their name, and which, in religious matters, combined, after the example of Herod the Great, Pharisaism and Sadduceeism. Such were the political circumstances in the midst of which Jesus was placed."—E. de Pressensé, *Jesus Christ: His Times, Life, and Work*, bk. 3, ch. 1.

A. D. 33-100.—The rise and diffusion of Christianity. See CHRISTIANITY.

A. D. 66-70.—The Great Revolt.—The oppression of the Jewish nation under the Roman governors who ruled Judæa directly, after the death of the first Herod Agrippa (A. D. 44), may not have been heavier in reality than it had been while the dependant and Romanized tyranny of the Herodian kings prevailed, but it proved to be more irritating and exasperating. "The burden, harshly shifted, was felt to be more galling. The priests and nobles murmured, intrigued, conspired; the rabble, bolder or more impatient, broke out into sedition, and followed every chief who offered to lead them to victory and independence. . . . It was only indeed under extraordinary provocation that the populace of the Jewish capital, who were generally controlled by the superior prudence of their chiefs, broke into violence in the streets. . . . But the ruder independence of the Galileans was not so easily kept in check. Their tract of heath and mountain was always then, as it has since always been,

in a state of partial insurrection. . . . For their coercion [at Jerusalem] the Romans had invented a peculiar machinery. To Agrippa, the tetrarch [the second Herod Agrippa], . . . they had given the title of King of the Sacrifices, in virtue of which he was suffered to reside in the palace at Jerusalem, and retain certain functions, fitted to impose on the imagination of the more ardent votaries of Jewish nationality. The palace of the Herods overlooked the Temple, and from its upper rooms the king could observe all that passed in that mart of business and intrigue. Placed, however, as a spy in this watch-tower, he was regarded by the Zealots, the faction of independence, as a foe to be baffled rather than a chief to be respected and honoured. They raised the walls of their sanctuary to shut out his view, and this, among other causes of discontent between the factions in the city, ripened to an enmity. . . . And now was introduced into the divisions of this unhappy people a new feature of atrocity. The Zealots sought to terrify the more prudent or time-serving by an organized system of private assassination. Their 'Sicarii,' or men of the dagger, are recognised in the records of the times as a secret agency, by which the most impatient of the patriots calculated on exterminating the chief supporters of the foreign government. . . . Hitherto the Romans, from policy rather than respect, had omitted to occupy Jerusalem with a military force. They were now invited and implored by the chiefs of the priesthood and nobility, and Florus [the Roman governor] sent a detachment to seize the city and protect the lives of his adherents. This was the point to which the Zealots themselves had wished to lead him."—C. Merivale, *Hist. of the Romans*, ch. 59.—A furious battle in the streets of Jerusalem occurred on the entrance of the Roman troops. The latter gained possession of the citadel, with the upper city, but, after seven days of fighting, were forced to capitulate, and were ruthlessly put to the sword, in violation of sworn pledges. "On that very day and hour, while the Jews were plunging their daggers in the hearts of the Romans, a great and terrible slaughter of their own people was going on in Cæsarea, where the Syrians and Greeks had risen upon the Jews, and massacred 20,000 of them in a single day. And in every Syrian city the same madness and hatred seized the people, and the Jews were ruthlessly slaughtered in all. No more provocation was needed; no more was possible. . . . The heads of the people began the war with gloomy forebodings; the common masses with the wildest enthusiasm, which became the mere intoxication of success when they drove back Cestius from the walls of the city, on the very eve of his anticipated victory—for Cestius [prefect of Syria] hastened southwards with an army of 20,000 men, and besieged the city. The people, divided amongst themselves, were on the point of opening the gates to the Romans, when, to the surprise of everybody, Cestius suddenly broke up his camp and began to retreat. Why he did so, no one ever knew. . . . The retreat became a flight, and Cestius brought back his army with a quarter of its numbers killed. . . . Vespasian was sent hastily with a force of three legions, besides the cohorts of auxiliaries. . . . Of the first campaign, that in Galilee, our limits will not allow us to write. . . . The months passed on, and yet the Romans did not appear

before the walls of the city. This meantime was a prey to internal evils, which when read appear almost incredible. . . . The events at Rome which elevated Vespasian to the throne were the principal reasons that the siege of Jerusalem was not actually commenced till the early summer of the year 70, when, in April, Titus began his march from Caesarea. . . . The city, meanwhile, had been continuing those civil dissensions which hastened its ruin. John [of Gischala], Simon Bar Gioras, and Eleazar, each at the head of his own faction, made the streets run with blood. John, whose followers numbered 6,000, held the Lower, New, and Middle City; Simon, at the head of 10,000 Jews and 5,000 Idumeans, had the strong post of the Upper City, with a portion of the third wall; Eleazar, with 2,000 zealots, more fanatic than the rest, had barricaded himself within the Temple itself. . . . In the sallies which John and Simon made upon each other all the buildings in this part of the town were destroyed or set on fire, and all their corn burned; so that famine had actually begun before the commencement of the siege."—W. Besant and E. H. Palmer, *Jerusalem, the City of Herod and Saladin*, ch. 1-2.—The awful but fascinating story of the siege, as told by Josephus and repeated by many writers since, is familiar to most readers and will not be given here. It was prolonged from April until the 7th of September, A. D. 70, when the Romans forced their way into the upper city. "They spread through the streets, slaying and burning as they went. In many houses where they expected rich plunder, they found nothing but heaps of putrid bodies, whole families who had died of hunger; they retreated from the loathsome sight and insufferable stench. But they were not moved to mercy towards the living; in some places the flames were actually retarded or quenched with streams of blood; night alone put an end to the carnage. . . . The city was ordered to be razed, excepting the three towers, which were left as standing monuments of the victory. . . . During the whole siege the number killed [according to Josephus] was 1,100,000, that of prisoners 97,000. In fact, the population not of Jerusalem alone, but that of the adjacent districts—many who had taken refuge in the city, more who had assembled for the feast of unleavened bread—had been shut up by the sudden formation of the siege." Of those who survived to the end and were spared, when the Roman soldiers had tired of slaughter, "all above seventeen years old were sent to Egypt to work in the mines, or distributed among the provinces to be exhibited as gladiators in the public theatres, and in combats against wild beasts. Twelve thousand died of hunger. . . . Thus fell, and forever, the metropolis of the Jewish state. . . . Of all the stately city—the populous streets, the palaces of the Jewish kings, the fortresses of her warriors, the Temple of her God—not a ruin remained, except the tall towers of Phasaelis, Mariamne, and Hippicus, and part of the western wall, which was left as a defence for the Roman camp."—H. H. Milman, *Hist. of the Jews*, bk. 16.

A. D. 70-133.—After the war with Rome.—The state of the surviving people.—"It might

have been expected that, from the character of the great war with Rome, the people, as well as the state of the Jews, would have fallen into utter dissolution, or, at least, verged rapidly towards total extermination. Besides the loss of nearly a million and a half of lives during the war, the markets of the Roman empire were glutted with Jewish slaves. . . . Yet still this inexhaustible race revived before long to offer new candidates for its inalienable inheritance of detestation and misery. Of the state of Palestine, indeed, immediately after the war, we have little accurate information. It is uncertain how far the enormous loss of life, and the numbers carried into captivity drained the country of the Jewish population; or how far the rescript of Vespasian, which offered the whole landed property of the province for sale, introduced a foreign race into the possession of the soil. The immense numbers engaged in the rebellion during the reign of Hadrian imply, either that the country was not nearly exhausted, or that the reproduction in this still fertile region was extremely rapid. In fact, it must be remembered that . . . the ravage of war was, after all, by no means universal in the province. Galilee, Judea, and great part of Idumæa were wasted, and probably much depopulated; but, excepting a few towns which made resistance, the populous regions and wealthy cities beyond the Jordan escaped the devastation. The dominions of King Agrippa were, for the most part, respected. Samaria, submitted without resistance, as did most of the cities on the sea-coast. . . . The Jews, though looked upon with contempt as well as detestation, were yet regarded, during the reign of Vespasian and his immediate successors, with jealous watchfulness. A garrison of 800 men occupied the ruins of Jerusalem, to prevent the reconstruction of the city by the fond and religious zeal of its former inhabitants. . . . Still, . . . it is impossible, unless communities were suffered to be formed, and the whole race enjoyed comparative security, that the nation could have appeared in the formidable attitude of resistance which it assumed in the time of Hadrian."—H. H. Milman, *Hist. of the Jews*, bk. 18 (v. 2).

A. D. 116.—The rising in Trajan's reign.—"Not quite fifty years after the destruction of Jerusalem, in the year 116, the Jews of the eastern Mediterranean rose against the imperial government. The rising, although undertaken by the Diaspora, was of a purely national character in its chief seats, Cyrene, Cyprus, Egypt, directed to the expulsion of the Romans as of the Hellenes, and, apparently, to the establishment of a separate Jewish state. It ramified even into Asiatic territory, and seized Mesopotamia and Palestine itself. When the insurgents were victorious they conducted the war with the same exasperation as the Sicarii in Jerusalem; they killed those whom they seized. . . . In Cyrene 220,000, in Cyprus even 240,000 men are said to have been thus put to death by them. On the other hand, in Alexandria, which does not appear itself to have fallen into the hands of the Jews, the besieged Hellenes slew whatever Jews were then in the city. The immediate cause of the rising is not clear. . . . To all appearance it was an outbreak of religious exasperation of the Jews, which had been growing in secret like a volcano since the destruction of the temple. . . .

The insurgents were nowhere able to offer resistance to the compact troops, . . . and similar punishments were inflicted on this Diaspora as previously on the Jews of Palestine. That Trajan annihilated the Jews in Alexandria, as Appian says, is hardly an incorrect, although perhaps a too blunt expression for what took place."—T. Mommsen, *Hist. of Rome*, bk. 8, ch. 11 (*The Provinces*, v. 2).—See, also, CYPRUS, A. D. 117.

A. D. 130-134.—The rising in Hadrian's reign.—The Emperor Hadrian, when his tour through the Empire brought him to Palestine, A. D. 130, resolved to erect the destroyed holy city of the Jews as a Roman colony with a Roman name, and to divest it altogether of the character which made it sacred in the eyes of the Jews. He forbade their sojourn in the new city, and exasperated them still more by showing favor, it is said, to the Christian sect. By this and by other measures a fresh revolt was provoked, A. D. 132, incited by the priest Eleazar and led by the bandit-chief Barcochebas, or Bar-Kokheba ('Son of the Star'). The cruel struggle, redeemed by no humanity on either side, continued for three years, and was ended only when hundreds of thousands of Jews had been slain. "The dispersion of the unhappy race, particularly in the West, was now complete and final. The sacred soil of Jerusalem was occupied by a Roman colony, which received the name of *Ælia Capitolina*, with reference to the emperor who founded it [Publius *Ælius* Hadrianus] and to the supreme God of the pagan mythology, installed on the desecrated summits of Zion and Moriah."—C. Merivale, *Hist. of the Romans*, ch. 65.—"The whole body of the Jews at home and abroad was agitated by the movement and supported more or less openly the insurgents on the Jordan; even Jerusalem fell into their hands, and the governor of Syria and indeed the emperor Hadrian appeared on the scene of conflict. . . . As in the war under Vespasian no pitched battle took place, but one place after another cost time and blood, till at length after a three years' warfare the last castle of the insurgents, the strong Bether, not far from Jerusalem, was stormed by the Romans. The numbers handed down to us in good accounts of 50 fortresses taken, 985 villages occupied, 580,000 that fell, are not incredible, since the war was waged with inexorable cruelty, and the male population was probably everywhere put to death. In consequence of this rising the very name of the vanquished people was set aside; the province was thenceforth termed, not as formerly Judæa, but by the old name of Herodotus, Syria of the Philistines, or Syria Palaestina. The land remained desolate; the new city of Hadrian continued to exist, but did not prosper. The Jews were prohibited under penalty of death from ever setting foot in Jerusalem."—T. Mommsen, *Hist. of Rome*, bk. 8, ch. 11 (*The Provinces*, v. 2).

A. D. 200-400.—The Nation without a country.—Its two governments.—"In less than sixty years after the war under Hadrian, before the close of the second century after Christ, the Jews present the extraordinary spectacle of two regular and organized communities: one under a sort of spiritual head, the Patriarch of Tiberias, comprehending all of Israelitish descent who inhabited the Roman empire; the other under the Prince of the Cap-

tivity, to whom all the eastern [Babylonian] Jews paid their allegiance. . . . Unfortunately it is among the most difficult parts of Jewish history to trace the growth of the patriarchal authority established in Tiberias, and its recognition by the whole scattered body of the nation, who, with disinterested zeal, and I do not scruple to add, a noble attachment to the race of Israel, became voluntary subjects and tributaries to their spiritual sovereign, and united with one mind and one heart to establish their community on a settled basis. It is a singular spectacle to behold a nation dispersed in every region of the world, without a murmur or repugnance, submitting to the regulations, and taxing themselves to support the greatness, of a supremacy which rested solely on public opinion, and had no temporal power whatever to enforce its decrees. It was not long before the Rabbins, who had been hunted down with unrelenting cruelty, began to creep forth from their places of concealment. The death of Hadrian, in a few years after the termination of the war, and the accession of the mild Antoninus, gave them courage, not merely to make their public appearance, but openly to reestablish their schools and synagogues. . . . The Rabbinical dominion gradually rose to greater power; the schools flourished; perhaps in this interval the great Synagogue or Sanhedrin had its other migrations, . . . and finally to Tiberias, where it fixed its pontifical throne and maintained its supremacy for several centuries. Tiberias, it may be remembered, was a town built by Herod Antipas, over an ancient cemetery, and therefore abominated by the more scrupulous Jews, as a dwelling of uncleanness. But the Rabbins soon obviated this objection. Simon Ben Jochai, by his cabalistic art, discovered the exact spot where the burial-place had been; this was marked off, and the rest of the city declared, on the same unerring authority, to be clean. Here, then, in this noble city, on the shore of the sea of Galilee, the Jewish pontiff fixed his throne; the Sanhedrin, if it had not, as the Jews pretend, existed during all the reverses of the nation, was formally reestablished. Simon, the son and heir of Gamaliel, was acknowledged as the Patriarch of the Jews, and Nasi or President of the Sanhedrin. . . . In every region of the West, in every province of the Roman empire, the Jews of all ranks and classes submitted, with the utmost readiness, to the sway of their Spiritual Potentate. His mandates were obeyed, his legates received with honour, his supplies levied without difficulty, in Rome, in Spain, in Africa. . . . In the mean time the rival throne in Babylonia, that of the Prince of the Captivity, was rapidly rising to the state and dignity which perhaps did not attain its perfect height till under the Persian monarchs. There seems to have been some acknowledged hereditary claim in R. Hona, who now appears as the Prince of the Captivity, as if his descent from the House of David had been recognized by the willing credulity of his brethren. . . . The Court of the Resch-Glutha [Prince of the Captivity] is described as . . . splendid; in imitation of his Persian master, he had his officers, counsellors, and cupbearers. Rabbins were appointed as satraps over the different communities. This state, it is probable, was maintained by a tribute raised from the body of the people, and substituted for that which, in ancient times, was paid

for the Temple in Jerusalem. . . . Whether the authority of the Prince of the Captivity extended beyond Babylonia and the adjacent districts is uncertain."—H. H. Milman, *Hist. of the Jews*, bk. 19 (v. 2).

A. D. 415.—Driven from Alexandria by Cyril. See ALEXANDRIA: A. D. 413-415.

5-6th Centuries.—Early Jewish settlements in Europe.—Arian toleration and Catholic persecution.—"The survey of the settlement of the Jews in Europe begins, as we leave Asia, with the Byzantine Empire. They already lived in its cities before Christianity acquired the empire of the world. In Constantinople the Jewish community inhabited a separate quarter, called the brass-market, where there was also a large synagogue. They were, however, expelled thence by an emperor, either Theodosius II., or Justinus II., and the synagogue was converted into the 'Church of the Mother of God.' . . . In Greece, Macedonia, and Illyria the Jews had already been settled a long time. . . . In Italy the Jews are known to have been domiciled as early as the time of the Republic, and to have been in enjoyment of full political rights until these were curtailed by the Christian emperors. They probably looked with excusable pleasure on the fall of Rome. . . . When Italy became Ostrogothic under Theodoric, the position of the Jews in that country was peculiar. Outbreaks of a spirit of hostility to them were not infrequent during this reign, but at the bottom they were not directed against the Jews, but were meant to be a demonstration against this hated Arian monarch. . . . Those nations . . . which were baptised in the Arian creed betrayed less intolerance of the Jews. Thus the more Arianism was driven out of Europe and gave way before the Catholic religion, the more were the Jews harassed by proselytising zeal. . . . In spite of the antipathy entertained against them by the leaders of opinion, the Jews of Italy were happy in comparison with their brethren of the Byzantine empire. . . . Even when the Lombards embraced the Catholic faith the position of the Jews in Italy remained supportable. The heads of the Catholic Church, the Popes, were free from savage intolerance. Gregory I. (590-604), surnamed the great and holy, who laid the foundation of the power of Catholicism, gave utterance to the principle, that the Jews should only be converted by means of persuasion and gentleness, not by violence. . . . In the territory which was subject to the Papal sway, in Rome, Lower Italy, Sicily, and Sardinia, he steadfastly persisted in this course in the face of the fanatical bishops, who regarded the oppression of the Jews as a pious work. . . . In the west of Europe, in France and Spain, where the Church was first obliged to make its way laboriously, the situation of the Jews assumed a different and much more favourable aspect. . . . It was a long while before Catholicism gained a firm footing in the west of Europe, and the Jews who had settled there enjoyed undisturbed peace until the victorious Church gained the upper hand. The immigration of the Jews into these important and wealthy provinces took place most probably as early as the time of the Republic or of Cæsar. . . . The presence of the Jews in the west of Europe is, however, not certain until the 2d century. The Gaulish Jews, whose first settlement was in the district of Arles, enjoyed the full

rights of Roman citizenship, whether they arrived in Gaul as merchants or fugitives, with the pedlar's pack or in the garb of slaves; they were likewise treated as Romans by the Frankish and Burgundian conquerors." The Burgundian King Sigismund, who embraced the Catholic faith in 516, "first raised the barrier between Jews and Christians. . . . A spirit of hostility to the Jews gradually spread from Burgundy over the Frankish countries. . . . The later of the Merovingian kings became more and more bigoted, and their hatred of the Jews consequently increased. . . . The Jews of Germany are certainly only to be regarded as colonies of the Frankish Jews, and such of them as lived in Austrasia, a province subject to the Merovingian kings, shared the same fate as their brethren in France. . . . While the history of the Jews in Byzance, Italy, and France, possesses but special interest, that of their brethren in the Pyrenean peninsula rises to the height of universal importance. . . . Jewish Spain contributed almost as greatly to the development of Judaism as Judæa and Babylonia. . . . Cordova, Grenada, and Toledo, are as familiar to the Jews as Jerusalem and Tiberias, and almost more so than Naherdea and Sora. When Judaism had come to a standstill in the East, and had grown weak with age, it acquired new vigour in Spain. . . . The first settlement of the Jews in beautiful Hesperia is buried in dim obscurity. It is certain that they came there as free men as early as the time of the Roman Republic, in order to take advantage of the productive resources of this country. The tortured victims of the unhappy insurrections under Vespasian, Titus, and Hadrian were also dispersed to the extreme west, and an exaggerated account relates that 80,000 of them were dragged off to Spain as prisoners. . . . The Jews . . . were unmolested under the Arian kings; . . . but as soon as the Catholic Church obtained the supremacy in Spain, and Arianism began to be persecuted, an unfavourable crisis set in."—H. Graetz, *Hist. of the Jews*, v. 3, ch. 2.

A. D. 615.—Siege and capture of Jerusalem by the Persians.—Sack and massacre. See JERUSALEM: A. D. 615.

A. D. 637.—Surrender of Jerusalem to the Moslems. See JERUSALEM: A. D. 637.

7th Century.—General persecution.—First expulsion from Spain.—In the seventh century, during the reign of the Eastern Roman Emperor Heraclius (A. D. 610-641) the Jews were subjected to a more general and bitter persecution than they had experienced before at the hands of the Christians. "It is said that about this time a prophecy was current, which declared that the Roman empire would be overthrown by a circumcised people. This report may have been spread by the Jews, in order to excite their own ardour, and assist their projects of rebellion; but the prophecy was saved from oblivion by the subsequent conquests of the Saracens. . . . The conduct of the Jews excited the bigotry, as it may have awakened the fears, of the imperial government, and both Phocas and Heraclius attempted to exterminate the Jewish religion, and if possible to put an end to the national existence. Heraclius not only practised every species of cruelty himself to effect this object within the bounds of his own dominions, but he even made the forced conversion or banishment of the Jews a prominent feature in his diplomacy."

Thus Heraclius induced Sisebut, the Gothic king in Spain, and Dagobert, the Frank king, to join him in forcing baptism on the Jews, with the alternative of flight.—G. Finlay, *Greece under the Romans*, ch. 4, sect. 5.—“Urged by the request and incited by the example of Heraclius, Sisebut [or Sisebut] issued an edict in the year 616, that, within a year, the Jews in Spain should either embrace Christianity, or should be shorn, scourged, and expelled from the kingdom, and their property confiscated. . . . It was a premium on hypocrisy; for hypocrisy was an instrument of self-preservation. Ninety thousand Jews made a nominal submission.”—H. Coppée, *Conquest of Spain by the Arab-Moors*, bk. 2, ch. 3 (v. 1).—See, also, GOTHUS (VISIGOTHUS): A. D. 507–711.

7th Century.—The Epoch of the Geonim.—The Exilarchate and the Gaonate.—After the death of the Caliph Othman (A. D. 655), when the followers of Mohammed were divided into two camps—the partisans of Ali and the partisans of Moawiyah, “the Babylonian Jews and Nestorian Christians sided with Ali, and rendered him their assistance.” Prominent among the Jewish supporters of Ali was Mar-Isaac, the head of a school. “The unhappy Ali valued this homage, and, doubtless, accorded privileges to the Jewish head of the school. It is quite probable that from this time the head of the school of Sora occupied a certain dignity, and took the title of Gaon. There were certain privileges connected with the Gaonate, upon which even the Exilarch—also politically appointed—did not venture to encroach. Through this there arose a peculiar relationship between the two entirely opposing offices—the Exilarchate and the Gaonate. This led to subsequent quarrels. With Bostanaï [then Exilarch] and Mar-Isaac, the Jewish officials recognised by the Caliph, there begins a new period in Jewish history—the Epoch of the Geonim. . . . For the space of 40 years (680 to 720), only the names of the Geonim and Exilarchs are known to us, historical details, however, are entirely wanting. During this time, through quarrels and concessions, there arose peculiar relations between the officials of the Jewish-Persian kingdom, which developed into a kind of constitution. The Jewish community in Babylonia (Persia), which had the appearance of a state, had a peculiar constitution. The Exilarch was at their head, and next to him stood the Gaon. Both together they formed the unity of the community. The Exilarch filled political functions. He represented the Babylonian-Persian Judaism under the Caliphs. He collected the taxes from the various communities, and paid them into the treasury. The Exilarchs, both in their outer appearance and mode of life, were like princes. They drove about in a state carriage; they had outriders and a kind of body guard, and received princely homage. The religious unity of Judaism, on the other hand, was represented in the two chief schools of Sora and Pumbeditha. They expounded the Talmud, giving it a practical application; they made new laws and institutions, and saw that they were carried out, by allotting punishments for those who transgressed them. The Exilarch shared the judicial power in common with the Gaon of Sora and the head of the school of Pumbeditha. . . . The head of the school of Sora, however, was alone privileged to be styled

‘Gaon’; the head of the school of Pumbeditha did not bear the title officially. The Gaon of Sora enjoyed general preference over his colleague of Pumbeditha.”—H. Graetz, *Hist. of the Jews*, v. 3, ch. 4.

8th Century.—Conversion of the Khazars to Judaism. See KHAZARS.

8th Century.—Origin of the Karaites. See KARAISM.

8–15th Centuries.—Toleration by Moors and Christians in Spain, followed by merciless persecution and expulsion.—Treatment in Portugal.—“Under the Moorish government in Spain the lot of this persecuted, tormented people was more tolerable than in any Christian country. . . . Under the Christian kings of the 12th and 13th centuries, they rose to still greater influence as financial advisers and treasurers, astronomers and physicians; in Toledo alone they numbered 12,000. . . . Their condition in Spain from the time of the Moorish supremacy to the end of the 13th century was upon the whole more favourable than in any other country of Europe. . . . The 14th century brought disaster to the Jews of the Peninsula and elsewhere. . . . They were detested by the people; first in one town and then in another they were attacked and murdered, and their synagogues were burned down; and at length, in 1391, the storm broke upon them in all its fury, and raged through the length and breadth of Spain. . . . Many thousands were slain; whilst 200,000 saved themselves by receiving baptism, but it was discovered in a few years that 17,000 had lapsed into Judaism. A century later, in 1492, a royal edict commanded all Jews to quit the country, leaving their goods behind them. As the Inquisition at the same time forbade the sale of victuals to the Jews, the majority . . . were compelled to submit to baptism. Of those who withdrew into exile—the numbers are variously reckoned from 170,000 to 400,000—the greater part perished from pestilence, starvation, or shipwreck. The descendants of those who survived, the Sephardim, found refuge in Italy, and under Turkish rule in the East, and, for a short space, even in Portugal. . . . In Portugal the Jews fared even worse than their brethren in Spain. . . . The Inquisition was . . . introduced as the approved means for handing over to the exchequer the wealth of the new Christians.”—J. I. von Döllinger, *The Jews in Europe (Studies in European Hist., ch. 9)*.

11th Century.—First appearance of Jews in England.—Their treatment as usurers.—“Their first appearance in England is said to have been due to the Conqueror, who brought over a Jewish colony from Rouen to London. They were special favourites of William Rufus; under Henry they play a less conspicuous part; but in the next reign we find them at Lincoln, Oxford, and elsewhere, and there can be no doubt that they were already established in most of the chief English towns. They formed, however, no part of the townsfolk. The Jew was not a member of the state; he was the king’s chattel, not to be meddled with, for good or for evil, save at the king’s own bidding. Exempt

from toll and tax and from the fines of justice, he had the means of accumulating a hoard of wealth which might indeed be seized at any moment by an arbitrary act of the king, but which the king's protection guarded with jealous care against all other interference. The capacity in which the Jew usually appears is that of a money-lender—an occupation in which the scruples of the Church forbade Christians to engage, lest they should be contaminated with the sin of usury. Fettered by no such scruples, the Hebrew money-lenders drove a thriving trade.”—K. Norgate, *England under the Angevin Kings*, v. 1, ch. 1.—“The Church declared against capitalism of any kind, branding it as usury. It became impossible in Angevin England to obtain the capital for any large scheme of building or organisation unless the projectors had the capital themselves. Here was the function which the Jew could perform in England of the twelfth century, which was just passing economically out of the stage of barter. Capital was wanted in particular for the change of architecture from wood to stone with the better classes, and especially for the erection of castles and monasteries. The Jews were, indeed, the first in England to possess dwelling-houses built with stone, probably for purposes of protection as well as of comfort. And as a specimen of their influence on monastic architecture, we have it on record that no less than nine Cistercian monasteries of the North Country were built by moneys lent by the great Aaron of Lincoln, who also boasted that he had built the shrine of St. Alban. . . . The result of the Church's attitude towards Jews and towards usury was to put the king into a peculiar relation towards his Jewish subjects. The Church kept them out of all other pursuits but that of usury, which it branded as infamous; the State followed suit, and confiscated the estates of all usurers dying as such. Hence, as a Jew could only be a usurer, his estate was always potentially the king's, and could be dealt with by the king as if it were his own. Yet, strange to say, it was not to the king's interest to keep the Jews' wealth in his own hands, for he, the king, as a good Christian, could not get usury for it, while the Jew could very soon double and treble it, since the absence of competition enabled him to fix the rate of interest very high, rarely less than forty per cent., often as much as eighty. . . . The only useful function the Jew could perform towards both king and people was to be as rich as possible, just as the larger the capital of a bank, the more valuable the part it plays in the world of commerce. . . . The king reaped the benefit of these riches in several ways. One of his main functions and main source of income was selling justice, and Jews were among his best customers. Then he claimed from them, as from his other subjects, fines and amerciaments for all the events of life. The Pipe Rolls contain entries of fines paid by Jews to marry, not to marry, to become divorced, to go a journey across the sea, to become partners with another Jew, in short, for all the decisive events of life. And above all, the king got frequent windfalls from the heirs of deceased Jews who paid heavy reliefs to have their fathers' charters and debts, of which, as we have seen, they could make more profitable use than the king, to whom the Jew's property escheated not qua Jew, but qua usurer. In the case of Aaron

of Lincoln the king did not disgorge at all at his death, but kept in his own hands the large treasures, lands, houses and debts of the great financier. He appears to have first organised the Jewry, and made the whole of the English Jews his agents throughout the country. . . . In addition to these quasi-regular and normal sources of income from his Jews, the king claimed from them—again as from his other subjects—various contributions from time to time under the names of gifts and tallages. And here he certainly seems, on occasion at least, to have exercised an unfavourable discrimination in his demands from the Jews. In 1187, the year of Aaron of Lincoln's death, he took a tenth from the rest of England, which yielded £70,000, and a quarter from the Jews, which gave as much as £60,000. In other words, the Jews were reckoned to have, at that date, one quarter of the movable wealth of the kingdom (£240,000 against £700,000 held by the rest). . . . They acted the part of a sponge for the Royal Treasury, they gathered up all the floating money of the country, to be squeezed from time to time into the king's treasure-chest. . . . The king was thus . . . the sleeping-partner in all the Jewish usury, and may be regarded as the Arch-usurer of the kingdom. By this means he was enabled to bring pressure on any of his barons who were indebted to the Jews. He could offer to release them of their debt of the usury accruing to it, and in the case of debts falling into his hand by the death of a Jew, he could commute the debt for a much smaller sum. Thus the Cistercian abbeys referred to above paid Richard I. 1,000 marks instead of the 6,400 which they had owed to Aaron of Lincoln.”—Jos. Jacobs, *The Jews of Angevin England*, introd.

A. D. 1076.—Capture of Jerusalem by the Seljuk Turks. See CRUSADES: CAUSES, &c.

A. D. 1096-1146.—Massacre of Jews in Europe by Crusaders.—The lawless and savage mobs of Crusaders which followed in the wake of the disorderly hosts of Peter the Hermit and Walter the Penniless, A. D. 1096, expended their zeal, at the outset of their march, in hunting and killing Jews. “Acting on the notion that the infidels dwelling in Europe should be exterminated before those in Asia should be attacked, [they] murdered 12,000 Jews. In Treves, many of these unfortunate men, driven to despair, laid violent hands on their children and on themselves, and multitudes embraced Christianity, from which they lapsed the moment the peril had passed. Two hundred Jews fled from Cologne and took refuge in boats; they were overtaken and slain. In Mayence, the archbishop, Rudhart, took them under his protection, and gave them the great hall of his castle for an asylum; the pilgrims, nevertheless, forced their way in, and murdered 700 of them in the archbishop's presence. At Spire the Jews valiantly defended themselves. At Worms they all committed suicide. At Magdeburg the archbishop, Ruprecht, amused himself by attacking them during the celebration of the feast of tabernacles, and by seizing their property.”—W. Menzel, *Hist. of Germany*, ch. 145 (v. 1).—The fervors of the Second Crusade [A. D. 1146] inclined, in Germany, to the same direction, of Jew-hunting; but St. Bernard, the apostle of the Crusade, was enlightened and humane enough to suppress the outrage by his great influence. A monk

named Radulf, self-appointed preacher of the Crusade in Germany, stirred up the people of the cities of the Rhine against the Jews, and numbers were massacred, notwithstanding attempts of the emperor, Conrad, to protect them. But Bernard went in person to the scene, and, by his personal authority, drove the brutal monk into his convent.—T. Keightley, *The Crusaders* [ch. 3].

11-17th Centuries.—Alternating toleration and oppression in Poland.—"It cannot be denied that this frugal, careful race formed the only class of traders in the land [16th-17th centuries]. That branch of industry which the nobleman despised, owing to pride or carelessness, and from which the peasant was excluded by stupidity and ignorance, fell to the share of the Jews. Though their presence may have been a misfortune for the nation in after years, they were certainly at the same time a national necessity. . . . Perpetually oppressed by capricious laws, the race raised itself by perseverance and cunning. Ill-treated, persecuted by fire and sword, still they returned, or others took their place; robbed and plundered repeatedly, the wealth of the land was yet theirs. . . . The first Jewish immigrants were exiles from Germany and Bohemia. In 1096 they fled to Poland, where at that time there was more religious tolerance than in the rest of Europe. The cruelty and greed of the first crusaders caused this exodus of the Jews. . . . Casimir the Great [1333-1370], instigated by his love for Esther, the beautiful Jewess of Opoczno, gave the Jews such civil rights and privileges as a Polish king could grant, which conduced to the advantage of the land; but already in the time of Lewis of Hungary, 1371, they were sentenced to exile. Notwithstanding this, we find them scattered over the whole of Poland in 1386. Christians were forbidden on pain of excommunication to have any intercourse with Jews or to purchase from them. When they settled in towns they were forced to live in particular suburbs. . . . The incredible increase of the Jewish population, supposed to be three times as rapid as that of the Polish inhabitants, was very alarming, as the Jews managed to avoid all public burdens and taxes. Sigismund Augustus [1548-1572] resolved, in spite of their objections, to impose a poll tax of one florin per head, and at the same time to discover by this means their actual number. It was estimated at 200,000, but only 16,000 florins were paid as tax. Their power was increased by John Sobiesky, to whom they had prophesied that he would ascend the throne. He favoured the Jews so much, that the senate in 1682 implored him to regard the welfare of the state, and not let the favours of the crown pass through their hands. The laws forbidding the Jews on pain of death to trade with the peasants, to keep inns, to sell brandy—laws which were passed anew in every reign—show that they never ceased to carry on these trades, so profitable for them, so ruinous for the peasant."—Count Von Moltke, *Poland*: ch. 6.

ALSO IN: H. Graetz, *Hist. of the Jews*, v. 4, ch. 18.

A. D. 1189.—Massacres in England.—At the time of the accession of Richard Cœur de

Lion, king of England, the crusading spirit had inflamed a specially bitter hatred of the Jews. Some of the obnoxious people were imprudent enough to press in among the spectators of King Richard's coronation. They were driven back with blows; "a riot ensued, and the Jews' quarter was plundered. A day elapsed before the king's troops could restore order, and then only three rioters were punished, for damage done to Christians. Thus encouraged, or allowed, the frenzy of persecution spread over the land. Generally it was the country people who were setting out as pilgrims for Palestine, who began the crusade at home, while the cities interposed to preserve the king's peace. But the rumour that the unbelievers were accustomed to crucify a Christian boy at Easter had hardened men's hearts against them. The cause of murder and rapine prevailed in Dunstable, Stamford, and Lincoln. At York, the viscount allowed 500 Jews to take refuge in the castle. Fearing, in spite of this, to be given up, they closed the gates against the king's officers. They were now besieged by the townsmen, under orders of the viscount, and the defence of men untrained to arms and without artillery lay only in the strength of the walls. They offered to ransom their lives, but the crowd thirsted for blood. Then a rabbi rose up and addressed his countrymen. 'Men of Israel, hear my words; it is better for us to die for our law than to fall into the hands of those who hate it; and our law prescribes this.' Then every man slew his wife and children, and hurled the corpses over the battlements. The survivors shut themselves up with their treasures in the royal chamber, and set fire to it. The crowd indemnified themselves by sacking the Jews' quarter, and burning the schedules of their debts, which were kept for safety in the cathedral."—C. H. Pearson, *Hist. of Eng. during the Early and Middle Ages*, v. 1, ch. 32.

ALSO IN: H. C. Adams, *Hist. of the Jews*, ch. 16.

12-15th Centuries.—Treatment in France.—In France, during the Middle Ages, the extorting of money from the Jews was one of the devices depended upon for replenishing the royal treasury. "It is almost incredible to what a length this was carried. Usury, forbidden by law and superstition to Christians, was confined to this industrious and covetous people. . . . The children of Israel grew rich in despite of insult and oppression, and retaliated upon their Christian debtors. If an historian of Philip Augustus may be believed, they possessed almost one-half of Paris. Unquestionably they must have had support both at court and in the halls of justice. The policy of the kings of France was to employ them as a sponge to suck their subjects' money, which they might afterwards express with less odium than direct taxation would incur. Philip Augustus released all Christians in his dominions from their debts to the Jews, reserving a fifth part to himself. He afterwards expelled the whole nation from France. But they appear to have returned again—whether by stealth, or, as is more probable, by purchasing permission. St. Louis twice banished and twice recalled the Jews. A series of alternate persecution and tolerance was borne by this extraordinary people with an invincible perseverance, and a talent of accumulating riches which kept pace

with their plunderers; till new schemes of finance supplying the turn, they were finally expelled under Charles VI. and never afterwards obtained any legal establishment in France."—H. Hallam, *The Middle Ages*, ch. 2, pt. 2 (v. 1).

13-14th Centuries.—Hostility of the Papacy and the Church.—Doctrine of the Divine condemnation of the Jews to Slavery.—Claim of the Emperors to ownership of them.—"The declaration by Innocent III. [Pope, 1198-1216] that the entire nation was destined by God on account of its sins to perpetual slavery, was the Magna Charta continually appealed to by those who coveted the possessions of the Jews and the earnings of their industry; both princes and people acted upon it. . . . The succeeding popes took their stand upon the maxims and behests of Innocent III. If the Jews built themselves a synagogue, it was to be pulled down; they might only repair the old ones. No Jew might appear as a witness against a Christian. The bishops were charged to enforce the wearing of the distinctive badge, the hat or the yellow garment, by all the means in their power. The wearing of the badge was particularly cruel and oppressive, for in the frequent tumults and risings in the towns the Jews, being thus recognisable at a glance, fell all the more easily into the hands of the excited mob; and if a Jew undertook a journey he inevitably became a prey to the numerous bandits and adventurers, who naturally considered him as an outlaw. . . . Where popes failed to interfere, the councils of the various countries made amends for the omission; they forbade, for instance, a Christian letting or selling a house to a Jew, or buying wine from him. Besides all this, the order was often renewed that all copies of the Talmud and commentaries upon it—consequently the greater part of the Jewish literature—should be burnt. . . . The new theory as to the Jews being in a state of slavery was now adopted and enlarged upon by theologians and canonists. Thomas Aquinas, whose teaching was received by the whole Roman Church as unassailable, pronounced that since the race was condemned to perpetual bondage princes could dispose of the possessions of the Jews just as they would of their own. A long list of canonical writers maintained, upon the same ground, the right of princes and governors to seize upon the sons and daughters of Jews and have them baptized by force. It was commonly taught, and the ecclesiastical claim still exists, that a Jewish child once baptized was not to be left to the father. Meanwhile princes had eagerly seized upon the papal doctrine that the perpetual slavery of the Jews was ordained by God, and on it the Emperor Frederick II. founded the claim that all Jews belonged to him as Emperor, following the contention prevalent at the time that the right of lordship over them devolved upon him as the successor of the old Roman Emperors. . . . King Albert went so far as to claim from King Philip of France that the French Jews should be handed over to him. . . . From the 14th century this 'servitude to the state' was understood to mean complete slavery. 'You yourselves, your bodies and your possessions, belong,' says the Emperor Charles IV. in a document addressed to the Jews, 'to us and to the empire; we may act, make and do with you

what we will and please.' The Jews were, in fact, constantly handed about like merchandise from one to another; the emperor, now in this place, now in that, declared their claims for debts to be cancelled; and for this a heavy sum was paid into his treasury, usually 30 per cent."—J. I. Von Döllinger, *The Jews in Europe* (*Studies in European Hist.*, ch. 9).

A. D. 1290.—Banished from England.—"At the same time [A. D. 1290], the King [Edward I.] banished all the Jews from the kingdom. Upward of 16,000 are said to have left England, nor did they reappear till Cromwell connived at their return in 1654. It is not quite clear why the King determined on this act of severity, especially as the Jews were royal property and a very convenient source of income. It is probable, however, that their way of doing business was very repugnant to his ideas of justice, while they were certainly great falsifiers of the coinage, which he was very anxious to keep pure and true. Earlier in the reign he had hanged between 200 and 300 of them for that crime, and they are said to have demanded 60 per cent. for their loans, taking advantage of the monopoly as money-lenders which the ecclesiastical prohibition of usury had given them."—J. F. Bright, *Hist. of Eng.*, period 1, p. 179.—The expulsion was in compliance with a demand made by Parliament. "We have no record of any special action or crime on the part of the Jews which suggested the particular parliamentary demand in 1290." It had been made four years before, when, "in one night, all the Jews in England were flung into prison, and would most likely have been expelled there and then, had they not outbribed the King with £12,000."—G. H. Leonard, *Expulsion of the Jews by Edward I.* (*Royal Hist. Soc. Trans.*, new series, v. 5, 1891).

A. D. 1321.—Persecution of Lepers and Jews.—"In the year 1321, a general rumour prevailed through Europe that the unhappy beings afflicted with leprosy (a disease with which the Crusaders had become infected in the East . . .) had conspired to inoculate all their healthy fellow-creatures with their own loathsome malady. . . . The King of Grenada and the Jews were denounced as the prime movers of this nefarious plot directed to the extermination of Christianity; and it was said that the latter, unable to overcome the many impediments which opposed their own agency, had bribed the lepers to become their instruments. This 'enormous Creed,' in spite of its manifold absurdities, found easy admission; and, if other evidence were wanting for its support, torture was always at hand to provide confessions. Philip V. [of France] was among the firmest believers, and therefore among the most active avengers of the imaginary crime; and he encouraged persecution by numerous penal edicts. At Toulouse, 160 Jews were burned alive at once on a single pile, without distinction of sex, and, as it seems, without any forms of previous examination. In Paris, greater gentleness was manifested; those only were led to the stake from whom an avowal of guilt could be extorted."—E. Smedley, *Hist. of France*, pt. 1, ch. 8.—"The lord of Parthenay writes word to the king that 'a great leper,' arrested on his territory, has confessed that a rich Jew had given him money, and supplied him with drugs. These drugs were compounded of human blood, of urine, and of the blood of

Christ (the consecrated wafer), and the whole, after having been dried and pounded, was put into a bag with a weight and thrown into the springs or wells. Several lepers had already been provisionally burnt in Gascony, and the king, alarmed at the new movement which was originating, hastily returned from Poitou to France, and issued an ordinance for the general arrest of the lepers. Not a doubt was entertained by any one of this horrible compact between the lepers and the Jews. 'We ourselves,' says a chronicler of the day, 'have seen with our own eyes one of these bags, in Poitou, in a burgh of our own vassalage.' . . . The king ordered all found guilty to be burnt, with the exception of those female lepers who happened to be pregnant. The other lepers were to be confined to their lazarettos. As to the Jews, they were burnt indiscriminately, especially in the South."

—J. Michelet, *Hist. of France*, bk. 5, ch. 5 (v. 1).

A. D. 1348-1349.—Accused of causing the Black Plague.—On the appearance in Europe, A. D. 1348, of the pestilence known as the Black Death, "there was a suspicion that the disease was due to human agencies, and, as usual, the Jews were asserted to have contrived the machinations by which the calamity was created. They were charged with poisoning the wells, and through France, Switzerland, and Germany, thousands of these unhappy people were destroyed on evidence derived from confessions obtained under torture. As far as he could, the Emperor Charles IV. protected them. They escaped persecution too in the dominions of Albrecht of Austria. It is said that the great number of the Jewish population in Poland is due to the fact that Casimir the Great was induced by the entreaties of one Esther, a favourite Jewish mistress of that monarch, to harbour and shelter them in his kingdom. It should be mentioned that Clement VI. forbade the persecution of the Jews at Avignon."—J. E. T. Rogers, *Hist. of Agriculture and Prices*, v. 1, ch. 15.

17th Century.—Toleration in Holland.—Attractiveness of that country to wealthy Israelites. See NETHERLANDS: A. D. 1621-1633.

A. D. 1655.—Toleration in England by Cromwell.—"Wednesday, Dec. 12, 1655. This day, 'in a withdrawing room at Whitehall,' presided over by his Highness [the Lord Protector, Oliver Cromwell], who is much interested in the matter, was held 'a Conference concerning the Jews';—of which the modern reader too may have heard something. Conference, one of Four Conferences, publicly held, which filled all England with rumour in those old December days; but must now contract themselves into a point for us. Highest official Persons, with Lord Chief Barons, Lord Chief Justices, and chosen Clergy have met here to advise, by reason, Law-learning, Scripture-prophecy, and every source of light for the human mind, concerning the proposal of admitting Jews, with certain privileges as of alien-citizens, to reside in England. They were banished near Four-hundred years ago: shall they now be allowed to reside and trade again? The

Proposer is 'Manasseh Ben Israel,' a learned Portuguese Jew of Amsterdam; who, being stirred-up of late years by the great things doing in England, has petitioned one and the other, Long Parliament and Little Parliament, for this object; but could never, till his Highness came into power, get the matter brought to a hearing. And so they debate and solemnly consider; and his Highness spake;—and says one witness, 'I never heard a man speak so well.' His Highness was eager for the scheme, if so might be. But the Scripture-prophecies, Law-learnings, and lights of the human mind seemed to point another way: zealous Manasseh went home again; the Jews could not settle here except by private sufferance of his Highness."—T. Carlyle, *Oliver Cromwell's Letters and Speeches*, pt. 9, letter 207.—"Cromwell . . . was able to overcome neither the arguments of the theologians, nor the jealousies of the merchants, nor the prejudices of the indifferent; and seeing that the conference was not likely to end as he desired, he put an end to its deliberations. Then, without granting the Jews the public establishment which they had solicited, he authorized a certain number of them to take up their residence in London, where they built a synagogue, purchased the land for a burial-ground, and quietly commenced the formation of a sort of corporation, devoted to the Protector, on whose tolerance their safety entirely depended."—F. P. Guizot, *Hist. of Oliver Cromwell*, bk. 6 (v. 2).

A. D. 1662-1753.—Condition in England.—Defeated attempt to legalize their naturalization.—"The Jews . . . were not formally authorised to establish themselves in England till after the Restoration. The first synagogue in London was erected in 1662. . . . There does not appear . . . to have been any legal obstacle to the sovereign and Parliament naturalising a Jew till a law, enacted under James I., and directed against the Catholics, made the sacramental test an essential preliminary to naturalisation. Two subsequent enactments exempted from this necessity all foreigners who were engaged in the hemp and flax manufacture, and all Jews and Protestant foreigners who had lived for seven continuous years in the American plantations. In the reign of James II. the Jews were relieved from the payment of the alien duty, but it is a significant fact that it was reimposed after the Revolution at the petition of the London merchants. In the reign of Anne some of them are said to have privately negotiated with Godolphin for permission to purchase the town of Brentford, and to settle there with full privileges of trade; but the minister, fearing to arouse the spirit of religious intolerance and of commercial jealousy, refused the application. The great development of industrial enterprise which followed the long and prosperous administration of Walpole naturally attracted Jews, who were then as now pre-eminent in commercial matters, and many of them appear at this time to have settled in England,"—among others, the family of Disraeli. In 1753, the Pelhams attempted to legalise the naturalisation of Jews; "not to naturalise all resident Jews, but simply to enable Parliament to pass special Bills to naturalise those who applied to it, although they had not lived in the colonies or been engaged in the hemp or flax manufacture. . . . The opponents of the ministry raised the cry that the Bill was an unchristian

tian one, and England was thrown into paroxysms of excitement scarcely less intense than those which followed the impeachment of Sacheverell. There is no page in the history of the 18th century that shows more decisively how low was the intellectual and political condition of English public opinion. According to its opponents, the Jewish Naturalisation Bill sold the birthright of Englishmen for nothing, it was a distinct abandonment of Christianity, it would draw upon England all the curses which Providence had attached to the Jews. The commercial classes complained that it would fill England with usurers. . . . The clergy all over England denounced it." After fierce opposition, the bill was finally passed; "but as the tide of popular indignation rose higher and higher, the ministers in the next year brought forward and carried its repeal."—W. E. H. Lecky, *Hist. of Eng.*, 18th Cent., ch. 2 (v. 1).

A. D. 1727-1880.—Persecutions and restrictions in Russia.—The Pale.—"The refugees from the Ukraine who had settled in Little Russia were expelled in 1727. No Jews from without were allowed to enter Russia upon any pretext. The few physicians and other professional men of the excluded race who did manage to remain in Russia were in continual jeopardy of insult and expulsion. Over and over again Russian statesmen who were anxious to develop the resources and trade possibilities of their backward and barbarous land, hinted at the advisability of bringing in some Jews. The Imperial will was resolutely opposed. . . . When the broad-minded Catherine II ascended the throne these efforts were renewed, but she too resisted them, and says in her Memoirs, 'their admission into Russia might have occasioned much injury to our small tradesmen.' She was too deeply bitten with the Voltairean philosophy of her time to have, or even assume, any religious fervour in the matter, but though in 1786 she issued a high-sounding edict 'respecting the protection of the rights of Jews of Russia,' the persecution on economic and social grounds continued unabated. By this time it will be seen the laws did, however, recognise the existence of Jews in Russia. The explanation is that the first partition of Poland and the annexation of the great Turkish territory lying between the Dnieper and the Dniester had brought into the empire such a vast Hebraic population that any thought of expulsion was hopeless. . . . The rape of Poland and the looting of Turkey had brought two millions of Jews under the sceptre of the Czar. The fact could not be blinked. They were there—inside the Holy Empire, whose boast for centuries had been that no circumcised dog could find rest for his foot on its sanctified territory. To an autocracy based so wholly on an orthodox religion as is that of the Czars, this seemed a most trying and perplexing problem. The solution they hit upon was to set aside one part of the empire as a sort of lazar house, which should serve to keep the rest of it from pollution. Hence we get the Pale. Almost every decade since 1786, the date of Catherine's ukase, has witnessed some alteration made in the dimensions and boundaries of this Pale. Now it has been expanded, now sharply contracted. . . . To trace these changes would be to unnecessarily burden ourselves with details. It is enough to keep in mind that the creation of the Pale was Russia's

solution of the Jewish problem in 1786, and is still the only one it can think of. Side by side with this naïve notion that Holy Russia could be kept an inviolate Christian land in the eyes of Heaven by juggling the map, there grew up the more worldly conception of turning the Jew to account as a kind of milch cow. . . . In 1819 Jewish brandy distillers were allowed to go into the interior and settle 'until,' as the ukase said, 'Russian master distillers shall have perfected themselves in the art of distilling.' They availed themselves of this permission in great numbers, and at the end of seven years were all summarily driven out again, a new ukase explaining that 'the number of Christian distillers was now sufficient.' . . . The past century's history of the Jews in Russia is made up of conflicts between these two impulses in the childlike Slavonic brain—the one to drive the heretic Jew into the Pale as into a kennel with kicks and stripes, the other guardedly to entice him out and manage to extract some service or profit from him. . . . In 1825 Nicholas ascended the throne. Within a year he had earned from the Jews that sinister title of 'The Second Haman,' by which Israel still recalls him. . . . With the death of Nicholas [1855] and the advent of Alexander II a new era dawned. Dr. Mackenzie Wallace has drawn a spirited and comprehensive picture of the literal stampede all Russia made to reform everything. . . . Almost the first thing the young Czar did was to revive a commission to inquire into the condition of the Jews, which Nicholas had decreed in 1840 and then allowed to lapse. This commission sent out a list of inquiries to all the Provincial Governors. These gentlemen returned voluminous reports, all, without exception, favourable to the Jews. . . . Upon the strength of these reports were issued the ukases of 1859, 1861, and 1863, . . . by which Jews of the first mercantile guild and Jewish artisans were allowed to reside all over the Empire. It is just as well to remember that even these beneficent concessions, which seem by contrast with what had gone before to mark such a vast forward step in Russo-Jewish history, were confessedly dictated by utilitarian considerations. The shackles were stricken only from the two categories of Jews whose freedom would bring profit to Russia. . . . Still, the quarter century following Alexander II's accession in 1855 fairly deserves its appellation of the 'golden age' when what preceded it is recalled."—H. Frederic, *The New Exodus*, ch. 4-5.—See, also, below: 19TH CENTURY.

A. D. 1740.—Rise of the modern Chasidim. See CHASIDIM.

A. D. 1791.—The French Revolutionary emancipation.—"It is to the French Revolution that the Jews owe their improved position in the modern world. That prolific parent of good and evil has at least deserved well of them. It was the first to do justice, full and unequivocal, to those whom every other great political movement passed over as too insignificant or too contemptible to be taken into account. Mirabeau and the Abbé Grégoire, the one in his desire to secularise the State, the other in his policy of Christianising the Revolution, as our historian Graetz puts it, both urged on a movement which, in an incredibly short space of time, succeeded in effecting the complete emancipation of all the Jews under the rule of the Republic. On the

17th September, 1791, the National Assembly decreed the abolition of every exceptional enactment previously in force against them, and thus made them by law what they had previously been in heart, citizens of their country. He who started as the child, afterwards to become the master, of the Revolution, proclaimed the same great principles of religious equality wherever his victorious eagles penetrated. Since that dawn of a better time, the light has spread more and more, though even now [1890] it is only here and there that it has shone forth unto the perfect day."—S. Singer, *Jews in their Relation to Other Races* (*National Life and Thought*, ch. 20).

A. D. 1846-1858.—Removal of disabilities in England.—"In 1846 the Act of Parliament was formally repealed which compelled Jews living in England to wear a distinctive dress. The law had, however, been in abeyance for nearly two centuries. About this time also the Jews were admitted to the privileges of the naturalization laws; and in 1858 the House of Commons by resolution altered the form of oath tendered to all its members. As it had stood up to this time, Jews were prevented from voting in the divisions, although a Jew could take his seat in the House when sent there by a constituency."—E. Porritt, *The Englishman at Home*, ch. 9.

19th Century.—The Anti-Semite movement. —Later persecution of the Jews in Russia.—

"Among the strange and unforeseen developments that have characterized the fourth quarter of the nineteenth century, few are likely to be regarded by the future historian with a deeper or more melancholy interest than the anti-Semite movement, which has swept with such a portentous rapidity over a great part of Europe. It has produced in Russia by far the most serious religious persecution of the century. It has raged fiercely in Roumania, the other great centre of the Oriental Jews. In enlightened Germany it has become a considerable parliamentary force. In Austria it counts among its adherents men of the highest social station. Even France, which from the days of the Revolution has been specially distinguished for its liberality to the Jews, has not escaped the contagion. . . . It is this movement which has been the occasion of the very valuable work of M. Anatole Leroy-Beaulieu on 'Israel among the Nations.' The author, who is universally recognized as one of the greatest of living political writers, has special qualifications for his task. With an exceedingly wide knowledge of the literature relating to his subject he combines much personal knowledge of the Jews in Palestine and in many other countries, and especially in those countries where the persecution has most furiously raged. That persecution, he justly says, unites in different degrees three of the most powerful elements that can move mankind—the spirit of religious intolerance; the spirit of exclusive nationality; and the jealousy which springs from trade or mercantile competition. Of these elements M. Leroy-Beaulieu considers the first to be on the whole the weakest. In that hideous Russian persecution which 'the New Exodus' of Frederic has made familiar to the English reader, the religious element certainly occupies a very leading place. Pobedonosteff, who shares with his master the chief guilt and infamy of this atrocious crime, belongs to the same type as the Torquemadas of the past, and the spirit that animates him has entered largely

into the anti-Semite movement in other lands. . . . Another element to which M. Leroy-Beaulieu attaches considerable importance is the Kultur Kampf in Germany. When the German Government was engaged in its fierce struggle with the Catholics, these endeavored to effect a diversion and to avenge themselves on papers, which were largely in the hands of Jews, by raising a new cry. They declared that a Kultur Kampf was indeed needed, but that it should be directed against the alien people who were undermining the moral foundations of Christian societies; who were the implacable enemies of the Christian creed and of Christian ideals. The cry was soon taken up by a large body of Evangelical Protestants. . . . Still more powerful, in the opinion of our author, has been the spirit of intense and exclusive nationality which has in the present generation arisen in so many countries and which seeks to expel all alien or heterogeneous elements, and to mould the whole national being into a single definite type. The movement has been still further strengthened by the greater keenness of trade competition. In the midst of many idle, drunken and ignorant populations the shrewd, thrifty and sober Jew stands conspicuous as the most successful trader. His rare power of judging, influencing and managing men, his fertility of resource, his indomitable perseverance and industry continually force him into the foremost rank and he is prominent in occupations which excite much animosity. The tax-gatherer, the agent, the middleman, and the money-lender are very commonly of Jewish race and great Jewish capitalists largely control the money markets of Europe at a time when capital is the special object of socialistic attacks."—W. E. H. Lecky, *Israel among the Nations* (*The Forum*, Dec., 1893).—"Until 1831 the lives and property of Jews had been respected. Their liberties were restricted, not obsolete. In that year all was changed. The Pale of Settlement, especially in the South, became a centre of riot. Crimes were charged against, and violence was offered to, those who had no means of retaliation; and whose only defence was passive endurance. The restlessness of the country, the low moral tone of the most ignorant and unreasonable peasantry in the world, commercial jealousy, and official intrigues were responsible for the outbreak. The Jews had thriven; that was a crime. As the Government had refused them the privileges of citizenship, they had no right to rise above their neighbours. A rescript, for which General Ignatieff was responsible, took cognisance, not of the sufferings of the Jews, but of the condition of the Christians. Commissioners . . . were appointed, in all towns inhabited by Jews, to inquire (1) into the manner of mal-practices by which the presence of Jews became injurious to the Christian population; (2) into the best methods of preventing Jews from evading old restrictions; (3) what new laws were required to stop the pernicious conduct of Jews in business. The inquiry resulted in the May Laws of 1882. These laws, which were so severe that hesitation was felt in applying them throughout the Pale, were supposed to be of only temporary application. They were known as laws for the time, and only came into full operation in 1890. . . . The May Laws define the Jews' duties to the State. These consist of military service, and pecuniary contributions. In common

with all Russians, Jews are subject to the Law of Conscription. Unlike Christians, they may not provide a substitute. They may not follow any trade, or profession, until they have produced evidence of registration in the recruiting district. While subject to military service, Jews cannot rise higher than the rank of non-commissioned officer. . . . The journal of statistics gives the proportion of Jews to the population as 3.95 per cent., whereas the percentage on the conscription rolls is 5.80. Thus the Hebrew is ground between the upper and nether millstone. . . . In December 1890 Russians were forbidden to sell, lease, or mortgage real estate to Jews throughout the Empire, a measure hitherto applied only to Poland. Where Jews have acquired such property they will be compelled to dispose thereof. The Jewish artisans, apothecaries' assistants, dentists, and midwives, with all apprentices, are to be expelled from all places outside the Pale. Exceptions to this are obtainable only by special permission from the Minister of the Interior. Even then the children of such must be removed to the Pale as soon as they come of age, or marry an unprivileged Jew. This Pale of Settlement, which stretches along the frontier, from the Baltic to the Black Sea, is a hell of seething wretchedness. Here five millions of Jews are compelled to live, and die, in a Ghetto of filth and misery, mocked with a feast of Tantalus. Beyond are lands where corn rots for lack of ingatherers; yet they are cabined and confined. Inability to bribe a corrupt mass of administrators has led to the expulsion of poor Jews from villages within the Pale, into crowded towns, such as Tchernizov, where the population

has consequently risen from 5,000 to 20,000. . . . In September [1890] the Jews were expelled from Trans-caspian territory; in October, Jews, not having the right to live in St. Petersburg, were ordered to be transferred, with their families, to their proper places of abode; in January the Jews were ordered to be expelled from the Terke region of the Caucasus; in February the Jews in Novgorod were expelled. It has been declared expedient to expel them from the Cossack Stanitzas of the Caucasus. Three years ago the Jews were forbidden to live on Crown lands. Eighty-seven families were recently ordered to leave Saraka districts, because they had settled there after the passing of the Ignatieff laws. Artisans are henceforth to be confined to limits of residence within the Pale. It is the same with millers; therefore mills are idle, and the price of corn has declined. In Courland and Livonia, descendants of Jewish families, which were established when those provinces were incorporated into Russia, may remain; but no others may settle. . . . Jews who have lived eight years in a village may be interned therein, and may not move, even walking distance, without leave. Jews leaving one village for another lose their rights, and must go to the Ghetto of the nearest town. This is practically a sentence of death. Executions are going on, not upon scaffolds, but in dusky Ghettos, where the victims of oppression pine without hope in the world."—C. N. Barham, *Persecution of the Jews in Russia* (*Westminster Rev.*, v. 136, 1891), pp. 139-144.

JOMSBORG.—Jomsborg, a stronghold at the mouth of the Oder, became, in the later part of the 10th and early part of the 11th centuries, a noted fastness of the piratical heathen Danes, who found there "a secure refuge from the new

religion and the civilization it brought with it," which their country was then submitting to. They founded at Jomsborg "a state to which no man might belong save on proof of courage, where no woman might enter within the walls, and where all booty was in common."—J. R. Green, *The Conquest of Eng.*, pp. 366-367.—"The impregnable castle of a certain body corporate, or 'Sea-Robbery Association (limited),' which, for some generations, held the Baltic in terror, and plundered far beyond the Belt,—in the ocean itself, in Flanders and the opulent trading havens there,—above all, in opulent anarchic England, which, for forty years from about this time, was the pirates' Goshen; and yielded, regularly every summer, slaves, danegelt, and miscellaneous plunder, like no other country Jomsborg or the viking-world had ever known."—T. Carlyle, *Early Kings of Norway*, ch. 5.—The pirate-nest at Jomsborg was broken up, about the middle of the tenth century, by Magnus the Good, of Norway.

C. to the year 14 of our era; Tiberius, from 14 to 37 A. D.; Caligula, from 37 to 41; Claudius, from 41 to 54; Nero, from 54 to 68."—J. C. L. Sismondi, *Fall of the Roman Empire*, ch. 2.

JULIAN LAW, The. See ROME: B. C. 90-88.

JULIAN LAWS, The.—"Cæsar [during his year of consulship, B. C. 59, before he went to Gaul] carried, with the help of the people, the body of admirable laws which are known to jurists as the '*Leges Juliæ*,' and mark an epoch in Roman history. . . . There was a law declaring the inviolability of the persons of magistrates during their term of authority, reflecting back on the murder of Saturninus, and touching by implication the killing of Lentulus and his companions. There was a law for the punishment of adultery, most disinterestedly singular if the popular accounts of Cæsar's habits had any grain of truth in them. There were laws for the protection of the subject from violence, public or private; and laws disabling persons who had laid hands illegally on Roman citizens from holding office in the Commonwealth. There was a law, intended at last to be effective, to deal with judges who allowed themselves to be bribed. There were laws against defrauders of the revenue; laws against debasing the coin; laws against sacrilege; laws against corrupt State contracts; laws against bribery at elections. Finally, there was a law, carefully framed, '*De repetundis*,' to exact retribution from pro-consuls or pro-prætors of the type of Verres, who had plundered the provinces."—J. A. JUROIPACH, Fortress of.—A fortress in the pass of Derbend, between the last spurs of the Caucasus and the Caspian, which the Persians and the Romans undertook at one time to maintain jointly. "This fortress, known as Juroipach or Biraparach, commanded the usual passage by which the hordes of the north were accustomed to issue from their vast arid steppes upon the rich and populous regions of the south for the purpose of plundering raids, if not of actual conquests. Their incursions threatened almost equally Roman and Persian territory, and it was felt that the two nations were alike interested in preventing them."—G. Rawlinson, *Seventh Great Oriental Monarchy*, ch. 19.

JURY, Trial by.—"The fabric of our judicial legislation commences with the Assize of Clarendon [see ENGLAND: A. D. 1162-1170]. . . . In the provisions of this assize for the repression of crime we find the origin of trial by jury, so often attributed to earlier times. Twelve lawful men of each hundred, with four from each township, were sworn to present those who were known or reputed as criminals within their district for trial by ordeal. The jurors were thus not merely witnesses, but sworn to act as judges also in determining the value of the charge; and it is this double character of Henry's [Henry II.] jurors that has descended to our 'grand jury.' . . . Two later steps brought the jury to its modern condition. Under Edward I. witnesses acquainted with the particular fact in question were added in each case to the general jury, and by the separation of these two classes of jurors at a later time the last became simply 'witnesses,' without any judicial power, while the first ceased to be witnesses at all, and became our modern jurors, who are only judges of the testimony given."—J. R. Green, *Short Hist. of Eng. People*, ch. 2, sect. 8.—See LAW.

KAIRWAN, The founding of. —Acbah, the first of the Moslem conquerors of Northern Africa who penetrated as far westward as the domain of ancient Carthage, but who did not take that city, secured his footing in the region [A. D. 670-675] by founding a new city, thirty-three leagues southeast of Carthage and twelve leagues from the sea. The site chosen was a wild, thickly wooded valley, in the midst of which the Arab leader is said to have cleared a space, erected walls around it, and then, planting his lance in the center, cried to his followers: "This is your Caravan." Hence the name, Kairwan or Caerwan, or Cairoan. Fixing his seat of government at Kairwan, building mosques and opening markets, Acbah and his successors soon made the new city a populous and important capital. —W. Irving, *Mahomet and his Successors*, v. 2, ch. 44.

KALEVALA, OR KALEWALA, The.—"To a certain class of modern philologists, no poem in the world is more familiar than the Kalewala, the long epic, which is to the mythology and traditional lore of the Finns what the Iliad and Odyssey of Homer are to the heroic story of ancient Greece. It is the source from which nearly all the information connected with the religious creed, the moral notions, the customs, and the domestic details of a most remarkable race is to be obtained. If we would know how the Greeks of the heroic age prayed, fought, eat, drank, sported, and clothed themselves, we turn to the pages of Homer. If we would obtain similar knowledge on the subject of the Finns, we consult the Kalewala. Though the traditions of the Finnish heroes are possibly as old as those of Achilles and Ajax, the arrangement of them into a continuous poem is a work of very recent date. No Wolfian controversy will arise respecting the construction of the Kalewala, for it is not more than twenty-five years since the Peisistratid who first put together the isolated songs, or Runes, published the result of his labours. Fragments of Finnish poetry, collected from the oral traditions of the people, had already made their appearance, though even the first important collection of these, which was made by Dr. Zacharias Topelius, dates no further back than 1822. . . . But it is with Dr. Lönnrot that the existence of the epic as an epic, with the title 'Kalewala,' begins. He published it in thirty-two Runes,—that is to say, books or cantos, for the word, which previously denoted an independent poem, now sinks into little more than a sign of division, though here and there, it must be confessed, an abrupt transition occurs, to which a parallel would not be found in the Iliad or the Odyssey. In 1849 a second edition of the Kalewala was published, likewise under the superintendence of Dr. Lönnrot, containing fifty cantos and nearly 23,000 lines."—J. Oxenford, *Kalewala* (*Temple Bar*, December, 1860).—"Besides its fresh and simple beauty of style, its worth as a storehouse of every kind of primitive folk-lore, being as it is the production of an Urvolk, a nation

that has undergone no violent revolution in language or institutions—the Kalevala has the peculiar interest of occupying a position between the two kinds of primitive poetry, the ballad and the epic. . . . Sixty years ago, it may be said, no one was aware that Finland possessed a national poem at all. Her people—who claim affinity with the Magyars of Hungary, but are possibly a back-wave of an earlier tide of population—had remained untouched by foreign influences since their conquest by Sweden, and their somewhat lax and wholesale conversion to Christianity: events which took place gradually between the middle of the twelfth and the end of the thirteenth centuries. . . . The annexation of Finland by Russia, in 1809, awakened national feeling, and stimulated research into the songs and customs which were the heirlooms of the people. . . . From the north of Norway to the slopes of the Altai, ardent explorers sought out the fragments of unwritten early poetry. These runes, or runots, were sung chiefly by old men called Runoias, to beguile the weariness of the long dark winters. The custom was for two champions to engage in a contest of memory, clasping each other's hands, and reciting in turn till he whose memory first gave in slackened his hold. The Kalevala contains an instance of this practice, where it is said that no one was so hardy as to clasp hands with Wiinämöinen, who is at once the Orpheus and the Prometheus of Finnish mythology. These Runoias, or rhapsodists, complain, of course, of the degeneracy of human memory; they notice how any foreign influence, in religion or politics, is destructive to the native songs of a race. 'As for the lays of old time, a thousand have been scattered to the wind, a thousand buried in the snow. . . . As for those which the Munks (the Teutonic knights) swept away, and the prayer of the priest over-whelmed, a thousand tongues were not able to recount them.' In spite of the losses thus caused, and in spite of the suspicious character of the Finns, which often made the task of collection a dangerous one, enough materials remained to furnish Dr. Lönnrot, the most noted explorer, with thirty-five Runots, or cantos. These were published in 1835, but later research produced the fifteen cantos which make up the symmetrical fifty of the Kalevala. In the task of arranging and uniting these, Dr. Lönnrot played the part generally ascribed to Pisistratus in relation to the Iliad and Odyssey. He is said to have handled with singular fidelity the materials which now come before us as one poem, not without a certain unity and continuous thread of narrative. It is this unity which gives the Kalevala a claim to the title of epic, although the element of permanence which is most obvious in the Greek epics, and in the earliest Hebrew records, is here conspicuously absent. . . . Among the Finns we find no trace of an aristocracy; there is scarcely a mention of kings, or priests; the heroes of the poem are really popular heroes, fishers, smiths, husbandmen, 'medicine-men' or wizards; exaggerated shadows of the people, pursuing on a heroic scale, not war, but the common daily business of primitive and peaceful men. In recording their adventures, the Kalevala, like the shield of Achilles, reflects all the life of a race, the feasts, the funerals, the rites of seed-time and harvest, of marriage and death, the hymn,

and the magical incantation. Were this all, the epic would only have the value of an exhaustive collection of the popular ballads which, as we have seen, are a poetical record of all the intenser moments in the existence of unsophisticated tribes. But it is distinguished from such a collection, by presenting the ballads as they are produced by the events of a continuous narrative, and thus it takes a distinct place between the aristocratic epics of Greece, or of the Franks, and the scattered songs which have been collected in Scotland, Sweden, Denmark, Greece, and Italy. Besides the interest of its unique position as a popular epic, the Kalevala is very precious, both for its literary beauties and for the confused mass of folk-lore which it contains.

. . . What is to be understood by the word 'Kalevala'? The affix 'la' signifies 'abode.' Thus, 'Tuonela' is 'the abode of Tuoni,' the god of the lower world; and as 'kaleva' means 'heroic,' 'magnificent,' 'Kalevala' is 'The Home of Heroes,' like the Indian 'Beerbloom,' or 'Virbhūmi.' The poem is the record of the adventures of the people of Kalevala—of their strife with the men of Pohjola, the place of the world's end."—A. Lang, *Kalevala* (*Fraser's Mag.*, June, 1872).—A complete translation of the Kalevala into English verse, by John Martin Crawford, was published in New York, in 1888.

A. D. 1854-1859.—The battle-ground of the struggle against Slavery-extension.—Border-ruffians and Free State settlers.—"The attention of the whole country had now been turned to the struggle provoked by the Kansas-Nebraska Bill, and the repeal of the Missouri Compromise. The fertile soil of Kansas had been offered as a prize to be contended for by Free and Slave States, and both had accepted the contest. The Slave State settlers were first in the field. The slave-holders of Western Missouri, which shut off Kansas from the Free States, had

crossed the border, pre-empted lands, and warned Free State immigrants not to pass through Missouri. The first election of a delegate to Congress took place November 29th, 1854, and was carried by organized 'bands of Missourians, who moved over the border on election day, voted, and returned at once to Missouri. The spring election of 1855, for a Territorial Legislature, was carried in the same fashion. In July, 1855, the Legislature, all Pro-Slavery, met at Pawnee, and adopted a State Constitution. To save trouble it adopted the laws of the State of Missouri entire, with a series of original statutes denouncing the penalty of death for nearly fifty offenses against Slavery. All through the spring and summer of 1855 Kansas was the scene of almost continuous conflict, the Border Ruffians of Missouri endeavoring to drive out the Free State settlers by murder and arson, and the Free State settlers retaliating. The cry of 'bleeding Kansas' went through the North. Emigration societies were formed in the Free States to aid, arm, equip, and protect intending settlers. These, prevented from passing through Missouri, took a more Northern route through Iowa and Nebraska, and moved into Kansas like an invading army. The Southern States also sent parties of intending settlers. But these were not generally slave-holders, but young men anxious for excitement. They did not go to Kansas, as their opponents did, to plow, sow, gather crops, and build up homes. Therefore, though their first rapid and violent movements were successful, their subsequent increase of resources and numbers was not equal to that of the Free State settlers. The Territory soon became practically divided into a Pro-Slavery district, and a Free State district. Leavenworth in the former, and Topeka and Lawrence in the latter, were the chief towns. September 5th, 1855, a Free State Convention at Topeka repudiated the Territorial Legislature and all its works, as the acts and deeds of Missourians alone. It also resolved to order a separate election for delegate to Congress, so as to force that body to decide the question, and to form a State government. January 15th, 1856, the Free State settlers [having applied to Congress for admission as a State] elected State officers under the Topeka Free State Constitution. The Federal Executive now entered the field. January 24th, 1856, the President, in a Special Message to Congress, endorsed the Pro-Slavery Legislature, and pronounced the attempt to form a Free State government, without the approval of the Federal authorities in the Territory, to be an act of rebellion. He then issued a proclamation, warning all persons engaged in disturbing the peace of Kansas to retire to their homes, and placed United States troops at the orders of Governor Shannon to enforce the (Pro-Slavery) laws of the Territory. The population of Kansas was now so large that very considerable armies were mustered on both sides, and a desultory civil war was kept up until nearly the end of the year. During its progress two Free State towns, Lawrence and Ossawatimie, were sacked. July 4th, 1856, the Free State Legislature attempted to assemble at Topeka, but was at once dispersed by a body of United States troops, under orders from Washington. September 9th, a new Governor, Geary, of Pennsylvania, arrived and succeeded in keeping the peace to some extent by a mixture of temporizing and

decided measures. By the end of the year he even claimed to have established order in the Territory. . . . January 6th, 1857, the Free State Legislature again attempted to meet at Topeka, and was again dispersed by Federal interference. Its presiding officer and many of its members were arrested by a United States deputy marshal. The Territorial, or Pro-Slavery, Legislature quarreled with Gov. Geary, who resigned, and Robert J. Walker, of Mississippi, was appointed in his stead. A resolution was passed by the House [in Congress] declaring the Acts of the Territorial Legislature cruel, oppressive, illegal, and void. It was tabled by the Senate." A new Congress met December 7th, 1857, "with a Democratic majority in both branches. In the House, James L. Orr, of South Carolina, a Democrat, was chosen Speaker. The debates of this Session were mainly upon the last scene in the Kansas struggle. Governor Walker had succeeded in persuading the Free State settlers to recognize the Territorial Legislature so far as to take part in the election which it had ordered. The result gave them control of the Legislature. But a previously elected Pro-Slavery Convention, sitting at Leecompton, went on to form a State Constitution. This was to be submitted to the people, but only votes 'For the Constitution with Slavery,' or 'For the Constitution without Slavery,' were to be received. Not being allowed in either event to vote against the Constitution, the Free State settlers refused to vote at all, and the Leecompton Constitution with Slavery received 6,000 majority. The new Territorial Legislature, however, ordered an election at which the people could vote for or against the Leecompton Constitution, and a majority of 10,000 was cast against it. . . . The President's Message argued in favor of receiving Kansas as a State under the Leecompton Constitution with Slavery, on the ground that the delegates had been chosen to form a State Constitution, and were not obligated to submit it to the people at all. This view was supported by the Southern members of Congress, and opposed by the Republicans and by a part of the Democrats, headed by Senator Douglas, of Illinois. The Senate passed a bill admitting Kansas as a State, under the Leecompton Constitution. The House passed the bill, with the proviso that the Constitution should again be submitted to a popular vote. The Senate rejected the proviso. A conference committee recommended that the bill of the House should be adopted, with an additional proviso making large grants of public lands to the new State, if the people of Kansas should vote to adopt the Leecompton Constitution. In this form the bill was passed by both Houses, and became a law. . . . The proffered inducement of public lands was a failure, and in August the Leecompton Constitution was rejected by 10,000 majority. Kansas, therefore, still remained a Territory. In 1859, at an election called by the Territorial Legislature, the people decided in favor of another Convention to form a State Constitution. This body met at Wyandot, in July, 1859, and adopted a State Constitution prohibiting Slavery. The Wyandot Constitution was submitted to the people and received a majority of 4,000 in its favor;" but Congress refused the admission to Kansas under this Constitution, the Senate rejecting, though the House approved.—A. Johnston, *Hist. of Am. Politics*, ch. 18-19.

A. D. 1765-1778.—Absence of Indian inhabitants.—Early exploration and settlement by the whites.—The colony of Transylvania.—In the wars that were waged between the Indian tribes of the South, before the advent of white settlers, Kentucky became "a sort of borderland such as separated the Scots and English in their days of combat. . . . The Chickasaws alone held their ground, being the most northern of the sedentary Southern Indians. Their strongholds on the bluffs of the Mississippi and the inaccessibility of this country on account of its deep, sluggish, mud-bordered streams, seem to have given them a sufficient measure of protection against their enemies, but elsewhere in the State the Indians were rooted out by their wars. The last tenants of the State, east of the Tennessee River, were the Shawnees, — that combative folk who ravaged this country with their ceaseless wars from the head-waters of the Tennessee to the Mississippi, and from the Lakes to Alabama. It was no small advantage to the early settlers of Kentucky that they found this region without a resident Indian population, for, bitter as was the struggle with the claimants of the soil, it never had the danger that would have come from a contest with the natives in closer proximity to their homes. . . . As Kentucky was unoccupied by the Indians, it was neglected by the French. . . . Thus the first settlers found themselves, in the main, free from these dangers due to the savages and their Gallic allies. The

land lay more open to their occupancy than any other part of this country ever did to its first European comers. . . . In 1765 Colonel George Croghan, who had previously visited the Ohio with Gist, made a surveying journey down that stream from Pittsburg to the Mississippi. . . . In 1766 a party of five persons, including a mulatto slave, under the command of Captain James Smith, explored a large part of what is now Tennessee, and probably extended their journey through Southern Kentucky. Journeys to Kentucky now became frequent. Every year sent one or more parties of pioneers to one part or another of the country. In 1769 Daniel Boone and five companions, all from the Yadkin settlements in North Carolina, came to Eastern Kentucky. One of the party was killed, but Boone remained, while his companions returned to their homes. Thus it will be seen that Boone's first visit was relatively late in the history of Kentucky explorations. Almost every part of its surface had been traversed by other explorers before this man, who passes in history as the typical pioneer, set foot upon its ground. In the time between 1770 and 1772 George Washington, then a land-surveyor, made two surveys in the region which is now the northeast corner of Kentucky. . . . The first distinct effort to found a colony was made by James Harrod and about forty companions, who found their way down the Ohio near to where Louisville now stands, and thence by land to what is now Mercer County, in Central Kentucky, where they established, on June 16, 1774, a village which they called, in honor of their leader, Harrodsburg. Earlier attempts at settlement were made at Louisville, but the fear of Indians caused the speedy abandonment of this post. . . . In 1775 other and stronger footholds were gained. Boone built a fort in what is now Madison County, and Logan another at St. Asaphs, in Lincoln County. The settlement of Kentucky was greatly favored by the decisive victory gained by Lord Dunmore's troops over the Indians from the north of the Ohio, at the mouth of the Kanawha [see OHIO VALLEY: A. D. 1774]. . . . That the process of possessing the land was going on with speed may be seen from the fact that Henderson and Company, land-agents at Boonesborough, issued from their office in the new-built fort entry certificates of surveys for 560,000 acres of land. The process of survey was of the rudest kind, but it served the purpose of momentary definition of the areas, made it possible to deal with the land as a commodity, and left the tribulations concerning boundaries to the next generation. These land deeds were given as of the 'colony of Transylvania,' which was in fact the first appellation of Kentucky, a name by which it was known for several years before it received its present appellation. At this time, the last year that the work of settling Kentucky was done under the authority of his majesty King George III., there were probably about 150 men who had placed themselves in settlements that were intended to be permanent within the bounds of what is now the Commonwealth of Kentucky. There may have been as many more doing the endless exploring work which preceded the choice of a site for their future homes. The men at Boone's Station claimed, and seem to have been awarded, a sort of hegemony among the settlements. On the

23d of May, at the call of Colonel Henderson, the land-agent of the proprietors, delegates from these settlements met at Boonesborough, and drew up a brief code of nine laws for the government of the young Commonwealth. . . . The Boonesborough parliament adjourned to meet in September, but it never reassembled. The venture which led to its institution fell altogether to ruin, and the name of Transylvania has been almost entirely forgotten. . . . The colony of Transylvania rested on a purchase of about 17,000,000 acres, or about one half the present area of Kentucky, which was made by some people of North Carolina from the Overhill Cherokee Indians, a part of the great tribe that dwelt on the Holston River. For this land the unfortunate adventurers paid the sum of £10,000 of English money. . . . Immediately after the Boonesborough parliament the position of the Transylvania company became very insecure; its own people began to doubt the validity of the titles they had obtained from the company, because, after a time, they learned from various sources that the lands of this region of Kentucky had been previously ceded to the English government by the Six Nations, and were included in the Virginia charter. In the latter part of 1775, eighty men of the Transylvania settlement signed a memorial asking to be taken under the protection of Virginia; or, if that colony thought it best, that their petition might be referred to the General Congress. . . . The proprietors of the colony made their answer to this rebellion by sending a delegate to the Federal Congress at Philadelphia, who was to request that the colony of Transylvania be added to the number of the American colonies. . . . Nothing came of this protest. Congress refused to seat their delegate, Patrick Henry and Jefferson, then representing Virginia, opposing the efforts of the proprietors. The Governor of North Carolina issued a proclamation declaring their purchase illegal. The colony gradually fell to pieces, though the State of Virginia took no decided action with reference to it until, in 1778, that Commonwealth declared the acts of the company void, but, in a generous spirit, offered compensation to Colonel Henderson and the other adventurers. The Transylvania company received 200,000 acres of valuable lands, and their sales to actual settlers were confirmed by an act of the Virginia Assembly. Thus the strongest, though not the first, colony of Kentucky, was a misadventure and quickly fell to pieces."—N. S. Shaler, *Kentucky*, ch. 5-7.

A. D. 1775-1784.—A county of Virginia.—Indian warfare of the Revolution.—**Aspirations towards State independence.**—"In the winter of 1775 Kentucky was formed into a county of Virginia. . . . About this time Harrodsburg, Boonesborough and Logan's Fort were successively assailed by the Indians. They withstood the furious attacks made upon them; not, however, without great loss. During the

succeeding summer they were considerably reinforced by a number of men from North Carolina, and about 100 under Col. Bowman from Virginia. In 1778 Kentucky was invaded by an army of Indians and Canadians under the command of Captain Duquesne; and the expedition of Col. George Rodgers Clark against the English post of Vincennes and Kaskaskia took place this year. In February of this year Boone, with about 30 men, was engaged in making salt at the Lower Blue Licks, when he was surprised by about 200 Indians. The whole party surrendered upon terms of capitulation. The Indians carried them to Detroit, and delivered them all up to the commandant, except Boone, whom they carried to Chillicothe. Boone soon effected his escape. . . . After . . . some weeks . . . Captain Duquesne, with about 500 Indians and Canadians, made his appearance before Boonesborough, and besieged the fort for the space of nine days, but finally decamped with the loss of 30 men killed, and a much greater number wounded. . . . About the first of April, 1779, Robert Patterson erected a block house, with some adjacent defenses, where the city of Lexington now stands. This year, the celebrated land law of Kentucky was passed by the Legislature of Virginia, usually called the Occupying Claimant Law. The great defect of this law was, that Virginia, by this act, did not provide for the survey of the country at the expense of the State. . . . Each one holding a warrant could locate it where he pleased, and survey it at his own cost. . . . The consequence of this law was . . . a flood of emigration during the years 1780 and 1781. During this period the emigrants were greatly annoyed by the frequent incursions of the Indians, and their entire destruction sometimes seemed almost inevitable. This law was a great feast for the lawyers of that day. . . . In November, 1780, Kentucky was divided into three counties, bearing the names of Fayette, Lincoln, and Jefferson. . . . In 1782, Indian hostility was earlier, more active and shocking than it had ever been in the country before; a great battle was fought upon Hinkston's Fork of the Licking, near where Mt. Sterling now stands, in which the Indians were victorious. In this battle, Estill, who commanded the whites, and nearly all of his officers, were killed. Near the Blue Licks another battle was soon afterwards fought with Captain Holder, in which the whites were again defeated; in both these last mentioned battles the contending foe were Wyandottes. . . . Peace was made with Great Britain in 1783, and hostilities ceased; hostilities with the Indians also for a time seemed suspended, but were soon renewed with greater violence than ever. During the cessation of hostilities with the Indians, settlements in Kentucky advanced rapidly. . . . As early as 1784 the people of Kentucky became strongly impressed with the necessity of the organization of a regular government, and gaining admission into the Union as a separate and independent State; but their efforts were continually perplexed and baffled for the space of eight years before their desire was fully accomplished. And though they were often tempted by Spain with the richest gifts of fortune if she would declare herself an independent State, and although the Congress of the Confederate States continually turned a deaf ear to her reiterated complaints and grievances, and repulsed her in every

effort to obtain constitutional independence, she maintained to the last the highest respect for law and order, and the most unswerving affection for the Government. . . . With the view to admission into the Union as an independent State, there were elected and held nine Conventions in Kentucky within the space of eight years."—W. B. Allen, *Hist. of Kentucky*, ch. 2-3.

A. D. 1789-1792. — Separation from Virginia and admission to the Union as a State.—"In the last days of the Continental Congress, Virginia, after some struggles, having reluctantly consented to her organization on that condition as an independent state, Kentucky had applied to that body for admission into the confederacy. That application had been referred to the new federal government about to be organized, a delay which had made it necessary to recommence proceedings anew; for the Virginia Assembly had fixed a limitation of time, which, being over-past, drove back the separatists to the original starting-point. On a new application to the Virginia Legislature, a new act had authorized a new Convention, being the third held on that subject, to take the question of separating into consideration. But this act had imposed some new terms not at all agreeable to the Kentuckians, of which the principal was the assumption by the new state of a portion of the Virginia debt, on the ground of expenses incurred by recent expeditions against the Indians. The Convention which met under this act proceeded no further than to vote a memorial to the Virginia Legislature requesting the same terms formerly offered. That request was granted, and a fourth Convention was authorized again to consider the question of separation, and, should that measure be still persisted in, to fix the day when it should take place. Having met during the last summer [1790], this Convention had voted unanimously in favor of separation; had fixed the first day of June, 1792, as the time; and had authorized the meeting of a fifth Convention to frame a state Constitution. In anticipation of these results, an act of Congress was now passed [Feb. 4, 1791] admitting Kentucky into the Union from and after the day above mentioned, not only without any inspection of the state Constitution, but before any such Constitution had been actually formed." In the Constitution subsequently framed for the new state of Kentucky, by the Convention appointed as above, an article on the subject of slavery "provided that the Legislature should have no power to pass laws for the emancipation of slaves without the consent of their owners, nor without paying therefor, previous to such emancipation, a full equivalent in money; nor laws to prevent immi-

grants from bringing with them persons deemed slaves by the laws of any one of the United States, so long as any persons of like age and description should be continued in slavery by the laws of Kentucky. But laws might be passed prohibiting the introduction of slaves for the purpose of sale, and also laws to oblige the owners of slaves to treat them with humanity."

A. D. 1861 (January—September). — The struggle with Secession and its defeat.—"Neutrality" ended.—"In the days when personal leadership was more than it can ever be again, while South Carolina was listening to the teachings of John C. Calhoun, which led her to try the experiment of secession, Kentucky was following Henry Clay, who, though a slaveholder, was a strong Unionist. The practical effect was seen when the crisis came, after he had been in his grave nine years. Governor Beriah Magoffin convened the Legislature in January, 1861, and asked it to organize the militia, buy muskets, and put the State in a condition of armed neutrality; all of which it refused to do. After the fall of Fort Sumter he called the Legislature together again, evidently hoping that the popular excitement would bring them over to his scheme. But the utmost that could be accomplished was the passage of a resolution by the lower house (May 16) declaring that Kentucky should occupy 'a position of strict neutrality,' and approving his refusal to furnish troops for the National army. Thereupon he issued a proclamation (May 20) in which he 'notified and warned all other States, separate or united, especially the United and Confederate States, that I solemnly forbid any movement upon Kentucky soil.' But two days later the Legislature repudiated this interpretation of neutrality, and passed a series of acts intended to prevent any scheme of secession that might be formed. It appropriated \$1,000,000 for arms and ammunition, but placed the disbursement of the money and control of the arms in the hands of Commissioners that were all Union men. It amended the militia law so as to require the State Guards to take an oath to support the Constitution of the United States, and finally the Senate passed a resolution declaring that 'Kentucky will not sever connection with the National Government, nor take up arms with either belligerent party.' Lovell H. Rousseau (afterward a gallant General in the National service), speaking in his place in the Senate, said: 'The politicians are having their day; the people will yet have theirs. I have an abiding confidence in the right, and I know that this secession movement is all wrong. There is not a single substantial reason for it; our Government had never oppressed us with a father's weight.' The Rev. Robert J. Breckinridge and other prominent citizens took a similar stand, and a new Legislature, chosen in August, presented a Union majority of three to one. As a

last resort, Governor Magoffin addressed a letter to President Lincoln, requesting that Kentucky's neutrality be respected and the National forces removed from the State. Mr. Lincoln, in refusing his request, courteously reminded him that the force consisted exclusively of Kentuckians, and told him that he had not met any Kentuckian except himself and the messengers that brought his letter who wanted it removed. To strengthen the first argument, Robert Anderson, of Fort Sumter fame, who was a citizen of Kentucky, was made a General and given the command in the State in September. Two months later, a secession convention met at Russellville, in the southern part of the State, organized a provisional government, and sent a full delegation to the Confederate Congress at Richmond, who found no difficulty in being admitted to seats in that body. Being now firmly supported by the new Legislature, the National Government began to arrest prominent Kentuckians who still advocated secession, whereupon others, including ex-Vice-President John C. Breckinridge, fled southward and entered the service of the Confederacy. Kentucky as a State was saved to the Union, but the line of separation was drawn between her citizens, and she contributed to the ranks of both the great contending armies."—R. Johnson, *Short Hist. of the War of Secession*, ch. 5.

KHAN.—KHAGAN.—"Khan" is the modern contracted form of the word which is found in the middle ages as 'Khagan,' or 'Chagan,' and in the Persian and Arabic writers as 'Khakan' or 'Khacan.' Its original root is probably the 'Khak,' which meant 'King' in ancient Susianian, in Ethiopic ('Tirhakah'), and in Egyptian ('Hyk-sos').—G. Rawlinson, *The Seventh Great Oriental Monarchy*, ch. 14, foot-note.

KHAR, OR KHARU, The.—"The term Khar in Egyptian texts appears to apply to the inhabitants of that part of Syria generally known as Phenicia, and seems to be derived from the Semitic Akbaru, 'the back' or 'west.'"—C. R. Conder, *Syrian Stone Lore*, ch. 1.

KHAREJITES, The.—A democratical party among the Mahometans, which first took form during the Caliphate of Ali, A. D. 657. The name given to the party, Kharejites, signified those who "go forth"—that is in secession and rebellion. It was their political creed that, "believers being absolutely equal, there should be no Caliph, nor oath of allegiance sworn to any man; but that the government should be in the hands of a Council of State elected by the people." Ali attacked and dispersed the Kharejites, in a battle at Nehrwan, A. D. 658; but they continued for a long period to give trouble to succeeding Caliphs.—Sir W. Muir, *Annals of the Early Caliphate*, ch. 40 and 42, with foot-note.

KHAZARS, OR CHAZARS, OR KHOZARS, The.—"This important people, now heard of for the first time in Persian history [late in the fifth century of the Christian era], appears to have occupied, in the reign of Kobad, the steppe country between the Volga and the Don, whence they made raids through the passes of the Caucasus into the fertile provinces of Iberia, Albania, and Armenia. Whether they were Turks, as is generally believed, or Circassians, as has been ingeniously argued by a living writer [H. H. Howorth], is doubtful; but we cannot be mistaken in regarding them as at this time a race of fierce and terrible barbarians."—G. Rawlinson, *Seventh Great Oriental Monarchy*, ch. 18.—"After the fall of the Persian empire [see MAHOMETAN CONQUEST: A. D. 632–651], they [the Khazars, or Chazars] crossed the Caucasus, invaded Armenia, and conquered the Crimean peninsula, which bore the name of Chazaria for some time. The Byzantine emperors trembled at the name of the Chazars, and flattered them, and paid them a tribute, in order to restrain their lust after the booty of Constantinople. The Bulgarians, and other tribes, were the vassals of the Chazars, and the people of Kiev (Russians) on the Dnieper were obliged to furnish them every

KHAZARS.

year with a sword, and fine skins from every fur-hunt. With the Arabs, whose near neighbours they gradually became, they carried on terrible wars. Like their neighbours, the Bulgarians and the Russians, the Chazars professed a coarse religion, which was combined with sensuality and lewdness. The Chazars became acquainted with Islamism and Christianity through the Arabs and Greeks. . . . There were also Jews in the land of the Chazars; they were some of the fugitives who had escaped (723) the mania for conversion which possessed the Byzantine Emperor Leo. . . . As interpreters or merchants, physicians or counsellors, the Jews were known and beloved by the Chazarian court, and they inspired the warlike Bulan with a love of Judaism. . . . It is possible that the circumstances under which the Chazars embraced Judaism have been embellished by legend, but the fact itself is too definitely proved on all sides to allow of there being any doubt as to its reality. Besides Bulan, the nobles of his kingdom, numbering nearly 4,000, adopted the Jewish religion. Little by little it made its way among the people, so that most of the inhabitants of the towns of the Chazarian kingdom were Jews. . . . A successor of Bulan, who bore the Hebrew name of Obadiah, was the first to occupy himself earnestly with the Jewish religion. He . . . founded synagogues and schools. . . . After Obadiah came a long series of Jewish Chagans, for according to a fundamental law of the state only Jewish rulers were permitted to ascend the throne."—H. Graetz, *Hist. of the Jews*, v. 3, ch. 5.

KHORASSAN: A. D. 1220-1221.—Conquest and destruction by the Mongols.—In the autumn of A. D. 1220, one division of the armies of Jingsis Khan, commanded by his son Tului, poured into Khorassan. "Khorassan was then one of the richest and most prosperous regions on the earth's surface; its towns were very thickly inhabited, and it was the first and most powerful province of Persia. The Mongol invasion altered all this, and the fearful ravage and destruction then committed is almost incredible." On the capture of the city of Nessa the inhabitants were tied together with cords and then massacred in a body—70,000 men, women and children together—by shooting them with arrows. At Meru (modern Merv) the wholesale massacre was repeated on a vastly larger scale, the corpses numbering 700,000, according to one account, 1,300,000 according to another. Even this was exceeded at Nishapoor ("city of Sapor"), the ancient capital of Khorassan. "To prevent the living hiding beneath the dead, Tului ordered every head to be cut off, and separate heaps to be made of men's, women's, and children's heads. The destruction of the city occupied fifteen days; it was razed to the

KHUAREZM.

ground, and its site was sown with barley; only 400 artisans escaped, and they were transported into the north. According to Mirkhond 1,747,000 men lost their lives in this massacre." The destroying army of demons and savages moved on to Herat, then a beautiful city surrounded by villages and gardens. It surrendered, and only 12,000 of its soldiers were slain at that time; but a few months later, upon news of a defeat suffered by the Mongols, Herat rebelled, and brought down upon itself a most terrible doom. Captured once more, after a siege of six months, the city experienced no mercy. "For a whole week the Mongols ceased not to kill, burn, and destroy, and it is said that 1,600,000 people were killed; the place was entirely depopulated and made desert." At Bamian, in the Hindu Kush, "every living creature, including animals and plants as well as human beings, was destroyed; a heap of slain was piled up like a mountain."—H. H. Howorth, *Hist. of the Mongols*, pt. 1, pp. 86-91.

KHUAREZM, OR CHORASMIA (modern Khiva).—"The extensive and fertile oasis in the midst of the sandy deserts of Central Asia, known in these days as the Khanat of Khiva, was called by the Greeks Chorasmia and by the Arabs Khwarezm [or Khuarezmi]. The Chorasmians were of the Aryan race, and their contingent to the army of Xerxes was equipped precisely in the Bactrian fashion. It is probable that Chorasmia formed a portion of the short-lived Greco-Bactrian monarchy, and it certainly passed under the domination of the White Huns, from whom it was subsequently wrested by the Toorks."—J. Hutton, *Central Asia*, ch. 10.

12th Century.—The Khuarezmian, or Khahrezmian, or Korasmian, or Carizmian Empire.—"The sovereigns of Persia were in the habit of purchasing young Turks, who were captured by the various frontier tribes in their mutual struggles, and employing them in their service. They generally had a body guard formed of them, and many of them were enfranchised and rose to posts of high influence, and in many cases supplanted their masters. The founder of the Khuarezmian power was such a slave, named Nushtekin, in the service of the Seljuk Sultan Malik Shah. He rose to the position of a Tesh-tedar or chamberlain, which carried with it the government of the province of Khuarezm, that is of the fertile valley of the Oxus and the wide steppes on either side of it, bounded on the west by the Caspian and on the east by Bukharia." The grandson of Nushtekin became virtually independent of the Seljuk sultan, and the two next succeeding princes began and completed the overthrow of the Seljuk throne. The last Seljuk sultan, Togrul III., was slain in battle, A. D. 1193, by Takish or Tokush, the Khuarezmian ruler, who sent his head to the Caliph at Bagdad and was formally invested by the Caliph with the sovereignty of Khorassan, Irak Adjem and other parts of the Persian domain not occupied by the Atabegs and the Assassins. Takish's son extended his conquests in Transoxiana and

Turkestan (A. D. 1209), and acquired Samarkand, which he made his capital. "He controlled an army of 400,000 men, and his dominions, at the invasion of the Mongols, stretched from the Jaxartes to the Persian Gulf, and from the Indus to the Irak Arab and Azerbaidjan."—H. Howorth, *Hist. of the Mongols*, pt. 1, pp. 7-8.

A. D. 1220.—Destruction by the Mongols.—In May, 1220, the Mongol army of Jingsis Khan marched upon Urgendj, or Khuarezm—the original capital of the empire of Khuarezm, to which it gave its name. That city, which is represented by the modern Khiva, was "the capital of the rich cluster of cities that then bordered the Oxus, a river very like the Nile in forming a strip of green across two sandy deserts which bound it on either hand." The Mongols were commanded, at first, by the three elder sons of Jingsis Khan; but two of them quarreled, and the siege was protracted through six months without much progress being made. Jingsis then placed the youngest son, Ogotai, in charge of operations, and they were carried forward more vigorously. "The Mongols at length assaulted the town, fired its buildings with naptha, and after seven days of desperate street-fighting captured it. This was probably in December, 1220. They sent the artisans and skilled workmen into Tartary, set aside the young women and children as slaves, and then made a general massacre of the rest of the inhabitants. They destroyed the city, and then submerged it by opening the dykes of the Oxus. The ruins are probably those now known as Old Urgendj. Raschid says that over 100,000 artisans and craftsmen were sent into Mongolia."—H. H. Howorth, *Hist. of the Mongols*, pt. 1, p. 85.

A. D. 1240.—Destroyed by the Mongols.—In December, 1240, the Mongols, pursuing their devastating march through Russia, reached Kiev. It was then a famous city, known among the Russians as "the mother of cities, magnificently placed on the high banks of the Dnieper, with its white walls, its beautiful gardens, and its thirty churches, with their gilded cupolas, which gave it its pretty Tartar name, Altundash Khan (i. e., the court of the Golden Heads); it was the metropolitan city of the old Russian princes, the seat of the chief patriarch of all Russia. It had latterly, namely, in 1204, suffered from the internal broils of the Russian princes, and had been much plundered and burnt. It was now to be for a while erased altogether." Kiev was taken by storm and the inhabitants "slaughtered

without mercy; the very bones were torn from the tombs and trampled under the horses' hoofs. . . . The magnificent city, with the ancient Byzantine treasures which it contained, was destroyed." During the 14th and 15th centuries Kiev seems to have remained in ruins, and the modern city is said to be "but a shadow of its former self."—H. H. KING, Origin of the word.—"Cyning, by contraction King, is closely connected with the word 'Cyn' or 'Kin'. . . . I do not feel myself called upon to decide whether Cyning is strictly the patronymic of 'cyn,' or whether it comes immediately from a cognate adjective (see Allen, *Royal Prerogative*, 176; Kemble, i. 153). It is enough if the two words are of the same origin, as is shown by a whole crowd of cognates, 'cynebarn,' 'cyneceyn,' 'cynedom,' 'cynehelm,' 'cynehlaforð'. . . . (I copy from Mr. Earle's *Glossarial Index*.) In all these words 'cyn' has the meaning of 'royal.' The modern High-Dutch König is an odd corruption; but the elder form is 'Chuninc.' The word has never had an English feminine; Queen is simply 'Cwen,' woman, wife. . . . The notion of the King being the 'canning' or 'cunning' man [is] an idea which could have occurred only to a mind on which all Teutonic philology was thrown away."—E. A. Freeman, *Hist. of the Norman Conquest of Eng.*, ch. 3, sect. 1, and note L (v. 1).

KING'S PEACE, The.—"The peace, as it was called, the primitive alliance for mutual good behaviour, for the performance and enforcement of rights and duties, the voluntary restraint of free society in its earliest form, was from the beginning of monarchy [in early England] under the protection of the king. . . . But this position is far from that of the fountain of justice and source of jurisdiction. The king's guarantee was not the sole safeguard of the peace; the hundred had its peace as well as the king; the king too had a distinct peace which like that of the church was not that of the country at large, a special guarantee for those who were under special protection. . . . When the king becomes the lord, patron and 'mundborh' of his whole people, they pass from the ancient national peace of which he is the guardian into the closer personal or territorial relation of which he is the source. The peace is now the king's peace. . . . The process by which the national peace became the king's peace is almost imperceptible; and it is very gradually that we arrive at the time at which all peace and law are supposed to die with the old king, and rise again at the proclamation of the new."—W. Stubbs, *Const. Hist. of Eng.*, ch. 7, sect. 72 (v. 1).

KINGSTON, Canada: A. D. 1673.—The building of Fort Frontenac.—La Salle's seignior.—In 1673, Count Frontenac, governor of Canada, personally superintended the construction of a fort on the north shore of Lake Ontario, at the mouth of the Catarqui, where the city of Kingston now stands, the site having been recommended by the explorer La Salle. The following year this fort, with surrounding lands to the extent of four leagues in front and half a league in depth, was granted in seignior to La Salle, he agreeing to pay the cost of its construction and to maintain it at his own charge. He named the post Frontenac.—F. Parkman, *La Salle*, ch. 6.

KIOWAN FAMILY, The. See AMERICAN ABORIGINES: KIOWAN FAMILY.

KIPCHAKS, The.—"The Kipchaks were called Comans by European writers. . . . The name Coman is derived no doubt from the river Kuma, the country about which was known to the Persians as Kumestan. . . . A part of their old country on the Kuma is still called Desht Kipchak, and the Kumuks, who have been pushed somewhat south by the Nogays, are, I believe, their lineal descendants. Others of their descendants no doubt remain also among

the Krim Tartars. To the early Arab writers the Kipchaks were known as Gusses, a name by which we also meet with them in the Byzantine annals. This shows that they belonged to the great section of the Turks known as the Gusses or Oghuz Turks. . . . They first invaded the country west of the Volga at the end of the ninth century, from which time till their final dispersal by the Mongols in the thirteenth century they were very persistent enemies of Russia. After the Mongol conquest it is very probable that they became an important element in the various tribes that made up the Golden Horde or Khanate of Kipchak."—H. H. Howorth, *Hist. of the Mongols*, pt. 1, p. 17.—See, also, MONGOLS: A. D. 1229-1294; and RUSSIA: A. D. 1859-1876.

KITCHEN-MIDDENS.—"Amongst the accumulations of Neolithic age which are thought by many archaeologists to be oldest are the well-known 'Kjökkenmödingr' or kitchen-middens of Denmark. These are heaps and mounds composed principally of shells of edible molluscs, of which the most abundant are oyster, cockle, mussel, and periwinkle. Commingled with the shells occur bones of mammals, birds, and fish in less or greater abundance, and likewise many implements of stone, bone, and horn, together with potsherds. The middens are met with generally near the coast, and principally on the shores of the Lymfjord and the Kattegat; they would appear, indeed, never to be found on the borders of the North Sea. They form mounds or banks that vary in height from 3 or 5 feet up to 10 feet, with a width of 150 to 200 feet, and a length of sometimes nearly 350 yards. . . . The Danish savants (Forchhammer, Steenstrup, and Worsaae), who first examined these curious shell-mounds, came to the conclusion that they were the refuse-heaps which had accumulated round the dwellings of some ancient coast-tribe. . . . Shell-mounds of similar character occur in other countries."—J. Geikie, *Prehistoric Europe*, ch. 15.

KLERUCHS.—"Another consequence of some moment arose out of this victory [of the Athenians over the citizens of Chalkis, or Chalcis, in the island of Eubœa, B. C. 506—see ATHENS: B. C. 509-506]. The Athenians planted a body of 4,000 of their citizens as Kleruchs (lot-holders) or settlers upon the lands of the wealthy Chalkidian oligarchy called the Hippobotæ—proprietors probably in the fertile plain of Lelantum between Chalkis and Eretria. This is a system which we shall find hereafter extensively followed out by the Athenians in the days of their power; partly with the view of providing for their poorer citizens—partly to serve as garrison among a population either hostile or of doubtful fidelity. These Attic Kleruchs (I can find no other name by which to speak of them) did not lose their birthright as Athenian citizens. They were not colonists in the Grecian sense, and they are known by a totally different name—but they corresponded very nearly to the colonies formerly planted out on the conquered lands by Rome."—G. Grote, *Hist. of Greece*, pt. 2, ch. 31 (v. 4).

KNIGHTS. See CHIVALRY; also, COMITATUS.

KNIGHTS BACHELORS.—"The word 'bachelor,' from whence has come 'bachelier,' does not signify 'bas chevalier,' but a knight who has not the number of 'bachelles' of land requisite to display a banner: that is to say, four 'bachelles.' The 'bachelle' was composed of ten 'maz,' or 'meix' (farms or domains), each of which contained a sufficiency of land for the work of two oxen during a whole year."—J. Froissart, *Chronicles* (trans. by Johnes), bk. 1, ch. 61, foot-note (v. 1).

Also in: Sir W. Scott, *Essay on Chivalry*.—R. T. Hampson, *Origines Patricie*, p. 338.

KNIGHTS BANNERETS.—"The name [banneret] imports the bearer of a small banner, and, in this respect, he differed from the baron, who bore a gonfalon or banner of war, and the simple knight, who bore a pennon. The banner,

properly so called, was a square flag; the pennon, according to the illuminations of ancient manuscripts, was a small square, having two long triangles attached to the side opposite that which was fixed to the lance or spear. These pendant portions resembling tails were so denominated. Rastal defines a banneret to be a knight made upon the field of battle, with the ceremony of cutting off the point of his standard, and so making this like a banner. And such, he says, are allowed to display their arms on a banner in the king's army, like the barons. That was, no doubt, the mode of creation; but it appears . . . that a knight, or an esquire of four bachelors, or cow lands, and therefore, a bachelor, to whom the king had presented a banner on his first battle, became a banneret on the second; so that, in such cases, there would be no such ceremony necessary."—R. T. Hampson, *Origines Patricie*, ch. 11.

KNIGHTS OF THE SHIRE.—During the thirteenth century there grew up in England the practice of sending to the Great Council of the king a certain number of knights from each shire to represent the "lesser baronage," which had formerly possessed the privilege of attending the council in person, but which had become more neglectful of attendance as their numbers increased. In theory, these knights of the shire, as they came to be called, were representatives of that "lesser baronage" only. "But the necessity of holding their election in the County Court rendered any restriction of the electoral body physically impossible. The court was composed of the whole body of freeholders, and no sheriff could distinguish the 'aye, aye' of the yeoman from the 'aye, aye' of the lesser baron. From the first moment therefore of their attendance we find the knights regarded not as mere representatives of the baronage, but as knights of the shire, and by this silent revolution the whole body of the rural freeholders were admitted to a share in the government of the realm."—J. R. Green, *Short Hist. of the English People*, ch. 4.—The history of the knights of the shire is the history of the origin of county representation in the English Parliament. The representation of boroughs, or towns, has a history quite distinct. Of the leading part played by the knights of the shire in the development and establishment of the English Constitution Mr. Stubbs remarks ("Const. Hist. of Eng.," ch. 17, sect. 272): "Both historical evidence and the nature of the case lead to the conviction that the victory of the constitution was won by the knights of the shires; they were the leaders of parliamentary debate; they were the link between the good peers and the good towns; they were the indestructible element of the house of commons; they were the representatives of those local divisions of the realm which were coeval with the historical existence of the people of England, and the interests of which were most directly attacked by the abuses of royal prerogative." KORAN, The.—"The Koran, as Mr. Kingsley quaintly, but truly, says, 'after all is not a book, but an irregular collection of Mohammed's meditations and notes for sermons.' It is not a code, it is not a journal, it is a mere gathering together of irregular scraps, written on palm-leaves and bones of mutton, which Abu-Bekr [the bosom friend of Mahomet and the first of the Caliphs or successors of the Prophet] put together without the slightest regard to chronological order, only putting the long fragments at the beginning, and the short fragments at the end. But so far from having the Koran of Mahomet, we have not even the Koran of Abu-Bekr. Caliph Othman [the third Caliph], we know, gave enormous scandal by burning all the existing copies, which were extremely discordant, and putting forth his own version as the 'textus ab omnibus receptus.' How much then of the existing Koran is really Mahomet's; how much has been lost, added, transposed, or perverted; when, where, and why each fragment was delivered, it is often impossible even to conjecture. And yet these baskets of fragments are positively worshipped."—E. A. Freeman, *Hist. and Conquests of the Saracens*, lect. 2.

KORKYRA, OR CORCYRA.—The Greek island now known as Corfu, separated from the coast of Epirus by a strait only two to seven miles in breadth, bore in ancient times the name of Korkyra, or, rather, took that name from its ruling city. "Korkyra [the city] was founded by the Corinthians, at the same time (we are told) as Syracuse. . . . The island was generally conceived in antiquity as the residence of the Homeric Phæakians, and it is to this fact that Thucydides ascribes in part the eminence of the Korkyrean marine. According to another story, some Eretrians from Eubœa had settled there, and were compelled to retire. A third statement represents the Liburnians as the prior inhabitants,—and this perhaps is the most probable, since the Liburnians were an enterprising, maritime, piratical race, who long continued to occupy the more northerly islands in the Adriatic along the Illyrian and Dalmatian coast. . . . At the time when the Corinthians were about to colonize Sicily, it was natural that they should also wish to plant a settlement at Korkyra, which was a post of great importance for facilitating the voyage from Peloponnesus to Italy, and was further convenient for traffic with Epirus, at that period altogether non-Hellenic. Their choice of a site was fully justified by the prosperity and power of the colony, which, however, though sometimes in combination with the mother-city, was more frequently alienated from her and hostile, and continued so from an early period throughout most part of the three centuries from 700-400 B. C. . . . Notwithstanding the long-continued dissensions between Korkyra and Corinth, it appears that four considerable settlements on this same line of coast were formed by the joint enterprise of both,—Leukas and Anaktorium to the south of the mouth of the Ambrakiotic Gulf—and Apollonia and Epidamnus [afterwards called Dyrrhachium], both in the territory of the Illyrians at some distance to the north of the Akrokeranian promontory [modern Cape Glossa, on the Albanian coast]. . . . Leukas, Anaktorium and Ambrakia are all referred to the agency of Kypselus the Corinthian. . . . The six colonies just named—Korkyra, Ambrakia, Anaktorium, Leukas [near the modern St. Maura], Apollonia, and Epidamnus—form an aggregate lying apart from the rest of the Hellenic name, and connected with each other, though not always maintained in harmony, by analogy of race and position, as well as by their common origin from Corinth."—G. KYMRY, OR CYMRY, The.—The name which the Britons of Wales and Cumberland gave to themselves during their struggle with the Angles and Saxons, meaning "Cym-bro (Combrox) or the compatriot, the native of the country, the rightful owner of the soil. . . . From the occupation by the English of the plain of the Dee and the Mersey, the Kymry dwelt in two lands, known in quasi-Latin as Cambria, in Welsh Cymru, which denotes the Principality of Wales, and Cumbria, or the kingdom of Cumberland. . . . Kambria was regularly used for Wales by such writers as Giraldus in the twelfth century, . . . but the fashion was not yet established of distinguishing between Cambria and Cumbria as we do."—J. Rhys, *Celtic Britain*, ch.

LADOCEA.

4.—The term Cymry or Kymry is sometimes used in a larger sense to denote the whole Brythonic branch of the Celtic race, as distinguished from the Goidelic, or Gaelic; but that use of it does not seem to be justified. On the question whether the name Kymry, or Cymry, bears any relation to that of the ancient Cimbri, see CIMBRI AND TEUTONES.

KYNOSSEMA, Battle of. See CYNOSSEMA.

KYNURIANS, OR CYNURIANS, The.—One of the three races of people who inhabited the Peloponnesian peninsula of Greece before the Dorian conquest,—the other two races being the Arcadians and the Achæans. "They were never (so far as history knows them) an independent population. They occupied the larger portion of the territory of Argolis, from Orneæ, near the northern or Phliasian border, to Thyrea and the Thyreatis, on the Laconian border: and though belonging originally (as Herodotus imagines rather than asserts) to the Ionic race—they had been so long subjects of Argos in his time that almost all evidence of their ante-Dorian condition had vanished."—G. Grote, *Hist. of Greece*, pt. 2, ch. 4.

KYZICUS. See CYZICUS.

L.

LABARUM, The.—"The chief banner of the Christian emperors [Roman] was the so-called 'labarum.' Ensebius describes it as a long lance with a cross-piece; to the latter a square silk flag was attached, into which the images of the reigning emperor and his children were woven. To the point of the lance was fastened a golden crown enclosing the monogram of Christ and the sign of the cross."—E. Guhl and W. Koner, *Life of the Greeks and Romans*, sect. 107.

LABOR ORGANIZATION. See SOCIAL MOVEMENTS.

LABRADOR, The Name.—"Labrador—Laboratoris Terra—is so called from the circumstance that Cortereal in the year 1500 stole thence a cargo of Indians for slaves."—F. Parkman, *Pioneers of France in the New World: Champlain*, ch. 1, foot-note.

LABYRINTHS.—MAZES.—"The Labyrinths of the classical age and the quaint devices of later times, the Mazes, of which they were the prototypes, present to the archaeologist a subject of investigation which hitherto has not received that degree of attention of which it appears so well deserving. . . . Labyrinths may be divided into several distinct classes, comprising complicated ranges of caverns, architectural labyrinths or sepulchral buildings, tortuous devices indicated by coloured marbles or cut in turf, and topiary labyrinths or mazes formed by clipped hedges. . . . Of the first class we may instance the labyrinth near Nauplia in Argolis, termed that of the Cyclops, and described by Strabo; also the celebrated Cretan example, which from the observations of modern travellers is supposed to have consisted of a series of caves, resembling in some degree the catacombs of

Rome or Paris. It has been questioned, however, whether such a labyrinth actually existed. . . . Of architectural labyrinths, the most extraordinary specimen was without doubt that at the southern end of the lake Mœris in Egypt, and about thirty miles from Arsinoë. Herodotus, who describes it very distinctly, says that . . . it consisted of twelve covered courts, 1,500 subterranean chambers, in which the bodies of the Egyptian princes and the sacred crocodiles were interred, and of as many chambers above ground, which last only he was permitted to enter."—E. Trollope, *Notices of Ancient and Mediaeval Labyrinths* (*Archaeological Journal*, v. 15).

(called The Cuman), King of Hungary, 1272-1290. . . . Ladislaus V. (called The Posthumous), King of Hungary and Bohemia, 1439-1457. . . . Ladislaus VI. (Jagellon), King of Hungary, 1440-1444; King of Poland, 1434-1444.

LADOCEA, OR LADOKEIA, Battle of.—Fought in what was called the Cleomenic War,

between Cleomenes, king of Sparta, and the Achaean League, B. C. 226. The battle was fought near the city of Megalopolis, in Arcadia, which belonged to the League and which was threatened by Cleomenes. The latter won a complete victory, and Lydiades, of Megalopolis, one of the noblest of the later Greeks, was slain.—C. Thirlwall, *Hist. of Greece*, ch. 62.

LADY, Original use of the title.—"Hlæfdige," the Saxon word from which our modern English word "lady" comes, was the highest female title among the West-Saxons, being reserved for the king's wife.—E. A. Freeman, *Hist. of the Norman Conq. of Eng.*, v. 1, note F.

LADY OF THE ENGLISH.—By the custom of the West Saxons, the king's wife was called Lady, not Queen, and when the Wessex kingdom widened to cover England, its queen was known as the Lady of the English.

LÆNLAND.—"Either bookland or folkland could be leased out by its holders [in early England]; and, under the name of 'lænland,' held by free cultivators."—W. Stubbs, *Const. Hist. of England*, ch. 5, sect. 36 (v. 1).

ALSO IN: J. M. Kemble, *The Saxons in England*, bk. 1, ch. 11.

LÆTI.—LÆT.—LAZZI.—"Families of the conquered tribes of Germany, who were forcibly settled within the 'limes' of the Roman provinces, in order that they might repopulate desolated districts, or replace the otherwise dwindling provincial population—in order that they might bear the public burdens and minister to the public needs, i. e., till the public land, pay the public tribute, and also provide for the defence of the empire. They formed a semi-servile class, partly agricultural and partly military; they furnished corn for the granaries and soldiers for the cohorts of the empire, and were generally known in later times by the name of Læti or Liti."—F. Seebohm, *English Village Community*, ch. 8.—"There seems to be no reason for questioning that the eorl, ceorl and læt of the earliest English laws, those of Ethelbert, answer exactly to the edhiling, the friling and the lazzus of the old Saxons. Whether the Kentish læts were of German origin has been questioned. Lappenberg thinks they were 'unfree of kindred race.' K. Maurer thinks them a relic of ancient British population who came between the free wealth and the slave. . . . The name (lazzus—slow or lazy) signifies condition, not nationality. . . . The wer-gild of the Kentish læt was 40, 60, or 80 shillings, according to rank, that of the ceorl being 200."—W. Stubbs, *Const. Hist. of Eng.*, ch. 4, sect. 31, foot-note (v. 1).

LAKE DWELLINGS.—"Among the most interesting relics of antiquity which have yet been discovered are the famous lake-dwellings of Switzerland, described by Dr. Keller and others. . . . Dr. Keller . . . has arranged them in three groups, according to the character of their substructure. [1] Those of the first group, the Pile Dwellings, are, he tells us, by far the most numerous in the lakes of Switzerland and Upper Italy. In these the substructure consists of piles of various kinds of wood, sharpened sometimes by fire, sometimes by stone hatchets or celts, and in later times by tools of bronze, and probably of iron, the piles being driven into the bottom of the lake at various distances from the shore. . . . [2] The Frame Pile-Dwellings are very rare. 'The distinction between this form and the regular pile-settlement consists in the fact that the piles, instead of having been driven into the mud of the lake, had been fixed by a mortise-and-tenon arrangement into split trunks, lying horizontally on the bed of the lake.' . . . [3] In the Fascine Dwellings, as Dr. Keller terms his third group of lake-habitations, the substructure consisted of successive layers of sticks or small stems of trees built up from the bottom of the lake till they reached above the lake-level. . . . Lake-dwellings have been met with in many other regions of Europe besides Switzerland and Italy, as in Bavaria, Austria, Hungary, Mecklenburg, Pomerania, France, Wales, Ireland, and Scotland. The 'Crannoges' of Ireland and Scotland were rather artificial islands than dwellings like those described above."—J. Geikie, *Prehistoric Europe*, pp. 369-372.

LAMAS.—LAMAISM.—"The development of the Buddhist doctrine which has taken place in the Panjab, Nepal, and Tibet . . . has resulted at last in the complete establishment of Lamaism, a religion not only in many points different from, but actually antagonistic to, the primitive system of Buddhism; and this not only in its doctrine, but also in its church organization." Tibet is "the only country where the Order has become a hierarchy, and acquired temporal power. Here, as in so many other countries, civilization entered and history began with Buddhism. When the first missionaries went there is not, however, accurately known; but Nepal was becoming Buddhist in the 6th century, and the first Buddhist king of Tibet sent to India for the holy scriptures in 632 A. D. A century afterwards an adherent of the native devil-worship drove the monks away, destroyed the monasteries, and burnt the holy books; but the blood of the martyrs was the seed of the

church—it returned triumphant after his death, and rapidly gained in wealth and influence. . . . As the Order became wealthy, rival abbots had contended for supremacy, and the chiefs had first tried to use the church as a means of binding the people to themselves, and then, startled at its progress, had to fight against it for their own privilege and power. When, in the long run, the crozier proved stronger than the sword, the Dalai Lama became in 1419 sole temporal sovereign of Tibet.”—T. W. Rhys Davids, *Buddhism*, ch. 8-9.—“Up to the moment of its conversion to Buddhism a profound darkness had rested on [Tibet]. The inhabitants were ignorant and uncultivated, and their indigenous religion, sometimes called Bon, consisted chiefly of magic based on a kind of Shamanism. . . . The word is said to be of Tungusic origin, and to be used as a name for the earliest religion of Mongolia, Siberia and other Northern countries. . . . It is easy to understand that the chief function of the Shamans, or wizard-priests, was to exorcise evil demons, or to propitiate them by sacrifices and various magical practices. . . . The various gradations of the Tibetan hierarchy are not easily described, and only a general idea of them can be given. . . . First and lowest in rank comes the novice or junior monk, called Gethsul (Getzul). . . . Secondly and higher in rank we have the full monk, called Gelong (or Gelon). . . . Thirdly we have the superior Gelong or Khanpo (strictly mKhan po), who has a real right to the further title Lama. . . . As the chief monk in a monastery he may be compared to the European Abbot. . . . Some of the higher Khanpo Lamas are supposed to be living re-incarnations or re-embodiments of certain canonized saints and Bodhi-sattvas who differ in rank. These are called Avatara Lamas, and of such there are three degrees. . . . There is also a whole class of mendicant Lamas. . . . Examples of the highest Avatara are the two quasi-Popes, or spiritual Kings, who are supreme Lamas of the Yellow sect—the one residing at Lhasa, and the other at Tashi Lunpo (Krashi Lunpo), about 100 miles distant. . . . The Grand Lama at Lhasa is the Dalai Lama, that is, ‘the Ocean-Lama, or one whose power and learning are as great as the ocean. . . . The other Grand Lama, who resides in the monastery of Tashi Lunpo, is known in Europe under the names of the Tashi Lama.”—Sir M. Monier-Williams, *Buddhism*, lect. 11.—“Kublai-Khan, after subduing China [see CHINA: A. D. 1259-1294], adopted the Buddhist doctrines, which had made considerable progress among the Tartars. In the year 1261 he raised a Buddhist priest named Mati to the dignity of head of the Faith in the empire. This priest is better known under the name of Pakbo Lama, or supreme Lama: he was a native of Tibet, and had gained the good graces and confidence of Kublai, who, at the same time that he conferred on him the supreme sacerdotal office, invested him with the temporal power in Tibet, with the titles of ‘King of the Great and Precious Law,’ and ‘Institutor of the Empire.’ Such was the origin of the Grand Lamas of Tibet, and it is not impossible that the Tartar Emperor, who had had frequent communications with the Christian missionaries, may have wished to create a religious organisation after the model of the Romish hierarchy.”—Abbé Huc, *Christianity in China, Tartary and Thibet*, v. 2, p. 10.

LAMBETH, Treaty of.—A treaty of Sept. 11, A. D. 1217, which was, in a certain sense, the sequel of Magna Carta. The barons who extorted the Great Charter from King John in 1215 were driven subsequently to a renewal of war with him. They renounced their allegiance and offered the crown to a French prince, Louis, husband of Blanche of Castile, who was John's niece. The pretensions of Louis were maintained after John's death, against his young son, Henry III. The cause of the latter triumphed in a decisive battle fought at Lincoln, May 20, 1217, and the contest was ended by the treaty named above. “The treaty of Lambeth is, in practical importance, scarcely inferior to the Charter itself.”—W. Stubbs, *Const. Hist. of Eng.*, ch. 14, sect. 170 (v. 2).

LANCASTER, Chancellorship of the Duchy of.—“The Chancellorship of the Duchy of Lancaster is an office more remarkable for its antiquity than for its present usefulness. It dates from the time of Henry the Fourth, when the County of Lancashire was under a government distinct from the rest of the Kingdom. About the only duty now associated with the office is the appointment of magistrates for the county of Lancashire. In the other English and Welsh counties, these appointments are made by the Lord High Chancellor, who is the head of the Judicial system. The duties of the Chancellor of the Duchy of Lancaster are thus exceedingly light. The holder of the office is often spoken of as ‘the maid of all work to the Cabinet,’ from the fact that he is accorded a place in the Cabinet without being assigned any special duties likely to occupy the whole of his time. Usually the office is bestowed upon some statesman whom it is desirable for special reasons to have in the Cabinet, but for whom no other office of equal rank or importance is available.”—E. Porritt, *The Englishman at Home*, ch. 8.

LANCES, Free.—With Sir John Hawkwood and his “free company” of English mercenaries, “came first into Italy [about 1360] the use of the term ‘lances,’ as applied to hired troops; each ‘lance’ being understood to consist of three men; of whom one carried a lance, and the others were bowmen. . . . They mostly fought on foot, having between each two archers a lance, which was held as men hold their hunting-spears in a boar-hunt.”—T. A. Trollope, *Hist. of the Commonwealth of Florence*, v. 2, p. 144.

LANDFRIEDE.—FEHDERECHT.—THE SWABIAN LEAGUE.—"Landfriede"—Peace of the Land. The expression, Public Peace, which, in deference to numerous and high authorities I have generally used in the text, is liable to important objections. 'A breach of the public peace' means, in England, any open disorder or outrage. But [in mediæval Germany] the Landfriede (Pax publica) was a special act or provision directed against the abuse of an ancient and established institution,—the Fehderecht (jus diffidationis, or right of private warfare). The attempts to restrain this abuse were, for a long time, local and temporary. . . . The first energetic measure of the general government to put down private wars was that of the diet of Nürnberg (1466). . . . The Fehde is a middle term between duel and war. Every affront or injury led, after certain formalities, to the declaration, addressed to the offending party, that the aggrieved party would be his foe, and that of his helpers and helpers' helpers. . . . I shall not go into an elaborate description of the evils attendant on the right of diffidation or private warfare (Fehderecht); they were probably not so great as is commonly imagined."—L. Ranke, *Hist. of the Reformation in Germany*, v. 1, pp. 77 (foot-note), 71, and 81.—"The right of diffidation, or of private warfare, had been the immemorial privilege of the Germanic nobles—a privilege as clear as it was ancient, which no diet attempted to abolish, but which, from the mischiefs attending its exercise, almost every one had endeavoured to restrain. . . . Not only state could declare war against state, prince against prince, noble against noble, but any noble could legally defy the emperor himself." In the reign of Frederick III. (1440-1493) efforts were made to institute a tribunal—an imperial chamber—which should have powers that would operate to restrain these private wars; but the emperor and the college of princes could not agree as to the constitution of the court proposed. To attain somewhat the same end, the emperor then "established a league both of the princes and of the imperial cities, which was destined to be better observed than most preceding confederations. Its object was to punish all who, during ten years, should, by the right of diffidation, violate the public tranquillity. He commenced with Swabia, which had ever been regarded as the imperial domain; and which, having no elector, no governing duke, no actual head other than the emperor himself, and, consequently, no other

acknowledged protector, was sufficiently disposed to his views. In its origin the Swabian league consisted only of six cities, four prelates, three counts, sixteen knights; but by promises, or reasoning, or threats, Frederic soon augmented it. The number of towns was raised to 22, of prelates to 13, of counts to 12, of knights or inferior nobles to 350. It derived additional strength from the adhesion of princes and cities beyond the confines of Swabia; and additional splendour from the names of two electors, three margraves, and other reigning princes. It maintained constantly on foot 10,000 infantry and 1,000 cavalry,—a force generally sufficient for the preservation of tranquillity. Of its salutary effects some notion may be formed from the fact that, in a very short period, one-and-forty bandit dens were stormed, and that two powerful offenders, George duke of Bavaria, and duke Albert of Munich, were compelled by an armed force to make satisfaction for their infraction of the public peace."—S. A. Dunham, *Hist. of the Germanic Empire*, v. 2, pp. 281-283.—The final suppression of the Fehderecht was brought about in the succeeding reign, of Maximilian, by the institution of the Imperial Chamber and the organization of the Circles to enforce its decrees. LANDSQUENETS.—"After the accession of Maximilian I. [Emperor, A. D. 1493-1519], the troops so celebrated in history under the name of 'Landsquenets' began to be known in Europe. They were native Germans, and soon rose to a high degree of military estimation. That Emperor, who had studied the art of war, and who conducted it on principles of Tactics, armed them with long lances; divided them into regiments, composed of ensigns and squads; compelled them to submit to a rigorous discipline, and retained them under their standards after the conclusion of the wars in which he was engaged. . . . Pikes were substituted in the place of their long lances, under Charles V."—Sir N. W. Wraxall, *Hist. of France*, 1574-1610, v. 2, p. 183.

LANGUE D'OC.—"It is well known that French is in the main a descendant from the Latin, not the Latin of Rome, but the corrupter Latin which was spoken in Gaul. Now these Latin-speaking Gauls did not, for some reason, say 'est,' 'it is,' for 'yes,' as the Romans did; but they used a pronoun, either 'ille,' 'he,' or 'hoc,' 'this.' When, therefore, a Gaul desired to say 'yes,' he nodded, and said 'he' or else 'this,' meaning 'He is so,' or 'This is so.' As it happens the Gauls of the north said 'ille,' and those of the south said 'hoc,' and these words gradually got corrupted into two meaningless words, 'oui' and 'oc.' It is well known that the people in the south of France were especially distinguished by using the word 'oc' instead of 'oui' for 'yes,' so that their 'dialect' got to be called the 'langue d'oc,' and this word Languedoc gave the name to a province of France."—C. F. Keary, *Dawn of History*, ch. 3.

ALSO IN: F. Hueffer, *The Troubadours*, ch. 1.—Sir G. C. Lewis, *The Romance Languages*, p. 52, and after.

LANGUEDOC.—When, as a consequence of the Albigensian wars, the dominions of the Counts of Toulouse were broken up and absorbed for the most part in the domain of the French crown, the country which had been chiefly ravaged in those wars, including Septimania and much of the old county of Toulouse, acquired the name by which its language was known—Languedoc. The 'langue d'oc' was spoken likewise in Provence and in Aquitaine; but it gave a definite geographical name only to the region between the Rhone and the Garonne. See ALBIGENSES: A. D. 1217-1229; also, PROVENCE: A. D. 1179-1207.

LAON: The last capital of the Carolingian kings.—The rock-lifted castle and stronghold of Laon, situated in the modern department of Aisne, about 74 miles northeast from Paris, was the last refuge and capital—sometimes the sole dominion—of the Carolingian kings, in their final struggle with the new dynasty sprung from the Dukes of France. The "King of Laon" and the "King of St. Denis," as the contestants are sometimes called, disputed with one another for a monarchy which was small when the sovereignty of the two had been united in one. In 991 the "King of Laon" was betrayed to his rival, Hugh Capet, and died in prison. "Laon ceased to be a capital, and became a quiet country town; the castle, relic of those days, stood till 1832, when it was rased to the ground."

LATERAN, The.—"The Lateran derives its name from a rich patrician family, whose estates were confiscated by Nero. . . . It afterwards became an imperial residence, and a portion of it . . . was given by Constantine to Pope Melchisedes in 312,—a donation which was confirmed to St. Sylvester, in whose reign the first basilica was built here. . . . The ancient Palace of the Lateran was the residence of the popes for nearly 1,000 years. . . . The modern Palace of the Lateran was built from designs of Fontana by Sixtus V. In 1693 Innocent XII. turned it into a hospital,—in 1438 Gregory XVI. appropriated it as a museum."—A. J. C. Hare, *Walks in Rome*, ch. 13.

LATHES OF KENT.—"The county of Kent [England] is divided into six 'lathes,' of nearly equal size, having the jurisdiction of the hundreds in other shires. The lathe may be derived from the Jutish 'lething' (in modern Danish 'leding')—a military levy."—T. P. Taswell-Langmead, *English Const. Hist.*, ch. 1, foot-note.

LATHOM HOUSE, Siege of. See ENGLAND: A. D. 1644 (JANUARY).

LATIFUNDIA.—The great slave-titled estates of the Romans, which swallowed up the properties of the small land-holders of earlier times, were called Latifundia.

LATIN CHURCH, The.—The Roman Catholic Church (see PAPACY) is often referred to as the Latin Church, in distinction from the Greek or Orthodox Church of the East.

LATIN EMPIRE AT CONSTANTINOPLE. See ROMANIA, THE EMPIRE OF.

LATIN LANGUAGE IN THE MIDDLE AGES. See EDUCATION, MEDIEVAL.

"LATIN NAME," The.—"We must . . . explain what was meant in the sixth century of Rome [third century B. C.] by the 'Latin name.'

... The Latin name was now extended far beyond its old geographical limits, and was represented by a multitude of flourishing cities scattered over the whole of Italy, from the frontier of Cisalpine Gaul to the southern extremity of Apulia. ... Not that they were Latins in their origin, or connected with the cities of the old Latium: on the contrary they were by extraction Romans; they were colonies founded by the Roman people, and consisting of Roman citizens: but the Roman government had resolved that, in their political relations, they should be considered, not as Romans, but as Latins; and the Roman settlers, in consideration of the advantages which they enjoyed as colonists, were content to descend politically to a lower condition than that which they had received as their birthright. The states of the Latin name, whether cities of old Latium or Roman colonies, all enjoyed their own laws and municipal government, like the other allies; and all were, like the other allies, subject to the sovereign dominion of the Romans. They were also so much regarded as foreigners that they could not buy or inherit land from Roman citizens; nor had they generally the right of intermarriage with Romans. But they had two peculiar privileges: one, that any Latin who left behind him a son in his own city, to perpetuate his family there, might remove to Rome, and acquire the Roman franchise; the other, that every person who had held any magistracy or distinguished office in a Latin state, might become at once a Roman citizen."—T. Arnold, *Hist. of Rome*, ch. 41.

LATINS, Subjugation of, by the Romans. See *ROME*: B. C. 339–338.

LATIUM.—THE OLD LATINS.—"The plain of Latium must have been in primeval times the scene of the grandest conflicts of nature, while the slowly formative agency of water deposited, and the eruptions of mighty volcanoes upheaved, the successive strata of that soil on which was to be decided the question to what people the sovereignty of the world should belong. Latium is bounded on the east by the mountains of the Sabines and Aequi, which form part of the Apennines; and on the south by the Volscian range rising to the height of 4,000 feet, which is separated from the main chain of the Apennines by the ancient territory of the Hernici, the table-land of the Sacco (Trerus, a tributary of the Liris), and stretching in a westerly direction terminates in the promontory of Terracina. On the west its boundary is the sea, which on this part of the coast forms but few and indifferent harbours. On the north it imperceptibly merges into the broad highlands of Etruria. The region thus enclosed forms a magnificent plain traversed by the Tiber, the 'mountain-stream' which issues from the Umbrian, and by the Anio, which rises in the Sabine mountains. Hills here and there emerge, like islands, from the plain; some of them steep limestone cliffs, such as that of Soracte in the north-east, and that of the Circeian promontory on the south-west, as well as the similar though lower height of the Janiculum near Rome; others volcanic elevations, whose extinct craters had become converted into lakes which in some cases still exist; the most important of these is the Alban range, which, free on every side, stands forth from the plain between the Volscian chain and the river Tiber. Here settled the stock which is known to

history under the name of the Latins, or, as they were subsequently called by way of distinction from the Latin communities beyond the bounds of Latium, the 'Old Latins' ('prisci Latini'). But the territory occupied by them, the district of Latium, was only a small portion of the central plain of Italy. All the country north of the Tiber was to the Latins a foreign and even hostile domain, with whose inhabitants no lasting alliance, no public peace, was possible, and such armistices as were concluded appear always to have been for a limited period. The Tiber formed the northern boundary from early times. ... We find, at the time when our history begins, the flat and marshy tracts to the south of the Alban range in the hands of Umbro-Sabellian stocks, the Rutuli and Volsci; Ardea and Veii are no longer in the number of originally Latin towns. Only the central portion of that region between the Tiber, the spurs of the Apennines, the Alban Mount, and the sea—a district of about 700 square miles, not much larger than the present canton of Zurich—was Latium proper, the 'plain,' as it appears to the eye of the observer from the heights of Monte Cavo. Though the country is a plain, it is not monotonously flat. With the exception of the sea-beach which is sandy and formed in part by the accumulations of the Tiber, the level is everywhere broken by hills of tufa moderate in height, though often somewhat steep, and by deep fissures of the ground. These alternating elevations and depressions of the surface lead to the formation of lakes in winter; and the exhalations proceeding in the heat of summer from the putrescent organic substances which they contain engender that noxious fever-laden atmosphere, which in ancient times tainted the district as it taints it at the present day."—T. Mommsen, *Hist. of Rome*, bk. 1, ch. 3.—See, also, *ITALY*, ANCIENT.

LAURAS.—"The institution of Lauras was the connecting link between the hermitage and the monastery, in the later and more ordinary use of that word. ... A Laura was an aggregation of separate cells, under the not very strongly defined control of a superior, the inmates meeting together only on the first and last days, the old and new Sabbaths, of each week, for their common meal in the refectory and for common worship. ... The origin of the word 'Laura' is uncertain. ... Probably it is another form of 'labra,' the popular term in Alexandria for an alley or narrow court."—I. G. Smith, *Christian Monasticism*, pp. 38–39.

LAUREATE, English Poets.—"From the appointment of Chaucer about five hundred years have elapsed, and during that period a long line of poets have held the title of Laureate. For the first two hundred years they were

somewhat irregularly appointed, but from the creation of Richard Edwards in 1561, they come down to the present time without interruption. The selection of the Laureate has not always been a wise one, but the list contains the names of a few of our greatest authors, and the honour was certainly worthily bestowed upon Edmund Spenser, Ben Jonson, John Dryden, Robert Southey, William Wordsworth, and Alfred Tennyson. As the custom of crowning successful poets appears to have been in use since the origin of poetry itself, the office of Poet Laureate can certainly boast of considerable antiquity, and the laurel wreath of the Greeks and Romans was an envied trophy long before our Druidical forefathers held aloft the mistletoe bough in their mystic rites. From what foreign nation we first borrowed the idea of a King of the Poets is doubtful."—W. Hamilton, *Origin of the Office of Poet Laureate* (Royal Hist. Soc., *Transactions*, v. 8).—The following is a list of the Poets Laureate of England, with the dates of their appointment: Geoffrey Chaucer, 1368; Sir John Gower, 1400; Henry Scogan; John Kay; Andrew Bernard, 1486; John Skelton, 1489; Robert Whittington, 1512; Richard Edwards, 1561; Edmund Spenser, 1590; Samuel Daniel,

1598; Ben Jonson, 1616; Sir William Davenant, 1638; John Dryden, 1670; Thomas Shadwell, 1688; Nahum Tate, 1692; Nicholas Rowe, 1715; Rev. Laurence Eusden, 1718; Colley Cibber, 1730; William Whitehead, 1757; Thomas Warton, 1785; Henry James Pye, 1790; Robert Southey, 1813; William Wordsworth, 1843; Alfred Tennyson, 1850.—W. Hamilton, *The Poets Laureate of England*.

LAURIUM, Silver Mines of.—These mines, in Attica, were owned and worked at an early time by the Athenian state, and seem to have yielded a large revenue, more or less of which was divided among the citizens. It was by persuading the Athenians to forego that division that Themistocles secured money to build the fleet which made Athens a great naval power. The mines were situated in the southern part of Attica, in a district of low hills, not far from the promontory of Sunium.—G. Grote, *Hist. of Greece*, pt. 2, ch. 39.

LAW.*

The subject is here treated with reference to the history of the rights of persons and property, and that of procedure, rather than in its political and economic aspects, which are discussed under other heads. And those parts of the history of law thus considered which enter into our present systems are given the preference in space,—purely historical matters, such as the Roman Law, being treated elsewhere, as indicated in the references placed at the end of this article:

Admiralty Law.

A. D. 1183.—Law as to Shipwrecks.—"The Emperor Constantine, or Antonine (for there is some doubt as to which it was), had the honour of being the first to renounce the claim to shipwrecked property in favor of the rightful owner. But the inhuman customs on this subject were too deeply rooted to be eradicated by the wisdom and vigilance of the Roman law givers. The legislation in favor of the unfortunate was disregarded by succeeding emperors, and when the empire itself was overturned by the northern barbarians, the laws of humanity were swept away in the tempest, and the continual depredations of the Saxons and Normans induced the inhabitants of the western coasts of Europe to treat all navigators who were thrown by the perils of the sea upon their shores as pirates, and to punish them as such, without inquiry or discrimination. The Emperor Andronicus Comnenus, who reigned at Constantinople in 1183, made great efforts to repress this inhuman practice. His edict was worthy of the highest praise, but it ceased to be put in execution after his death. . . . Valin says, it was reserved to the ordinances of Lewis XIV. to put the finishing stroke towards the extinction of this species of

piracy, by declaring that shipwrecked persons and property were placed under the special protection and safe guard of the crown, and the punishment of death without hope of pardon, was pronounced against the guilty."—James Kent, *International Law*, edited by J. T. Abdy, p. 31.

A. D. 1537.—Jurisdiction.—The Act of 28 Henry VIII., c. 15, granted jurisdiction to the Lord High Admiral of England.

A. D. 1575.—Jurisdiction.—"The Request of the Judge of the Admiralty, to the Lord Chief Justice of her Majesty's Bench, and his Colleagues, and the Judges' Agreement 7th May 1575,"—by which the long controversy between these Courts as to their relative jurisdiction was terminated, will be found in full in *Benedict's American Admiralty*, 3d ed., p. 41.

A. D. 1664.—Tide-mark.—The space between high and low water mark is to be taken as part of the sea, when the tide is in.—Erastus C. Benedict, *American Admiralty*, 3d ed., by Robert D. Benedict, p. 35, citing *Sir John Constable's Case*, *Anderson's Rep.* 89.

A. D. 1789.—United States Judiciary Act.—The Act of 1789 declared admiralty jurisdiction to extend to all cases "where the seizures are made on waters which are navigable from the sea by vessels of ten or more tons burthen."—*Judiciary Act*, U. S. Stat. at Large, v. 1, p. 76.

A. D. 1798.—Lord Stowell and Admiralty Law.—"Lord Mansfield, at a very early period of his judicial life, introduced to the notice of the English bar the Rhodian laws, the *Consolato del mare*, the laws of Oleron, the treatises of Roccus, the laws of Wisbuy, and, above all, the marine ordinances of Louis XIV., and the commentary of Valin. These authorities were cited by him in *Luke v. Lyde* [2 Burr. 882], and from that time a new direction was given to English studies, and new vigor, and more liberal

* Prepared for this work by Austin Abbott, Dean of the New York University Law School.

and enlarged views, communicated to forensic investigations. Since the year 1798, the decisions of Sir William Scott (now Lord Stowell) on the admiralty side of Westminster Hall, have been read and admired in every region of the republic of letters, as models of the most cultivated and the most enlightened human reason. . . . The doctrines are there reasoned out at large, and practically applied. The arguments at the bar, and the opinions from the bench, are intermingled with the greatest reflections, . . . the soundest policy, and a thorough acquaintance with all the various topics which concern the great social interests of mankind."—James Kent, *Commentaries*, pt. 5, lect. 42.

A. D. 1841-1842.—Jurisdiction.—The act 3 and 4 Vic., c. 65, restored to the English Admiralty some jurisdiction of which it had been deprived by the Common Law Courts.—*Benedict's Am. Admiralty*, p. 56.

A. D. 1845.—Extension of Admiralty Jurisdiction.—"It took the Supreme Court of the United States more than fifty years to reject the antiquated doctrine of the English courts, that admiralty jurisdiction was confined to salt water, or water where the tide ebbed and flowed. Congress in 1845 passed an act extending the admiralty jurisdiction of the Federal courts to certain cases upon the great lakes, and the navigable waters connecting the same. The constitutionality of this act was seriously questioned, and it was not till 1851 that the Supreme Court, by a divided court, in the case of the *Genesee Chief*, which collided with another vessel on Lake Ontario, sustained the constitutionality of the act, and repudiated the absurd doctrine that tides had anything to do with the admiralty jurisdiction conferred by the constitution upon Federal courts."—Lyman Trumbull, *Precedent versus Justice, American Law Review*, v. 27, p. 324.—See, also, *Act of 1845*, 5 U. S. Stat. at L. 726.

A. D. 1873.—Division of Loss in case of Collision settled by Judicature Act.—"The rule that where both ships are at fault for a collision each shall recover half his loss from the other, contradicts the old rule of the common law that a plaintiff who is guilty of contributory negligence can recover nothing. This conflict between the common law and the law of the Admiralty was put an end to in 1873 by the Judicature Act of that year, which (s. 25, subs. 9) provides that 'if both ships shall be found to have been in fault' the Admiralty rule shall prevail. . . . There can be no doubt that in some instances it works positive injustice; as where it prevents the innocent cargo-owner from recovering more than half his loss from one of the two wrong-doing shipowners. And recent cases show that it works in an arbitrary and uncertain manner when combined with the enactments limiting the shipowner's liability for damage done by his ship. The fact, however, remains, that it has been in operation with the approval of the shipping community for at least two centuries, and probably for a much longer period; and an attempt to abolish it at the time of the passing of the Judicature Acts met with no success. The true reason of its very general acceptance is probably this—that it gives effect to the principle of distributing losses at sea, which is widely prevalent in maritime affairs. Insurance, limitation of shipowner's liability,

and general average contribution are all connected, more or less directly, with this principle."—R. G. Marsden, *Two Points of Admiralty Law, Law Quarterly Review*, v. 2, pp. 357-362.

For an enumeration of the various Maritime codes with their dates, see *Benedict's Am. Admiralty*, pp. 91-97, and *Davis' Outlines of International Law*, pp. 5, 6, &c.

Common Law.*

A. D. 449-1066.—Trial by Jury unknown to Anglo-Saxons.—"It may be confidently asserted that trial by jury was unknown to our Anglo-Saxon ancestors; and the idea of its existence in their legal system has arisen from a want of attention to the radical distinction between the members or judges composing a court, and a body of men apart from that court, but summoned to attend it in order to determine conclusively the facts of the case in dispute. This is the principle on which is founded the intervention of a jury; and no trace whatever can be found of such an institution in Anglo-Saxon times."—W. Forsyth, *Trial by Jury*, p. 45.

A. D. 630.—The first Written Body of English Law.—"The first written body of English Law is said to have been promulgated in the Heptarchy by Ethelbert, about the year 630, and enacted with the consent of the states of his kingdom."—Joseph Parke, *Hist. of Chancery*, p. 14.

A. D. 871-1066.—The King's Peace.—1. The technical use of "the king's peace" is, I suspect, connected with the very ancient rule that a breach of the peace in a house must be atoned for in proportion to the householder's rank. If it was in the king's dwelling, the offender's life was in the king's hand. This peculiar sanctity of the king's house was gradually extended to all persons who were about his business, or specially under his protection; but when the Crown undertook to keep the peace everywhere, the king's peace became coincident with the general peace of the kingdom, and his especial protection was deemed to be extended to all peaceable subjects. In substance, the term marks the establishment of the conception of public justice, exercised on behalf of the whole commonwealth, as something apart from and above the right of private vengeance,—a right which the party offended might pursue or not, or accept composition for, as he thought fit. The private bloodfeud, it is true, formally and finally disappeared from English jurisprudence only in the present century; but in its legalized historical shape of the wager of battle it was not a native English institution.—Sir Frederick Pollock, *Essays in Jurisprudence and Ethics*, p. 205.—See, also, KING'S PEACE.

A. D. 1066.—Inquisition, parent of Modern Jury.—"When the Normans came into England they brought with them, not only a far more vigorous and searching kingly power than had been known there, but also a certain product of the exercise of this power by the Frankish kings and the Norman dukes; namely, the use of the inquisition in public administration, i. e., the practice of ascertaining facts by summoning together by public authority a number of people most likely, as being neighbors, to know and tell the truth, and calling for their answer under oath. This was the parent of the modern jury.

*Including legislation in modification of it.

... With the Normans came also another novelty, the judicial duel—one of the chief methods for determining controversies in the royal courts; and it was largely the cost, danger, and unpopularity of the last of these institutions which fed the wonderful growth of the other.”—J. B. Thayer, *The Older Modes of Trial* (*Harvard Law Review*, v. 5, p. 45).

A. D. 1066-1154.—Trial by Jury unknown to Anglo-Normans.—“The same remark which has already been made, with reference to the absence of all mention of the form of jury trial in the Anglo-Saxon Laws, applies equally to the first hundred years after the Conquest. It is incredible that so important a feature of our jurisprudence, if it had been known, would not have been alluded to in the various compilations of law which were made in the reigns of the early Norman kings. . . . Although the form of the jury did not then exist, the rudiments of that mode of trial may be distinctly traced, in the selection from the neighborhood where the dispute arose, of a certain number of persons, who after being duly sworn testified to the truth of the facts within their own knowledge. This is what distinguishes the proceeding from what took place among the Anglo-Saxons—namely, the choosing a limited number of *probi homines* to represent the community, and give testimony for them.”—W. Forsyth, *Trial by Jury*, pp. 82-90. —See, also, **JURY: TRIAL BY.**

A. D. 1066-1154.—The Curia Regis.—“As a legal tribunal the jurisdiction of the Curia was both civil and criminal, original and appellate. As a primary court it heard all causes in which the king's interests were concerned, as well as all causes between the tenants-in-chief of the crown, who were too great to submit to the local tribunals of the shire and the hundred. As an appellate court it was resorted to in those cases in which the powers of the local courts had been exhausted or had failed to do justice. By virtue of special writs, and as a special favor, the king could at his pleasure call up causes from the local courts to be heard in his own court according to such new methods as his advisers might invent. Through the issuance of these special writs the king became practically the fountain of justice, and through their agency the new system of royal law, which finds its source in the person of the king, was brought in to remedy the defects of the old, unelastic system of customary law which prevailed in the provincial courts of the people. The curia followed the person of the king, or the justiciar in the king's absence.”—Hannis Taylor, *Origin and Growth of the English Constitution*, pt. 1, pp. 245-246.

A. D. 1066-1215.—Purchasing Writs.—“The course of application to the curia regis was of this nature. The party suing paid, or undertook to pay, to the king a fine to have *justitiam et rectam* in his court; and thereupon he obtained a writ or precept, by means of which he commenced his suit; and the justices were authorized to hear and determine his claim.”—Recves' (Finlason's) *Hist. Eng. Law*, v. 1, p. 267.

A. D. 1077.—Trial by Battle.—“The earliest reference to the battle, I believe, in any account of a trial in England, is at the end of the case of Bishop Wulfstan v. Abbot Walter, in 1077. The controversy was settled, and we read: ‘Thercof there are lawful witnesses . . . who said and

heard this, ready to prove it by oath and battle.’ This is an allusion to a common practice in the Middle Ages, that of challenging an adversary's witness, or perhaps to one method of disposing of cases where witnesses were allowed on opposite sides and contradicted each other. . . . Thus, as among nations still, so then in the popular courts and between contending private parties, the battle was often the ultima ratio, in cases where their rude and unrational methods of trial yielded no results. It was mainly in order to displace this dangerous . . . mode of proof that the recognitions—that is to say, the first organized form of the jury—were introduced. These were regarded as a special boon to the poor man, who was oppressed in many ways by the duel. It was by enactment of Henry II. that this reform was brought about, first in his Norman dominions (in 1150-52), before reaching the English throne, and afterwards in England, sometime after he became king, in 1154.”—J. B. Thayer, *The Older Modes of Trial* (*Harvard Law Review*, v. 5, pp. 66-67).—See, also: **WAGER OF BATTLE.**

A. D. 1100 (circa).—Origin of Statutes of Limitation.—“Our ancestors, instead of fixing a given number of years as the period within which legal proceedings to recover real property must be resorted to, had recourse to the singular expedient of making the period of limitation run from particular events or dates. From the time of Henry I. to that of Henry III., on a writ of right, the time within which a descent must be shown was the time of King Henry I. (Co. Litt. 114b). In the twentieth year of Henry III., by the Statute of Merton (c. 8) the date was altered to the time of Henry II. Writs of ‘mort d'ancestor’ were limited to the time of the last return of King John into England; writs of novel disseisin to the time of the king's first crossing the sea into Gascony. In the previous reign, according to Glanville (lib. 13, c. 33), the disseisin must have been since the last voyage of King Henry II. into Normandy. So that the time necessary to bar a claim varied materially at different epochs. Thus matters remained until the 3 Edw. I. (Stat. West. 1, c. 39), when, as all lawyers are aware, the time within which a writ of right might be brought was limited to cases in which the seisin of the ancestor was since the time of King Richard I., which was construed to mean the beginning of that king's reign (2 Inst. 238), a period of not less than eighty-six years. The legislature having thus adopted the reign of Richard I. as the date from which the limitation in a real action was to run, the courts of law adopted it as the period to which, in all matters of prescription or custom, legal memory, which till then had been confined to the time to which living memory could go back, should thenceforth be required to extend. Thus the law remained for two centuries and a half, by which time the limitation imposed in respect of actions to recover real property having long become inoperative to bar claims which had their origin posterior to the time of Richard I., and having therefore ceased practically to afford any protection against antiquated claims, the legislature, in 32d of Henry VIII. (c. 2), again interfered, and on this occasion, instead of dating the period of limitation from some particular event or date, took the wiser course of prescribing a fixed number of years as the limit within

which a suit should be entertained. . . . It was of course impossible that as time went on the adoption of a fixed epoch, as the time from which legal memory was to run, should not be attended by grievous inconvenience and hardship. Possession, however long, enjoyment, however interrupted, afforded no protection against stale and obsolete claims, or the assertion of long abandoned rights. And as parliament failed to intervene to amend the law, the judges set their ingenuity to work, by fictions and presumptions, to atone for the supineness of the legislature. . . . They first laid down the somewhat startling rule that from the usage of a lifetime the presumption arose that a similar usage had existed from a remote antiquity. Next, as it could not but happen that, in the case of many private rights, especially in that of easements, which had a more recent origin, such a presumption was impossible, judicial astuteness to support possession and enjoyment, which the law ought to have invested with the character of rights, had recourse to the questionable theory of lost grants. Juries were first told that from user, during living memory, or even during twenty years, they might presume a lost grant or deed; next they were recommended to make such presumption; and lastly, as the final consummation of judicial legislation, it was held that a jury should be told, not only that they might, but also that they were bound to presume the existence of such a lost grant, although neither judge nor jury, nor any one else, had the shadow of a belief that any such instrument had ever really existed. . . . When the doctrine of presumptions had proceeded far towards its development, the legislature at length interfered, and in respect of real property and of certain specified easements, fixed certain periods of possession or enjoyment as establishing presumptive rights."—C. J. Cockburn, in *Bryant v. Foot*, L. R. 2 Q. B., 161; s. c. (*Thayer's Cases on Evidence*, 94).

A. D. 1110 (circa).—The King's Peace superior to the Peace of the Subject.—"We find in the so-called laws of Henry I., that wherever men meet for drinking, selling, or like occasions, the peace of God and of the lord of the house is to be declared between them. The amount payable to the host is only one shilling, the king taking twelve, and the injured party, in case of insult, six. Thus the king is already concerned, and more concerned than any one else; but the private right of the householder is distinctly though not largely acknowledged. We have the same feeling well marked in our modern law by the adage that every man's house is his castle, and the rule that forcible entry may not be made for the execution of ordinary civil process against the occupier: though for contempt of Court arising in a civil cause, it may, as not long ago the Sheriff of Kent had to learn in a sufficiently curious form. The theoretical stringency of our law of trespass goes back, probably, to the same origin. And in a quite recent American textbook we read, on the authority of several modern cases in various States of the Union, that 'a man assaulted in his dwelling is not obliged to retreat, but may defend his possession to the last extremity.'"—F. Pollock, *The King's Peace* (*Law Quarterly Review*, v. 1, pp. 40-41).

A. D. 1135.—Abeyance of the King's Peace.—"The King's Peace is proclaimed in general

terms at his accession. But, though generalized in its application, it still was subject to a strange and inconvenient limit in time. The fiction that the king is everywhere present, though not formulated, was tacitly adopted; the protection once confined to his household was extended to the whole kingdom. The fiction that the king never dies was yet to come. It was not the peace of the Crown, an authority having continuous and perpetual succession, that was proclaimed, but the peace of William or Henry. When William or Henry died, all authorities derived from him were determined or suspended; and among other consequences, his peace died with him. What this abeyance of the King's Peace practically meant is best told in the words of the Chronicle, which says upon the death of Henry I. (anno 1135): 'Then there was tribulation soon in the land, for every man that could forthwith robbed another.' Order was taken in this matter (as our English fashion is) only when the inconvenience became flagrant in a particular case. At the time of Henry III.'s death his son Edward was in Palestine. It was intolerable that there should be no way of enforcing the King's Peace till the king had come back to be crowned; and the great men of the realm, by a wise audacity, took upon them to issue a proclamation of the peace in the new king's name forthwith. This good precedent being once made, the doctrine of the King's Peace being in suspense was never afterwards heard of."—F. Pollock, *The King's Peace* (*Law Quarterly Review*, v. 1, pp. 48-49).

A. D. 1154-1189.—Origin of Unanimity of Jury.—"The origin of the rule as to unanimity may, I think, be explained as follows: In the assise as instituted in the reign of Henry II. it was necessary that twelve jurors should agree in order to determine the question of disseisin; but this unanimity was not then secured by any process which tended to make the agreement compulsory. The mode adopted was called, indeed, an afforcement of the jury; but this term did not imply that any violence was done to the conscientious opinions of the minority. It merely meant that a sufficient number were to be added to the panel until twelve were at last found to agree in the same conclusion; and this became the verdict of the assise. . . . The civil law required two witnesses at least, and in some cases a greater number, to establish a fact in dispute; as, for instance, where a debt was secured by a written instrument, five witnesses were necessary to prove payment. These would have been called by our ancestors a jurata of five. At the present day, with us no will is valid which is not attested by at least two witnesses. In all countries the policy of the law determines what it will accept as the minimum of proof. Bearing then in mind that the jury system was in its inception nothing but the testimony of witnesses informing the court of facts supposed to lie within their own knowledge, we see at once that to require that twelve men should be unanimous was simply to fix the amount of evidence which the law deemed to be conclusive of a matter in dispute."—W. Forsyth, *Hist. of Trial by Jury*, ch. 11, sect. 1.

A. D. 1154-1189.—Reign of Law initiated.—"The reign of Henry II. initiates the rule of law. The administrative machinery, which had been regulated by routine under Henry I., is now made a part of the constitution, enunciated

in laws, and perfected by a steady series of reforms. The mind of Henry II. was that of a lawyer and man of business. He set to work from the very beginning of the reign to place order on a permanent basis, and, recurring to the men and measures of his grandfather, to complete an organization which should make a return to feudalism impossible."—W. Stubbs, *Select Charters of Eng. Const. Hist.*, p. 21.

A. D. 1164-1176.—Trial by Assize.—"The first mention of the trial by assize in our existing statutes occurs in the Constitutions of Clarendon, A. D. 1164 [see ENGLAND: A. D. 1162-1170], where it was provided that if any dispute arose between a layman and a clerk as to whether a particular tenement was the property of the Church or belonged to a lay fief, this was to be determined before the chief justiciary of the kingdom, by the verdict of twelve lawful men. . . . This was followed by the Statute of Northampton, A. D. 1176, which directs the justices, in case a lord should refuse to give to the heir the seisin of his deceased ancestor, 'to cause a recognition to be made by means of twelve lawful men as to what seisin the deceased had on the day of his death;' and also orders them to inquire in the same manner in cases of novel disseisin."—W. Forsyth, *Trial by Jury*, ch. 6, sect. 3.

A. D. 1165 (circa).—Justice bought and sold.—"The king's justice was one great source of his revenue, and he sold it very dear. Observe that this buying and selling was not in itself corruption, though it is hard to believe that corruption did not get mixed up with it. Suitors paid heavily not to have causes decided in their favour in the king's court, but to have them heard there at all. The king's justice was not a matter of right, but of exceptional favour; and this was especially the case when he undertook, as he sometimes did, to review and overrule the actual decisions of local courts, or even reverse, on better information, his own previous commands. And not only was the king's writ sold, but it was sold at arbitrary and varying prices, the only explanation of which appears to be that in every case the king's officers took as much as they could get. Now we are in a position to understand that famous clause of the Great Charter: 'To no man will we sell, nor to none deny or delay, right or justice.' The Great Charter comes about half a century after the time of which we have been speaking; so in that time, you see, the great advance had been made of regarding the king's justice as a matter not of favour but of right. And besides this clause there is another which provides for the regular sending of the king's judges into the counties. Thus we may date from Magna Carta the regular administration of a uniform system of law throughout England. What is more, we may almost say that Magna Carta gave England a capital. For the king's court had till then no fixed seat; it would be now at Oxford, now at Westminster, now at Winchester, sometimes at places which by this time are quite obscure. But the Charter provided that causes between subject and subject which had to be tried by the king's judges should be tried not where the king's court happened to be, but in some certain place; and so the principal seat of the courts of justice, and ultimately the political capital of the realm, became established at Westminster."—Sir F. Pollock, *Essays in Jurisprudence and Ethics*, p. 209.

A. D. 1166.—Assize of Clarendon. See ENGLAND: A. D. 1162-1170.

A. D. 1176.—Justices in Eyre.—"It has been generally supposed that justices in Eyre (*justitarii itinerantes*) were first established in 1176, by Henry II., for we find it recorded that in that year, in a great counsel held at Northampton, the king divided the realm into six parts, and appointed three traveling justices to go each circuit, so that the number was eighteen in all. . . . But although the formal division of the kingdom into separate circuits may have been first made by Henry II., yet there is no doubt that single justiciars were appointed by William I., a few years after the Conquest, who visited the different shires to administer justice in the king's name, and thus represented the *curia regis* as distinct from the hundred and county courts."—W. Forsyth, *Trial by Jury*, pp. 81-82.

A. D. 1189.—Legal Memory.—Its effect.—"No doubt usage for the last fifty or sixty years would be some evidence of usage 700 years ago, but if the question is to be considered as an ordinary question of fact, I certainly for one would very seldom find a verdict in support of the right as in fact so ancient. I can hardly believe, for instance, that the same fees in courts of justice which were till recently received by the officers as ancient fees attached to their ancient offices were in fact received 700 years ago; or that the city of London took before the time of Richard I. the same payments for measuring corn and coals and oysters that they do now. I have no doubt the city of Bristol did levy dues in the Avon before the time of legal memory, and that the mayor, as head of that corporation, got some fees at that time; but I can hardly bring myself to believe that the mayor of Bristol at that time received 5s. a year from every ship above sixty tons burthen which entered the Avon; yet the claim of the city of Bristol to their ancient mayor's dues, of which this is one, was established before Lord Tenterden, in 1828. I think the only way in which verdicts in support of such claims, and there are many such, could have properly been found, is by supposing that the jury were advised that, in favor of the long continued user, a presumption arose that it was legal, on which they ought to find that the user was immemorial, if that was necessary to legalize it, unless the contrary was proved; that presumption not being one purely of fact, and to be acted on only when the jury really entertained the opinion that in fact the legal origin existed. This was stated by Parke B., on the first trial of *Jenkins v. Harvey*, 1 C. M. & R. 894, as being his practice, and what he considered the correct mode of leaving the question to the jury; and that was the view of the majority of the judges in the Court of Exchequer Chamber in *Shephard v. Payne*, 16 C. B. (N. S.) 132; 33 L. J. (C. P.) 158. This is by no means a modern doctrine; it is as ancient as the time of Littleton, who, in his *Tenures*, § 170, says that all are agreed that usage since the time of Richard I. is a title; some, he says, have thought it the only title of prescription, but that others have said 'that there is also another title of prescription that was at the common law before any statute of limitation of writs, &c., and that it was where a custom or usage or other thing hath been used for time whereof mind of man runneth not to the contrary. And they have said that

this is proved by the pleading where a man will plead a title of prescription of custom. He shall say that such a custom hath been used from time whereof the memory of men runneth not to the contrary, that is as much as to say, when such a matter is pleaded, that no man then alive hath heard any proof of the contrary, nor hath no knowledge to the contrary; and inasmuch that such title of prescription was at the common law, and not put out by any statute, ergo, it abideth as it was at the common law; and the rather that the said limitation of a writ of right is of so long time past. 'Ideo quare de hoc.' It is practically the same thing whether we say that usage as far back as proof extends is a title, though it does not go so far back as the year 1189; or that such usage is to be taken in the absence of proof to the contrary to establish that the usage began before that year; and certainly the lapse of 400 years since Littleton wrote has added force to the remark, 'the rather that the limitation of a writ of right is of so long time past.' But either way, proof that the origin of the usage was since that date, puts an end to the title by prescription; and the question comes round to be whether the amount of the fee, viz. 13s., is by itself sufficient proof that it must have originated since."—J. Blackburn, in *Bryant v. Foot*, L. R. 2 Q. B., 161; s. c. (*Thayer's Cases on Evidence*, p. 88).

A. D. 1194.—English Law Repositories.—"The extant English judicial records do not begin until 1194 (Mich. 6 Rich. I.). We have a series of such records from 1384 (6 Rich. II.). The first law treatise by Glanvill was not written before 1187. The law reports begin in 1292. The knowledge of the laws of England prior to the twelfth century is in many points obscure and uncertain. From that time, however, the growth and development of these laws can be traced in the parliamentary and official records, treatises, and law reports."—John F. Dillon, *The Laws and Jurisprudence of England and America*, pp. 28-29.

A. D. 1199.—Earliest instance of Action for Trespass.—"A case of the year 1199 (2 Rot. Cur. Reg. 34) seems to be the earliest reported instance of an action of trespass in the royal courts. Only a few cases are recorded during the next fifty years. But about 1250 the action came suddenly into great popularity. In the 'Abbreviatio Placitorum,' twenty-five cases are given of the single year 1252-1253. We may infer that the writ, which had before been granted as a special favor, became at that time a writ of course. In Britton (f. 49), pleaders are advised to sue in trespass rather than by appeal, in order to avoid 'la perilouse aventure de batayles.' Trespass in the popular courts of the hundred and county was doubtless of far greater antiquity than the same action in the Curia Regis. Several cases of the reign of Henry I. are collected in Bigelow, *Placita Anglo-Normannica*, 89, 98, 102, 127."—J. B. Ames, *The Disseisin of Chattels* (*Harvard Law Review*, v. 3, p. 29, note).

A. D. 1208.—Evidence: Attesting Witnesses.—"From the beginning of our records, we find cases, in a dispute over the genuineness of a deed, where the jury are combined with the witnesses to the deed. This goes back to the Franks; and their custom of requiring the witness to a document to defend it by battle also crossed the channel, and is found in Glanville

(lib. X., c. 12). . . . In these cases the jury and the witnesses named in the deed were summoned together, and all went out and conferred privately as if composing one body; the witnesses did not regularly testify in open court. Cases of this kind are found very early, e. g. in 1208-1209 (Pl. Ab. 63, col. 1, Berk.). . . . In the earlier cases these witnesses appear, sometimes, to have been conceived of as a constituent part of the jury; it was a combination of business-witnesses and community-witnesses who tried the case,—the former supplying to the others their more exact information, just as the hundreders, or those from another county, did in the cases before noticed. But in time the jury and the witnesses came to be sharply discriminated. Two or three cases in the reign of Edward III. show this. In 1337, 1338 and 1349, we are told that they are charged differently; the charge to the jury is to tell the truth (a lour ascient) to the best of their knowledge, while that to the witnesses is to tell the truth and loyally inform the inquest, without saying anything about their knowledge (sans lour scient); 'for the witnesses,' says Thorpe, C. J., in 1349, 'should say nothing but what they know as certain, i. e., what they see and hear.' . . . By the Statute of York (12 Edw. II. c. 2), in 1318, it was provided that while process should still issue to the witnesses as before, yet the taking of the inquest should not be delayed by their absence. In this shape the matter ran on for a century or two. By 1472 (Y. B. 12 Edw. IV. 4, 9), we find a change. It is said, with the assent of all the judges, that process for the witnesses will not issue unless asked for. As late, certainly, as 1489 (Y. B. 5 H. VII. 8), we find witnesses to deeds still summoned with the jury. I know of no later case. In 1549-1550 Brooke, afterwards Chief Justice of the Common Bench, argues as if this practice was still known: 'When the witnesses . . . are joined to the inquest,' etc.; and I do not observe anything in his Abridgment, published in 1568, ten years after his death, to indicate that it was not a recognized part of the law during all his time. It may, however, well have been long obsolescent. Coke (Inst. 6 b.) says of it, early in the seventeenth century, 'and such process against witnesses is vanished;' but when or how he does not say. We may reasonably surmise, if it did not become infrequent as the practice grew, in the fifteenth century, of calling witnesses to testify to the jury in open court, that, at any rate, it must have soon disappeared when that practice came to be attended with the right, recognized, if not first granted, in the statute of 1562-1563 (5 Eliz. c. 9, s. 6), to have legal process against all sorts of witnesses."—James B. Thayer, in *Harvard Law Rev.*, v. 5, pp. 302-5, also in *Sel. Cas. Ev.* pp. 771-773.—"After the period reached in the passage above quoted, the old strictness as to the summoning of attesting witnesses still continued under the new system. As the history of the matter was forgotten, new reasons were invented, and the rule was extended to all sorts of writings."—J. B. Thayer, *Select Cases on Evidence*, p. 773.

A. D. 1215 (ante).—Courts following the King.—"Another point which ought not to be forgotten in relation to the King's Court is its migratory character. The early kings of England were the greatest landowners in the country, and besides their landed estates they had

rights over nearly every important town in England, which could be exercised only on the spot. They were continually travelling about from place to place, either to consume in kind part of their revenues, or to hunt or to fight. Wherever they went the great officers of their court, and in particular the chancellor with his clerks, and the various justices had to follow them. The pleas, so the phrase went, 'followed the person of the king,' and the machinery of justice went with them."—Sir J. F. Stephen, *Hist. of the Criminal Law of England*, v. 1, p. 87.

A. D. 1215.—Magna Charta.—"With regard to the administration of justice, besides prohibiting all denials or delays of it, it fixed the court of Common Pleas at Westminster, that the suitors might no longer be harassed with following the King's person in all his progresses; and at the same time brought the trial of issues home to the very doors of the freeholders by directing assizes to be taken in the proper counties, and establishing annual circuits. It also corrected some abuses then incident to the trials by wager of law and of battle; directing the regular awarding of inquest for life or member; prohibited the King's inferior ministers from holding pleas of the crown, or trying any criminal charge, whereby many forfeitures might otherwise have unjustly accrued to the exchequer; and regulated the time and place of holding the inferior tribunals of justice, the county court, sheriff's tourn, and court leet. . . . And, lastly (which alone would have merited the title that it bears, of the great charter,) it protected every individual of the nation in the free enjoyment of his life, his liberty and his property, unless declared to be forfeited by the judgment of his peers, or the law of the land."—Owen Flintoff, *Laws of Eng.*, p. 184.—See, also, ENGLAND: A. D. 1215.

A. D. 1216.—Distinction between Common and Statute Law now begins.—"The Chancellors, during this reign [John 1199-1216], did nothing to be entitled to the gratitude of posterity, and were not unworthy of the master whom they served. The guardians of law were the feudal barons, assisted by some enlightened churchmen, and by their efforts the doctrine of resistance to lawless tyranny was fully established in England, and the rights of all classes of the people were defined and consolidated. We here reach a remarkable era in our constitutional history. National councils had met from the most remote times; but to the end of this reign their acts not being preserved are supposed to form a part of the *lex non scripta*, or common law. Now begins the distinction between common and statute law, and henceforth we can distinctly trace the changes which our juridical system has undergone. These changes were generally introduced by the Chancellor for the time being."—Lord Campbell, *Lives of the Chancellors*, v. 1, p. 115.

A. D. 1216-1272.—Henry de Bracton.—"It is curious that, in the most disturbed period of this turbulent reign, when ignorance seemed to be thickening and the human intellect to decline, there was written and given to the world the best treatise upon law of which England could boast, till the publication of Blackstone's Commentaries, in the middle of the eighteenth century. It would have been very gratifying to me if this work could have been ascribed with certainty to any of the Chancellors whose lives have been noticed.

The author, usually styled Henry de Bracton, has gone by the name of Brycton, Britton, Briton, Breton, and Brets; and some have doubted whether all these names are not imaginary. From the elegance of his style, and the familiar knowledge he displays of the Roman law, I cannot doubt that he was an ecclesiastic who had addicted himself to the study of jurisprudence; and as he was likely to gain advancement from his extraordinary proficiency, he may have been one of those whom I have commemorated, although I must confess that he rather speaks the language likely to come from a disappointed practitioner rather than of a Chancellor who had been himself in the habit of making Judges. For comprehensiveness, for lucid arrangement, for logical precision, this author was unrivalled during many ages. Littleton's work on Tenures, which illustrated the reign of Edward IV., approaches Bracton; but how barbarous are, in comparison, the commentaries of Lord Coke, and the law treatises of Hale and of Hawkins!"—Lord Campbell, *Lives of the Chancellors*, v. 1, p. 139.—For opposite view see 9 *American Bar Ass'n Rep.*, p. 193.

A. D. 1217.—Dower.—"The additional provision made in the edition of 1217 to the provisions of the earlier issues of the Charter in respect of widow's rights fixed the law of dower on the basis on which it still rests. The general rule of law still is that the widow is entitled for her life to a third part of the lands of which her husband was seized for an estate of inheritance at any time during the marriage. At the present day there are means provided which are almost universally adopted, of barring or defeating the widow's claim. The general rule of law, however, remains the same. The history of the law of dower deserves a short notice, which may conveniently find a place here. It seems to be in outline as follows. Tacitus noticed the contrast of Teutonic custom and Roman law, in that it was not the wife who conferred a dowry on the husband, but the husband on the wife. By early Teutonic custom, besides the bride-price, or price paid by the intending husband to the family of the bride, it seems to have been usual for the husband to make gifts of lands or chattels to the bride herself. These appear to have taken two forms. In some cases the husband or his father executed before marriage an instrument called '*libellum dotis*,' specifying the nature and extent of the property to be given to the wife. . . . Another and apparently among the Anglo-Saxons a commoner form of dower is the '*morning gift*.' This was the gift which on the morning following the wedding the husband gave to the wife, and might consist either of land or chattels. . . . By the law as stated by Glanvil the man was bound to endow the woman '*tempore desponsationis ad ostium ecclesiae*.' The dower might be specified or not. If not specified it was the third part of the freehold which the husband possessed at the time of betrothal. If more than a third part was named, the dower was after the husband's death cut down to a third. A gift of less would however be a satisfaction of dower. It was sometimes permitted to increase the dower when the freehold available at the time of betrothal was small, by giving the wife a third part or less of subsequent acquisitions. This however must have been expressly granted at the time of betrothal. A woman could never claim more than

had been granted 'ad ostium ecclesiae.' Dower too might be granted to a woman out of chattels personal, and in this case she would be entitled to a third part. In process of time however, this species of dower ceased to be regarded as legal, and was expressly denied to be law in the time of Henry IV. A trace of it still remains in the expression in the marriage service, 'with all my worldly goods I thee endow.'—Kenelm E. Digby, *Hist. of the Law of Real Property*, pp. 126–128 (4th ed.).

A. D. 1258.—Provisions of Oxford; no Writs except de Cursu.—"The writ had originally no connection whatever with the relief sought, it had been a general direction to do right to the plaintiff, or as the case might be, but, long before the time now referred to, this had been changed. . . . It appears that even after the writ obtained by the plaintiff had come to be connected with the remedy sought for, . . . a writ to suit each case was framed and issued, but the Provisions of Oxford (1258) expressly forbade the Chancellor to frame new writs without the consent of the King and his Council. It followed that there were certain writs, each applicable to a particular state of circumstances and leading to a particular judgment, which could be purchased by an intending plaintiff. These writs were described as writs 'de cursu,' and additions to their number were made from time to time by direction of the King, of his Council or of Parliament."—D. M. Kerly, *Hist. of Equity*, p. 9.

A. D. 1258.—Sale of Judicial Offices.—"The Norman Kings, who were ingenious adepts in realizing profit in every opportunity, commenced the sale of Judicial Offices. The Plantagenets followed their example. In Madox, chap. II., and in the Cottoni Posthuma, may be found innumerable instances of the purchase of the Chancellorship, and accurate details of the amount of the consideration monies. . . . What was bought must, of course, be sold, and justice became henceforth a marketable commodity. . . . The Courts of Law became a huckster's shop; every sort of produce, in the absence of money, was bartered for 'justice.'"—J. Parke, *Hist. of Eng. Chancery*, p. 23.

A. D. 1265.—Disappearance of the Office of Chief Justiciary.—"Towards the end of this reign [Henry III.] the office of Chief Justiciary, which had often been found so dangerous to the Crown, fell into disuse. Hugh le Despenser, in the 49th of Henry III., was the last who bore the title. The hearing of common actions being fixed at Westminster by Magna Charta, the Aula Regia was gradually subdivided and certain Judges were assigned to hear criminal cases before the King himself, wheresoever he might be, in England. These formed the Court of King's Bench. They were called 'Justitiiarii ad placita coram Rege,' and the one who was to preside 'Capitalis Justiciarius.' He was inferior in rank to the Chancellor, and had a salary of only one hundred marks a year, while the Chancellor had generally 500. Henceforth the Chancellor, in rank, power, and emolument, was the first magistrate under the Crown, and looked up to as the great head of the profession of the law."—Lord Campbell, *Lives of the Chancellors*, v. 1, pp. 139–140.

A. D. 1275.—Statute of Westminster the First; Improvement of the Law.—"He [Rob-

ert Burnel] presided at the Parliament which met in May, 1275, and passed the 'Statute of Westminster the First,' deserving the name of a Code rather than an Act of Parliament. From this chiefly, Edward I. has obtained the name of 'the English Justinian'—absurdly enough, as the Roman Emperor merely caused a compilation to be made of existing laws,—whereas the object now was to correct abuses, to supply defects, and to remodel the administration of justice. Edward deserves infinite praise for the sanction he gave to the undertaking; and from the observations he had made in France, Sicily, and the East, he may, like Napoleon, have been personally useful in the consultations for the formation of the new Code,—but the execution of the plan must have been left to others professionally skilled in jurisprudence, and the chief merit of it may safely be ascribed to Lord Chancellor Burnel, who brought it forward in Parliament. The statute is methodically divided into fifty-one chapters. . . . It provides for freedom of popular elections, then a matter of much moment, as sheriffs, coroners, and conservators of the peace were still chosen by the free holders in the county court, and attempts had been made unduly to influence the elections of knights of the shire, almost from the time when the order was instituted. . . . It amends the criminal law, putting the crime of rape on the footing to which it has been lately restored, as a most grievous but not a capital offence. It embraces the subject of 'Procedure' both in civil and criminal matters, introducing many regulations with a view to render it cheaper, more simple, and more expeditious. . . . As long as Burnel continued in office the improvement of the law rapidly advanced,—there having been passed in the sixth year of the King's reign the 'Statute of Gloucester;' in the seventh year of the King's reign the 'Statute of Mortmain;' in the thirteenth year of the King's reign the 'Statute of Westminster the Second,' the 'Statute of Winchester,' and the 'Statute of Circumspecte agatis;' and in the eighteenth year of the King's reign the 'Statute of Quo Warranto,' and the 'Statute of Quia Emptores.' With the exception of the establishment of estates tail, which proved such an obstacle to the alienation of land till defeated by the fiction of Fines and Common Recoveries,—these laws were in a spirit of enlightened legislation, and admirably accommodated the law to the changed circumstances of the social system,—which ought to be the object of every wise legislation."—Lord Campbell, *Lives of the Chancellors*, v. 1, pp. 143–146.—See, also, ENGLAND: A. D. 1275–1295, and 1279.

A. D. 1278.—Foundation of Costs at Common Law.—"The Statute of Gloucester, 6 Edw. I c. i., is the foundation of the common law jurisdiction as to costs, and by that statute it was enacted that in any action where the plaintiff recovered damages, he should also recover costs. . . . By the Judicature Act, 1875, O. L. V., the Legislature gave a direct authority to all the judges of the Courts constituted under the Judicature Act, and vested in them a discretion which was to guide and determine them, according to the circumstances of each case, in the disposition of costs."—Sydney Hastings, *Treatise on Torts*, p. 379.

A. D. 1285.—Statute of Westminster II.; Writs in Consimili Casu.—"The inadequacy

of the common form writs to meet every case was, to some extent, remedied by the 24th Chapter of the Statute of Westminster II., which, after providing for one or two particular cases to meet which no writ existed, provides further that 'whosoever from henceforth it shall fortune in Chancery that in one case a writ is found, and, in like case falling under like law is found none, the clerks of the Chancery shall agree in making a writ or shall adjourn the Plaintiffs until the next Parliament, and the cases shall be written in which they cannot agree, and be referred until the next Parliament; and, by consent of the men learned in the Law a writ shall be made, that it may not happen, that the King's Court should fail in ministering justice unto Complainants.' . . . The words of the statute give no power to make a completely new departure; writs are to be framed to fit cases similar to, but not identical with, cases falling within existing writs, and the examples given in the statute itself are cases of extension of remedies against a successor in title of the raiser of a nuisance, and for the successor in title of a person who had been disseised of his common. Moreover the form of the writ was debated upon before, and its sufficiency determined by the judges, not by its framers, and they were, as English judges have always been, devoted adherents to precedent. In the course of centuries, by taking certain writs as starting points, and accumulating successive variations upon them, the judges added great areas to our common law, and many of its most famous branches, assumpsit, and trover and conversion for instance, were developed in this way, but the expansion of the Common Law was the work of the 15th and subsequent centuries, when, under the stress of eager rivalry with the growing equitable jurisdiction of the Chancery, the judges strove, not only by admitting and developing actions upon the case, but also by the use of fictitious actions, following the example of the Roman Praetor, to supply the deficiencies of their system."—D. M. Kerly, *Hist. of Equity*, pp. 10-11.

A. D. 1285.—Writ of Elegit.—The Writ of Elegit "is a judicial writ given by the statute Westm. 2, 13 Edw. I., c. 18, either upon a judgment for a debt, or damages; or upon the forfeiture of a recognizance taken in the king's court. By the common law a man could only have satisfaction of goods, chattels, and the present profits of lands, by the . . . writs of 'fieri facias,' or 'levari facias,' but not the possession of the lands themselves; which was a natural consequence of the feudal principles, which prohibited the alienation, and of course the encumbering of the fief with the debts of the owner. . . . The statute therefore granted this writ (called an 'elegit,' because it is in the choice or the election of the plaintiff whether he will sue out this writ or one of the former), by which the defendant's goods and chattels are not sold, but only appraised; and all of them (except oxen and beasts of the plough) are delivered to the plaintiff, at such reasonable appraisement and price, in part of satisfaction of his debt. If the goods are not sufficient, then the moiety or one-half of his freehold lands, which he had at the time of the judgment given, whether held in his own name, or by any other in trust for him, are also to be delivered to the plaintiff; to hold, till out of the rents and profits thereof the debt be

levied, or till the defendant's interest be expired; as till the death of the defendant, if he be tenant for life or in tail."—Wm. Blackstone, *Commentaries*, bk. 3, ch. 27.

A. D. 1290.—Progress of the Common Law Right of Alienation.—"The statute of Quia Emptores, 18 Edw. I., finally and permanently established the free right of alienation by the sub-vassal, without the lord's consent; . . . and it declared, that the grantee should not hold the land of his immediate feoffor, but of the chief lord of the fee, of whom the grantor himself held it. . . . The power of involuntary alienation, by rendering the land answerable by attachment for debt, was created by the statute of Westm. 2, 13 Edw. I., c. 18, which granted the elegit; and by the statutes merchant or staple, of 13 Edw. I., and 27 Edw. III., which gave the extent. These provisions were called for by the growing commercial spirit of the nation. To these we may add the statute of 1 Edw. III., taking away the forfeiture or alienation by the king's tenants in capite, and substituting a reasonable fine in its place; . . . and this gives us a condensed view of the progress of the common law right of alienation from a state of servitude to freedom."—J. Kent, *Commentaries*, pt. 6, lect. 67.

A. D. 1292.—Fleta.—"Fleta, so called from its composition in the Fleet prison by one of the justices imprisoned by Edward I., is believed to have been written about the year 1292, and is nothing but an abbreviation of Bracton, and the work called 'Britton,' which was composed between the years 1290 and 1300, is of the same character, except that it is written in the vernacular language, French, while Granvil, Bracton and Fleta are written in Latin."—Thomas J. Semmes, 9 *American Bar Association Rep.*, p. 193.

A. D. 1300 (circa).—The King's Peace a Common Right.—"By the end of the thirteenth century, a time when so much else of our institutions was newly and strongly fashioned for larger uses, the King's Peace had fully grown from an occasional privilege into a common right. Much, however, remained to be done before the king's subjects had the full benefit of this. . . . A beginning of this was made as early as 1195 by the assignment of knights to take an oath of all men in the kingdom that they would keep the King's Peace to the best of their power. Like functions were assigned first to the old conservators of the peace, then to the justices who superseded them, and to whose office a huge array of powers and duties of the most miscellaneous kind have been added by later statutes. . . . Then the writ 'de securitate pacis' made it clear beyond cavil that the king's peace was now, by the common law, the right of every lawful man."—F. Pollock, *The King's Peace*, (*Law Quarterly Rev.*, v. 1, p. 49).

A. D. 1307-1509.—The Year Books.—"The oldest reports extant on the English law, are the Year Books . . . written in law French, and extend from the beginning of the reign of Edward II, to the latter end of the reign of Henry VIII, a period of about two hundred years. . . . The Year Books were very much occupied with discussions touching the forms of writs, and the pleadings and practice in real actions, which have gone entirely out of use."—J. Kent, *Commentaries*, pt. 3, lect. 21.

A. D. 1316.—Election of Sheriffs abolished.—“Until the time of Edward II. the sheriff was elected by the inhabitants of the several counties; but a statute of the 9th year of that reign abolished election, and ever since, with few exceptions, the sheriff has been appointed, upon nomination by the king's councillors and the judges of certain ranks, by the approval of the crown. . . . The office of sheriff is still in England one of eminent honor, and is conferred on the wealthiest and most notable commoners in the counties.”—*New American Cyclopædia*, v. 14, p. 585.

A. D. 1326-1377.—Jurors cease to be Witnesses.—“The verdict of . . . the assize was founded on the personal knowledge of the jurors themselves respecting the matter in dispute, without hearing the evidence of witnesses in court. But there was an exception in the case of deeds which came into controversy, and in which persons had been named as witnessing the grant or other matter testified by the deed. . . . This seems to have paved the way for the important change whereby the jury ceasing to be witnesses themselves, gave their verdict upon the evidence brought before them at the trials. . . . Since the jurors themselves were originally mere witnesses, there was no distinction in principle between them and the attesting witnesses; so that it is by no means improbable that the latter were at first associated with them in the discharge of the same function, namely, the delivery of a verdict, and that gradually, in the course of years, a separation took place. This separation, at all events, existed in the reign of Edward III.; for although we find in the Year Books of that period the expression, ‘the witnesses were joined to the assize,’ a clear distinction is, notwithstanding, drawn between them.”—W. Forsyth, *Trial by Jury*, pp. 124 and 128.

A. D. 1362.—Pleading in the English tongue.—Enrollment in Latin.—“The Statute 36 Edward III., c. 15, A. D. 1362, enacted that in future all pleas should be ‘pleaded, shewed, defended, answered, debated, and judged in the English tongue;’ the lawyers, on the alert, appended a proviso that they should be ‘entered and enrolled’ in Latin, and the old customary terms and forms retained.”—J. Parke, *Hist. of Chancery*, p. 43.

A. D. 1368.—Jury System in Civil Trials.—“As it was an essential principle of the jury trial from the earliest times, that the jurors should be summoned from the hundred where the cause of action arose, the court, in order to procure their attendance, issued in the first instance a writ called a venire facias, commanding the sheriff or other officer to whom it was directed, to have twelve good and lawful men for the neighborhood in court upon a day therein specified, to try the issue joined between the parties. And this was accordingly done, and the sheriff had his jury ready at the place which the court had appointed for its sitting. But when the Court of Common Pleas was severed from the Curia Regis, and became stationary at Westminster (a change which took place in the reign of King John, and was the subject of one of the provisions of Magna Charta), it was found to be very inconvenient to be obliged to take juries there from all parts of the country. And as justices were already in the habit of making periodical circuits for the purpose of holding the

assize in pleas of land, it was thought advisable to substitute them for the full court in banc at Westminster, in other cases also. The statute 13 Edw. I. c. 30, was therefore passed, which enacted that these justices should try other issues: ‘wherein small examination was required,’ or where both parties desired it, and return the inquests into the court above. This led to an alteration in the form of the venire: and instead of the sheriff being simply ordered to bring the jurors to the courts at Westminster on a day named, he was now required to bring them there on a certain day, ‘nisi prius,’ that is, unless before that day the justices of assize came into his county, in which case the statute directed him to return the jury, not to the court, but before the justices of assize.”—W. Forsyth, *Hist. of Trial by Jury*, pp. 139-140.

A. D. 1382.—Peaceable Entry.—“This remedy by entry must be pursued according to statute 5 Rich. II., st. 1, c. 8, in a peaceable and easy manner; and not with force or strong hand. For, if one turns or keeps another out of possession forcibly, this is an injury of both a civil and a criminal nature. The civil is remedied by an immediate restitution; which puts the ancient possessor in statu quo: the criminal injury, or public wrong, by breach of the king's peace, is punished by fine to the King.”—W. Blackstone, *Commentaries*, bk. 3, p. 179.

A. D. 1383-1403.—Venue to be laid in proper Counties.—“The statutes 6 Rich. II., c. 2, and 4 Hen. IV., c. 18, having ordered all writs to be laid in their proper counties, this, as the judges conceived, empowered them to change the venue, if required, and not to insist rigidly on abating the writ: which practice began in the reign of James the First. And this power is discretionally exercised, so as to prevent, and not to cause, a defect of justice. . . . And it will sometimes remove the venue from the proper jurisdiction . . . upon a suggestion, duly supported, that a fair and impartial trial cannot be had therein.”—W. Blackstone, *Commentaries*, bk. 3, p. 294.

A. D. 1388.—Prohibition against Citation of Roman Law in Common-law Tribunals.—“In the reign of Edward III. the exactions of the court of Rome had become odious to the king and the people. Edward, supported by his Parliament, resisted the payment of the tribute which his predecessors from the Conquest downwards, but more particularly from the time of John, had been accustomed to pay to the court of Rome; . . . the name of the Roman Law, which in the reigns of Henry II. and III., and of Edward I., had been in considerable favor at court, and even . . . with the judges, became the object of aversion. In the reign of Richard II. the barons protested that they would never suffer the kingdom to be governed by the Roman law, and the judges prohibited it from being any longer cited in the common law tribunals.”—G. Spence, *Equity Jurisdiction of the Court of Chancery*, v. 1, p. 346.

A. D. 1436.—Act to prevent interference with Common Law Process.—“In 1436, an act was passed with the concurrence of the Chancellor, to check the wanton filing of bills in Chancery in disturbance of common law process. The Commons, after reciting the prevailing grievance, prayed ‘that every person from this time forward vexed in Chancery for matter

determinable by the common law, have action against him that so vexed him, and recover his damages.' The King answered, 'that no writ of subpoena be granted hereafter till security be found to satisfy the party so vexed and grieved for his damages and expenses, if it so be that the matter may not be made good which is contained in the bill.'—Lord Campbell, *Lives of the Chancellors*, v. 1, p. 272.

A. D. 1450 (circa).—Evidence.—Number of Witnesses.—"It is then abundantly plain that by this time [the middle of the 15th century] witnesses could testify in open court to the jury. That this was by no means freely done seems also plain. Furthermore, it is pretty certain that this feature of a jury trial, in our day so conspicuous and indispensable, was then but little considered and of small importance."—J. B. Thayer, *Select Cases on Evidence*, p. 1071.

Also in: The same, *The Jury and its Development* (*Harvard Law Rev.*, v. 5, p. 360).

A. D. 1456.—Demurrers to Evidence.—"Very soon, as it seems, after the general practice began of allowing witnesses to testify to the jury, an interesting contrivance for eliminating the jury came into existence, the demurrer upon evidence. Such demurrers, like others, were demurrers in law; but they had the effect to withdraw from the jury all consideration of the facts, and, in their pure form, to submit to the court two questions, of which only the second was, in strictness, a question of law: (1) Whether a verdict for the party who gave the evidence could be given, as a matter of legitimate inference and interpretation from the evidence; (2) As a matter of law. Of this expedient, I do not observe any mention earlier than the year 1456, and it is interesting to notice that we do not trace the full use of witnesses to the jury much earlier than this."—J. B. Thayer, *Law and Fact in Jury Trials* (*Harvard Law Rev.*, v. 4, p. 162).

Also in: The same, *Select Cases on Evidence*, p. 149.

A. D. 1470.—Evidence.—Competency of Witnesses.—"Fortescue (*De Laud. c. 26*), who has the earliest account (about 1470) of witnesses testifying regularly to the jury, gives no information as to any ground for challenging them. But Coke, a century and a third later, makes certain qualifications of the assertion of the older judges, that 'they had not seen witnesses challenged.' He mentions as grounds of exclusion, legal infamy, being an 'infidel,' of non-sane memory, 'not of discretion,' a party interested, 'or the like.' And he says that 'it hath been resolved by the justices [in 1612] that a wife cannot be produced either against or for her husband, quia sunt duae animae in carne una.' He also points out that 'he that challengeth a right in the thing in demand cannot be a witness.' Here are the outlines of the subsequent tests for the competency of witnesses. They were much refined upon, particularly the excluding ground of interest; and great inconveniences resulted. At last in the fourth and fifth decades of the present century, in England, nearly all objections to competency were abolished, or turned into matters of privilege."—J. B. Thayer, *Select Cases on Evidence*, p. 1070.

A. D. 1473.—Barring Entails.—Taltarum's Case.—"The common-law judges at this time were very bold men, having of their own authority repealed the statute *De Donis*, passed in the

reign of Edward I., which authorized the perpetual entail of land,—by deciding in *Taltarum's Case*, that the entail might be barred through a fictitious proceeding in the Court of Common Pleas, called a 'Common Recovery';—the estate being adjudged to a sham claimant,—a sham equivalent being given to those who ought to succeed to it,—and the tenant in tail being enabled to dispose of it as he pleases, in spite of the will of the donor."—Lord Campbell, *Lives of the Chancellors*, v. 1, pp. 309-310.

A. D. 1481-1505.—Development of Actions of Assumpsit.—"It is probable that the willingness of equity to give pecuniary relief upon parol promises hastened the development of the action of assumpsit. Fairfax, J., in 1481, advised pleaders to pay more attention to actions on the case, and thereby diminish the resort to chancery; and Fineux, C. J., remarked, in 1505, after that advice had been followed and sanctioned by the courts, that it was no longer necessary to sue a subpoena in such cases. Brooke, in his 'Abridgment,' adds to this remark of Fineux, C. J.: 'But note that he shall have only damages by this [action on the case], but by subpoena the chancellor may compel him to execute the estate or imprison him ut dicitur.'"—J. B. Ames, *Specific Performance of Contracts* (*The Green Bag*, v. 1, p. 26).

A. D. 1484.—Statutes to be in English.—"In opening the volumes of our laws, as printed by authority 'from original records and authentic manuscripts,' we are struck with a change upon the face of these Statutes of Richard III., which indicates as true a regard for the liberty of the subjects as the laws themselves. For the first time the laws to be obeyed by the English people are enacted in the English tongue."—Charles Knight, *Hist. of Eng.*, v. 2, p. 200.

A. D. 1499 (circa).—Copyright.—"From about the period of the introduction of printing into this country, that is to say, towards the end of the fifteenth century, English authors had, in accordance with the opinion of the best legal authorities, a right to the Copyright in their works, according to the Common Law of the Realm, or a right to their 'copy' as it was anciently called, but there is no direct evidence of the right until 1558. The Charter of the Stationers' Company, which to this day is charged with the Registration of Copyright, was granted by Philip and Mary in 1556. The avowed object of this corporation was to prevent the spread of the Reformation. Then there followed the despotic jurisdiction of the Star Chamber over the publication of books, and the Ordinances and the Licensing Act of Charles II. At the commencement of the 18th century there was no statutory protection of Copyright. Unrestricted piracy was rife. The existing remedies of a bill in equity and an action at law were too cumbrous and expensive to protect the authors' Common Law rights, and authors petitioned Parliament for speedier and more effectual remedies. In consequence, the 8 Anne, c. 19, the first English Statute providing for the protection of Copyright, was passed in 1710. This Act gave to the author the sole liberty of publication for 14 years, with a further term of fourteen years, provided the author was living at the expiration of the first term, and enacted provisions for the forfeiture of piratical copies and for the imposition of penalties in cases of piracy. But in obtaining this Act, the

authors placed themselves very much in the position of the dog in the fable, who dropped the substance in snatching at the shadow, for, while on the one hand they obtained the remedial measures they desired, on the other, the Perpetual Copyright to which they were entitled at the Common Law was reduced to the fixed maximum term already mentioned, through the combined operation of the statute and the judicial decisions to be presently referred to. But notwithstanding the statute, the Courts continued for some time to recognise the rights of authors at Common Law, and numerous injunctions were granted to protect the Copyright in books, in which the term of protection granted by the statute of Anne had expired, and which injunctions therefore could only have been granted on the basis of the Common Law right. In 1769 judgment was pronounced in the great Copyright case of *Millar v. Taylor*. The book in controversy was Thomson's 'Seasons,' in which work the period of Copyright granted by the statute of Anne had expired, and the question was directly raised, whether a Perpetual Copyright according to Common Law, and independent of that statute, remained in the author after publication. Lord Mansfield, one of the greatest lawyers of all times, maintained in his judgment that Copyright was founded on the Common Law, and that it had not been taken away by the statute of Anne, which was intended merely to give for a term of years a more complete protection. But, in 1774 this decision was overruled by the House of Lords in the equally celebrated pendent case of *Donaldson v. Beckett*, in which the Judges consulted were equally divided on the same point, Lord Mansfield and Sir William Blackstone being amongst those who were of opinion that the Common Law right had not been taken away by the statute of Anne. But owing to a point of etiquette, namely that of being peer as well as one of the Judges, Lord Mansfield did not express his opinion, and in consequence, the House of Lords, influenced by a specious oration from Lord Camden, held (contrary to the opinion of the above-mentioned illustrious Jurists), that the statute had taken away all Common Law rights after publication, and hence that in a published book there was no Copyright except that given by the statute. This judgment caused great alarm amongst those who supposed that their Copyright was perpetual. Acts of Parliament were applied for, and in 1775 the Universities obtained one protecting their literary property.—T. A. Romer, *Copyright Law Reform* (*Law Mag. & Rev.*, 4th ser., v. 12, p. 231).

A. D. 1499.—Action of Ejectment.—"The writ of 'ejectione firmæ' . . . , out of which the modern action of ejectment has gradually grown into its present form, is not of any great antiquity. . . . The Court of Common Pleas had exclusive jurisdiction of real actions while ejectment could be brought in all three of the great common law courts. . . . The practitioners in the King's Bench also encouraged ejectment, for it enabled them to share in the lucrative practice of the Common Pleas. . . . In the action of 'ejectione firmæ,' the plaintiff first only recovered damages, as in any other action of trespass. . . . The courts, consequently following, it is said, in the footsteps of the courts of equity, . . . introduced into this action a species of relief not

warranted by the original writ, . . . viz., a judgment to recover the term, and a writ of possession thereupon. Possibly the change was inspired by jealousy of the chancery courts. It cannot be stated precisely when this change took place. In 1383 it was conceded by the full court that in 'ejectione firmæ' the plaintiff could no more recover his term than in trespass he could recover damages for a trespass to be done. . . . But in 1468 it was agreed by opposing counsel that the term could be recovered, as well as damages. The earliest reported decision to this effect was in 1499, and is referred to by Mr. Reeves as the most important adjudication rendered during the reign of Henry VII., for it changed the whole system of remedies for the trial of controverted titles to land, and the recovery of real property."—Sedgwick and Wait, *Trial of Title to Land* (2nd ed.), sect. 12-25.—"Ejectment is the form of action now retained in use in England under the Statute of 3 and 4 Wm. IV., c. 7, § 36, which abolished all other forms of real actions except dower. It is in general use in some form in this country, and by it the plaintiff recovers, if at all, upon the strength of his own title, and not upon the weakness of that of the tenant, since possession is deemed conclusive evidence of title as to all persons except such as can show a better one."—Washburn, *Real Property* (5th ed.), v. 1, p. 465.

A. D. 1504-1542.—Consideration in Contracts.—"To the present writer it seems impossible to refer consideration to a single source. At the present day it is doubtless just and expedient to resolve every consideration into a detriment to the promisee incurred at the request of the promisor. But this definition of consideration would not have covered the cases of the 16th century. There were then two distinct forms of consideration: (1) detriment; (2) a precedent debt. Of these detriment was the more ancient, having become established in substance, as early as 1504. On the other hand no case has been found recognizing the validity of a promise to pay a precedent debt before 1542. These two species of consideration, so different in their nature, are, as would be surmised, of distinct origin. The history of detriment is bound up with the history of special assumpsit, whereas the consideration based upon a precedent debt must be studied in the development of 'indebitatus assumpsit.'—J. B. Ames, *Hist. of Assumpsit* (*Harvard Law Review*, v. 2, pp. 1-2).

A. D. 1520.—The Law of Parol Guaranty.—"It was decided in 1520, that one who sold goods to a third person on the faith of the defendant's promise that the price should be paid, might have an action on the case upon the promise. This decision introduced the whole law of parol guaranty. Cases in which the plaintiff gave his time or labor were as much within the principle of the new action as those in which he parted with property. And this fact was speedily recognized. In Saint-Germain's book, published in 1531, the student of law thus defines the liability of a promisor: 'If he to whom the promise is made have a charge by reason of the promise, . . . he shall have an action for that thing that was promised, though he that made the promise have no worldly profit by it.' From that day to this a detriment has always been deemed a valid consideration for a promise if incurred at the promisor's request."—J. B. Ames, *Hist. of Assumpsit* (*Harvard Law Rev.*, v. 2, p. 14).

A. D. 1535.—Statute of Uses.—"Before the passing of the Statute of Uses in the twenty-seventh year of Henry VIII, attempts had been made to protect by legislation the interests of creditors, of the king, and of the lords, which were affected injuriously by feoffments to uses. . . . The object of that Statute was by joining the possession or seisen to the use and interest (or, in other words, by providing that all the estate which would by the common law have passed to the grantee to uses should instantly be taken out of him and vested in 'cestui que use'), to annihilate altogether the distinction between the legal and beneficial ownership, to make the ostensible tenant, in every case also the legal tenant, liable to his lord for feudal dues and services,—wardship, marriage, and the rest. . . . By converting the use into the legal interest the Statute did away with the power of disposing of interests in lands by will, which had been one of the most important results of the introduction of uses. Probably these were the chief results aimed at by the Statute of Uses. A strange combination of circumstances—the force of usage by which practices had arisen too strong even for legislation to do away with, coupled with an almost superstitious adherence on the part of the courts to the letter of the statute—produced the curious result, that the effect of the Statute of Uses was directly the reverse of its purpose, that by means of it secret conveyances of the legal estate were introduced, while by a strained interpretation of its terms the old distinction between beneficial or equitable and legal ownership was revived. What may be called the modern law of Real Property and the highly technical and intricate system of conveyancing which still prevails, dates from the legislation of Henry VIII."—Kenelm E. Digby, *Hist. of the Law of Real Property* (4th ed.); pp. 343-345.

A. D. 1540-1542.—Testamentary Power.—"The power of disposing by will of land and goods has been of slow growth in England. The peculiar theories of the English land system prevented the existence of a testamentary power over land until it was created by the Statute of Wills (32 & 34 Hen. VIII.) extended by later statutes, and although a testamentary power over personal property is very ancient in this country, it was limited at common law by the claims of the testator's widow and children to their 'reasonable parts' of his goods. The widow was entitled to one third, or if there were no children to one half of her husband's personal estate; and the children to one third, or if there was no widow to one half of their father's personal estate, and the testator could only dispose by his will of what remained. Whether the superior claims of the widow and children existed all over England or only in some counties by custom is doubted; but . . . by Statutes of William and Mary, Will. III. and Geo. I., followed by the Wills Act (1 Vict. c. 26), the customs have been abolished, and a testator's testamentary power now extends to all his real and personal property."—Stuart C. Macaskie, *The Law of Executors and Administrators*, p. 1.

A. D. 1542.—Liability in Indebitatus Assumpsit on an Express Promise.—"The origin of *indebitatus assumpsit* may be explained in a few words: Slade's case [4 Rep., 92a], decided in 1603, is commonly thought to be the source of this action. But this is a misapprehension.

'*Indebitatus assumpsit*' upon an express promise is at least sixty years older than Slade's case. The evidence of its existence throughout the last half of the sixteenth century is conclusive. There is a note by Brooke, who died in 1558, as follows: 'where one is indebted to me, and he promises to pay before Michaelmas, I may have an action of debt on the contract, or an action on the case on the promise.'"—J. B. Ames, *Hist. of Assumpsit* (*Harvard Law Rev.*, v. 2, p. 16).

A. D. 1557.—Statute of Uses Rendered Nugatory.—"Twenty-two years after the passing of this statute (Mich. Term 4 & 5 Ph. & M.) the judges by a decision practically rendered the Statute nugatory by holding that the Statute will not execute more than one use, and that if there be a second use declared the Statute will not operate upon it. The effect of this was to bring again into full operation the equitable doctrine as to uses in lands."—A. H. Marsh, *Hist. of the Court of Chancery*, pp. 122-123.

A. D. 1580.—Equal Distribution of Property.—"In Holland, all property, both real and personal, of persons dying intestate, except land held by feudal tenure, was equally divided among the children, under the provisions of an act passed by the States in 1580. This act also contained a further enlightened provision, copied from Rome, and since adopted in other Continental Countries, which prohibited parents from dis-inheriting their children except for certain specified offences. Under this legal system, it became customary for parents to divide their property by will equally among their children, just as the custom of leaving all the property to the eldest son grew up under the laws of England. The Puritans who settled New England adopted the idea of the equal distribution of property, in case there was no will—giving to the eldest son, however, in some of the colonies a double portion, according to the Old Testament injunction,—and thence it has spread over the whole United States."—D. Campbell, *The Puritan in Holland, England and America*, v. 2, p. 452.

A. D. 1589.—Earliest notice of Contract of Insurance.—"The first notice of the contract of insurance that appears in the English reports, is a case cited in Coke's Reports [6 Coke's Rep., 47b], and decided in the 31st of Elizabeth; and the commercial spirit of that age gave birth to the statute of 43rd Elizabeth, passed to give facility to the contract, and which created the court of policies of assurance, and shows by its preamble that the business of marine insurance had been in immemorial use, and actively followed. But the law of insurance received very little study and cultivation for ages afterwards; and Mr. Park informs us that there were not forty cases upon matters of insurance prior to the year 1756, and even those cases were generally loose nisi prius notes, containing very little information or claim to authority."—J. Kent, *Commentaries*, pt. 5, lect. 48.

A. D. 1592.—A Highwayman as a Chief-Justice.—"In 1592, Elizabeth appointed to the office of Chief-Justice of England a lawyer, John Popham, who is said to have occasionally been a highwayman until the age of thirty. At first blush this seems incredible, but only because such false notions generally prevail regarding the character of the time. The fact is that neither piracy nor robbery was considered particularly discreditable at the court of Elizabeth. The

queen knighted Francis Drake for his exploits as a pirate, and a law on the statute-books, passed in the middle of the century, gave benefit of clergy to peers of the realm when convicted of highway robbery. Men may doubt, if they choose, the stories about Popham, but the testimony of this statute cannot be disputed."—D. Campbell, *The Puritan in Holland, England and America*, v. 1, p. 366.

A. D. 1650-1700.—Evidence.—"Best Evidence Rule."—"This phrase is an old one. During the latter part of the seventeenth century and the whole of the eighteenth, while rules of evidence were forming, the judges and text writers were in the habit of laying down two principles; namely, (1) that one must bring the best evidence that he can, and (2) that if he does this, it is enough. These principles were the beginning, in the endeavor to give consistency to the system of evidence before juries. They were never literally enforced,—they were principles and not exact rules; but for a long time they afforded a valuable test. As rules of evidence and exceptions to the rules became more definite, the field for the application of the general principle of the 'Best Evidence' was narrower. But it was often resorted to as a definite rule and test in a manner which was very misleading. This is still occasionally done, as when we are told in *McKinnon v. Bliss*, 21 N. Y., p. 218, that 'it is a universal rule founded on necessity, that the best evidence of which the nature of the case admits is always receivable.' Greenleaf's treatment of this topic (followed by Taylor) is perplexing and antiquated. A juster conception of it is found in *Best, Evid.* s. 88. Always the chief example of the 'Best Evidence' principle was the rule about proving the contents of a writing. But the origin of this rule about writings was older than the 'Best Evidence' principle; and that principle may well have been a generalization from this rule, which appears to be traceable to the doctrine of *proferat*. That doctrine required the actual production of the instrument which was set up in pleading. In like manner, it was said, in dealing with the jury, that a jury could not specifically find the contents of a deed unless it had been exhibited to them in evidence. And afterwards when the jury came to hear testimony from witnesses, it was said that witnesses could not undertake to speak to the contents of a deed without the production of the deed itself. . . . Our earliest records show the practice of exhibiting charters and other writings to the jury."—J. B. Thayer, *Select Cases on Evidence*, p. 726.

A. D. 1600.—Mortgagee's Right to Possession.—"When this country was colonized, about A. D. 1600, the law of mortgage was perfectly well settled in England. It was established there that a mortgage, whether by deed upon condition, by trust deed, or by deed and defeasance, vested the fee, at law, in the mortgagee, and that the mortgagee, unless the deed reserved possession to the mortgagor, was entitled to immediate possession. Theoretically our ancestors brought this law to America with them. Things ran on until the Revolution. Mortgages were given in the English form, by deed on condition, by deed and defeasance, or by trust deed. It was not customary in Plymouth or Massachusetts Bay, and it is probable that it was not customary elsewhere, to insert a provision that the

mortgagor, until default in payment, should retain possession. Theoretically, during the one hundred and fifty years from the first settlement to the Revolution, the English rules of law governed all these transactions, and, as matter of book law, every mortgagee of a house or a farm was the owner of it, and had the absolute right to take possession upon the delivery of the deed. But the curious thing about this is, that the people generally never dreamed that such was the law."—H. W. Chaplin, *The Story of Mortgage Law* (*Harvard Law Review*, v. 4, p. 12).

A. D. 1601-1602.—Malicious Prosecution.—"The modern action for malicious prosecution, represented formerly by the action for conspiracy, has brought down to our own time a doctrine which is probably traceable to the practice of spreading the case fully upon the record, namely, that what is a reasonable and probable cause for a prosecution is a question for the court. That it is a question of fact is confessed, and also that other like questions in similar cases are given to the jury. Reasons of policy led the old judges to permit the defendant to state his case fully upon the record, so as to secure to the court a greater control over the jury in handling the facts, and to keep what were accounted questions of law, i. e., questions which it was thought should be decided by the judges out of the jury's hands. Gawdy, J., in such a case, in 1601-2, 'doubted whether it were a plea, because it amounts to a non culpabilis. . . . But the other justices held that it was a good plea, per doubt del lay gents.' Now that the mode of pleading has changed, the old rule still holds; being maintained, perhaps, chiefly by the old reasons of policy."—J. B. Thayer, *Law and Fact in Jury Trials* (*Harvard Law Rev.*, v. 4, p. 147).

ALSO IN: The same, *Select Cases on Evidence*, p. 150.

A. D. 1603.—Earliest reported case of Bills of Exchange.—"The origin and history of Bills of Exchange and other negotiable instruments are traced by Lord Chief Justice Cockburn in his judgment in *Goodwin v. Roberts* [L. R. 10 Ex., pp. 346-358]. It seems that bills were first brought into use by the Florentines in the twelfth century. From Italy the use of them spread to France, and eventually they were introduced into England. The first English reported case in which they are mentioned is *Martin v. Boure* (Cro. Jac. 3), decided in 1603. At first the use of Bills of Exchange seems to have been confined to foreign bills between English and foreign merchants. It was afterwards extended to domestic bills between traders, and finally to bills of all persons whether traders or not. The law throughout has been based on the custom of merchants respecting them; the old form of declaration on bill used always to state that it was drawn 'secundum usum et consuetudinem mercatorum.'"—M. D. Chalmers, *Bills of Exchange*, p. xlv., introd.—See, also, MONEY AND BANKING, MEDIEVAL.

A. D. 1604.—Death Inferred from Long Absence.—"It is not at all modern to infer death from a long absence; the recent thing is the fixing of a time of seven years, and putting this into a rule. The faint beginning of it, as a common-law rule, and one of general application in all questions of life and death, is found, so far as our recorded cases show, in *Doe d. George v. Jesson* (January, 1805). Long before this time,

in 1604, the 'Bigamy Act' of James I. had exempted from the scope of its provisions, and so from the situation and punishment of a felon (1) those persons who had married a second time when the first spouse had been beyond the seas for seven years, and (2) those whose spouse had been absent for seven years, although not beyond the seas,—'the one of them not knowing the other to be living within that time.' This statute did not treat matters altogether as if the absent party were dead; it did not validate the second marriage in either case. It simply exempted a party from the statutory penalty."—J. B. Thayer, *Presumptions and the Law of Evidence* (*Harvard Law Review*, v. 3, p. 151).

A. D. 1609.—First Recognition of Right to Sue for Quantum Meruit.—"There seems to have been no recognition of the right to sue upon an implied 'quantum meruit' before 1609. The innkeeper was the first to profit by the innovation. Reciprocity demanded that, if the law imposed a duty upon the innkeeper to receive and keep safely, it should also imply a promise on the part of the guest to pay what was reasonable. The tailor was in the same case with the innkeeper, and his right to recover upon a quantum meruit was recognized in 1610." [Six Carpenters' Case, 8 Rep., 147a.]—J. B. Ames, *Hist. of Assumpsit* (*Harvard Law Rev.*, v. 2, p. 58).

A. D. 1623.—Liability of Gratuitous Bailee to be Charged in Assumpsit, established.—"The earliest attempt to charge bailees in assumpsit were made when the bailment was gratuitous. These attempts, just before and after 1600, were unsuccessful, because the plaintiffs could not make out any consideration. The gratuitous bailment was, of course, not a benefit, but a burden to the defendant; and, on the other hand, it was not regarded as a detriment, but an advantage to the plaintiff. But in 1623 it was finally decided, not without a great straining, it must be conceded, of the doctrine of consideration, that a bailee might be charged in assumpsit on a gratuitous bailment."—J. B. Ames, *Hist. of Assumpsit* (*Harvard Law Review*, v. 2, p. 6, citing *Wheatley v. Low*, *Palm.*, 281; *Cro. Jac.* 668).

A. D. 1625 (circa).—Experiment in Legislation.—Limitation in time.—"The distinction between temporary and permanent Legislation is a very old one." It was a distinction expressed at Athens; but "we have no such variety of name. All are alike Acts of Parliament. Acts in the nature of new departures in the Law of an important kind are frequently limited in time, very often with a view of gaining experience as to the practical working of a new system before the Legislature commits itself to final legislation on the subject, sometimes, no doubt, by way of compromise with the Opposition, objecting to the passing of such a measure at all. Limitation in time often occurs in old Acts. Instances are the first Act of the first Parliament of Charles I. (1 Car. I., c. 1), forbidding certain sports and pastimes on Sunday, and permitting others. The Book of Sports of James I. had prepared the mind of the people for that more liberal observance of Sunday which had been so offensive to the Puritans of Elizabeth's reign, but it had not been down to that time acknowledged by the Legislature. This was now done in 1625, the Act was passed for the then Parliament, continued from time to time, and

finally (the experiment having apparently succeeded) made perpetual in 1641. Another instance is the Music Hall Act of 1752 passed it is said on the advice of Henry Fielding, in consequence of the disorderly state of the music halls of the period, and perhaps still more on account of the Jacobite songs sometimes sung at such places. It was passed for three years, and, having apparently put an end to local disaffection, was made perpetual in 1755. Modern instances are the Ballot Act, 1872, passed originally for eight years, and now annually continued, the Regulation of Railways Act, 1873, creating a new tribunal, the Railway Commission, passed originally for five years, and annually continued until made perpetual by the Railway and Canal Traffic Act, 1888; the Employers' Liability Act, 1880, a new departure in Social Legislation, expiring on the 31st December, 1887, and since annually continued; and the Shop Hours Regulation Act, 1886, a similar departure, expiring in 1888, and continued for the present Session. . . . (2) Place. —It is in this respect that the Experimental method of Parliament is most conspicuous. A law is enacted binding only locally, and is sometimes extended to the whole or a part of the realm, sometimes not. The old Statute of Circumspecte Agatis (13 Edw. I., stat. 4) passed in 1285 is one of the earliest examples. The point of importance in it is that it was addressed only to the Bishop of Norwich, but afterwards seems to have been tacitly admitted as law in the case of all dioceses, having probably been found to have worked well at Norwich. It was not unlike the Rescripts of the Roman emperors, which, primarily addressed to an individual, afterwards became precedents of general law."—James William (*Law Mag. & Rev.*, *Lond.* 1888-9, 4th ser., v. 14, p. 306).

A. D. 1630-1641.—Public Registry.—"When now we look to the United States, we find no difficulty in tracing the history of the institution on this side of the Atlantic. The first settlers of New York coming from Holland, brought it with them. In 1636, the Pilgrims of Plymouth, coming also from Holland, passed a law requiring that for the prevention of frauds, all conveyances, including mortgages and leases, should be recorded. Connecticut followed in 1639, the Puritans of Massachusetts in 1641; Penn., of course, introduced it into Pennsylvania. Subsequently every State of the Union established substantially the same system."—D. Campbell, *The Puritan in Holland, England and America*, v. 2, p. 463.

A. D. 1650 (circa).—Law regarded as a Luxury.—"Of all the reforms needed in England, that of the law was perhaps the most urgent. In the general features of its administration the system had been little changed since the days of the first Edward. As to its details, a mass of abuses had grown up which made the name of justice nothing but a mockery. Twenty thousand cases, it was said, stood for judgment in the Court of Chancery, some of them ten, twenty, thirty years old. In all the courts the judges held their positions at the pleasure of the crown. They and their clerks, the marshals, and the sheriffs exacted exorbitant fees for every service, and on their cause-list gave the preference to the suitor with the longest purse. Legal documents were written in a barbarous jargon which none but the initiated could understand.

The lawyers, for centuries, had exercised their ingenuity in perfecting a system of pleading, the main object of which seems to have been to augment their charges, while burying the merits of a cause under a tangle of technicalities which would secure them from disentanglement. The result was that law had become a luxury for the rich alone."—D. Campbell, *The Puritan in Holland, England and America*, v. 2, pp. 383-384.

A. D. 1657.—Perhaps the first Indebitatus Assumpsit for Money paid to Defendant by Mistake.—"One who received money from another to be applied in a particular way was bound to give an account of his stewardship. If he fulfilled his commission, a plea to that effect would be a valid discharge. If he failed for any reason to apply the money in the mode directed, the auditors would find that the amount received was due to the plaintiff, who would have a judgment for its recovery. If, for example, the money was to be applied in payment of a debt erroneously supposed to be due from the plaintiff to the defendant, . . . the intended application of the money being impossible, the plaintiff would recover the money in Account. Debt would also lie in such cases. . . . By means of a fiction of a promise implied in law 'Indebitatus Assumpsit' because concurrent with Debt, and thus was established the familiar action of Assumpsit for money had and received to recover money paid to the defendant by mistake. *Bonnel v. Fowke* (1657) is, perhaps, the first action of the kind."—J. B. Ames, *Hist. of Assumpsit* (*Harvard Law Rev.*, v. 2, p. 66).

A. D. 1670.—Personal Knowledge of Jurors.—"The jury were still required to come from the neighborhood where the fact they had to try was supposed to have happened; and this explains the origin of the venue (*vicinitum*), which appears in all indictments and declarations at the present day. It points out the place from which the jury must be summoned. . . . And it was said by the Court of Common Pleas in *Bushell's case* (A. D. 1670), that the jury being returned from the vicinage whence the cause of action arises, the law supposes them to have sufficient knowledge to try the matters in issue, 'and so they must, though no evidence were given on either side in court';—and the case is put of an action upon a bond to which the defendant pleads *solvit ad diem*, but offers no proof:—where, the court said 'the jury is directed to find for the plaintiff, unless they know payment was made of their own knowledge, according to the plea.' This is the meaning of the old legal doctrine, which is at first sight somewhat startling, that the evidence in court is not binding evidence to a jury. Therefore acting upon their own knowledge, they were at liberty to give a verdict in direct opposition to the evidence, if they so thought fit."—W. Forsyth, *Trial by Jury*, pp. 134-136.

A. D. 1678.—The Statute of Frauds.—"During Lord Nottingham's period of office, and partly in consequence of his advice, the Statute of Frauds was passed. Its main provisions are directed against the enforcement of verbal contracts, the validity of verbal conveyances of interests in land, the creation of trusts of lands without writing, and the allowance of nuncupative wills. It also made equitable interests in lands subject to the owner's debts to the same extent as legal interests were. The statute carried

into legislative effect principles which had, so far back as the time of Bacon's orders, been approved by the Court of Chancery, and by its operation in the common law courts it must often have obviated the necessity for equitable interference. In modern times it has not infrequently been decried, especially so far as it restricts the verbal proof of contracts, but in estimating its value and operation at the time it became a law it must be remembered that the evidence of the parties to an action at law could not then be received, and the Defendant might have been charged upon the uncorroborated statement of a single witness which he was not allowed to contradict, as Lord Eldon argued many years afterwards, when the action upon the case for fraud was introduced at law. It was therefore a most reasonable precaution, while this unreasonable rule continued, to lay down that the Defendant should be charged only upon writing signed by him."—D. M. Kerly, *Hist. of Equity*, p. 170.

A. D. 1680.—Habeas Corpus and Personal Liberty.—"The language of the great charter is, that no freeman shall be taken or imprisoned but by the lawful judgment of his equals, or by the law of the land. And many subsequent old statutes expressly direct, that no man shall be taken or imprisoned by suggestion or petition to the king or his council, unless it be by legal indictment, or the process of the common law. By the petition of right, 3 Car. 1., it is enacted, that no freeman shall be imprisoned or detained without cause shown. . . . By 16 Car. 1., c. 10, if any person be restrained of his liberty . . . he shall, upon demand of his counsel, have a writ of habeas corpus, to bring his body before the court of king's bench or common pleas, who shall determine whether the cause of his commitment be just. . . . And by 31 Car. 11., c. 2, commonly called the habeas corpus act, the methods of obtaining this writ are so plainly pointed out and enforced, that, . . . no subject of England can be long detained in prison, except in those cases in which the law requires and justifies such detainer. And, . . . it is declared by 1 W. and M. St. 2, c. 2, that excessive bail ought not be required."—W. Blackstone, *Commentaries*, I., 135.—J. Kent, *Commentaries*, pt. 4, lect. 24.—For the text of the Habeas Corpus Act of 1679 see ENGLAND: A. D. 1679 (MAY).

A. D. 1683-1771.—Subsequent Birth of a Child revokes a Will.—"The first case that recognized the rule that the subsequent birth of a child was a revocation of a will of personal property, was decided by the court of delegates, upon appeal, in the reign of Charles II.; and it was grounded upon the law of the civilians [*Overbury v. Overbury*, 2 Show Rep., 253]. . . . The rule was applied in chancery to a devise of real estate, in *Brown v. Thompson* [1 Ld. Raym. 441]; but it was received with doubt by Lord Hardwicke and Lord Northampton. The distinction between a will of real and personal estate could not well be supported; and Lord Mansfield declared, that he saw no ground for a distinction. The great point was finally and solemnly settled, in 1771, by the court of exchequer, in *Christopher v. Christopher* [Dickens's Rep. 445], that marriage and a child, were a revocation of a will of land."—J. Kent, *Commentaries*, pt. 6, lect. 68.

A. D. 1688.—Dividing Line between Old and New Law.—The dividing line between the ancient and the modern English reports may, for the sake of convenient arrangement, be placed at the revolution in the year 1688. "The distinction between the old and new law seems then to be more distinctly marked. The cumbersome and oppressive appendages of the feudal tenures were abolished in the reign of Charles II., and the spirit of modern improvement, . . . began then to be more sensibly felt, and more actively diffused. The appointment of that great and honest lawyer, Lord Holt, to the station of chief justice of the King's Bench, gave a new tone and impulse to the vigour of the common law."—J. Kent, *Commentaries*, pt. 3, lect. 21.

A. D. 1689.—First instance of an Action sustained for Damages for a Breach of Promise to Account.—"It is worthy of observation that while the obligation to account is created by law, yet the privity without which such an obligation cannot exist is, as a rule, created by the parties to the obligation. . . . Such then being the facts from which the law will raise an obligation to account, the next question is, How can such an obligation be enforced, or, what is the remedy upon such an obligation? It is obvious that the only adequate remedy is specific performance, or at least specific reparation. An action on the case to recover damages for a breach of the obligation, even if such an action would lie, would be clearly inadequate, as it would involve the necessity of investigating all the items of the account for the purpose of ascertaining the amount of the damages, and that a jury is not competent to do. In truth, however, such an action will not lie. If, indeed, there be an actual promise to account, either an express or implied in fact, an action will lie for the breach of that promise; but as such a promise is entirely collateral to the obligation to account, and as therefore a recovery on the promise would be no bar to an action on the obligation, it would seem that nominal damages only could be recovered in an action on the promise, or at the most only such special damages as the plaintiff had suffered by the breach of the promise. Besides the first instance in which an action on such a promise was sustained was as late as the time of Lord Holt [*Wilkyns v. Wilkyns*, Carth. 89], while the obligation to account has existed and been recognized from early times."—C. C. Langdell, *A Brief Survey of Equity Jurisdiction* (*Harvard Law Rev.*, v. 2, pp. 250-251).

A. D. 1689-1710.—Lord Holt and the Law of Bailments.—"The most celebrated case which he decided in this department was that of *Coggs v. Bernard*, in which the question arose, 'whether, if a person promises without reward to take care of goods, he is answerable if they are lost or damaged by his negligence?' In a short compass he expounded with admirable clearness and accuracy the whole law of bailment, or the liability of the person to whom goods are delivered for different purposes on behalf of the owner; availing himself of his knowledge of the Roman civil law, of which most English lawyers were as ignorant as of the Institutes of Menu. . . . He then elaborately goes over the six sorts of bailment, showing the exact degree of care required on the part of the bailee in each, with the corresponding degree of negligence which will give a right of action to the

bailor. In the last he shows that, in consideration of the trust, there is an implied promise to take ordinary care; so that, although there be no reward, for a loss arising from gross negligence the bailee is liable to the bailor for the value of the goods. Sir William Jones is contented that his own masterly 'Essay on the Law of Bailment' shall be considered merely as a commentary upon this judgment; and Professor Story, in his 'Commentaries on the Law of Bailments,' represents it as 'a prodigious effort to arrange the principles by which the subject is regulated in a scientific order.'"—Lord Campbell, *Lives of the Chief Justices*, v. 2, pp. 113-114.

A. D. 1703.—Implied Promises recognized.—"The value of the discovery of the implied promise in fact was exemplified . . . in the case of a parol submission to an award. If the arbitrators awarded the payment of a sum of money, the money was recoverable in debt, since an award, after the analogy of a judgment, created a debt. But if the award was for the performance of a collateral act, . . . there was, originally, no mode of compelling compliance with the award, unless the parties expressly promised to abide by the decision of the arbitrators. *Tilford v. French* (1663) is a case in point. So, also, seven years later, 'it was said by Twisden, J., [*Anon.*, 1 Vent. 69], that if two submit to an award, this contains not a reciprocal promise to perform; but there must be an express promise to ground an action upon it.' This doctrine was abandoned by the time of Lord Holt, who, . . . said: 'But the contrary has been held since; for if two men submit to the award of a third person, they do also thereby promise expressly to abide by his determination, for agreeing to refer is a promise in itself.'"—J. B. Ames, *Hist. of Assumpsit* (*Harvard Law Review*, v. 2, p. 62).

A. D. 1706.—Dilatory Pleas.—"Pleas to the jurisdiction, to the disability, or in abatement, were formerly very often used as mere dilatory pleas, without any foundation of truth, and calculated only for delay; but now by statute 4 and 5 Ann., c. 16, no dilatory plea is to be admitted, without affidavit made of the truth thereof, or some probable matter shown to the court to induce them to believe it true."—W. Blackstone, *Commentaries*, bk. 3, p. 302.

A. D. 1710.—Joint Stock Companies: Bubble Act.—"The most complicated, as well as the most modern, branch of the law of artificial persons relates to those which are formed for purposes of trade. They are a natural accompaniment of the extension of commerce. An ordinary partnership lacks the coherence which is required for great undertakings. Its partners may withdraw from it, taking their capital with them, and the 'firm' having as such no legal recognition, a contract made with it could be sued upon, according to the common law of England, only in an action in which the whole list of partners were made plaintiffs or defendants. In order to remedy the first of these inconveniences, partnerships were formed upon the principle of a joint-stock, the capital invested in which must remain at a fixed amount, although the shares into which it is divided may pass from hand to hand. This device did not however obviate the difficulty in suing, nor did it relieve the partners, past and present, from liability for debts in excess of their, past or present, shares in the concern.

In the interest not only of the share-partners, but also of the public with which they had dealings, it was desirable to discourage the formation of such associations; and the formation of joint-stock partnerships, except such as were incorporated by royal charter, was accordingly, for a time, prohibited in England by the 'Bubble Act,' 6 Geo. I. c. 18. An incorporated trading company, in accordance with the ordinary principles regulating artificial persons, consists of a definite amount of capital to which alone creditors of the company can look for the satisfaction of their demands, divided into shares held by a number of individuals who, though they participate in the profits of the concern, in proportion to the number of shares held by each, incur no personal liability in respect of its losses. An artificial person of this sort is now recognized under most systems of law. It can be formed, as a rule, only with the consent of the sovereign power, and is described as a 'societe,' or 'compagnie,' 'anonyme,' an 'Actiengesellschaft,' or 'joint-stock company limited.' A less pure form of such a corporation is a company the shareholders in which incur an unlimited personal liability. There is also a form resembling a partnership 'en commandite,' in which the liability of some of the shareholders is limited by their shares, while that of others is unlimited. Subject to some exceptions, any seven partners in a trading concern may, and partners whose number exceeds twenty must, according to English law, become incorporated by registration under the Companies Acts, with either limited or unlimited liability as they may determine at the time of incorporation."—Thomas Erskine Holland, *Elements of Jurisprudence*, 5th ed., p. 298.

A. D. 1711.—Voluntary Restraint of Trade.—"The judicial construction of Magna Charta is illustrated in the great case of *Mitchell v. Reynolds* (1 P. W., 181), still the leading authority upon the doctrine of voluntary restraint of trade, though decided in 1711, when modern mercantile law was in its infancy. The Court (Chief Justice Parker), distinguishing between voluntary and involuntary restraints of trade, says as to involuntary restraints: 'The first reason why such of these, as are created by grant and charter from the crown and by-laws generally are void, is drawn from the encouragement which the law gives to trade and honest industry, and that they are contrary to the liberty of the subject. Second, another reason is drawn from Magna Charta, which is infringed by these acts of power. That statute says: *Nullus liber homo, etc., disseizetur de libero tenemento, vel libertatibus vel liberis consuetudinibus suis, etc.*; and these words have been always taken to extend to freedom of trade.'"—Frederick N. Judson, 14 *American Bar Ass'n Rept.*, p. 236.

A. D. 1730.—Special Juries.—"The first statutory recognition of their existence occurs so late as in the Act 3 Geo. II., ch. 25. But the principle seems to have been admitted in early times. We find in the year 1450 (29 Hen. VI.) a petition for a special jury. . . . The statute of George II. speaks of special juries as already well known, and it declares and enacts that the courts at Westminster shall, upon motion made by any plaintiff, prosecutor, or defendant, order and appoint a jury to be struck before the proper officer of the court where the cause is depending, 'in such manner as special juries have been and

are usually struck in such courts respectively upon trials at bar had in the said courts.'"—W. Forsyth, *Trial by Jury*, pp. 143-144.

A. D. 1730.—Written Pleadings to be in English.—"There was one great improvement in law proceedings which, while he [Lord King] held the Great Seal, he at last accomplished. From very ancient times the written pleadings, both in criminal and civil suits, were, or rather professed to be, in the Latin tongue, and while the jargon employed would have been very perplexing to a Roman of the Augustan Age, it was wholly unintelligible to the persons whose life, property, and fame were at stake. This absurdity had been corrected in the time of the Commonwealth, but along with many others so corrected, had been reintroduced at the Restoration, and had prevailed during five succeeding reigns. The attention of the public was now attracted to it by a petition from the magistracy of the North Riding of the county of York, representing the evils of the old law language being retained in legal process and proceedings, and praying for the substitution of the native tongue. The bill, by the Chancellor's direction, was introduced in the House of Commons, and it passed there without much difficulty. In the Lords it was fully explained and ably supported by the Lord Chancellor, but it experienced considerable opposition. . . . Amidst heavy forebodings of future mischief the bill passed, and mankind are now astonished that so obvious a reform should have been so long deferred."—Lord Campbell, *Lives of the Chancellors*, v. 4, p. 504.

A. D. 1739-1744.—Oath according to one's Religion.—"Lord Hardwick established the rule that persons, though not Christians, if they believe in a divinity, may be sworn according to the ceremonies of their religion, and that the evidence given by them so sworn is admissible in courts of justice, as if, being Christians, they had been sworn upon the Evangelists. This subject first came before him in *Ramkissenseat v. Barker*, where, in a suit for an account against the representatives of an East India Governor, the plea being overruled that the plaintiff was an alien infidel, a cross bill was filed, and an objection being made that he could only be sworn in the usual form, a motion was made that the words in the commission, 'on the holy Evangelists,' should be omitted, and that the commissioners should be directed to administer an oath to him in the manner most binding on his conscience. . . . The point was afterwards finally settled in the great case of *Omychund v. Barker*, where a similar commission to examine witnesses having issued, the Commissioners certified 'That they had sworn the witnesses examined under it in the presence of Brahmin or priest of the Gentoo religion, and that each witness touched the hand of the Brahmin,—this being the most solemn form in which oaths are administered to witnesses professing the Gentoo religion.' Objection was made that the deposition so taken could not be read in evidence; and on account of the magnitude of the question, the Lord Chancellor called in the assistance of the three chiefs of the common law Courts.—After a very long, learned, and ingenious argument, which may be perused with pleasure, they concurred in the opinion that the depositions were admissible."—Lord Campbell, *Lives of the Chancellors*, v. 5, pp. 69-70.

A. D. 1750.—Dale v. Hall, 1 Wils., 281, understood to be the first reported case of an action of special assumpsit sustained against a common carrier, on his implied contract.—“Assumpsit, . . . was allowed, in the time of Charles I., in competition with Detinue and Case against a bailee for custody. At a later period Lord Holt suggested that one might ‘turn an action against a common carrier into a special assumpsit (which the law implies) in respect of his hire.’ Dale v. Hall (1750) is understood to have been the first reported case in which that suggestion was followed.”—J. B. Ames, *Hist. of Assumpsit* (*Harvard Law Rev.*, v. 2, p. 63).

A. D. 1750-1800.—Demurrer to Evidence.—“Near the end of the last century demurrers upon evidence were rendered useless in England, by the decision in the case of *Gibson v. Hunter* (carrying down with it another great case, that of *Lickbarrow v. Mason*, which, like the former, had come up to the Lords upon this sort of demurrer), that the party demurring must specify upon the record the facts which he admits. That the rule was a new one is fairly plain from the case of *Cocksedge v. Fanshawe*, ten years earlier. It was not always followed in this country, but the fact that it was really a novelty was sometimes not understood.”—J. B. Thayer, *Law and Fact in Jury Trials* (*Harvard Law Rev.*, v. 4, p. 147).

A. D. 1756-1788.—Lord Mansfield and Commercial Law.—“In the reign of Geo. II., England had grown into the greatest manufacturing and commercial country in the world, while her jurisprudence had by no means been expanded or developed in the same proportion. . . . Hence, when questions necessarily arose respecting the buying and selling of goods,—respecting the affreightment of ships,—respecting marine insurances,—and respecting bills of exchange and promissory notes, no one knew how they were to be determined. . . . Mercantile questions were so ignorantly treated when they came into Westminster Hall, that they were usually settled by private arbitration among the merchants themselves. If an action turning upon a mercantile question was brought in a court of law, the judge submitted it to the jury, who determined it according to their own notions of what was fair, and no general rule was laid down which could afterwards be referred to for the purpose of settling similar disputes. . . . When he [Lord Mansfield] had ceased to preside in the Court of King’s Bench, and had retired to enjoy the respect of his labors, he read the following just eulogy bestowed upon them by Mr. Justice Buller, in giving judgment in the important case of *Lickbarrow v. Mason*, respecting the effect of the indorsement of a bill of lading:—‘Within these thirty years the commercial law of this country has taken a very different turn from what it did before. Lord Hardwicke himself was proceeding with great caution, not establishing any general principle, but decreeing on all the circumstances put together. Before that period we find that, in courts of law, all the evidence in mercantile cases was thrown together; they were left generally to a jury; and they produced no general principle. From that time, we all know, the great study has been to find some certain general principle, which shall be known to all mankind, not only to rule the particular

case then under consideration, but to serve as a guide for the future. Most of us have heard these principles stated, reasoned upon, enlarged, and explained, till we have been lost in admiration at the strength and stretch of the understanding. And I should be very sorry to find myself under a necessity of differing from any case upon this subject which has been decided by Lord Mansfield, who may be truly said to be the founder of the commercial law of this country.’ . . . With regard to bills of exchange and promissory notes, Lord Mansfield first promulgated many rules that now appear to us to be as certain as those which guide the planets in their orbits. For example, it was till then uncertain whether the second indorser of a bill of exchange could sue his immediate indorser without having previously demanded payment from the drawer. . . . He goes on to explain [in *Heylyn v. Adamson*, 2 Burr., 669], . . . that the maker of a promissory note is in the same situation as the acceptor of a bill of exchange, and that in suing the indorser of the note it is necessary to allege and to prove a demand on the maker. . . . Lord Mansfield had likewise to determine that the indorser of a bill of exchange is discharged if he receives no notice of there having been a refusal to accept by the drawee (*Blesard v. Herst*, 6 Burr., 2670); and that reasonable time for giving notice of the dishonor of a bill or note is to be determined by the Court as matter of law, and is not to be left to the jury as matter of fact, they being governed by the circumstances of each particular case. (*Tindal v. Brown*, 1 Term. Rep., 167.) It seems strange to us how the world could go on when such questions of hourly occurrence, were unsettled. . . . There is another contract of infinite importance to a maritime people. . . . I mean that between ship-owners and merchants for the hiring of ships and carriage of goods. . . . Till his time, the rights and liabilities of these parties had remained undecided upon the contingency, not unlikely to arise, of the ship being wrecked during the voyage, and the goods being saved and delivered to the consignee at an intermediate port. Lord Mansfield settled that freight is due pro rata itineris—in proportion to the part of the voyage performed. . . . Lord Mansfield’s familiarity with the general principles of ethics, . . . availed him on all occasions when he had to determine on the proper construction and just fulfilment of contracts. The question having arisen, for the first time, whether the seller of goods by auction, with the declared condition that they shall be sold to ‘the highest bidder,’ may employ a ‘puffer,’—an agent to raise the price by bidding,—he thus expressed himself: [*Bexwell v. Christie*, Cowp., 395] ‘. . . The basis of all dealings ought to be good faith; so more especially in these transactions, where the public are brought together upon a confidence that the articles set up to sale will be disposed of to the highest real bidder. That can never be the case if the owner may secretly enhance the price by a person employed for that purpose. . . . I cannot listen to the argument that it is a common practice . . . ; the owner violates his contract with the public if, by himself or his agent, he bids upon his goods, and no subsequent bidder is bound to take the goods at the price at which they are knocked down to him.’”—Lord Campbell, *Lives of the Chief Justices*, v. 2, pp. 308-314.

A. D. 1760. — Judicial Independence. — “A glance into the pages of the Judges of England, by Foss, will show with what ruthless vigour the Stuarts exercised their prerogative of dismissing Judges whose decisions were displeasing to the court. Even after the Revolution, the prerogative of dismissal, which was supposed to keep the Judges dependent on the Crown, was jealously defended. When in 1692 a Bill passed both Houses of Parliament, establishing the independence of Judges by law, and confirming their salaries, William III. withheld his Royal assent. Bishop Burnet says, with reference to this exercise of the Veto, that it was represented to the King by some of the Judges themselves, that it was not fit that they should be out of all dependence on the Court. When the Act of Settlement secured that no Judge should be dismissed from office, except in consequence of a conviction for some offence, or the address of both Houses of Parliament, the Royal jealousy of the measure is seen by the promise under which that arrangement was not to take effect till the deaths of William III. and of Anne, and the failure of their issue respectively, in other words, till the accession of the House of Hanover. It was not till the reign of George III. that the Commissions of the Judges ceased to be void on the demise of the Crown.” — J. G. S. MacNeill, *Law Mag. and Rev. 4th series*, v. 16 (1890-91), p. 202.

A. D. 1760. — Stolen Bank Notes the Property of a Bona Fide Purchaser. — “The law of bills of exchange owes much of its scientific and liberal character to the wisdom of the great jurist, Lord Mansfield. Sixteen years before the American Revolution, he held that bank notes, though stolen, become the property of the person to whom they are bona fide delivered for value without knowledge of the larceny. This principle is later affirmed again and again as necessary to the preservation of the circulation of all the paper in the country, and with it all its commerce. Later there was a departure from this principle in the noted English case of *Gill v. Cubitt*, in which it was held that if the holder for value took it under circumstances which ought to have excited the suspicion of a prudent and careful man, he could not recover. This case annoyed courts and innocent holders for years, until it was sat upon, kicked, cuffed, and overruled, and the old doctrine of 1760 re-established, which is now the undisputed and settled law of England and this country.” — Wm. A. McClean, *Negotiable Paper (The Green Bag)*, v. 5, p. 86).

A. D. 1768. — Only one Business Corporation Chartered in this Country before the Declaration of Independence. — “Pennsylvania is entitled to the honor of having chartered the first business corporation in this country, ‘The Philadelphia Contributionship for Insuring Houses from Loss by Fire.’ It was a mutual insurance company, first organized in 1752, but not chartered until 1768. It was the only business corporation whose charter antedated the Declaration of Independence. The next in order of time were: ‘The Bank of North America,’ chartered by Congress in 1781 and, the original charter having been repealed in 1785, by Pennsylvania in 1787; ‘The Massachusetts Bank,’ chartered in 1784; ‘The Proprietors of Charles River Bridge,’ in 1785; ‘The Mutual Assurance

Company’ (Philadelphia), in 1786; ‘The Associated Manufacturing Iron Co.’ (N. Y.), in 1786. These were the only joint-stock business corporations chartered in America before 1787. After that time the number rapidly increased, especially in Massachusetts. Before the close of the century there were created in that State about fifty such bodies, at least half of them turn-pike and bridge companies. In the remaining States combined, there were perhaps as many more. There was no great variety in the purposes for which these early companies were formed. Insurance, banking, turn-pike roads, toll-bridges, canals, and, to a limited extent, manufacturing were the enterprises which they carried on.” — S. Williston, *Hist. of the Law of Business Corporations before 1800 (Harvard Law Review)*, v. 2, pp. 165-166).

A. D. 1776. — Ultimate property in land. — “When, by the Revolution, the Colony of New York became separated from the Crown of Great Britain, and a republican government was formed, The People succeeded the King in the ownership of all lands within the State which had not already been granted away, and they became from thenceforth the source of all private titles.” — Judge Comstock, *People v. Rector, etc., of Trinity Church*, 22 N. Y., 44-46. — “It is held that only such parts of the common law as, with the acts of the colony in force on April 19, 1775, formed part of the law of the Colony on that day, were adopted by the State; and only such parts of the common and statute law of England were brought by the colonists with them as suited their condition, or were applicable to their situation. Such general laws thereupon became the laws of the Colony until altered by common consent, or by legislative enactment. The principles and rules of the common law as applicable to this country are held subject to modification and change, according to the circumstances and condition of the people and government here. . . . By the English common law, the King was the paramount proprietor and source of all title to all land within his dominion, and it was considered to be held mediately or immediately of him. After the independence of the United States, the title to land formerly possessed by the English Crown in this country passed to the People of the different States where the land lay, by virtue of the change of nationality and of the treaties made. The allegiance formerly due, also, from the people of this country to Great Britain was transferred, by the Revolution, to the governments of the States.” — James Gerard, *Titles to Real Estate* (3rd ed.), pp. 26 and 5. — “Hence the rule naturally follows, that no person can, by any possible arrangement, become invested with the absolute ownership of land. But as that ownership must be vested somewhere, or great confusion, if not disturbance, might result, it has, therefore, become an accepted rule of public law that the absolute and ultimate right of property shall be regarded as vested in the sovereign or corporate power of the State where the land lies. This corporate power has been naturally and appropriately selected for that purpose, because it is the only one which is certain to survive the generations of men as they pass away. Wherever that sovereign power is represented by an individual, as in England, there the absolute right of property to all land in the kingdom is vested in that individual.

Whoever succeeds to the sovereignty, succeeds to that right of property and holds it in trust for the nation. In this country, where the only sovereignty recognized in regard to real property, is represented by the State in its corporate capacity, that absolute right of property is vested in the State."—Anson Bingham, *Law of Real Property*, p. 3.

A. D. 1778.—First Instance of Assumpsit upon a Vendor's Warranty.—"A vendor who gives a false warranty may be charged to-day, of course, in contract; but the conception of such a warranty, as a contract is quite modern. *Stuart v. Wilkens* [3 Doug., 18], decided in 1778, is said to have been the first instance of an action of assumpsit upon a vendor's warranty."—J. B. Ames, *Hist. of Assumpsit (Harvard Law Rev., v. 2, p. 8)*.

A. D. 1783.—Lord Mansfield laid foundation of Law of Trade-Marks.—"The symbolism of commerce, conventionally called 'trade-marks,' is, according to Mr. Browne, in his excellent work on trade-marks, as old as commerce itself. The Egyptians, the Chinese, the Babylonians, the Greeks, the Romans, all used various marks or signs to distinguish their goods and handiwork. The right to protection in such marks has come to be recognized throughout the civilized world. It is, however, during the last seventy or eighty years that the present system of jurisprudence has been built up. In 1742 Lord Hardwick refused an injunction to restrain the use of the Great Mogul stamp on cards. In 1783 Lord Mansfield laid the foundation of the law of trade-marks as at present developed, and in 1816, in the case of *Day v. Day*, the defendant was enjoined from infringing the plaintiff's blacking label. From that time to the present day there have arisen a multitude of cases, and the theory of the law of trade-marks proper may be considered as pretty clearly expounded. In 1875 the Trade-marks Registration Act provided for the registration of trade-marks, and defined what could in future properly be a trade-mark. In this country the Act of 1870, corrected by the Act of 1881, provided for the registration of trade-marks. The underlying principle of the law of trade-marks is that of preventing one man from acquiring the reputation of another by fraudulent means, and of preventing fraud upon the public; in other words, the application of the broad principles of equity."—Grafton D. Cushing, *Cases Analogous to Trade-marks (Harvard Law Rev., v. 4, p. 321)*.

A. D. 1790.—Stoppage in Transitu, and Rights of Third Person under a Bill of Lading.—"Lord Loughborough's most elaborate common law judgment was in the case of *Lichbarrow v. Mason*, when he presided in the court of Exchequer Chamber, on a writ of error from the Court of King's Bench. The question was one of infinite importance to commerce—"Whether the right of the unpaid seller of goods to stop them while they are on their way to a purchaser who has become insolvent, is divested by an intermediate sale to a third person, through the indorsement of the bill of lading, for a valuable consideration?" He concluded by saying:—"From a review of all the cases it does not appear that there has ever been a decision against the legal right of the consignor to stop the goods in transitu before the case which we have here to consider. The rule which we are now to lay

down will not disturb but settle the notions of the commercial port of this country on a point of very great importance, as it regards the security and good faith of their transactions. For these reasons we think the judgment of the Court of King's Bench ought to be reversed.' But a writ of error being brought in the House of Lords, this reversal was reversed, and the right of the intermediate purchaser as against the original seller, has ever since been established."—Lord Campbell, *Lives of the Chancellors*, v. 6, pp. 138-139.

A. D. 1792.—Best-Evidence rule.—"In *Grant v. Gould*, 2 H. Bl. p. 104 (1792), Lord Loughborough said: 'That all common law courts ought to proceed upon the general rule, namely, the best evidence that the nature of the case will admit, I perfectly agree.' But by this time it was becoming obvious that this 'general rule' was misapplied and over-emphasized. Blackstone, indeed, repeating Gilbert, had said in 1770, in the first editions of his Commentaries (III. 368) as it was said in all the later ones: 'The one general rule that runs through all the doctrine of trials is this, that the best evidence the nature of the case will admit of shall always be required, if possible to be had; but, if not possible, then the best evidence that can be had shall be allowed. For if it be found that there is any better evidence existing than is produced, the very not producing it is a presumption that it would have detected some falsehood that at present is concealed.' But in 1794, the acute and learned Christian, in editing the twelfth edition, pointed out the difficulties of the situation: 'No rule of law,' he said, 'is more frequently cited, and more generally misconceived, than this. It is certainly true when rightly understood; but it is very limited in its extent and application. It signifies nothing more than that, if the best legal evidence cannot possibly be produced, the next best legal evidence shall be admitted.'"—J. B. Thayer, *Select Cases on Evidence*, p. 732.

A. D. 1794.—First Trial by Jury in U. S. Supreme Court.—"In the first trial by jury at the bar of the Supreme Court of the United States, in 1794, Chief-Justice Jay, after remarking to the jury that fact was for the jury and law for the court, went on to say: 'You have, nevertheless, a right to take upon yourselves to judge of both, and to determine the law as well as the fact in controversy.' But I am disposed to think that the common-law power of the jury in criminal cases does not indicate any right on their part; it is rather one of those manifold illogical and yet rational results, which the good sense of the English people brought about, in all parts of their public affairs, by way of easing up the rigor of a strict application of rules."—J. B. Thayer, *Law and Fact in Jury Trials (Harvard Law Review, v. 4, p. 171)*.

A. D. 1813-1843.—Insolvents placed under Jurisdiction of a Court, and able to claim Protection by a Surrender of Goods.—"It was not until 1813 that insolvents were placed under the jurisdiction of a court, and entitled to seek their discharge on rendering a true account of all their debts and property. A distinction was at length recognized between poverty and crime. This great remedial law restored liberty to crowds of wretched debtors. In the next thirteen years

upwards of 50,000 were set free. Thirty years later, its beneficent principles were further extended, when debtors were not only released from confinement, but able to claim protection to their liberty, on giving up all their goods."—T. E. May, *Constitutional Hist. of England* (Widdellton's ed.), v. 2, p. 271.—See, also, DEBT, LAWS CONCERNING.

A. D. 1819.—The Dartmouth College Case.—"The framers of the Constitution of the United States, moved chiefly by the mischiefs created by the preceding legislation of the States, which had made serious encroachments on the rights of property, inserted a clause in that instrument which declared that 'no State shall pass any ex post-facto law, or law impairing the obligation of contracts.' The first branch of this clause had always been understood to relate to criminal legislation, the second to legislation affecting civil rights. But, before the case of *Dartmouth College v. Woodward* occurred, there had been no judicial decisions respecting the meaning and scope of the restraint in regard to contracts. . . . The State court of New Hampshire, in deciding this case, had assumed that the college was a public corporation, and on that basis had rested their judgment; which was, that between the State and its public corporations there is no contract which the State cannot regulate, alter, or annul at pleasure. Mr. Webster had to overthrow this fundamental position. If he could show that this college was a private eleemosynary corporation, and that the grant of the right to be a corporation of this nature is a contract between the sovereign power and those who devote their funds to the charity, and take the incorporation for its better management, he could bring the legislative interference within the prohibition of the Federal Constitution. . . . Its important positions, . . . were these: 1. That Dr. Wheelock was the founder of this college, and as such entitled by law to be visitor, and that he had assigned all the visitatorial powers to the trustees. 2. That the charter created a private and not a public corporation, to administer a charity, in the administration of which the trustees had a property, which the law recognizes as such. 3. That the grant of such a charter is a contract between the sovereign power and its successors and those to whom it is granted and their successors. 4. That the legislation which took away from the trustees the right to exercise the powers of superintendence, visitation, and government, and transferred them to another set of trustees, impaired the obligation of that contract. . . . On the conclusion of the argument, the Chief Justice intimated that a decision was not to be expected until the next term. It was made in February, 1819, fully confirming the grounds on which Mr. Webster had placed the cause. From this decision, the principle in our constitutional jurisprudence, which regards a charter of a private corporation as a contract, and places it under the protection of the Constitution of the United States, takes its date. To Mr. Webster belongs the honor of having produced its judicial establishment."—G. T. Curtis, *Life of Daniel Webster*, v. 1, p. 165-169 (5th ed.).

A. D. 1823.—Indian Right of Occupancy.—"The first case of importance that came before the court of last resort with regard to the Indian question had to do with their title to land.

This was the case of *Johnson v. McIntosh*, 8 Wheaton, 543. In this case, Chief Justice Marshall delivered the opinion of the court and held that discovery gave title to the country by whose subjects or by whose authority it was made, as against all persons but the Indians as occupants; that this title gave a power to grant the soil and to convey a title to the grantees, subject only to the Indian right of occupancy; and that the Indians could grant no title to the lands occupied by them, their right being simply that of occupancy and not of ownership. The Chief Justice says: 'It has never been doubted that either the United States or the several States had a clear title to all the lands within the boundary lines described in the treaty (of peace between England and United States) subject only to the Indians' right of occupancy, and that the exclusive power to extinguish that right was vested in that government which might constitutionally exercise it. . . . The United States, then, have unequivocally acceded to that great and broad rule by which its civilized inhabitants now hold this country. They hold and assert in themselves the title by which it was acquired. They maintain, as all others have maintained, that discovery gave an exclusive right to extinguish the Indian title of occupancy, either by purchase or by conquest; and gave also a right to such a degree of sovereignty as the circumstances of the people would allow them to exercise. The power now possessed by the government of the United States to grant lands resided, while we were colonies, in the crown or its grantees. The validity of the title given by either has never been questioned in our courts. It has been exercised uniformly over territory in possession of the Indians. The existence of this power must negative the existence of any right which may conflict with and control it. An absolute title to lands cannot exist, at the same time, in different persons, or in different governments. An absolute must be an exclusive title, or at least a title which excludes all others not compatible with it. All our institutions recognize the absolute title of the crown, subject only to the Indian right of occupancy, and recognize the absolute title of the crown to extinguish that right. This is incompatible with an absolute and complete title in the Indians.'"—William B. Hornblower, 14 *American Bar Ass'n Rept.* 264-265.

A. D. 1826.—Jurors from the Body of the County.—"In the time of Fortescue, who was lord chancellor in the reign of Henry VI. [1422-61], with the exception of the requirement of personal knowledge in the jurors derived from near neighborhood of residence, the jury system had become in all its essential functions similar to what now exists. . . . The jury were still required to come from the neighborhood where the fact they had to try was supposed to have happened; and this explains the origin of the venire (vicinetum), which appears in all indictments and declarations at the present day. It points out the place from which the jury must be summoned. . . . Now, by 6 George IV., ch. 50, the jurors need only be good and lawful men of the body of the county."—W. Forsyth, *Trial by Jury*, ch. 7, sect. 3.

A. D. 1828.—Lord Tenterden's Act.—"Be it therefore enacted . . . That in Actions of Debt or upon the Case grounded upon any Simple

Contract or Acknowledgement or Promise by Words only shall be deemed sufficient Evidence of a new or continuing Contract, . . . unless such Acknowledgement or Promise shall be made or contained by or in some Writing to be signed by the Party chargeable thereby."—*Statutes at Large*, v. 68, 9 George IV., c. 14.

A. D. 1833.—Wager of Law abolished, and Effect upon Detinue.—"This form of action (detinue) was also formerly subject (as were some other of our legal remedies), to the incident of 'wager of law' ('vadiatio legis'),—a proceeding which consisted in the defendant's discharging himself from the claim on his own oath, bringing with him at the same time into court eleven of his neighbors, to swear that they believed his denial to be true. This relic of a very ancient and general institution, which we find established not only among the Saxons and Normans, but among almost all the northern nations that broke in upon the Roman empire, continued to subsist among us even till the last reign, when it was at length abolished by 3 and 4 Will. IV. c. 42, s. 13: and as the wager of law used to expose plaintiffs in detinue to great disadvantage, it had the effect of throwing that action almost entirely out of use, and introducing in its stead the action of trover and conversion."—Stephens, *Commentaries*, v. 3, pp. 442–443 (8th ed.).

A. D. 1834.—Real Actions abolished.—"The statutes of 32 H. VIII., c. 2, and 21 Jac. I., c. 16 (so far as the latter applied to actions for the recovery of land) were superseded by 3 & 4 Wm. IV., c. 27. The latter statute abolished the ancient real actions, made ejectment (with few exceptions) the sole remedy for the recovery of land, and, for the first time, limited directly the period within which an ejectment might be brought. It also changed the meaning of 'right of entry,' making it signify simply the right of an owner to the possession of land of which another person has the actual possession, whether the owner's estate is divested or not. In a word, it made a right of entry and a right to maintain ejectment synonymous terms, and provided that whenever the one ceased the other should cease also; i. e., it provided that whenever the statute began to run against the one right, it should begin to run against the other also, and that, when it had run twenty years without interruption, both rights should cease; and it also provided that the statute should begin to run against each right the moment that the right began to exist, i. e., the moment that the actual possession and the right of possession became separated. The statute, therefore, not only ignored the fact that ejectment (notwithstanding its origin) is in substance purely in rem (the damages recovered being only nominal), and assumed that it was, on the contrary, in substance purely in personam, i. e., founded upon tort, but it also assumed that every actual possession of land, without a right of possession, is a tort."—C. C. Langdell, *Summary of Equity Pleading*, pp. 144–145.

A. D. 1836.—Exemption Laws.—"Our State legislatures commenced years ago to pass laws exempting from execution necessary household goods and personal apparel, the horses and implements of the farmer, the tools and instruments of the artisan, etc. Gradually the beneficent policy of such laws has been extended. In 1828, Mr. Benton warmly advocated in the Senate of the United States the policy of a national home-

stead law. The Republic of Texas passed the first Homestead Act, in 1836. It was the great gift of the infant Republic of Texas to the world. In 1849, Vermont followed; and this policy has since been adopted in all but eight States of the Union. By these laws a homestead (under various restrictions as to value) for the shelter and protection of the family is now exempt from execution or judicial sale for debt, unless both the husband and the wife shall expressly join in mortgaging it or otherwise expressly subjecting it to the claims of creditors."—J. F. Dillon, *Laws and Jurisprudence of England and America*, p. 360.

A. D. 1837.—Employer's liability.—"No legal principle, with a growth of less than half a century, has become more firmly fixed in the common law of to-day, than the rule that an employer, if himself without fault, is not liable to an employee injured through the negligence of a fellow-employee engaged in the same general employment. This exception to the well known doctrine of 'respondeat superior,' although sometimes considered an old one, was before the courts for the first time in 1837, in the celebrated case of *Priestly v. Fowler*, 3 M. & W. 1, which it is said, has changed the current of decisions more radically than any other reported case. . . . The American law, though in harmony with the English, seems to have had an origin of its own. In 1841 *Murray v. The South Carolina Railroad Company*, 1 Mc. & M. 385, decided that a railroad company was not liable to one servant injured through the negligence of another servant in the same employ. Although this decision came a few years after *Priestly v. Fowler*, the latter case was cited by neither counsel nor court. It is probable, therefore, that the American Court arrived at its conclusion entirely independent of the earlier English case,—a fact often lost sight of by those who in criticising the rule, assert that it all sprang from an ill-considered opinion by Lord Abinger in *Priestly v. Fowler*. The leading American case, however, is *Farwell v. Boston and Worcester Railroad Company*, 4 Met. 49, which, following the South Carolina case, settled the rule in the United States. It has been followed in nearly every jurisdiction, both State and Federal."—Marland C. Hobbs, *Statutory Changes in Employer's Liability* (*Harvard Law Rev.*, v. 2, pp. 212–213).

A. D. 1838.—Arrests on Mesne Process for Debt abolished, and Debtor's Lands, for first time, taken in Satisfaction of Debt.—

"The law of debtor and creditor, until a comparatively recent period, was a scandal to a civilized country. For the smallest claim, any man was liable to be arrested on mesne process, before legal proof of the debt. . . . Many of these arrests were wanton and vexatious; and writs were issued with a facility and looseness which placed the liberty of every man—suddenly and without notice—at the mercy of any one who claimed payment of a debt. A debtor, however honest and solvent, was liable to arrest. The demand might even be false and fraudulent; but the pretended creditor, on making oath of the debt, was armed with this terrible process of the law. The wretched defendant might lie in prison for several months before his cause was heard; when, even if the action was discontinued or the debt disproved, he could not obtain his discharge without further proceedings, often too

costly for a poor debtor, already deprived of his livelihood by imprisonment. No longer even a debtor,—he could not shake off his bonds. . . . The total abolition of arrests on mesne process was frequently advocated, but it was not until 1838 that it was at length accomplished. Provision was made for securing absconding debtors; but the old process for the recovery of a debt in ordinary cases, which had wrought so many acts of oppression, was abolished. While this vindictive remedy was denied, the debtor's lands were, for the first time, allowed to be taken in satisfaction of a debt; and extended facilities were afterwards afforded for the recovery of small claims, by the establishment of county courts.—T. E. May, *Constitutional Hist. of England* (Widdleton's ed.), v. 2, pp. 267-268.—See, also, DEBT: LAWS CONCERNING.

A. D. 1839-1848.—Emancipation of Women.—"According to the old English theory, a woman was a chattel, all of whose property belonged to her husband. He could beat her as he might a beast of burden, and, provided he was not guilty of what would be cruelty to animals, the law gave no redress. In the emancipation of women Mississippi led off, in 1839, New York following with its Married Women's Act of 1848, which has been since so enlarged and extended, and so generally adopted by the other states, that, for all purposes of business, ownership of property, and claim to her individual earnings, a married woman is to-day, in America, as independent as a man."—D. Campbell, *The Puritan in Holland, England and America*, v. 1, p. 71.

A. D. 1842.—One who takes Commercial Paper as Collateral is a Holder for Value.—"Take the subject of the transfer of such paper as collateral security for, or even in the payment of, a pre-existing indebtedness. We find some of the courts holding that one who takes such paper as collateral security for such a debt is a holder for value; others, that he is not, unless he extends the time for the payment of the secured debt or surrenders something of value, gives some new consideration; while still others hold that one so receiving such paper cannot be a holder for value; and some few hold that even receiving the note in payment and extinguishment of a pre-existing debt does not constitute one a holder for value. The question, as is known to all lawyers, was first presented to the Supreme Court of the United States in *Swift vs. Tyson* (16 Peters, 1). There, however, the note had been taken in payment of the debt. It was argued in that case that the highest court in New York had decided that one so taking a note was not a holder for value, and it was insisted in argument that the contract, being made in New York, was to be governed by its law; but the court, through Justice Story—Justice Catron alone dissenting—distinctly and emphatically repudiated the doctrine that the Federal court was to be governed on such questions by the decisions of the courts of the State where the contract was made, and held the holder a holder for value."—Henry C. Tompkins, 13 *American Bar Ass'n Rep.*, p. 255.

A. D. 1845.—Interest of Disseisee transferable.—"It was not until 1845 that by statute the interest of the disseisee of land became transferable. Similar statutes have been enacted in many of our States. In a few jurisdictions the same results have been obtained by judicial leg-

islation. But in Alabama, Connecticut, Dakota, Florida, Kentucky, Massachusetts, New York, North Carolina, Rhode Island and Tennessee, and presumably in Maryland and New Jersey, it is still the law that the grantee of a disseisee cannot maintain an action in his own name for the recovery of the land."—J. B. Ames, *The Disseisin of Chattels* (*Harvard Law Rev.*, v. 3, p. 25).

A. D. 1846.—Ultra vires.—"When railway companies were first created with Parliamentary powers of a kind never before entrusted to similar bodies, it soon became necessary to determine whether, when once called into existence, they were to be held capable of exercising, as nearly as possible, all the powers of a natural person, unless expressly prohibited from doing so, or whether their acts must be strictly limited to the furtherance of the purpose for which they had been incorporated. The question was first raised in 1846, with reference to the right of a railway company to subsidise a harbour company, and Lord Langdale, in deciding against such a right, laid down the law in the following terms:—'Companies of this kind, possessing most extensive powers, have so recently been introduced into this country that neither the legislature nor the courts of law have yet been able to understand all the different lights in which their transactions ought properly to be viewed. . . . To look upon a railway company in the light of a common partnership, and as subject to no greater vigilance than common partnerships are, would, I think, be greatly to mistake the functions which they perform and the powers which they exercise of interference not only with the public but with the private rights of all individuals in this realm. . . . I am clearly of opinion that the powers which are given by an Act of Parliament, like that now in question, extend no further than is expressly stated in the Act, or is necessarily and properly required for carrying into effect the undertaking and works which the Act has expressly sanctioned.' [Citing *Coleman v. Eastern Counties R. Co.*, 10 Beav., 13.] This view, though it has sometimes been criticised, seems now to be settled law. In a recent case in the House of Lords, the permission which the Legislature gives to the promoters of a company was paraphrased as follows:—'You may meet together and form yourselves into a company, but in doing that you must tell all who may be disposed to deal with you the objects for which you have been associated. Those who are dealing with you will trust to that memorandum of association, and they will see that you have the power of carrying on business in such a manner as it specifies. You must state the objects for which you are associated, so that the persons dealing with you will know that they are dealing with persons who can only devote their means to a given class of objects.' [Citing *Riche v. Ashbury Carriage Co.*, L.R., 7 E. & L., App. 684.] An act of a corporation in excess of its powers with reference to third persons is technically said to be ultra vires [perhaps first in *South Yorkshire R. Co. v. Great Northern R. Co.*, 9 exch. 84 (1853)]; and is void even if unanimously agreed to by all the incorporators. The same term is also, but less properly, applied to a resolution of a majority of the members of a corporation which being beyond the powers of the corporation will not bind a dissentient minor-

ity of its members."—Thomas Erskine Holland, *Elements of Jurisprudence*, 5th ed., p. 301.—(*Compare Art. by Seymour D. Thompson in Am. Law Rev., May—June, 1894.*)

A. D. 1848-1883.—The New York Codes and their Adoption in other Communities.—"The 'New York Mail' gives the following information as to the extent to which our New York Codes have been adopted in other communities. In most instances the codes have been adopted substantially in detail, and in others in principle: 'The first New York Code, the Code of Civil Procedure, went into effect on the 1st of July, 1848. It was adopted in Missouri in 1849; in California in 1851; in Kentucky in 1851; in Ohio in 1853; in the four provinces of India between 1853 and 1856; in Iowa in 1855; in Wisconsin in 1856; in Kansas in 1859; in Nevada in 1861; in Dakota in 1862; in Oregon in 1862; in Idaho in 1864; in Montana in 1864; in Minnesota in 1866; in Nebraska in 1866; in Arizona in 1866; in Arkansas in 1868; in North Carolina in 1868; in Wyoming in 1869; in Washington Territory in 1869; in South Carolina in 1870; in Utah in 1870; in Connecticut in 1879; in Indiana in 1881. In England and Ireland by the Judicature Act of 1873; this Judicature Act has been followed in many of the British Colonies; in the Consular Courts of Japan, in Shanghai, in Hong Kong and Singapore, between 1870 and 1874. The Code of Criminal Procedure, though not enacted in New York till 1881, was adopted in California in 1850; in India at the same time with the Code of Civil Procedure; in Kentucky in 1854; in Iowa in 1858; in Kansas in 1859; in Nevada in 1861; in Dakota in 1862; in Oregon in 1864; in Idaho in 1864; in Montana in 1864; in Washington Territory in 1869; in Wyoming in 1869; in Arkansas in 1874; in Utah in 1876; in Arizona in 1877; in Wisconsin in 1878; in Nebraska in 1881; in Indiana in 1881; in Minnesota in 1883. The Penal Code, though not enacted in New York until 1882, was adopted in Dakota in 1865 and in California in 1872. The Civil Code, not yet enacted in New York, though twice passed by the Legislature, was adopted in Dakota in 1866 and in California in 1872, and has been much used in the framing of substantive laws for India. The Political Code, reported for New York but not yet considered, was adopted in California in 1872. Thus it will be seen that the State of New York has given laws to the world to an extent and degree unknown since the Roman Codes followed Roman conquests.'"—*The Albany Law Journal*, v. 39, p. 261.

A. D. 1848.—Simplification of Procedure.—"In civil matters, the greatest reform of modern times has been the simplification of procedure in the courts, and the virtual amalgamation of law and equity. Here again America took the lead, through the adoption by New York, in 1848, of a Code of Practice, which has been followed by most of the other states of the Union, and in its main features has lately been taken up by England."—D. Campbell, *The Puritan in Holland, England and America*, v. 1, p. 70.

A. D. 1848.—Reform in the Law of Evidence.—"The earliest act of this kind in this country was passed by the Legislature of Connecticut in 1848. It is very broad and sweeping in its provisions. It is in these words: 'No person shall be disqualified as a witness in any suit or proceeding at law, or in equity, by reason of

his interest in the event of the same, as a party or otherwise, or by reason of his conviction of a crime; but such interest or conviction may be shown for the purpose of affecting his credit.' (Revised Statutes of Connecticut, 1849, p. 86, § 141. In the margin of the page the time of the passage of the law is given as 1848.) This act was drafted and its enactment secured by the Hon. Charles J. McCurdy, a distinguished lawyer and the Lieutenant-Governor of that State. A member of Judge McCurdy's family, having been present at the delivery of this lecture at New Haven in 1892, called my attention to the above fact, claiming, and justly, for this act the credit of leading in this country the way to such legislation. But he was mistaken in his claim that it preceded similar legislation in England, although its provisions are an improvement on the contemporary enactments of the like kind in that country."—John F. Dillon, *Laws and Jurisprudence of England and America*, p. 374, notes.

A. D. 1851.—Bentham's Reforms in the Law of Evidence.—"In some respects his [Bentham's] 'Judicial Evidence,' . . . is the most important of all his censorial writings on English Law. In this work he exposed the absurdity and perniciousness of many of the established technical rules of evidence. . . . Among the rules combated were those relating to the competency of witnesses and the exclusion of evidence on various grounds, including that of pecuniary interest. He insisted that these rules frequently caused the miscarriage of justice, and that in the interest of justice they ought to be swept away. His reasoning fairly embraces the doctrine that parties ought to be allowed and even required to testify. . . . But Bentham had set a few men thinking. He had scattered the seeds of truth. Though they fell on stony ground they did not all perish. But verily reform is a plant of slow growth in the sterile gardens of the practising and practical lawyer. Bentham lived till 1832, and these exclusionary rules still held sway. But in 1843, by Lord Denman's Act, interest in actions at common law ceased, as a rule, to disqualify; and in 1846 and 1851, by Lord Brougham's Acts, parties in civil actions were as a rule made competent and compellable to testify. I believe I speak the universal judgment of the profession when I say changes more beneficial in the administration of justice have rarely taken place in our law, and that it is a matter of profound amazement, as we look back upon it, that these exclusionary rules ever had a place therein, and especially that they were able to retain it until within the last fifty years."—J. F. Dillon, *Laws and Jurisprudence of England and America*, pp. 339-341.

A. D. 1852-1854.—Reform in Procedure.—"A great procedure reform was effected by the Common Law Procedure Acts of 1852 and 1854 as the result of their labours. The main object of the Acts was to secure that the actual merits of every case should be brought before the judges unobscured by accidental and artificial questions arising upon the pleadings, but they also did something to secure that complete adaptability of the common law courts for finally determining every action brought within them, which the Chancery Commissioners of 1850 had indicated as one of the aims of the reformers. Power was given to the common law courts to allow parties to be interrogated by their oppo-

nents, to order discovery of documents, to direct specific delivery of goods, to grant injunctions, and to hear interpleader actions, and equitable pleas were allowed to be urged in defence to common law actions."—D. M. Kerly, *Hist. of Equity*, p. 288.

A. D. 1854.—"Another mode" (besides common law lien).—"Another mode of creating a security is possible, by which not merely the ownership of the thing but its possession also remains with the debtor. This is called by the Roman lawyers and their modern followers 'hypotheca.' Hypothecs may arise by the direct application of a rule of law, by judicial decision, or by agreement. Those implied by law, generally described as 'tacit hypothecs,' are probably the earliest. They are first heard of in Roman law in connection with that right of a landlord over the goods of his tenant, which is still well known on the Continent and in Scotland under its old name, and which in England takes the form of a right of Distress. Similar rights were subsequently granted to wives, pupils, minors, and legatees, over the property of husbands, tutors, curators, and heirs, respectively. The action by which the praetor Servius first enabled a landlord to claim the goods of his defaulting tenant in order to realize his rent, even if they had passed into the hands of third parties, was soon extended so as to give similar rights to any creditor over property which its owner had agreed should be held liable for a debt. A real right was thus created by the mere consent of the parties, without any transfer of possession, which although opposed to the theory of Roman law, became firmly established as applicable both to immoveable and moveable property. Of the modern States which have adopted the law of hypothec, Spain perhaps stands alone in adopting it to the fullest extent. The rest have, as a rule, recognized it only in relation to immoveables. Thus the Dutch law holds to the maxim 'mobilia non habent sequelam,' and the French Code, following the 'coutumes' of Paris and Normandy, lays down that 'les meubles n'ont pas de suite par hypothèque.' But by the 'Code de Commerce,' ships, though moveables, are capable of hypothecation; and in England what is called a mortgage, but is essentially a hypothec, of ships is recognized and regulated by the 'Merchant Shipping Acts,' under which the mortgage must be recorded by the registrar of the port at which the ship itself is registered [17 and 18 Vic. c. 104]. So also in the old contract of 'bottomry,' the ship is made security for money lent to enable it to proceed upon its voyage."—T. E. Holland, *Elements of Jurisprudence*, 5th ed., p. 203.

A. D. 1854-1882.—Simplification of Titles and Transfers of Land in England.—"For the past fifty years the project of simplifying the titles and transfer of land has received great attention in England. In the year 1854 a royal commission was created to consider the subject. The report of this commission, made in 1857, was able and full so far as it discussed the principles of land transfer which had been developed to that date. It recommended a limited plan of registration of title. This report, and the report of the special commission of the House of Commons of 1879, have been the foundation of most of the subsequent British legislation upon the subject. Among the more prominent acts passed may be

named Lord Westbury's Act of 1862, which attempted to establish indefeasible titles; Lord Cairns' Land Transfer Act of 1875, which provided for guaranteed titles upon preliminary examinations; the Conveyancing and Law of Property Act of 1881, which established the use of short forms of conveyances; and Lord Cairns' Settled Land Act of 1882."—Dwight H. Olmstead, 13 *American Bar Ass'n Rep.*, p. 267.

A. D. 1855.—Suits against a State or Nation.—"In England the old common law methods of getting redress from the Crown were by 'petition de droit' and 'monstrans le droit,' in the Court of Chancery or the Court of Exchequer, and in some cases by proceedings in Chancery against the Attorney-General. It has recently been provided by statute [23 & 24 Vic., c. 24] that a petition of right may be entitled in any one of the superior Courts in which the subject-matter of the petition would have been cognisable, if the same had been a matter in dispute between subject and subject, and that it shall be left with the Secretary of State for the Home Department, for her Majesty's consideration, who, if she shall think fit, may grant her fiat that right be done, whereupon an answer, plea, or demurrer shall be made on behalf of the Crown, and the subsequent proceedings be assimilated as far as practicable to the course of an ordinary action. It is also provided that costs shall be payable both to and by the Crown, subject to the same rules, so far as practicable, as obtain in proceedings between subject and subject."—T. E. Holland, *Elements of Jurisprudence*, 5th ed., p. 337.—The United States Court of Claims was established in 1855. For State courts of claims see Note in 16 *Abbott's New Cases* 436 and authorities there referred to.

A. D. 1858.—The Contractual Theory of Marriage as affecting Divorce.—"The doctrine may be resolved into two propositions—(a) that a marriage celebrated abroad cannot be dissolved but by a Court of the foreign country; (b) that a marriage in England is indissoluble by a foreign Court. The first proposition has never been recognized in any decision in England. Even before the Act of 1858 it is extremely doubtful if the English Courts would have scrupled to decree a divorce *à mensâ* where the marriage was had in a foreign country, and certainly after the Statutes they did not hesitate to grant a divorce, though the marriage took place abroad (*Ratcliff v. Ratcliff*, 1859, 1 Sw. & Tr. 217). It is true that in cases where the foreign Courts have dissolved a marriage celebrated in their own country between persons domiciled in that country, these sentences were regarded as valid here, and some credit was given to the fact of the marriage having been celebrated there (*Ryan v. Ryan*, 1816, 2 Phill. 332; *Argent v. Argent*, 1865, 4 Sw. & Tr. 52); but how far it influenced the learned Judges does not appear; the main consideration being the circumstance of domicile. The second proposition has been generally supposed by writers both in England and America (Story, Wharton) to have been introduced by *Lolley's Case*, 1812, Ruse. & Ry. 237, and followed in *Tovey v. Lindsay*, 1813, 1 Dow. 117, and *McCarthy v. De Caix*, 1831, 2 Cl. & F. 568, and only to have been abandoned in 1858 (*Dicey*), or in 1868 in *Shaw v. Gould*. But the case of *Harvey v. Farnie*, 1880-1882, 5 P. D.

153; 6 P. D. 35, 8 App. C. 48, has now shown that the Contractual theory had no permanent hold whatever in this country, that it did not originate with *Lolley's Case* and was not adopted by Lord Eldon but that it arose from a mistaken conception of Lord Brougham as to the point decided in the famous Resolution, and was never seriously entertained by any other Judge in England, and we submit this is correct."—E. H. Monnier, in *Law Mag. & Rev.*, 12 ser., v. 17 (Lond., 1891-2), p. 82.

A. D. 1873.—The Judicature Acts.—"The first Judicature Act was passed in 1873 under the auspices of Lord Selborne and Lord Cairns. It provided for the consolidation of all the existing superior Courts into one Supreme Court, consisting of two primary divisions, a High Court of Justice and a Court of Appeal. . . . Law and Equity, it was provided, were to be administered concurrently by every division of the Court, in all civil matters, the same relief being granted upon equitable claims or defences, . . . as would have previously been granted in the Court of Chancery; no proceeding in the Court was to be stayed by injunction analogous to the old common injunction but the power for any branch of the Court to stay proceedings before itself was of course to be retained; and the Court was to determine the entire controversy in every matter that came before it. By the 25th section of the Act rules upon certain of the points where differences between Law and Equity had existed, deciding in favour of the latter, were laid down, and it was enacted generally that in the case of conflict, the rules of Equity should prevail."—D. M. Kerly, *Hist. of Equity*, p. 293.

A. D. 1882.—Experiments in Codification in England.—"The Bills of Exchange Act 1882 is, I believe, the first code or codifying enactment which has found its way into the English Statute Book. By a code, I mean a statement under the authority of the legislature, and on a systematic plan, of the whole of the general principles applicable to any given branch of the law. A code differs from a digest inasmuch as its language is the language of the legislature, and therefore authoritative; while the propositions of a digest merely express what is, in the opinion of an individual author, the law on any given subject. In other words the propositions of a code are law, while the propositions of a digest may or may not be law."—M. D. Chalmers, *An Experiment in Codification (Law Quarterly Rev., v. 2, p. 125)*.

A. D. 1889.—Passage of Block-Indexing Act.—"The history of Land Transfer Reform in the United States is confined, almost exclusively, to matters which have occurred in the State of New York during the past ten years, and which culminated in the passage of the Block-Indexing Act for the city of New York of 1889. In January, 1882, a report was made by a special committee of the Association of the Bar of the city of New York, which had been appointed to consider and report what changes, if any, should be made in the manner of transferring title to land in the city and State. The committee reported that by reason of the accumulated records in the offices of the county clerk and register of deeds of the city, 'searches practically could not be made in those offices,' and recommended the appointment of a State commission, which should consider and report a

mode of transferring land free from the difficulties of the present system. The report was adopted by the association, and during the same year like recommendations were made by the Chamber of Commerce and by real estate and other associations of the city."—D. H. Olmstead, 13 *American Bar Ass'n Rep.*, pp. 269-270.

Criminal Law.

A. D. 1066-1272.—The Ordinary Criminal Courts.—"In a very few words the history of the ordinary courts is as follows: Before the Conquest the ordinary criminal court was the County or Hundred Court, but it was subject to the general supervision and concurrent jurisdiction of the King's Court. The Conqueror and his sons did not alter this state of things, but the supervision of the King's Court and the exercise of his concurrent jurisdiction were much increased both in stringency and in frequency, and as time went on narrowed the jurisdiction and diminished the importance of the local court. In process of time the King's Court developed itself into the Court of King's Bench and the Courts of the Justices of Assize, Oyer and Terminer and Gaol Delivery, or to use the common expression, the Assize Courts; and the County Court, so far as its criminal jurisdiction was concerned, lost the greater part of its importance. These changes took place by degrees during the reigns which followed the Conquest, and were complete at the accession of Edward I. In the reign of Edward III. the Justices of the Peace were instituted, and they, in course of time, were authorized to hold Courts for the trial of offenders, which are the Courts of Quarter Sessions. The County Court, however, still retained a separate existence, till the beginning of the reign of Edward IV., when it was virtually, though not absolutely, abolished. A vestige of its existence is still to be traced in Courts Leet."—Sir James F. Stephen, *Hist. of the Criminal Law*, v. 1, pp. 75-76.

A. D. 1166.—Disappearance of Compurgation in Criminal Cases.—"In criminal cases in the king's courts, compurgation is thought to have disappeared in consequence of what has been called 'the implied prohibition' of the Assize of Clarendon, in 1166. But it remained long in the local and ecclesiastical courts. Palgrave preserves as the latest instances of compurgation in criminal cases that can be traced, some cases as late as 1440-1, in the Hundred Court of Winchelsea in Sussex. They are cases of felony, and the compurgation is with thirty-six neighbors. They show a mingling of the old and the new procedure."—J. B. Thayer, *The Older Modes of Trial (Harvard Law Rev., v. 5, p. 59)*.

A. D. 1166-1215.—Jury in Criminal Cases.—"It seems to have been possible, even before the decree of the Fourth Lateran Council, in . . . 1215, to apply the jury to criminal cases whenever the accused asked for it. . . . The Assize of Clarendon, in 1166, with its apparatus of an accusing jury and a trial by ordeal is thought to have done away in the king's courts with compurgation as a mode of trial for crime; and now the Lateran Council, in forbidding ecclesiastics to take part in trial by ordeal, was deemed to have forbidden that mode of trial."—Jas. B. Thayer, *The Jury and its Development (Harvard Law Rev., v. 5, p. 265)*.

A. D. 1176 (circa).—“Eyres,” and Criminal Jurisdiction.—“It is enough for me to point out that, on the circuits instituted by Henry II, and commonly distinguished as ‘eyres’ by way of pre-eminence, the administration of criminal justice, was treated, not as a thing by itself, but as one part, perhaps the most prominent and important part, of the general administration of the country, which was put to a considerable extent under the superintendence of the justices in eyre. Nor is this surprising when we consider that fines, amercements, and forfeitures of all sorts were items of great importance in the royal revenue. The rigorous enforcement of all the proprietary and other profitable rights of the Crown which the articles of eyre confided to the justices was naturally associated with their duties as administrators of the criminal law, in which the king was deeply interested, not only because it protected the life and property of his subjects, but also because it contributed to his revenue.”—Sir J. F. Stephen, *Hist. of the Criminal Law of England*, v. 1, p. 102.

A. D. 1198-1199.—Trial by Ordeal.—“The earliest instance of the ordeal [see ORDEAL] in our printed judicial records occurs in 1198-9, on an appeal of death, by a maimed person, where two of the defendants are adjudged to purge themselves by the hot iron. But within twenty years or so this mode of trial came to a sudden end in England, through the powerful agency of the Church,—an event which was the more remarkable because Henry II., in the Assize of Clarendon (1166) and again in that of Northampton (1176), providing a public mode of accusation in the case of the larger crimes, had fixed the ordeal as the mode of trial. The old form of trial by oath was no longer recognized in such cases in the king’s courts. It was the stranger, therefore, that such quick operation should have been allowed in England to the decree, in November, 1215, of the Fourth Lateran Council at Rome. That this was recognized and accepted within about three years (1218-19) by the English crown is shown by the well-known writs of Henry III., to the judges, dealing with the puzzling question of what to do for a mode of trial, ‘cum prohibitum sit per Ecclesiam Romanam iudicium ignis et aquae.’ I find no case of trial by ordeal in our printed records later than Trinity Term of the 15 John (1213).”—J. B. Thayer, *The Older Modes of Trial (Harvard Law Rev., v. 5, p. 64-65)*.

A. D. 1215.—Two Juries in Criminal Cases.—“The ordeal was strictly a mode of trial. What may clearly bring this home to one of the present day is the well-known fact that it gave place, not long after the Assize of Clarendon, to the petit jury, when Henry III. bowed to the decree of the fourth Lateran Council (1215) abolishing the ordeal. It was at this point that our cumbrous, inherited system of two juries in criminal cases had its origin.”—J. B. Thayer, *Presumptions and the Law of Evidence (Harvard Law Rev., v. 3, p. 159, note)*.

A. D. 1215.—Had Coroners Common Law Power as to Fires?—“Although Magna Charta took away the power of the Coroner of holding Pleas of the Crown, that is of trying the more important crimes, there was nothing to forbid him from continuing to receive accusations against all offenders. This he did, and continues to do to the present day, without chal-

lenge, in cases of sudden or unexplained deaths. Nor is it denied that he has done so and may do so in other matters, such as in treasure trove, wreck of the sea and deodands. The difficulty, of course, is to know whether the Coroner was or was not in the habit of holding inquests on fires. There is no evidence that he had not the power to do so. On the contrary, we think the extracts from the ancient writers which we have before quoted, are on the whole in favour of his having that power. Before Magna Charta he had the power to try all serious crimes; arson would unquestionably be one of them. Magna Charta only took away his power of trying them, not of making a preliminary investigation, otherwise an inquest.”—Sherston Baker, *Law Mag. & Rev. (Lond., 1886-7)*, 4th ser., v. 12, p. 268.

A. D. 1272-1875.—King’s Bench.—The Supreme Criminal Court.—“From the reign of Edward I. to the year 1875 it [the Court of King’s Bench] continued to be the Supreme Criminal Court of the Realm, with no alterations in its powers or constitution of sufficient importance to be mentioned except that during the Commonwealth it was called the Upper Bench.”—Sir J. F. Stephen, *Hist. of Criminal Law of England*, v. 1, p. 94.

A. D. 1276.—Coroner’s Jury.—“The earliest instance that occurs of any sort of preliminary inquiry into crimes with a view to subsequent proceedings is the case of the coroner’s inquest. Coroners, according to Mr. Stubbs, originated in the year 1194, but the first authority of importance about their duties is to be found in Bracton. He gives an account of their duties so full as to imply that in his day their office was comparatively modern. The Statute de Officio Coronatoris (4 Edward I., st. 2, A. D. 1276) is almost a transcript of the passage in Bracton. It gives the coroner’s duty very fully, and is, to this day, the foundation of the law on the subject.”—Sir J. F. Stephen, *Hist. of the Criminal Law of England*, v. 1, p. 217.

ALSO IN: W. Forsyth, *Trial by Jury*, p. 187.

A. D. 1285.—Courts of Oyer and Terminer.—“The first express mention of them with which I am acquainted is in the statute 13 Edw. I., c. 29 (A. D. 1285), which taken in connection with some subsequent authorities throws considerable light on their nature. They were either general or special. General when they were issued to commissioners whose duty it was to hear and determine all matters of a criminal nature within certain local limits, special when the commission was confined to particular cases. Such special commissions were frequently granted at the prayer of particular individuals. They differed from commissions of gaol delivery principally in the circumstance that the commission of Oyer and Terminer was ‘ad inquirendum, audiendum, et terminandum,’ whereas that of gaol delivery is ‘ad gaolam nostram castri nostri de C. de prisonibus in ea existentibus hac vice deliberandum,’ the interpretation put upon which was that justices of Oyer and Terminer could proceed only upon indictments taken before themselves, whereas justices of gaol delivery had to try every one found in the prison which they were to deliver. On the other hand, a prisoner on bail could not be tried before a justice of gaol delivery, because he would not be in the gaol, whereas if he appeared before justices of Oyer and Terminer he might be both indicted and

tried."—Sir J. F. Stephen, *Hist. of the Criminal Law of England*, v. 1, p. 106.

A. D. 1305.—Challenging Jury for Cause.—"The prisoner was allowed to challenge peremptorily, i. e. without showing cause, any number of jurors less than thirty-five, or three whole juries. When or why he acquired this right it is difficult to say. Neither Bracton nor Britton mention it, and it is hard to reconcile it with the fact that the jurors were witnesses. A man who might challenge peremptorily thirty-five witnesses could always secure impunity. It probably arose at a period when the separation between the duties of the jury and the witnesses was coming to be recognized. The earliest statute on the subject, 33 Edw. I, st. 4 (A. D. 1305), enacts 'that from henceforth, notwithstanding it be alleged by them that sue for the king that the jurors of those inquests, or some of them, be not indifferent for the king, yet such inquests shall not remain untaken for that cause, but if they that sue for the king will challenge any of those jurors, they shall assign of the challenge a cause certain.'"—Sir J. F. Stephen, *Hist. of the Criminal Law of England*, v. 1, pp. 301-302.

A. D. 1344.—Justices of the Peace.—"In 1344 (18 Edw. III, st. 2, c. 2) it was enacted that 'two or three of the best of reputation in the counties shall be assigned keepers of the peace by the King's Commission, . . . to hear and determine felonies and trespasses done against the peace in the same counties, and to inflict punishment reasonably.' This was the first act by which the Conservators of the Peace obtained judicial power."—Sir J. F. Stephen, *Hist. of the Criminal Law of England*, v. 1, p. 113.

A. D. 1506.—Insanity as a Defence.—The earliest adjudication upon the legal responsibility of an insane person occurred in the Year Book of the 21 Henry VII.—*American Law Rev.*, v. 15, p. 717.

A. D. 1547.—Two Lawful Witnesses required to Convict.—"In all cases of treason and misprision of treason,—by statutes 1 Edw. VI. c. 12; 5 & 6 Edw. VI. c. 11, and 7 & 8 Will. III. c. 3,—two lawful witnesses are required to convict a prisoner; unless he shall willingly and without violence confess the same. And, by the last-mentioned statute, it is declared, that both of such witnesses must be to the same overt act of treason; or one to one overt act, and the other to another overt act of the same species of treason, and not of distinct heads or kinds: and that no evidence shall be admitted to prove any overt act, not expressly laid in the indictment."—Sir J. F. Stephen, *Commentaries*, v. 4, p. 425 (8th ed.).

A. D. 1592.—Criminal Trials under Elizabeth.—"In prosecutions by the State, every barrier which the law has ever attempted to erect for the protection of innocence was ruthlessly cast down. Men were arrested without the order of a magistrate, on the mere warrant of a secretary of state or privy councillor, and thrown into prison at the pleasure of the minister. In confinement they were subjected to torture, for the rack rarely stood idle while Elizabeth was on the throne. If brought to trial, they were denied the aid of a counsel and the evidence of witnesses in their behalf. Nor were they confronted with the witnesses against them, but written depositions, taken out of court and in the absence of the prisoner, were read to the

jury, or rather such portions of them as the prosecution considered advantageous to its side. On the bench sat a judge holding office at the pleasure of the crown, and in the jury-box twelve men, picked out by the sheriff, who themselves were punished if they gave a verdict of acquittal."—D. Campbell, *The Puritan in Holland, England and America*, v. 1, p. 367.

A. D. 1600 (circa).—Capital Punishment.—"Sir James Fitz James Stephen, in his *History of Criminal Law*, estimates that at the end of the sixteenth century there were about 800 executions per year in England (v. 1, 468). Another sentence in vogue in England before that time was to be hanged, to have the bowels burned, and to be quartered. Beccaria describes the scene where 'amid clouds of writhing smoke the groans of human victims, the crackling of their bones, and the flying of their still panting bowels were a pleasing spectacle and agreeable harmony to the frantic multitude.' (ch. 39.) As late as the reign of Elizabeth, . . . the sentence of death in England was to be hung, drawn and quartered. Campian, the Jesuit, was tortured before trial until his limbs were dislocated on the rack, and was carried helpless into Westminster Hall for trial before the Chief Justice of England, unable to raise an arm in order to plead not guilty. He was sentenced to be hung, drawn and quartered, which meant legally, that upon being hung he was to be cut down while yet living, and dragged at the tail of a horse, and then before death should release him, to be hewn in pieces, which were to be sent dispersed to the places where the offense was committed or known, to be exhibited in attestation of the punishment, the head being displayed in the most important place, as the chief object of interest. In the process of hanging, drawing and quartering, Froude says that due precautions were taken to prolong the agony. Campian's case is specially interesting, as showing the intervention of a more humane spirit to mitigate the barbarity of the law. As they were about to cut him down alive from the gibbet, the voice of some one in authority cried out: 'Hold, till the man is dead.' This innovation was the precursor of the change in the law so as to require the sentence to be that he be hanged by the neck until he is dead. It is not generally known that the words 'until he is dead' are words of mercy inserted to protect the victim from the torture and mutilation which the public had gathered to enjoy."—Austin Abbott, *Address before N. Y. Society of Med. Jur.* (*The Advocate*, Minn., 1889, v. 1, p. 71).

A. D. 1641-1662.—No Man shall be compelled to Criminate himself.—"What . . . is the history of this rule? . . . Briefly, these things appear: 1st. That it is not a common law rule at all, but is wholly statutory in its authority. 2d. That the object of the rule, until a comparatively late period of its existence, was not to protect from answers in the king's court of justice, but to prevent a usurpation of jurisdiction on the part of the Court Christian (or ecclesiastical tribunals). 3d. That even as thus enforced the rule was but partial and limited in its application. 4th. That by gradual perversion of function the rule assumed its present form, but not earlier than the latter half of the seventeenth century. . . . But nothing can be clearer than that it was a statutory rule. . . . The first of these were 16 Car. I., c. 2 (1641) and

provided that no one should impose any penalty in ecclesiastical matters, nor should 'tender . . . to any . . . person whatsoever any corporal oath whereby he shall be obliged to confess or accuse himself of any crime or any . . . thing whereby he shall be exposed to any censure or penalty whatever.' This probably applied to ecclesiastical courts alone. The second (13 Car. II., c. 12, 1662) is more general, providing that 'no one shall administer to any person whatsoever, the oath usually called *ex officio*, or any other oath, whereby such persons may be charged or compelled to confess any criminal matter.' . . . The Statute of 13 Car. II. is cited in *Scurr's Case*, but otherwise neither of them seems to have been mentioned; nor do the text-books, as a rule, take any notice of them. Henceforward, however, no question arises in the courts as to the validity of the privilege against self-crimination, and the statutory exemption is recognized as applying in common-law courts as well as in others. . . . This maxim, or rather the abuse of it in the ecclesiastical courts, helps in part to explain the shape which the general privilege now has taken. . . . We notice that most of the church's religious investigations, . . . were conducted by means of commissions or inquisitions, not by ordinary trials upon proper presentment; and thus the very rule of the canon law itself was continually broken, and persons unsuspected and unbetrayed '*per famam*' were compelled, '*seipsum prodere*,' to become their own accusers. This, for a time, was the burden of the complaint. . . . Furthermore, in rebelling against this abuse of the canon-law rule, men were obliged to formulate their reasons for objecting to answer the articles of inquisitions. . . . They professed to be willing to answer ordinary questions, but not to betray themselves to disgrace and ruin, especially as where the crimes charged were, as a rule, religious offences and not those which men generally regard as offences against social order. In this way the rule began to be formulated and limited, as applying to the disclosure of forfeitures and penal offences. In the course of the struggle the aid of the civil courts was invoked . . . ; and towards the end of the seventeenth century, . . . it found a lodgement in the practice of the Exchequer, of Chancery, and of the other courts. There had never been in the civil courts any complaint based on the same lines, or any demand for such a privilege. . . . But the momentum of this right, wrested from the ecclesiastical courts after a century of continual struggle, fairly carried it over and fixed it firmly in the common-law practice also."—John H. Wigmore, *Nemo Tenetur seipsum Prodere* (*Harvard Law Rev.*, v. 5, pp. 71-88).

A. D. 1660-1820.—187 Capital Offenses added to Criminal Code in England.—"From the Restoration to the death of George III.,—a period of 160 years,—no less than 187 capital offenses were added to the criminal code. The legislature was able, every year, to discover more than one heinous crime deserving of death. In the reign of George II. thirty-three Acts were passed creating capital offenses; in the first fifty years of George III., no less than sixty-three. In such a multiplication of offenses all principle was ignored; offenses wholly different in character and degree were confounded in the indiscriminating penalty of death. Whenever an offense was found to be increasing, some busy

senator called for new rigor, until murder became in the eye of the law no greater crime than picking a pocket, purloining a ribbon from a shop, or pilfering a pewter-pot. Such law-makers were as ignorant as they were cruel. . . . Dr. Johnson,—no squeamish moralist,—exposed them; Sir W. Blackstone, in whom admiration of our jurisprudence was almost a foible, denounced them. Beccaria, Montesquieu, and Bentham demonstrated that certainty of punishment was more effectual in the repression of crime, than severity; but law-givers were still inexorable."—T. E. May, *Constitutional Hist. of England* (Widdleton's ed.), v. 2, pp. 553-554.

A. D. 1695.—Counsel allowed to Persons indicted for High Treason.—"Holland, following the early example of Spain, always permitted a prisoner the services of a counsel; and if he was too poor to defray the cost, one was furnished at the public charge. In England, until after the fall of the Stuarts, this right, except for the purposes of arguing mere questions of law, was denied to every one placed on trial for his life. In 1695, it was finally accorded to persons indicted for high treason. Even then it is doubtful, says Lord Campbell, whether a bill for this purpose would have passed if Lord Ashley, afterwards Earl of Shaftesbury and author of the '*Characteristics*,' had not broken down while delivering in the House of Commons a set speech upon it, and, being called upon to go on, had not electrified the House by observing: 'If I, sir, who rise only to give my opinion upon a bill now pending, in the fate of which I have no personal interest, am so confounded that I am unable to express the least of what I propose to say, what must the condition of that man be, who, without any assistance, is called to plead for his life, his honor, and for his posterity?'"—D. Campbell, *The Puritan in Holland, England and America*, v. 2, p. 446.

A. D. 1708.—Torture.—The fact that judicial torture, though not a common law power of the courts, was used in England by command of Mary, Elizabeth, James I and Charles I, is familiar to all. It was sanctioned by Lord Coke and Lord Bacon, and Coke himself conducted examinations by it. It was first made illegal in Scotland in 1708; in Bavaria and Wurtemberg in 1806; in Baden in 1831.—Austin Abbott, *Address before N. Y. Society of Med. Jur.* (*The Advocate, Minn.*, 1889, v. 1, p. 71).

A. D. 1725.—Knowledge of Right and Wrong the test of Responsibility.—The case of Edward Arnold, in 1725, who was indicted for shooting at Lord Onslow, seems to be the earliest case in which the knowledge of right and wrong becomes the test of responsibility.—*American Law Review*, v. 15, pp. 720-722.

A. D. 1770.—Criminal Law of Libel.—"In this case [Case of the North Briton Junius' Letter to the King, tried before Lord Mansfield and a special jury on the 2nd June 1770] two doctrines were maintained which excepted libels from the general principles of the Criminal Law—firstly, that a publisher was criminally responsible for the acts of his servants, unless he was proved to be neither privy nor to have assented to the publication of a libel; secondly, that it was the province of the Court alone to judge of the criminality of the publication complained of. The first rule was rigidly observed in the Courts until the passing of Lord Campbell's Libel Act in 1843 (6

and 7 Vict., c. 96). The second prevailed only until 1792, when Fox's Libel Act (32 Geo. III, c. 60) declared it to be contrary to the Law of England. . . . A century's experience has proved that the law, as declared by the Legislature in 1792, has worked well, falsifying the forebodings of the Judges of the period, who predicted 'the confusion and destruction of the Law of England' as the result of a change which they regarded as the subversion of a fundamental and important principle of English Jurisprudence. Fox's Libel Act did not complete the emancipation of the Press. Liberty of discussion continued to be restrained by merciless persecution. The case of Sir Francis Burdett, in 1820, deserves notice. Sir Francis had written, on the subject of the 'Peterloo Massacre' in Manchester, a letter which was published in a London newspaper. He was fined £2,000 and sentenced to imprisonment for three months. The proceedings on a motion for a new trial are of importance because of the Judicial interpretation of the Libel Act of 1792. The view was then stated by Best, J. (afterwards Lord Wynford), and was adopted unanimously by the Court, that the statute of George III. had not made the question of libel one of fact. If it had, instead of removing an anomaly, it would have created one. Libel, said Best, J., is a question of law, and the judge is the judge of the law in libel as in all other cases, the jury having the power of acting agreeably to his statement of the law or not. All that the statute does is to prevent the question from being left to the jury in the narrow way in which it was left before that time. The jury were then only to find the fact of the publication and the truth of the innuendoes, for the judges used to tell them that the intent was an inference of law to be drawn from the paper, with which the jury had nothing to do. The legislature have said that this is not so, but that the whole case is for the jury (4 B. and A. 95). The law relating to Political Libel has not been developed or altered in any way since the case of R. v. Burdett. If it should ever be revived, which does not at present appear probable, it will be found, says Sir James Stephen, to have been insensibly modified by the law as to defamatory libels on private persons, which has been the subject of a great number of highly important judicial decisions. The effect of these is, amongst other things, to give a right to every one to criticise fairly—that is, honestly, even if mistakenly—the public conduct of public men, and to comment honestly, even if mistakenly, upon the proceedings of Parliament and the Courts of Justice. (History of the Criminal Law, II., 376.) The unsuccessful prosecution of Cobbett for an article in the 'Political Register,' in 1831, nearly brought to a close the long series of contests between the Executive and the Press. From the period of the Reform Act of 1832, the utmost latitude has been permitted to public writings, and Press prosecutions for political libels, like the Censorship, have lapsed."—J. W. Ross Brown, in *Law Mag. & Rev.*, 4th ser., v. 17, p. 197.

A. D. 1791.—Criminals allowed Counsel.—"When the American States adopted their first constitutions, five of them contained a provision that every person accused of crime was to be allowed counsel for his defence. The same right was, in 1791, granted for all America in the first

amendments to the Constitution of the United States. This would seem to be an elementary principle of justice, but it was not adopted in England until nearly half a century later, and then only after a bitter struggle."—D. Campbell, *The Puritan in Holland, England and America*, v. 1, p. 70.

A. D. 1818.—Last Trial by Battle.—"The last appeal of murder brought in England was the case of Ashford v. Thornton in 1818. In that case, after Thornton had been tried and acquitted of the murder of Mary Ashford at the Warwick Assizes her brother charged him in the court of king's bench with her murder, according to the forms of the ancient procedure. The court admitted the legality of the proceedings, and recognized the appellee's right to wage his body; but as the appellant was not prepared to fight, the case ended upon a plea of *autrefois acquit* interposed by Thornton when arraigned on the appeal. This proceeding led to the statute of 59 Geo. III., c. 46, by which all appeals in criminal cases were finally abolished."—Hannis Taylor, *Origin and Growth of the English Const.*, pt. 1, p. 311.—See, also, WAGER OF BATTLE.

A. D. 1819.—Severity of the former Criminal Law of England.—"Sir James Mackintosh in 1819, in moving in Parliament for a committee to inquire into the conditions of the criminal law, stated that there were then 'two hundred capital felonies on the statute book.' Undoubtedly this apparent severity, for the reasons stated by Sir James Stephen, is greater than the real severity, since many of the offenses made capital were of infrequent occurrence; and juries, moreover, often refused to convict, and persons capitally convicted for offenses of minor degrees of guilt were usually pardoned on condition of transportation to the American and afterwards to the Australian colonies. But this learned author admits that, 'after making all deductions on these grounds there can be no doubt that the legislation of the eighteenth century in criminal matters was severe to the highest degree, and destitute of any sort of principle or system.'"—J. F. Dillon, *Laws and Jurisprudence of England and America*, p. 366.

A. D. 1825.—"Ticket-of-leave" system established.—"The 'ticket-of-leave' system [was] established under the English laws of penal servitude. It originated under the authority of the governors of the penal colonies, and was the first sanctioned by Parliament, so far as the committee are aware, by an Act 5 Geo. IV., chap. 34. Subsequently, when transportation for crime was abolished by the Acts 16, 17 Vict., chap. 99 (A. D. 1853) and 20, 21 Vict., chap. 3, and system of home prisons established, the 'license' or ticket-of-leave system was adopted by Parliament, in those acts, as a method of rewarding convicts for good conduct during imprisonment. By further acts passed in 1864, 1871 and 1879, the system has been brought gradually into its present efficacy."—*Report of Committee on Judicial Administration, and Remedial Procedure* (9 American Bar Ass'n Rep., 317).

A. D. 1832-1860.—Revision of Criminal Code in England.—"With the reform period commenced a new era in criminal legislation. Ministers and law officers now vied with philanthropists, in undoing the unhallowed work of many generations. In 1832, Lord Auckland, Master of the Mint, secured the abolition of capital

punishment for offences connected with coinage; Mr. Attorney-general Denman exempted forgery from the same penalty in all but two cases, to which the Lords would not assent; and Mr. Ewart obtained the like remission for sheep-stealing, and other similar offences. In 1833, the Criminal Law Commission was appointed, to revise the entire code. . . . The commissioners recommended numerous other remissions, which were promptly carried into effect by Lord John Russell in 1837. Even these remissions, however, fell short of public opinion, which found expression in an amendment of Mr. Ewart, for limiting the punishment of death to the single crime of murder. This proposal was then lost by a majority of one; but has since, by successive measures, been accepted by the legislature;—murder alone, and the exceptional crime of treason, having been reserved for the last penalty of the law. Great indeed, and rapid, was this reformation of the criminal code. It was computed that, from 1810 to 1845, upwards of 1,400 persons had suffered death for crimes, which had since ceased to be capital.”—T. E. May, *Constitutional Hist. of England* (Widdleton's ed.), v. 2, pp. 557-558.

A. D. 1843.—Lord Campbell's Libel Act, and Publisher's Liability.—“In the ‘Morning Advertiser’ of the 19th of December, 1769, appeared Junius's celebrated letter to the king. Inflammatory and seditious, it could not be overlooked; and as the author was unknown, informations were immediately filed against the printers and publishers of the letter. But before they were brought to trial, Almon, the bookseller, was tried for selling the ‘London Museum,’ in which the libel was reprinted. His connection with the publication proved to be so slight that he escaped with a nominal punishment. Two doctrines, however, were maintained in this case, which excepted libels from the general principles of the criminal law. By the first, a publisher was held criminally answerable for the acts of his servants, unless proved to be neither privy nor assenting to the publication of a libel. So long as exculpatory evidence was admitted, this doctrine was defensible; but judges afterwards refused to admit such evidence, holding that the publication of a libel by a publisher's servant was proof of his criminality. And this monstrous rule of law prevailed until 1843, when it was condemned by Lord Campbell's Libel Act.”—T. E. May, *Constitutional Hist. of England* (Widdleton's ed.), v. 2, pp. 113-114. —“And be it enacted, that whosoever, upon the trial of any indictment or information for the publication of a libel, under the plea of not guilty, evidence shall have been given which shall establish a presumptive case of publication against the defendant by the act of any other person by his authority, it shall be competent to such defendant to prove that such publication was made without his authority, consent, or knowledge, and that the said publication did not arise from want of due care or caution on his part.”—*Statute 6 & 7 Vic., c. 96, s. 7.*

A. D. 1848.—The English Court of Criminal Appeal.—“England has not yet got her court of Criminal Appeal, although the Council of Judges, in their belated scheme of legal reform, recommend the legislature to create one. Questions whether an action should be dismissed as ‘frivolous or vexatious,’ disputes about ‘secu-

ity for costs,’ and the ‘sufficiency of interrogatories’ or ‘particulars,’ and all manner of trivial causes affecting property or status, are deemed by the law of England sufficiently important to entitle the parties to them, if dissatisfied with the finding of a court of first instance, to submit it to the touchstone of an appeal. But the lives and liberties of British subjects charged with the commission of criminal offences are in general disposed of irrevocably by the verdict of a jury, guided by the directions of a trial judge. To this rule, however, there are two leading exceptions. In the first place, any convicted prisoner may petition the sovereign for a pardon, or for the commutation of his sentence; and the royal prerogative of mercy is exercised through, and on the advice of the Secretary of State for the Home Department. In the second place, the English machine juridical notwithstanding its lack of a properly constituted Court of Criminal Appeal, is furnished with a kind of ‘mechanical equivalent’ therefor, in the ‘Court for Crown Cases Reserved,’ which was established by act of Parliament in 1848 (11 & 12 Vict. c. 78).”—*The English Court of Criminal Appeal* (*The Green Bag*, v. 5, p. 345).

A. D. 1854.—Conflict between U. S. Constitution and a Treaty.—“About 1854, M. Dillon, French consul at San Francisco, refused to appear and testify in a criminal case. The Constitution of the United States (Amendment VI.), in criminal cases grants accused persons compulsory process for obtaining witnesses, while our treaties of 1853, with France (Art. II.) says that consuls ‘shall never be compelled to appear as witnesses before the courts.’ Thus there was a conflict between the Constitution and the treaty, and it was held that the treaty was void. After a long correspondence the French Consuls were directed to obey a subpoena in future.”—Theodore D. Woolsey, *Introduct. to the Study of International Law* [6th ed.], p. 157, note.

A. D. 1877.—“Indeterminate Sentences.”—“This practice, so far as the committee can ascertain, has been adopted in the states of New York and Ohio only. . . . The Ohio statute has been taken mainly from that which was adopted in New York, April 12, 1877.”—*Report of Committee on Judicial Administrations, and Remedial Procedure* (9 Am. Bar Ass'n Rep., p. 313).

A. D. 1893.—Criminal Jurisdiction of Federal Courts.—“The Supreme Court of the U. S., in *United States v. Rodgers*, . . . 150 U. S., . . . in declaring that the term ‘high seas’ in the criminal law of the United States is applicable as well to the open waters of the great lakes as to the open waters of the ocean, may be said, in a just sense, not to have changed the law, but to have asserted the law to be in force upon a vast domain over which its jurisdiction was heretofore in doubt. The opinion of Justice Field will take its place in our jurisprudence in company with the great cases of the Genesee Chief, 12 How. (U. S.), 443, and its successors, and with them marks the self adapting capacity of the judicial power to meet the great exigencies of justice and good government.”—*University Law Rev.*, v. 1, p. 2.

Ecclesiastical Law.

A. D. 449-1066.—No distinction between Lay and Ecclesiastical Jurisdiction.—“In the time of our Saxon ancestors, there was no

sort of distinction between the lay and the ecclesiastical jurisdiction: the county court was as much a spiritual as a temporal tribunal; the rights of the church were ascertained and asserted at the same time, and by the same judges, as the rights of the laity. For this purpose the bishop of the diocese, and the alderman, or, in his absence, the sheriff of the county, used to sit together in the county court, and had there the cognizance of all causes, as well ecclesiastical as civil: a superior deference being paid to the bishop's opinion in spiritual matters, and to that of the lay judges in temporal."—W. Blackstone, *Commentaries*, bk. 3, p. 61.

A. D. 1066-1087.—Separation of Ecclesiastical from Civil Courts.—"William I. (whose title was warmly espoused by the monasteries, which he liberally endowed, and by the foreign clergy whom he brought over in shoals from France and Italy, and planted in the best preferments of the English church), was at length prevailed upon to . . . separate the ecclesiastical court from the civil: whether actuated by principles of bigotry, or by those of a more refined policy, in order to discountenance the laws of King Edward, abounding with the spirit of Saxon liberty, is not altogether certain. But the latter, if not the cause, was undoubtedly the consequence, of this separation: for the Saxon laws were soon overborne by the Norman justiciaries, when the county court fell into disrepute by the bishop's withdrawing his presence, in obedience to the charter of the conqueror; which prohibited any spiritual cause from being tried in the secular courts, and commanded the suitors to appear before the bishop only, whose decisions were directed to conform to the canon law."—W. Blackstone, *Commentaries*, bk. 3, pp. 62-63.—"The most important ecclesiastical measure of the reign, the separation of the church jurisdiction from the secular business of the courts of law, is unfortunately, like all other charters of the time, undated. Its contents however show the influence of the ideas which under the genius of Hildebrand were forming the character of the continental churches. From henceforth the bishops and archdeacons are no longer to hold ecclesiastical pleas in the hundred-court, but to have courts of their own; to try causes by canonical, not by customary law, and allow no spiritual questions to come before laymen as judges. In case of contumacy the offender may be excommunicated and the king and sheriff will enforce the punishment. In the same way laymen are forbidden to interfere in spiritual causes. The reform is one which might very naturally recommend itself to a man like Lanfranc."—W. Stubbs, *Const. Hist. of England*, v. 1, sect. 101.

A. D. 1100.—Reunion of Civil and Ecclesiastical Courts.—"King Henry the First, at his accession, among other restorations of the laws of King Edward the Confessor, revived this of the union of the civil and ecclesiastical courts. . . . This, however, was ill-relished by the popish clergy, . . . and, therefore, in their synod at Westminster, 3 Hen. I., they ordained that no bishop should attend the discussion of temporal causes; which soon dissolved this newly effected union."—W. Blackstone, *Commentaries*, bk. 3, p. 63.

A. D. 1135.—Final Separation of Civil and Ecclesiastical Courts.—"And when, upon the

death of King Henry the First, the usurper Stephen was brought in and supported by the clergy, we find one article of the oath which they imposed upon him was, that ecclesiastical persons and ecclesiastical causes should be subject only to the bishop's jurisdiction. And as it was about that time that the contest and emulation began between the laws of England and those of Rome, the temporal courts adhering to the former, and the spiritual adopting the latter as their rule of proceeding, this widened the breach between them, and made a coalition afterwards impracticable; which probably would else have been effected at the general reformation of the church."—W. Blackstone, *Commentaries*, bk. 3, p. 64.

A. D. 1285.—Temporal Courts assume Jurisdiction of Defamation.—"To the Spiritual Court appears also to have belonged the punishment of defamation until the rise of actions on the case, when the temporal courts assumed jurisdiction, though not, it seems, to the exclusion of punishment by the church. The punishment of usurers, cleric and lay, also belonged to the ecclesiastical judges, though their movables were confiscated to the king, unless the usurer 'vita comite digne poenituerit, et testamento condito quae legare decreverit a se prorsus alienaverit.' That is, it seems, the personal punishment was inflicted by the Ecclesiastical Court, but the confiscation of goods (when proper) was decreed by the King's Court."—Melville M. Bigelow, *Hist. of Procedure*, p. 51.

A. D. 1857-1859.—Ecclesiastical Courts deprived of Matrimonial and Testamentary Causes.—"Matrimonial causes, or injuries respecting the rights of marriage, are another . . . branch of the ecclesiastical jurisdiction. Though, if we consider marriages in the light of mere civil contracts, they do not seem to be properly of spiritual cognizance. But the Romanists having very early converted this contract into a holy sacramental ordinance, the church of course took it under her protection, upon the division of the two jurisdictions. . . . One might . . . wonder, that the same authority, which enjoined the strictest celibacy to the priesthood, should think them the proper judges in causes between man and wife. These causes, indeed, partly from the nature of the injuries complained of, and partly from the clerical method of treating them, soon became too gross for the modesty of a lay tribunal. . . . Spiritual jurisdiction of testamentary causes is a peculiar constitution of this island; for in almost all other (even in popish) countries all matters testamentary are under the jurisdiction of the civil magistrate. And that this privilege is enjoyed by the clergy in England, not as a matter of ecclesiastical right, but by the special favor and indulgence of the municipal law, and as it should seem by some public act of the great council, is freely acknowledged by Lindewode, the ablest canonist of the fifteenth century. 'Testamentary causes, he observes, belong to the ecclesiastical courts 'de consuetudine Angliæ, et super consensu regio et suorum procerum in talibus ab antiquo concessa.'"—W. Blackstone, *Commentaries*, bk. 3, pp. 91-95.—Jurisdiction in testamentary causes was taken away from the ecclesiastical courts by Statutes 20 and 21 Vic., c. 77 and 21 and 22 Vic., chaps. 56 and 95, and was transferred to the court of Probate. Jurisdiction in matrimonial

causes was transferred to the Divorce Court by Statute 20 and 21 Vic., 85.

Equity.

A. D. 449-1066.—Early Masters in Chancery.—"As we approach the era of the Conquest, we find distinct traces of the Masters in Chancery, who, though in sacred orders, were well trained in jurisprudence, and assisted the chancellor in preparing writs and grants, as well as in the service of the royal chapel. They formed a sort of college of justice, of which he was the head. They all sat in the Wittenagemote, and, as 'Law Lords', are supposed to have had great weight in the deliberations of that assembly."—Lord Campbell, *Lives of the Chancellors*, v. 1, p. 53.

A. D. 596.—Chancellor, Keeper of the Great Seal.—"From the conversion of the Anglo-Saxons to Christianity by the preaching of St. Augustine, the King always had near his person a priest, to whom was entrusted the care of his chapel, and who was his confessor. This person, selected from the most learned and able of his order, and greatly superior in accomplishments to the unlettered laymen attending the Court, soon acted as private secretary to the King, and gained his confidence in affairs of state. The present demarcation between civil and ecclesiastical employments was then little regarded, and to this same person was assigned the business of superintending writs and grants, with the custody of the great seal."—Lord Campbell, *Lives of the Chancellors*, v. 1, p. 27.

A. D. 1066.—Master of the Rolls.—"The office of master, formerly called the Clerk or Keeper of the Rolls, is recognized at this early period, though at this time he appears to have been the Chancellor's deputy, not an independent officer."—Geo. Spence, *Equity Jurisdiction of the Court of Chancery*, v. 1, p. 100.

A. D. 1066-1154.—Chancellor as Secretary of State.—"Under the Norman Kings, the Chancellor was a kind of secretary of state. His functions were political rather than judicial. He attended to the royal correspondence, kept the royal accounts, and drew up writs for the administration of justice. He was also the keeper of the seal."—*Montague's Elements of Const. Hist. of England*, p. 27.—See, also, CHANCELLOR.

A. D. 1067.—First Lord Chancellor.—"The first keeper of the seals who was endowed with the title of Lord Chancellor was Maurice, who received the great seal in 1067. The incumbents of the office were for a long period ecclesiastics; and they usually enjoyed episcopal or archiepiscopal rank, and lived in the London palaces attached to their sees or provinces. The first Keeper of the seals of England was Fitzgilbert, appointed by Queen Matilda soon after her coronation, and there was no other layman appointed until the reign of Edward III."—L. J. Bigelow, *Bench and Bar*, p. 23.

A. D. 1169.—Uses and Trusts.—"According to the law of England, trusts may be created 'inter vivos' as well as by testament, and their history is a curious one, beginning, like that of the Roman 'fidei commissa', with an attempt to evade the law. The Statutes of Mortmain, passed to prevent the alienation of lands to religious houses, led to the introduction of 'uses,' by which the grantor alienated his land to a friend to hold 'to the use' of a monastery, the

clerical chancellors giving legal validity to the wish thus expressed. Although this particular device was put a stop to by 15 Ric. II. c. 5, 'uses' continued to be employed for other purposes, having been found more malleable than what was called, by way of contrast, 'the legal estate.' They offered indeed so many modes of escaping the rigour of the law, that, after several other statutes had been passed with a view of curtailing their advantages, the 27 Hen. VIII. c. 10 enacted that, where any one was seized to a use, the legal estate should be deemed to be in him to whose use he was seized. The statute did not apply to trusts of personal property, nor to trusts of land where any active duty was cast upon the trustee, nor where a use was limited 'upon a use,' i. e. where the person in whose favour a use was created was himself to hold the estate to the use of some one else. There continued therefore to be a number of cases in which, in spite of the 'Statute of Uses,' the Court of Chancery was able to carry out its policy of enforcing what had otherwise been merely moral duties. The system thus arising has grown to enormous dimensions, and trusts, which, according to the definition of Lord Hardwicke, are 'such a confidence between parties that no action at law will lie, but there is merely a case for the consideration of courts of equity,' are inserted not only in wills, but also in marriage settlements, arrangements with creditors, and numberless other instruments necessary for the comfort of families and the development of commerce."—T. E. Holland, *Elements of Jurisprudence*, 5th ed., p. 217.

A. D. 1253.—A Lady Keeper of the Seals.—"Having occasion to cross the sea and visit Gascony, A. D. 1253, Henry III. made her [Queen Eleanor] keeper of the seal during his absence, and in that character she in her own person presided in the 'Aula Regia,' hearing causes, and, it is to be feared, forming her decisions less in accordance with justice than her own private interests. Never did judge set law and equity more fearfully at naught."—L. J. Bigelow, *Bench and Bar*, p. 28.

A. D. 1258.—No Writs except De Cursu.—"In the year 1258 the Provisions of Oxford were promulgated; two separate clauses of which bound the chancellor to issue no more writs except writs 'of course' without command of the King and his Council present with him. This, with the growing independence of the judiciary on the one hand, and the settlement of legal process on the other, terminated the right to issue special writs, and at last fixed the common writs in unchangeable form; most of which had by this time become developed into the final form in which for six centuries they were treated as precedents of declaration."—M. M. Bigelow, *Hist. of Procedure*, p. 197.

A. D. 1272-1307.—The Chancellor's functions.—"In the reign of Edward I. the Chancellor begins to appear in the three characters in which we now know him; as a great political officer, as the head of a department for the issue of writs and the custody of documents in which the King's interest is concerned, as the administrator of the King's grace."—Sir William R. Anson, *Law and Custom of the Constitution*, pt. 2, p. 146.

A. D. 1330.—Chancery stationary at Westminster.—"There was likewise introduced about

this time a great improvement in the administration of justice, by rendering the Court of Chancery stationary at Westminster. The ancient kings of England were constantly migrating,—one principal reason for which was, that the same part of the country, even with the aid of purveyance and pre-emption, could not long support the court and all the royal retainers, and render in kind due to the King could be best consumed on the spot. Therefore, if he kept Christmas at Westminster, he would keep Easter at Winchester, and Pentecost at Gloucester, visiting his many palaces and manors in rotation. The Aula Regis, and afterwards the courts into which it was partitioned, were ambulatory along with him—to the great vexation of the suitors. This grievance was partly corrected by Magna Charta, which enacted that the Court of Common Pleas should be held ‘in a certain place,’—a corner of Westminster Hall being fixed upon for that purpose. In point of law, the Court of King’s Bench and the Court of Chancery may still be held in any county of England,—‘where-soever in England the King or the Chancellor may be.’ Down to the commencement of the reign of Edward III., the King’s Bench and the Chancery actually had continued to follow the King’s person, the Chancellor and his officers being entitled to part of the purveyance made for the royal household. By 28 Edw. I., c. 5, the Lord Chancellor and the Justices of the King’s Bench were ordered to follow the King, so that he might have at all times near him sages of the law able to order all matters which should come to the Court. But the two Courts were now by the King’s command fixed in the places where, unless on a few extraordinary occasions, they continued to be held down to our own times, at the upper end of Westminster Hall, the King’s Bench on the left hand, and the Chancery on the right, both remaining open to the Hall, and a bar erected to keep off the multitude from pressing on the judges.”—Lord Campbell, *Lives of the Chancellors*, v. 1, p. 181.

A. D. 1348.—“**Matters of Grace**” committed to the Chancellor.—“In the 22nd year of Edward III, matters which were of grace were definitely committed to the Chancellor for decision, and from this point there begins to develop that body of rules—supplementing the deficiencies or correcting the harshness of the Common Law—which we call Equity.”—Sir W. R. Anson, *Law and Custom of the Constitution*, pt. 2, p. 147.

ALSO IN: *Kerly’s Hist. of the Court of Chancery*, p. 31.

A. D. 1383.—**Early Instance of Subpoena.**—“It is said that John Waltham, Bishop of Salisbury, who was Keeper of the Rolls about the 5th of Richard II., considerably enlarged this new jurisdiction; that, to give efficacy to it, he invented, or more properly, was the first who adopted in that court, the writ of subpoena, a process which had before been used by the council, and is very plainly alluded to in the statutes of the last reign, though not under that name. This writ summoned the party to appear under a penalty, and answer such things as should be objected against him; upon this a petition was lodged, containing the articles of complaint to which he was then compelled to answer. These articles used to contain suggestions of injuries suffered, for which no remedy was to be had in

the courts of common law, and therefore the complainant prayed advice and relief of the chancellor.”—J. Reeves, *Hist. Eng. Law* (Finlason’s ed.), v. 3, p. 384.

A. D. 1394.—**Chancery with its own Mode of Procedure.**—“From the time of passing the stat. 17 Richard II. we may consider that the Court of Chancery was established as a distinct and permanent court, having separate jurisdiction, with its own peculiar mode of procedure similar to that which had prevailed in the Council, though perhaps it was not wholly yet separated from the Council.”—Geo. Spence, *Equity Jurisdiction of the Court of Chancery*, v. 1, p. 345.

A. D. 1422.—**Chancery Cases appear in Year Books.**—“It is beyond a doubt that this [chancery] court had begun to exercise its judicial authority in the reigns of Richard II., Henry IV. and V. . . . But we do not find in our books any report of cases there determined till 37 Henry VI., except only on the subject of uses; which, as has been before remarked, might give rise to the opinion, that the first equitable judicature was concerned in the support of uses.”—J. Reeves, *Hist. Eng. Law* (Finlason’s ed.), v. 3, p. 553.

A. D. 1443.—**No distinction between Examination and Answer.**—The earliest record of written answers is in 21 Henry VI. Before that time little, if any, distinction was made between the examination and the answer.—Kerly, *Hist. of Courts of Chancery*, p. 51.

A. D. 1461-1483.—**Distinction between Proceeding by Bill and by Petition.**—“A written statement of the grievance being required to be filed before the issuing of the subpoena, with security to pay damages and costs,—bills now acquired form, and the distinction arose between the proceeding by bill and by petition. The same regularity was observed in the subsequent stages of the suit. Whereas formerly the defendant was generally examined viva voce when he appeared in obedience to the subpoena, the practice now was to put in a written answer, commencing with a protestation against the truth or sufficiency of the matters contained in the bill, stating the facts relied upon by the defendant, and concluding with a prayer that he may be dismissed, with his costs. There were likewise, for the purpose of introducing new facts, special replications and rejoinders, which continued till the reign of Elizabeth, but which have been rendered unnecessary by the modern practice of amending the bill and answer. Pleas and demurrers now appear. Although the pleadings were in English, the decrees on the bill continued to be in Latin down to the reign of Henry VIII. Bills to perpetuate testimony, to set out metes and bounds, and for injunctions against proceedings at law, and to stay waste, became frequent.”—Lord Campbell, *Lives of the Chancellors*, v. 1, p. 309.

A. D. 1461-1483.—**Jurisdiction of Chancery over Trusts.**—“The equitable jurisdiction of the Court of Chancery may be considered as making its greatest advances in this reign [Edw. IV.]. The point was now settled, that there being a feoffment to uses, the ‘cestui que’ use, or person beneficially entitled, could maintain no action at law, the Judges saying that he had neither ‘jus in re’ nor ‘jus ad rem,’ and that their forms could not be moulded so as to afford

him any effectual relief, either as to the land or the profits. The Chancellors, therefore, with general applause, declared that they would proceed by subpoena against the feoffee to compel him to perform a duty which in conscience was binding upon him, and gradually extended the remedy against his heir and against his alienee with notice of the trust, although they held, as their successors have done, that the purchaser of the legal estate for valuable consideration without notice might retain the land for his own benefit. They therefore now freely made decrees requiring the trustee to convey according to the directions of the 'cestui que trust,' or person beneficially interested; and the most important branch of the equitable jurisdiction of the Court over trusts was firmly and irrevocably established."—Lord Campbell, *Lives of the Chancellors*, v. 1, p. 309.

A. D. 1538.—Lord Keeper of the Great Seal.—"Between the death, resignation, or removal of one chancellor, and the appointment of another, the Great Seal, instead of remaining in the personal custody of the Sovereign, was sometimes entrusted to a temporal keeper, either with limited authority (as only to seal writs), or with all the powers, though not with the rank of Chancellor. At last the practice grew up of occasionally appointing a person to hold the Great Seal with the title of 'Keeper,' where it was meant that he should permanently hold it in his own right and discharge all the duties belonging to it. Queen Elizabeth, ever sparing in the conferring of dignities, having given the Great Seal with the title of 'Keeper' to Sir Nicholas Bacon, objections were made to the legality of some of his acts,—and to obviate these, a statute was passed declaring that 'the Lord Keeper of the Great Seal for the time being shall have the same place, pre-eminence, and jurisdiction as the Lord Chancellor of England.' Since then there never have been a Chancellor and Keeper of the Great Seal concurrently, and the only difference between the two titles is, that the one is more sounding than the other, and is regarded as a higher mark of royal favor."—Lord Campbell, *Lives of the Chancellors*, v. 1, p. 40.

ALSO IN: Sir W. R. Anson, *Law and Custom of the Constitution*, v. 2, p. 150.

A. D. 1558.—Increase of Business in the Court of Chancery.—"The business of the Court of Chancery had now so much increased that to dispose of it satisfactorily required a Judge regularly trained to the profession of the law, and willing to devote to it all his energy and industry. The Statute of Wills, the Statute of Uses, the new modes of conveyancing introduced for avoiding transmutation of possession, the questions which arose respecting the property of the dissolved monasteries, and the great increase of commerce and wealth in the nation, brought such a number of important suits into the Court of Chancery, that the holder of the Great Seal could no longer satisfy the public by occasionally stealing a few hours from his political occupations, to dispose of bills and petitions, and not only was his daily attendance demanded in Westminster Hall during term time, but it was necessary that he should sit, for a portion of each vacation, either at his own house, or in some convenient place appointed by him for clearing off his arrears."—Lord Campbell, *Lives of the Chancellors*, v. 2, p. 95.

A. D. 1567-1632.—Actions of Assumpsit in Equity.—"The late development of the implied contract to pay 'quantum meruit,' and to indemnify a surety, would be the more surprising, but for the fact that Equity gave relief to tailors and the like, and to sureties long before the common law held them. Spence, although at a loss to account for the jurisdiction, mentions a suit brought in Chancery, in 1567, by a tailor, to recover the amount due for clothes furnished. The suit was referred to the Queen's tailor, to ascertain the amount due, and upon his report a decree was made. The learned writer adds that 'there were suits for wages and many others of like nature.' A surety who had no counter-bond filed a bill against his principal in 1632, in a case which would seem to have been one of the earliest of the kind, for the reporter, after stating that there was a decree for the plaintiff, adds 'quod nota.'"—J. B. Ames, *History of Assumpsit* (*Harvard Law Rev.*, v. 2, pp. 59-60).

A. D. 1592.—All Chancellors, save one, Lawyers.—"No regular judicial system at that time prevailed in the court; but the suitor when he thought himself aggrieved, found a desultory and uncertain remedy, according to the private opinion of the chancellor, who was generally an ecclesiastic, or sometimes (though rarely) a statesman: no lawyer having sat in the court of chancery from the times of the chief justices Thorpe and Knyvet, successively chancellors to King Edward III. in 1372 and 1373, to the promotion of Sir Thomas More by King Henry VIII., in 1530. After which the great seal was indiscriminately committed to the custody of lawyers or courtiers, or churchmen, according as the convenience of the times and the disposition of the prince required, till Sargeant Puckering was made lord keeper in 1593; from which time to the present the court of chancery has always been filled by a lawyer, excepting the interval from 1621 to 1625, when the seal was entrusted to Dr. Williams, then dean of Westminster, but afterwards bishop of Lincoln; who had been chaplain to Lord Ellesmere when chancellor."—W. Blackstone, *Commentaries*, bk. 3, ch. 4.

A. D. 1595.—Injunctions against Suits at Law.—Opposition of common law courts.—"The strongest inclination was shown to maintain this opposition to the court of equity, not only by the courts, but by the legislature. The stat. 27 Elizabeth, c. 1, which, in very general words, restrains all application to other jurisdictions to impeach or impede the execution of judgments given in the king's courts, under penalty of a praemunire, has been interpreted, as well as stat. Richard II., c. 5, not only as imposing a restraint upon popish claims of jurisdiction, but also of the equitable jurisdiction in Chancery; and in the thirty-first and thirty-second years of this reign, a counsellor-at-law was indicted in the King's Bench on the statute of praemunire, for exhibiting a bill in Chancery after judgment had gone against his client in the King's Bench. Under this and the like control, the Court of Chancery still continued to extend its authority, supported, in some degree, by the momentum it acquired in the time of Cardinal Wolsey."—J. Reeves, *Hist. Eng. Law* (Finlason's ed.), v. 5, pp. 386-387.

A. D. 1596.—Lord Ellesmere and his Decisions.—Kerly says the earliest chancellors' decisions that have come down to us are those of

Lord Ellesmere. He was the first chancellor to establish equity upon the basis of precedents. But compare Reeves (Finlason's), *Hist. Eng. Law*, v. 3, p. 553, who mentions decisions in the Year Books.—Kerly, *Hist. of the Court of Chancery*, p. 98.

A. D. 1601.—Cy Pres Doctrine.—"There is no trace of the doctrine being put into practice in England before the Reformation, although in the earliest reported cases where it has been applied it is treated as a well recognized rule, and as one owing its origin to the traditional favour with which charities had always been regarded. Much of the obscurity which covers the introduction of the doctrine into our Law may perhaps be explained by the fact that, in the earliest times, purely charitable gifts, as they would now be understood, were almost unknown. The piety of donors was most generally displayed in gifts to religious houses, and the application of the subject matter of such gifts was exclusively in the Superiors of the different Orders, and entirely exempt from secular control. From the religious houses the administration of charitable gifts passed to the Chancellor, as keeper of the King's conscience, the latter having as '*parens patriae*' the general superintendence of all infants, idiots, lunatics and charities. And it was not until some time later that this jurisdiction became gradually merged, and then only in cases where trusts were interposed, in the general jurisdiction of the Chancery Courts. It is not necessary to go into the long vexed question as to when that actually took place. It is enough to say that it is now pretty conclusively established that the jurisdiction of the Chancery Courts over charitable trusts existed anterior to, and independently of, the Statute of Charitable Uses, 43 Eliz., c. 4. As charitable gifts generally involved the existence of a trust reposed in some one, it was natural that the Chancery Court, which assumed jurisdiction over trusts, should have gradually extended that jurisdiction over charities generally; but the origin of the power, that it was one delegated by the Crown to the Chancellor, must not be lost sight of, as in this way, probably, can be best explained the curious distinct jurisdictions vested in the Crown and the Chancery Courts respectively to apply gifts *Cy pres*, the limits of which, though long uncertain, were finally determined by Lord Eldon in the celebrated case of *Moggridge v. Thackwell*, 7 ves. 69. If we remember that the original jurisdiction in all charitable matters was in the Crown, and that even after the Chancery Courts acquired a jurisdiction over trusts, there was still a class of cases untouched by such jurisdiction, we shall better understand how the prerogative of the Crown still remained in a certain class of cases, as we shall see hereafter. However this may be, there is no doubt that when the Chancery Courts obtained the jurisdiction over the charities, which they have never lost, the liberal principles of the Civil or Canon Law as to the carrying out of such gifts were the sources and inspirations of their decisions. And hence the *Cy pres* doctrine became gradually well recognised, though the mode of its application has varied from time to time. Perhaps the most striking instances of this liberal construction are to be found in the series of cases which, by a very strained interpretation of the Statute of Elizabeth with regard to charitable

uses, decided that gifts to such uses in favour of corporations, which could not take by devise under the old Wills Act, 32 Hen. VIII., c. 1, were good as operating in the nature of an appointment of the trust in equity, and that the intentment of the statute being in favour of charitable gifts, all deficiencies of assurance were to be supplied by the Courts. Although, historically, there may be no connection between the power of the King over the administration of charities, and the dispensing power reserved to him by the earlier Mortmain Acts, the one being, as we have seen, a right of Prerogative, the other a Feudal right in his capacity as ultimate Lord of the fee, it is perhaps not wholly out of place to allude shortly to the latter, particularly as the two appear not to have been kept distinct in later times. By the earlier Mortmain Acts, the dispensing power of the King, as Lord Paramount, to waive forfeitures under these Acts was recognised, and gifts of land to religious or charitable corporations were made not '*ipso facto*' void, but only voidable at the instance of the immediate Lord, or, on his default, of the King and after the statute '*quia emptores*,' which practically abolished mesne seignories, the Royal license became in most cases sufficient to secure the validity of the gift. The power of suspending statutes being declared illegal at the Revolution, it was deemed prudent, seeing that the grant of licenses in Mortmain imported an exercise of such suspending power, to give these licenses a Parliamentary sanction; and accordingly, by 7 and 8 William III., c. 37, it was declared that the King might grant licenses to aliens in Mortmain, and also to purchase, acquire, and hold lands in Mortmain in perpetuity without pain of forfeiture. The right of the mesne lord was thus passed over, and the dispensing power of the Crown, from being originally a Feudal right, became converted practically into one of Prerogative. The celebrated Statute of 1 Edward VI., c. 14, against superstitious uses, which is perhaps the earliest statutory recognition of the *Cy pres* doctrine, points also strongly to the original jurisdiction in these matters being in the King." The author proceeds to trace at some length the subsequent developments of the doctrine both judicial and statutory. The doctrine is not generally recognised in the United States.—H. L. Manby in *Law Mag. & Rev.*, 4th ser., v. 15 (London, 1889-90), p. 203.

A. D. 1603-1625.—Equity and the Construction of Wills.—"After a violent struggle between Lord Coke and Lord Ellesmere, the jurisdiction of the Court of Chancery to stay by injunction execution on judgments at law was finally established. In this reign [James I.] the Court made another attempt,—which was speedily abandoned,—to determine upon the validity of wills,—and it has been long settled that the validity of wills of real property shall be referred to courts of law, and the validity of wills of personal property to the Ecclesiastical Courts,—equity only putting a construction upon them when their validity has been established."—Lord Campbell, *Lives of the Chancellors*, v. 2, p. 386.

A. D. 1612.—Right of Redemption.—The right to redeem after the day dates from the reign of James I. From the time of Edward IV. (1461-83) a mortgagor could redeem after the day if accident, or a collateral agreement, or

fraud by mortgagee, prevented payment.—Kerly, *Hist. of the Court of Chancery*, p. 143.

A. D. 1616.—Contest between Equity and Common-Law Courts.—"In the time of Lord Ellesmere (A. D. 1616) arose that notable dispute between the courts of law and equity, set on foot by Sir Edward Coke, then chief justice of the court of king's bench; whether a court of equity could give relief after or against a judgment at the common law? This contest was so warmly carried on, that indictments were preferred against the suitors, the solicitors, the counsel, and even a master in chancery, for having incurred a 'praemunire,' by questioning in a court of equity a judgment in the court of king's bench, obtained by a gross fraud and imposition. This matter being brought before the king, was by him referred to his learned counsel for their advice and opinion; who reported so strongly in favor of the courts of equity, that his majesty gave judgment in their behalf."—W. Blackstone, *Commentaries*, bk. 3, p. 54.

A. D. 1616.—Relief against judgments at law.—"This was in 1616, the year of the memorable contest between Lord Coke and Lord Ellesmere as to the power of equity to restrain the execution of common-law judgment obtained by fraud. . . . The right of equity to enforce specific performance, where damages at law would be an inadequate remedy, has never since been questioned."—J. B. Ames, *Specific Performance of Contracts (The Green Bag)*, v. 1, p. 27).

A. D. 1671.—The Doctrine of Tacking established.—"It is the established doctrine in the English law, that if there be three mortgages in succession, and all duly registered, or a mortgage, and then a judgment, and then a second mortgage upon the estate, the junior mortgagee may purchase in the first mortgage, and tack it to his mortgage, and by that contrivance 'squeeze out' the middle mortgage, and gain preference over it. The same rule would apply if the first, as well as the second incumbrance, was a judgment; but the incumbrancer who tacks must always be a mortgagee, for he stands in the light of a bona fide purchaser, parting with his money upon the security of the mortgage. . . . In the English law, the rule is under some reasonable qualification. The last mortgagee cannot tack, if, when he took his mortgage, he had notice in fact . . . of the intervening incumbrance. . . . The English doctrine of tacking was first solemnly established in *Marsh v. Lee* [2 Vent. 337], under the assistance of Sir Matthew Hale, who compared the operation to a plank in shipwreck gained by the last mortgagee; and the subject was afterwards very fully and accurately expounded by the Master of the Rolls, in *Brace v. Duchess of Marlborough* [2 P. Wms. 491]."—J. Kent, *Commentaries*, pt. 6, lect. 58.

A. D. 1702-1714.—Equitable conversion.—"He [Lord Harcourt] first established the important doctrine, that if money is directed either by deed or will to be laid out in land, the money shall be taken to be land, even as to collateral heirs."—Lord Campbell, *Lives of the Chancellors*, v. 4, p. 374.

A. D. 1736-1756.—Lord Hardwicke developed System of Precedents.—"It was under Lord Hardwicke that the jurisdiction of Equity was fully developed. During the twenty years of his chancellorship the great branches of equi-

table jurisdiction were laid out, and his decisions were regularly cited as authority until after Lord Eldon's time.—Kerly, *Hist. of the Court of Chancery*, pp. 175-177.

A. D. 1742.—Control of Corporations.—"That the directors of a corporation shall manage its affairs honestly and carefully is primarily a right of the corporation itself rather than of the individual stockholders. . . . The only authority before the present century is the case of the *Charitable Corporation v. Sutton*, decided by Lord Hardwicke [2 Atk. 400]. But this case is the basis . . . of all subsequent decisions on the point, and it is still quoted as containing an accurate exposition of the law. The corporation was charitable only in name, being a joint-stock corporation for lending money on pledges. By the fraud of some of the directors . . . and by the negligence of the rest, loans were made without proper security. The bill was against the directors and other officers, 'to have a satisfaction for a breach of trust, fraud, and mismanagement.' Lord Hardwicke granted the relief prayed, and a part of his decision is well worth quoting. He says: 'Committee-men are most properly agents to those who employ them in this trust, and who empower them to direct and superintend the affairs of the corporation. In this respect they may be guilty of acts of commission or omission, of malfeasance or nonfeasance. . . . Nor will I ever determine that a court of equity cannot lay hold of every breach of trust, let the person be guilty of it either in a private or public capacity.'"—S. Williston, *Hist. of the Law of Business (Harvard Law Review)*, v. 2, pp. 158-159).

A. D. 1782.—Demurrer to Bill of Discovery.—"Originally, it appears not to have been contemplated that a demurrer or plea would lie to a bill for discovery, unless it were a demurrer or plea to the nature of the discovery sought or to the jurisdiction of the court, e. g., a plea of purchase for value; and, though it was a result of this doctrine that plaintiffs might compel discovery to which they were not entitled, it seems to have been supposed that they were not likely to do so to any injurious effect, since they must do it at their own expense. But this view was afterwards abandoned, and in 1782 it was decided that, if a bill of discovery in aid of an action at law stated no good cause of action against the defendant, it might be demurred to on that ground, i. e., that it showed on its face no right to relief at law, and, therefore, no right to discovery in equity. Three years later in *Hindman v. Taylor*, the question was raised whether a defendant could protect himself for answering a bill for discovery by setting up an affirmative defence by plea; and, though Lord Thurlow decided the question in the negative, his decision has since been overruled; and it is now fully settled that any defence may be set up to a bill for discovery by demurrer or plea, the same as to a bill for relief; and, if successful, it will protect the defendant from answering."—C. C. Langdell, *Summary of Equity Pleading*, pp. 204-205.

A. D. 1786.—Injunction after Decree to pay Proceeds of Estate into Court.—"As soon as a decree is made . . . , under which the executor will be required to pay the proceeds of the whole estate into court, an injunction ought to be granted against the enforcement of any

claim against the estate by an action at law; and accordingly such has been the established rule for more than a hundred years. . . . The first injunction that was granted expressly upon the ground above explained was that granted by Lord Thurlow, in 1782, in the case of *Brooks v. Reynolds*. . . . In the subsequent case of *Kenyon v. Worthington*, . . . an application to Lord Thurlow for an injunction was resisted by counsel of the greatest eminence. The resistance, however, was unsuccessful, and the injunction was granted. This was in 1786; and from that time the question was regarded as settled."—C. C. Langdell, *Equity Jurisdiction* (*Harvard Law Review*, v. 5, pp. 122-123).

A. D. 1792.—Negative Pleas.—"In *Gun v. Prior*, Forrester, 88, note, 1 Cox, 197, 2 Dickens, 657, Cas. in Eq. Pl. 47, a negative plea was overruled by Lord Thurlow after a full argument. This was in 1785. Two years later, the question came before the same judge again, and, after another full argument, was decided the same way. *Newman v. Wallis*, 2 Bro. C. C. 143, Cas. in Eq. Pl. 52. But in 1792, in the case of *Hall v. Noyes*, 3 Bro. C. C. 483, 489, Cas. in Eq. Pl. 223, 227, Lord Thurlow took occasion to say that he had changed his opinion upon the subject of negative pleas, and that his former decisions were wrong; and since then the right to plead a negative plea has not been questioned."—C. C. Langdell, *Summary of Equity Pleading*, p. 114, note.

A. D. 1801-1827.—Lord Eldon settled Rules of Equity.—"The doctrine of this Court," he [Lord Eldon] said himself, 'ought to be as well settled and as uniform, almost, as those of the common law, laying down fixed principles, but taking care that they are to be applied according to the circumstances of each case. I cannot agree that the doctrines of this Court are to be changed by every succeeding judge. Nothing would inflict on me greater pain than the recollection that I had done any thing to justify the reproach that the Equity of this Court varies like the Chancellor's foot.' Certainly the reproach he dreaded cannot justly be inflicted upon his memory. . . . From his time onward the development of equity was effected ostensibly, and, in the great majority of cases, actually, by strict deduction from the principles to be discovered in decided cases, and the work of subsequent Chancery judges has been, for the most part, confined, as Lord Eldon's was, to tracing out these principles into detail, and to rationalising them by repeated review and definition."—D. M. Kerly, *Hist. Court Chanc.*, p. 182.

A. D. 1812.—Judge Story.—"We are next to regard Story during his thirty-five years of judicial service. He performed an amount of judicial labor almost without parallel, either in quality or quantity, in the history of jurisprudence. His judgments in the Circuit Court comprehended thirteen volumes. His opinions in the Supreme Court are found in thirty-five volumes. Most of these decisions are on matters of grave difficulty, and many of them of first impression. Story absolutely created a vast amount of law for our country. Indeed, he was essentially a builder. When he came to the bench, the law of admiralty was quite vague and unformed; his genius formed it as exclusively as Stowell's did in England. He also did much toward building up the equity system which has become

part of our jurisprudence. In questions of international and constitutional law, the breadth and variety of his legal learning enabled him to shine with peculiar brilliancy. It is sufficient to say that there is scarcely any branch of the law which he has not greatly illustrated and enlarged,—prize, constitutional, admiralty, patent, copyright, insurance, real estate, commercial law so called, and equity,—all were gracefully familiar to him. The most celebrated of his judgments are *De Lovio v. Boit*, in which he investigates the jurisdiction of the Admiralty; *Martin v. Hunter's Lessee*, which examines the appellate jurisdiction of the United States Supreme Court; *Dartmouth College v. Woodward*, in which the question was, whether the charter of a college was a contract within the meaning of the constitutional provision prohibiting the enactment, by any State, of laws impairing the obligations of contracts; his dissenting opinion in *Charles River Bridge Company v. The Warren Bridge*, involving substantially the same question as the last case; and the opinion in the *Girard* will case. These are the most celebrated, but are scarcely superior to scores of his opinions in cases never heard of beyond the legal profession. His biographer is perhaps warranted in saying of his father's judicial opinions: 'For closeness of texture and compact logic, they are equal to the best judgments of Marshall; for luminousness and method, they stand beside those of Mansfield; in elegance of style, they yield the palm only to the prize cases of Lord Stowell, but in fullness of illustration and wealth and variety of learning, they stand alone.'—Irving Browne, *Short Studies of Great Lawyers*, pp. 293-295.

A. D. 1814-1823.—Chancellor Kent.—"In February, 1814, he was appointed chancellor. The powers and jurisdiction of the court of chancery were not clearly defined. There were scarcely any precedents of its decisions, to which reference could be made in case of doubt. Without any other guide, he felt at liberty to exercise such powers of the English chancery as he deemed applicable under the Constitution and laws of the State, subject to the correction of the Court of Errors, on appeal. . . . On the 31st of July, 1823, having attained the age of sixty years, the period limited by the Constitution for the tenure of his office, he retired from the court, after hearing and deciding every case that had been brought before him. On this occasion the members of the bar residing in the City of New York, presented him an address. After speaking of the inestimable benefits conferred on the community by his judicial labors for five and twenty years they say: 'During this long course of services, so useful and honorable, and which will form the most brilliant period in our judicial history, you have, by a series of decisions in law and equity, distinguished alike for practical wisdom, profound learning, deep research and accurate discrimination, contributed to establish the fabric of our jurisprudence on those sound principles that have been sanctioned by the experience of mankind, and expounded by the enlightened and venerable sages of the law. Though others may hereafter enlarge and adorn the edifice whose deep and solid foundations were laid by the wise and patriotic framers of our government, in that common law which they claimed for the people

as their noblest inheritance, your labors on this magnificent structure will forever remain eminently conspicuous, command the applause of the present generation, and exciting the admiration and gratitude of future ages."—Charles B. Waite, *James Kent (Chicago Law Times, v. 3, pp. 339-341)*.

A. D. 1821.—Negative Pleas to be supported by an Answer.—"The principle of negative pleas was first established by the introduction of anomalous pleas; but it was not perceived at first that anomalous pleas involved the admission of pure negative pleas. It would often happen, however, that a defendant would have no affirmative defence to a bill, and yet the bill could not be supported because of the falsity of some material allegation contained in it; and, if the defendant could deny this false allegation by a negative plea, he would thereby avoid giving discovery as to all other parts of the bill. At length, therefore, the experiment of setting up such a plea was tried; and, though unsuccessful at first, it prevailed in the end, and negative pleas became fully established. If they had been well understood, they might have proved a moderate success, although they were wholly foreign to the system into which they were incorporated; but, as it was, their introduction was attended with infinite mischief and trouble, and they did much to bring the system into disrepute. For example, it was not clearly understood for a long time that a pure negative plea required the support of an answer; and there was no direct decision to that effect until the case of *Sanders v. King*, 6 Madd. 61, Cas. in Eq. Pl. 74, decided in 1821."—C. C. Langdell, *Summary of Equity Pleading*, pp. 113-114.

A. D. 1834.—First Statute of Limitations in Equity.—"None of the English statutes of limitation, prior to 3 & 4 Wm. IV., c. 27, had any application to suits in equity. Indeed, they contained no general terms embracing all actions at law, but named specifically all actions to which they applied; and they made no mention whatever of suits in equity. If a plaintiff sued in equity, when he might have brought an action at law, and the time for bringing the action was limited by statute, the statute might in a certain sense be pleaded to the suit in equity; for the defendant might say that, if the plaintiff had sued at law, his action would have been barred; that the declared policy of the law therefore, was against the plaintiff's recovering; and hence the cause was not one of which a court of equity ought to take cognizance. In strictness, however, the plea in such a case would be to the jurisdiction of the court."—C. C. Langdell, *Summary of Equity Pleading*, pp. 149-150.

A. D. 1836.—Personal Character of Shares of Stock first established in England.—"The most accurate definition of the nature of the property acquired by the purchase of a share of stock in a corporation is that it is a fraction of all the rights and duties of the stockholders composing the corporation. Such does not seem to have been the clearly recognized view till after the beginning of the present century. The old idea was rather that the corporation held all its property strictly as a trustee, and that the shareholders were, strictly speaking, 'cestuis que trust,' being in equity co-owners of the corporate property. . . . It was not until the decision of *Bligh v. Brent* [Y. & C. 268], in 1836,

that the modern view was established in England."—S. Williston, *Hist. of the Law of Business Corporations before 1800 (Harvard Law Rev., v. 2, pp. 149-151)*.

A. D. 1875.—Patents, Copyrights and Trade-Marks.—"In modern times the inventor of a new process obtains from the State, by way of recompense for the benefit he has conferred upon society, and in order to encourage others to follow his example, not only an exclusive privilege of using the new process for a fixed term of years, but also the right of letting or selling his privilege to another. Such an indulgence is called a patent-right, and a very similar favour, known as copy-right, is granted to the authors of books, and to painters, engravers, and sculptors, in the productions of their genius. It has been a somewhat vexed question whether a 'trade-mark' is to be added to the list of intangible objects of ownership. It was at any rate so treated in a series of judgments by Lord Westbury, which, it seems, are still good law. He says, for instance, 'Imposition on the public is indeed necessary for the plaintiff's title, but in this way only, that it is the test of the invasion by the defendant of the plaintiff's right of property.' [Citing 33 L. J. Ch. 204; cf. 35 Ch. D. Oakley v. Dalton.] It was also so described in the 'Trade Marks Registration Act,' 1875 [§§ 3, 4, 5], as it was in the French law of 1857 relating to 'Marques de fabrique et de commerce.' The extension of the idea of ownership to these three rights is of comparatively recent date. Patent-right in England is older than the Statute of Monopolies, 21 Jac. I. c. 3, and copy-right is obscurely traceable previously to the Act of 8 Anne, c. 19, but trade-marks were first protected in the present century."—T. E. Holland, *Elements of Jurisprudence*, 5th ed., p. 183.

LAZARISTS, The.—"The Priests of the Missions, or the Lazarists ['sometimes called the Vincentian Congregation'], . . . have not unfrequently done very essential service to Christianity." Their Society was founded in 1624 by St. Vincent de Paul, "at the so-called Priory of St. Lazarus in Paris, whence the name Lazarists. . . . Besides their mission-labours, they took complete charge, in many instances, of ecclesiastical seminaries, which, in obedience to the instruction of the Council of Trent, had been established in the various dioceses, and even at this day many of these institutions are under their direction. In the year 1642 these devoted priests were to be seen in Italy, and not long after were sent to Algiers, to Tunis, to Madagascar, and to Poland."—J. Alzog, *Manual of Universal Church Hist.*, v. 3, pp. 463-465.

LAZICA.—LAZIC WAR.—"Lazica, the ancient Colchis and the modern Mingrelia and Imeritia, bordered upon the Black Sea." From A. D. 522 to 541 the little kingdom was a dependency of Rome, its king, having accepted Christianity, acknowledging himself a vassal of the Roman or Byzantine emperor. But the Romans provoked a revolt by their encroachments. "They seized and fortified a strong post, called Petra, upon the coast, appointed a commandant who claimed an authority as great as that of the Lazic king, and established a commercial monopoly which pressed with great severity upon the poorer classes of the Lazi." The Persians were accordingly invited in to drive the Romans out, and did so, reducing Lazica, for the time being, to the state of a Persian province. But, in their turn, the Persians became obnoxious, and the Lazi, making their peace with Rome, were taken by the Emperor Justinian under his protection. "The Lazic war, which commenced in consequence of this act of Justinian's, continued almost without intermission for nine years—from A. D. 549 to 557. Its details are related at great length by Procopius and Agathias, who view the struggle as one which vitally concerned the interests of their country. According to them, Chosroës [the Persian king] was bent upon holding Lazica in order to construct at the mouth of the Phasis a great naval station and arsenal, from which his fleets might issue to command the commerce or ravage the shores of the Black Sea." The Persians in the end withdrew from Lazica, but the Romans, by treaty, paid them an annual tribute for their possession of the country.—G. Rawlinson, *Seventh Great Monarchy*, ch. 20.

LEGATE.—This was the title given to the lieutenant-general or associate chosen by a Roman commander or provincial governor to be his second-in-authority.—W. Ramsay, *Manual of Roman Antiq.*, ch. 12.

LEGES JULIÆ, LEGES SEMPRONIÆ, &c. See JULIAN LAWS; SEMPRONIAN LAWS, &c.

LEGION, The Roman.—"The original order of a Roman army was, as it seems, similar to the phalanx; but the long unbroken line had been divided into smaller detachments since, and perhaps by Camillus. The long wars in the Samnite mountains naturally caused the Romans to retain and to perfect this organisation, which made their army more movable and pliable, without preventing the separate bodies quickly combining and forming in one line. The legion now [at the time of the war with Pyrrhus, B. C. 280] consisted of thirty companies (called 'manipuli') of the average strength of a hundred men, which were arranged in three lines of ten manipuli each, like the black squares on a chess-

board. The manipuli of the first line consisted of the youngest troops, called 'hastati'; those of the second line, called 'principes,' were men in the full vigour of life; those of the third, the 'triarii,' formed a reserve of older soldiers, and were numerically only half as strong as the other two lines. The tactic order of the manipuli enabled the general to move the 'principes' forward into the intervals of the 'hastati,' or to withdraw the 'hastati' back into the intervals of the 'principes,' the 'triarii' being kept as a reserve. . . . The light troops were armed with javelins, and retired behind the solid mass of the manipuli as soon as they had discharged their weapons in front of the line, at the beginning of the combat."—W. Ihne, *Hist. of Rome*, bk. 3, ch. 16 (v. 1).—"The legions, as they are described by Polybius, in the time of the Punic wars, differed very materially from those which achieved the victories of Cæsar, or defended the monarchy of Hadrian and the Antonines. The constitution of the Imperial legion may be described in a few words. The heavy-armed infantry, which composed its principal strength, was divided into ten cohorts, and fifty-five companies, under the orders of a correspondent number of tribunes and centurions. The first cohort, which always claimed the post of honour and the custody of the eagle, was formed of 1,105 soldiers, the most approved for valour and fidelity. The remaining nine cohorts consisted each of 555; and the whole body of legionary infantry amounted to 6,100 men. . . . The legion was usually drawn up eight deep, and the regular distance of three feet was left between the files as well as ranks. . . . The cavalry, without which the force of the legion would have remained imperfect, was divided into ten troops or squadrons; the first, as the companion of the first cohort, consisted of 132 men; whilst each of the other nine amounted only to 66."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 1.

Also in: W. Ramsay, *Manual of Roman Antiq.*, ch. 12.

LEGION OF HONOR, Institution of the. See FRANCE: A. D. 1801-1803.

LEGITIMISTS AND ORLEANISTS.—The partisans of Bourbon monarchy in France became divided into two factions by the revolution of 1830, which deposed Charles X. and raised Louis Philippe to the throne. Charles X., brother of Louis XVI. and Louis XVIII., was in the direct line of royal descent, from Louis XIV. Louis Philippe, Duke of Orleans, who displaced him, belonged to a younger branch of the Bourbon family, descending from the brother of Louis XIV., Philippe, Duke of Orleans, father of the Regent Orleans. Louis Philippe, in his turn, was expelled from the throne in 1848, and the crown, after that event, became an object of claim in both families. The claim supported by the Legitimists was extinguished in 1883 by the death of the childless Comte de Chambord, grandson of Charles X. The Orleanist claim is still maintained (1894) by the Comte de Paris, grandson of Louis Philippe.

LELEGES, The.—"The Greeks beyond the sea [Ionian Greeks of Asia Minor] were however not merely designated in groups, according to the countries out of which they came, but certain collective names existed for them—such as that of Javan in the East. . . . Among all these names the most widely spread was that of the Leleges, which the ancients themselves designated as that of a mixed people. In Lycia, in Miletus, and in the Troad these Leleges had their home; in other words, on the whole extent of coast in which we have recognized the primitive seats of the people of Ionic Greeks."—E. Curtius, *Hist. of Greece*, bk. 1, ch. 2.—See, also, DORIANS and IONIANS.

LELIAERDS.—In the mediæval annals of the Flemish people, the partisans of the French are called "Leliaerds," from "lilie," the Flemish for lily.—J. Hutton, *James and Philip van Artevelde*, p. 32, foot-note.

LEPTIS MAGNA.—"The city of Leptis Magna, originally a Phœnician colony, was the capital of this part of the province [the tract of north-African coast between the Lesser and the Greater Syrtes], and held much the same prominent position as that of Tripoli at the present day. The only other towns in the region of the Syrtes, as it was sometimes called, were Cea, on the site of the modern Tripoli, and Sabrata, the ruins of which are still visible at a place called Tripoli Vecchio. The three together gave the name of the Tripolis of Africa to this region, as distinguished from the Pentapolis of Cyrenaica. Hence the modern appellation."—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 20, sect. 1, foot-note (v. 2).—See, also, CARTHAGE, THE DOMINION OF.

LESBOS. — The largest of the islands of the Ægean, lying south of the Troad, great part of which it once controlled, was particularly distinguished in the early literary history of ancient Greece, having produced what is called "the Æolian school" of lyric poetry. Alcæus, Sappho, Terpander and Arion were poets who sprang from Lesbos. The island was one of the important colonies of what was known as the Æolic migration, but became subject to Athens after the Persian War. In the fourth year of the Peloponnesian War its chief city, Mitylene (which afterwards gave its name to the entire island), seized the opportunity to revolt. The siege and reduction of Mitylene by the Athenians was one of the exciting incidents of that struggle. — Thucydides, *History*, bk. 3.

LESCHÉ, The. — The clubs of Sparta and Athens formed an important feature of the life of Greece. In every Grecian community there was a place of resort called the Lesché. In Sparta it was peculiarly the resort of old men, who assembled round a blazing fire in winter, and were listened to with profound respect by their juniors. These retreats were numerous in Athens. — C. O. Müller, *Hist. and Antiquities of the Doric race*, v. 2, p. 396. — "The proper home of the Spartan art of speech, the original source of so many Spartan jokes current over all Greece, was the Lesché, the place of meeting for men at leisure, near the public drilling-grounds, where they met in small bands, and exchanged merry talk." — E. Curtius, *Hist. of Greece*, v. 1, p. 220 (*Am. ed.*).

LETTERS OF MARQUE. See **PRIVATEERS.**

LETTRE DE CACHET. — "In French history, a letter or order under seal; a private letter of state: a name given especially to a written order proceeding from and signed by the king, and countersigned by a secretary of state, and used at first as an occasional means of delaying the course of justice, but later, in the 17th and 18th centuries, as a warrant for the imprisonment without trial of a person obnoxious for any reason to the government, often for life or for a long period, and on frivolous pretences. Lettres de

LEUDES.

cachet were abolished at the Revolution." — *Century Dict.* — "The minister used to give generously blank lettres-de-cachet to the intendants, the bishops, and people in the administration. Saint-Florentin, alone, gave away as many as 50,000. Never had man's dearest treasure, liberty, been more lavishly squandered. These letters were the object of a profitable traffic; they were sold to fathers who wanted to get rid of their sons, and given to pretty women who were inconvenienced by their husbands. This last cause of imprisonment was one of the most prominent. And all through good-nature. The king [Louis XV.] was too good to refuse a lettre-de-cachet to a great lord. The intendant was too good-natured not to grant one at a lady's request. The government clerks, the mistresses of the clerks, and the friends of these mistresses, through good-nature, civility, or mere politeness, obtained, gave, or lent, those terrible orders by which a man was buried alive. Buried; — for such was the carelessness and levity of those amiable clerks, — almost all nobles, fashionable men, all occupied with their pleasures, — that they never had the time, when once the poor fellow was shut up, to think of his position." — J. Michelet, *Historical View of the French Revolution*, introd., pt. 2, sect. 9.

LETTS. See **LITHUANIANS.**

LEUCADIA, OR LEUCAS. — Originally a peninsula of Acarnania, on the western coast of Greece, but converted into an island by the Corinthians, who cut a canal across its narrow neck. Its chief town, of the same name, was at one time the meeting place of the Acarnanian League. The high promontory at the southwestern extremity of the island was celebrated for the temple of Apollo which crowned it, and as being the scene of the story of Sappho's suicidal leap from the Leucadian rock.

LEUCÆ, Battle of. — The kingdom of Pergamum having been bequeathed to the Romans by its last king, Attalus, a certain Aristonicus attempted to resist their possession of it, and Crassus, one of the consuls of B. C. 131 was sent against him. But Crassus had no success and was finally defeated and slain, near Leucæ. Aristonicus surrendered soon afterwards to M. Perperna and the war in Pergamum was ended. — G. Long, *Decline of the Roman Republic*, v. 1, ch. 14.

LEUCI, The. — A tribe in Belgic Gaul which occupied the southern part of the modern department of the Meuse, the greater part of the Meurthe, and the department of the Vosges. — Napoleon III., *Hist. of Cæsar*, bk. 3, ch. 2, footnote (v. 2).

LEUCTRA, Battle of (B. C. 371). See **GREECE:** B. C. 379-371.

LEUD, OR LIDUS, The. See **SLAVERY, MEDÆVAL: GERMANY.**

LEUDES. — "The Frankish warriors, but particularly the leaders, were called 'leudes,' from the Teutonic word 'lende,' 'liude,' 'leute,' people, as some think (Thierry, *Lettres sur l'Hist. de Franc*, p. 130). In the Scandinavian dialects, 'lide' means a warrior . . . ; and in the Kymric also 'lwydd' means an army or war-band. . . . It was not a title of dignity, as every free fighter among the Franks was a leud, but in process of time the term seems to have been

LEUDES.

restricted to the most prominent and powerful warriors alone."—P. Godwin, *Hist. of France: Ancient Gaul*, bk. 3, ch. 12, foot-note.

LEUGA, The.—"The roads in the whole Roman empire were measured and marked according to the unit of the Roman mile (1.48 kilom.), and up to the end of the second century this applied also to those [the Gallic] provinces. But from Severus onward its place was taken in the three Gauls and the two Germanies by a mile correlated no doubt to the Roman, but yet different and with a Gallic name, the 'leuga' (2.222 kilomètres), equal to one and a half Roman miles. . . . The double 'leuga,' the German 'rasta,' . . . corresponds to the French 'lieue.'"—T. Mommsen, *Hist. of the Romans*, bk. 8, ch. 3.

LEVELLERS, The.—"Especially popular among the soldiers [of the Parliamentary Army, England, A. D. 1647-48], and keeping up their excitement more particularly against the House of Lords, were the pamphlets that came from John Lilburne, and an associate of his named Richard Overton. . . . These were the pamphlets . . . which . . . were popular with the common soldiers of the Parliamentary Army, and nursed that especial form of the democratic passion among them which longed to sweep away the House of Lords and see England governed by a single Representative House. Baxter, who reports this growth of democratic opinion in the Army from his own observation, distinctly recognises in it the beginnings of that rough ultra-Republican party which afterwards became formidable under the name of The Levellers."—D. Masson, *Life of John Milton*, v. 3, bk. 4, ch. 1.—"They [the Levellers] had a vision of a pure and patriotic Parliament, accurately representing the people, yet carrying out a political programme incomprehensible to nine-tenths of the nation. This Parliament was to represent all legitimate varieties of thought, and was yet to act together as one man. The necessity for a Council of State they therefore entirely denied; and they denounced it as a new tyranny. The excise they condemned as an obstruction to trade. They would have no man compelled to fight, unless he felt free in his own conscience to do so. They appealed to the law of nature, and found their interpretation of it carrying them further and further away from English traditions and habits, whether of Church or State." A mutiny of the Levellers in the army, which broke out in April and May, 1649, was put down with stern vigor by Cromwell and Fairfax, several of the leaders being executed.—J. A. Picton, *Oliver Cromwell*, ch. 17.

LIA-FAIL, The.—"The Tuatha-de-Danaan [the people who preceded the Milesians in colonizing Ireland, according to the fabulous Irish histories] brought with them from Scandinavia, among other extraordinary things, three marvelous treasures, the Lia-Fail, or Stone of Destiny, the Sorcerer's Spear, and the Magic Caldron, all celebrated in the old Irish romances. The Lia-Fail possessed the remarkable property of making a strange noise and becoming wonderfully disturbed, whenever a monarch of Ireland of pure blood was crowned, and a prophecy was attached to it, that whatever country possessed it should be ruled over by a king of Irish descent, and enjoy uninterrupted success and prosperity. It was preserved at Cashel, where the kings of Munster were crowned upon it. According to some writers it was afterwards kept at the Hill of Tara, where it remained until it was carried to Scotland by an Irish prince, who succeeded to the crown of that country. There it was preserved at Seone, until Edward I. carried it away into England, and placed it under the seat of the coronation chair of our kings, where it still remains. . . . It seems to be the opinion of some modern antiquarians that a pillar stone still remaining at the Hill of Tara is the true Lia-Fail, which in that case was not carried to Scotland."—T. Wright, *Hist. of Ireland*, bk. 1, ch. 2, and foot-note.—See, also, SCOTLAND: 8TH-9TH CENTURIES.

were familiarly known. See UNITED STATES OF AM.: A. D. 1765; NEW YORK: A. D. 1773-1774; and LIBERTY TREE.

LIBERTY CAP.—"This emblem, like many similar ones received by the revolutions from the hand of chance, was a mystery even to those who wore it. It had been adopted [at Paris] for the first time on the day of the triumph of the soldiers of Châteauneuf [April 15, 1792, when 41 Swiss soldiers of the regiment of Châteauneuf, condemned to the galleys for participation in a dangerous mutiny of the garrison at Nancy in 1790, but liberated in compliance with the demands of the mob, were fêted as heroes by the Jacobins of Paris]. Some said it was the coiffure of the galley-slaves, once infamous, but glorious since it had covered the brows of these martyrs of the insurrection; and they added that the people wished to purify this head-dress from every stain by wearing it themselves. Others only saw in it the Phrygian bonnet, a symbol of freedom for slaves. The 'bonnet rouge' had from its first appearance been the subject of dispute and dissension amongst the Jacobins; the 'exaltés' wore it, whilst the 'modérés' yet abstained from adopting it." Robespierre and his immediate followers opposed the "frivolity" of the "bonnet rouge," and momentarily suppressed it in the Assembly. "But even the voice of Robespierre, and the resolutions of the Jacobins, could not arrest the outbreak of enthusiasm that had placed the sign of 'avenging equality' ('l'égalité vengeresse') on every head; and the evening of the day on which it was repudiated at the Jacobins' saw it inaugurated at all the theatres. The bust of Voltaire, the destroyer of prejudice, was adorned with the Phrygian cap of liberty, amidst the shouts of the spectators, whilst the cap and pike became the uniform and weapon of the citizen soldier."—A. de Lamartine, *Hist. of the Girondists*, bk. 13 (v. 1).

LIBERTY TREE AND LIBERTY HALL.—"Lafayette said, when in Boston, 'The world should never forget the spot where once

LIBRARIES.

stood Liberty Tree, so famous in your annals.' . . . The open space at the four corners of Washington, Essex, and Boylston streets was once known as Hanover Square, from the royal house of Hanover, and sometimes as the Elm Neighborhood, from the magnificent elms with which it was environed. It was one of the finest of these that obtained the name of Liberty Tree, from its being used on the first occasion of resistance to the obnoxious Stamp Act. . . . At day-break on the 14th August, 1765, nearly ten years before active hostilities broke out, an effigy of Mr. Oliver, the Stamp officer, and a boot, with the Devil peeping out of it,—an allusion to Lord Bute,—was discovered hanging from Liberty Tree. The images remained hanging all day, and were visited by great numbers of people, both from the town and the neighboring country. Business was almost suspended. Lieutenant-Governor Hutchinson ordered the sheriff to take the figures down, but he was obliged to admit that he dared not do so. As the day closed in the effigies were taken down, placed upon a bier, and, followed by several thousand people of every class and condition," were borne through the city and then burned, after which much riotous conduct on the part of the crowd occurred. "In 1766, when the repeal of the Stamp Act took place, a large copper plate was fastened to the tree, inscribed in golden characters:—'This tree was planted in the year 1646, and pruned by order of the Sons of Liberty, Feb. 14th, 1766.' . . . The ground immediately about Liberty Tree was popularly known as Liberty Hall. In August, 1767, a flagstaff had been erected, which went through and extended above its highest branches. A flag hoisted upon this staff was the signal for the assembling of the Sons of Liberty. . . . In August, 1775, the name of Liberty having become offensive to the tories and their British allies, the tree was cut down by a party led by one Job Williams."—S. A. Drake, *Old Landmarks of Boston*, ch. 14.

LIBERUM VETO, The. See POLAND: A. D. 1578-1652.

LIBRA, The Roman.—"The ancient Roman unit of weight was the libra, or pondus, from which the modern names of the livre and pound are derived. Its weight was equal to 5,015 Troy gr. or 325 grm., and it was identical with the Greek-Asiatic mina."—H. W. Chisholm, *Science of Weighing and Measuring*, ch. 2.—See, also, AS.

LIBRARIES.

Ancient.

Babylonia and Assyria.—"The Babylonians were . . . essentially a reading and writing people. . . . Books were numerous and students were many. The books were for the most part written upon clay [tablets] with a wooden reed or metal stylus, for clay was cheap and plentiful, and easily impressed with the wedge-shaped lines of which the characters were composed. But besides clay, papyrus and possibly also parchment were employed as writing materials; at all events the papyrus is referred to in the texts."—A. H. Sayce, *Social Life among the Assyrians and Babylonians*, p. 30.—"We must speak of the manner in which the tablet was formed. Fine clay was selected, kneaded, and

moulded into the shape of the required tablet. One side was flat, and the other rounded. The writing was then inscribed on both sides, holes were pricked in the clay, and then it was baked. The holes allowed the steam which was generated during the process of baking to escape. It is thought that the clay used in some of the tablets was not only well kneaded, but ground in some kind of mill, for the texture of the clay is as fine as some of our best modern pottery. The wedges appear to have been impressed by a square headed instrument."—E. A. W. Budge, *Babylonian Life and History*, p. 105.—Assurbanipal, the Sardanapalus of the Greeks, was the greatest and most celebrated of Assyrian monarchs. He was the principal patron of

Assyrian literature, and the greater part of the grand library at Nineveh was written during his reign."—G. Smith, *Assyrian Discoveries*, ch. 18. —"Assurbanipal is fond of old books, particularly of the old sacred works. He collects the scattered specimens from the chief cities of his empire, and even employs scribes in Chaldea, Ourouk, Barsippa, and Babylon to copy for him the tablets deposited in the temples. His principal library is at Nineveh, in the palace which he built for himself upon the banks of the Tigris, and which he has just finished decorating. It contains more than thirty thousand tablets, methodically classified and arranged in several rooms, with detailed catalogues for convenient reference. Many of the works are continued from tablet to tablet and form a series, each bearing the first words of the text as its title. The account of the creation, which begins with the phrase: 'Formerly, that which is above was not yet called the heaven,' was entitled: 'Formerly, that which is above, No. 1;' 'Formerly, that which is above, No. 2;' and so on to the end. Assurbanipal is not less proud of his love of letters than of his political activity, and he is anxious that posterity should know how much he has done for literature. His name is inscribed upon every work in his library, ancient and modern. 'The palace of Assurbanipal, king of legions, king of multitudes, king of Assyria, to whom the god Nebo and the goddess Tasmetu have granted attentive ears and open eyes to discover the writings of the scribes of my kingdom, whom the kings my predecessors, have employed. In my respect for Nebo, the god of intelligence, I have collected these tablets; I have had them copied, I have marked them with my name, and I have deposited them in my palace.' The library at Dur-Sarginu, although not so rich as the one in Nineveh, is still fairly well supplied."—G. Maspéro, *Life in Ancient Egypt and Assyria*, ch. 16. —"Collections of inscribed tablets had been made by Tiglath-Pileser II., king of Assyria, B. C. 745, who had copied some historical inscriptions of his predecessors. Sargon, the founder of the dynasty to which Assur-bani-pal belonged, B. C. 722, had increased this library by adding a collection of astrological and similar texts, and Sennacherib, B. C. 705, had composed copies of the Assyrian canon, short histories, and miscellaneous inscriptions, to add to the collection. Sennacherib also moved the library from Calah, its original seat, to Nineveh, the capital. Esarhaddon, B. C. 681, added numerous historical and mythological texts. All the inscriptions of the former kings were, however, nothing compared to those written during the reign of Assur-bani-pal. Thousands of inscribed tablets from all places, and on every variety of subject, were collected, and copied, and stored in the library of the palace at Nineveh during his reign; and by his statements they appear to have been intended for the inspection of the people, and to spread learning among the Assyrians. Among these tablets one class consisted of historical texts, some the histories of the former kings of Assyria, and others copies of royal inscriptions from various other places. Similar to these were the copies of treaties, despatches, and orders from the king to his generals and ministers, a large number of which formed part of the library. There was a large collection of letters of all sorts, from despatches to

the king on the one hand, down to private notes on the other. Geography found a place among the sciences, and was represented by lists of countries, towns, rivers, and mountains, notices of the position, products, and character of districts, &c., &c. There were tables giving accounts of the law and legal decisions, and tablets with contracts, loans, deeds of sale and barter, &c. There were lists of tribute and taxes, accounts of property in the various cities, forming some approach to a census and general account of the empire. One large and important section of the library was devoted to legends of various sorts, many of which were borrowed from other countries. Among these were the legends of the hero Izdubar, perhaps the Nimrod of the Bible. One of these legends gives the Chaldean account of the flood, others of this description give various fables and stories of evil spirits. The mythological part of the library embraced lists of the gods, their titles, attributes, temples, &c., hymns in praise of various deities, prayers to be used by different classes of men to different gods, and under various circumstances, as during eclipses or calamities, on setting out for a campaign, &c., &c. Astronomy was represented by various tablets and works on the appearance and motions of the heavens, and the various celestial phenomena. Astrology was closely connected with Astronomy, and formed a numerous class of subjects and inscriptions. An interesting division was formed by the works on natural history; these consisted of lists of animals, birds, reptiles, trees, grasses, stones, &c., &c., arranged in classes, according to their character and affinities as then understood, lists of minerals and their uses, lists of foods, &c., &c. Mathematics and arithmetic were found, including square and cube root, the working out of problems, &c., &c. Much of the learning on these tablets was borrowed from the Chaldeans and the people of Babylon, and had originally been written in a different language and style of writing, hence it was necessary to have translations and explanations of many of these; and in order to make their meaning clear, grammars, dictionaries, and lexicons were prepared, embracing the principal features of the two languages involved, and enabling the Assyrians to study the older inscriptions. Such are some of the principal features of the grand Assyrian library, which Assur-bani-pal established at Nineveh, and which probably numbered over 10,000 clay documents."—George Smith, *Ancient History from the Monuments: Assyria*, pp. 188–191. —"It is now [1882] more than thirty years since Sir Henry Layard, passing through one of the doorways of the partially explored palace in the mound of Kouyunjik, guarded by sculptured fish gods, stood for the first time in the double chambers containing a large portion of the remains of the immense library collected by Assurbanipal, King of Nineveh. . . . Since that time, with but slight intermissions, this treasure-house of a forgotten past has been turned over again and again, notably in the expeditions of the late Mr. George Smith, and still the supply of its cuneiform literature is not exhausted. Until last year [1881] this discovery remained unique; but the perseverance of the British Museum authorities and the patient labour of Mr. Rassam were then rewarded by the exhumation of what is apparently the library chamber of the temple

or palace at Sippara, with all its 10,000 tablets, resting undisturbed, arranged in their position on the shelves, just as placed in order by the librarian twenty-five centuries ago. . . . From what Berosus tells us with regard to Sippara, or Pantibiblon (the town of books), the very city, one of whose libraries has just been brought to light, . . . it may be inferred that this was certainly one of the first towns that collected a library. . . . It is possible that the mound at Mugheir enshrines the oldest library of all, for here are the remains of the city of Ur (probably the Biblical Ur of the Chaldees). From this spot came the earliest known royal brick inscription, as follows:—'Uruk, King of Ur, who Bit Nanur built.' Although there are several texts from Mugheir, such as that of Dungi, son of Uruk, yet, unless by means of copies made for later libraries in Assyria, we cannot be said to know much of its library. Strange to say, however, the British Museum possesses the signet cylinder of one of the librarians of Ur, who is the earliest known person holding such an office. . . . Its inscription is given thus by Smith:—'Emuq-sin, the powerful hero, the King of Ur, King of the four regions; Amil Anu, the tablet-keeper, son of Gat, his servant.' . . . Erech, the modern Warka, is a city at which we know there must have been one or more libraries, for it was from thence Assurbannipal copied the famous Isdubar series of legends in twelve tablets, one of which contained the account of the Deluge. Hence also came the wonderful work on magic in more than one hundred tablets; for, as we have it, it is nothing more than a facsimile by Assurbannipal's scribes of a treatise which had formed part of the collection of the school of the priests at Erech. . . . Larsa, now named Senkereh, was the seat of a tablet collection that seems to have been largely a mathematical one; for in the remains we possess of it are tablets containing tables of squares and cube roots and others, giving the characters for fractions. There are from here also, however, fragments with lists of the gods, a portion of a geographical dictionary, lists of temples, &c. . . . To a library at Cutha we owe the remnants of a tablet work containing an account of the creation and the wars of the gods, and, among others, a very ancient terra-cotta tablet bearing a copy of an inscription engraved in the temple of the god Dup Lan at Cutha, by Dungi, King of Ur. The number of tablets and cylinders found by M. de Sarzec at Zirkulla show that there too the habit of committing so much to writing was as rife as in other cities of whose literary character we know more."—*The Libraries of Babylonia and Assyria (Knowledge, Nov. 24, 1882, and March 2, 1883)*.—"One of the most important results of Sir A. H. Layard's explorations at Nineveh was the discovery of the ruined library of the ancient city, now buried under the mounds of Kouyunjik. The broken clay tablets belonging to this library not only furnished the student with an immense mass of literary matter, but also with direct aids towards a knowledge of the Assyrian syllabary and language. Among the literature represented in the library of Kouyunjik were lists of characters, with their various phonetic and ideographic meanings, tables of synonymes, and catalogues of the names of plants and animals. This, however, was not all. The inventors of the cunei-

form system of writing had been a people who preceded the Semites in the occupation of Babylonia, and who spoke an agglutinative language utterly different from that of their Semitic successors. These Accadians, as they are usually termed, left behind them a considerable amount of literature, which was highly prized by the Semitic Babylonians and Assyrians. A large portion of the Ninevite tablets, accordingly, consists of interlinear or parallel translations from Accadian into Assyrian, as well as of reading books, dictionaries, and grammars, in which the Accadian original is placed by the side of its Assyrian equivalent."—A. H. Sayce, *Fresh Light from the Ancient Monuments*, ch. 1.

Greece.—"Pisistratus the tyrant is said to have been the first who supplied books of the liberal sciences at Athens for public use. Afterwards the Athenians themselves, with great care and pains, increased their number; but all this multitude of books, Xerxes, when he obtained possession of Athens, and burned the whole of the city except the citadel, seized and carried away to Persia. But king Seleucus, who was called Nicanor, many years afterwards, was careful that all of them should be again carried back to Athens."—"That Pisistratus was the first who collected books, seems generally allowed by ancient writers. . . . In Greece were several famous libraries. Clearchus, who was a follower of Plato, founded a magnificent one in Heraclea. There was one in the island of Cnidos. The books of Athens were by Sylla removed to Rome. The public libraries of the Romans were filled with books, not of miscellaneous literature, but were rather political and sacred collections, consisting of what regarded their laws and the ceremonies of their religion."—Aulus Gellius, *The Attic Nights*, bk. 6, ch. 17 (v. 2), with foot-note by W. Beloe.—"If the libraries of the Greeks at all resembled in form and dimensions those found at Pompeii, they were by no means spacious; neither, in fact, was a great deal of room necessary, as the manuscripts of the ancients stowed away much closer than our modern books, and were sometimes kept in circular boxes, of elegant form, with covers of turned wood. The volumes consisted of rolls of parchment, sometimes purple at the back, or papyrus, about twelve or fourteen inches in breadth, and as many feet long as the subject required. The pages formed a number of transverse compartments, commencing at the left, and proceeding in order to the other extremity, and the reader, holding in either hand one end of the manuscript, unrolled and rolled it up as he read. Occasionally these books were placed on shelves, in piles, with the ends outwards, adorned with golden bosses, the titles of the various treatises being written on pendant labels."—J. A. St. John, *The Hellenes*, v. 2, p. 84.—"The learned reader need not be reminded how wide is the difference between the ancient 'volumen,' or roll, and the 'volume' of the modern book-trade, and how much smaller the amount of literary matter which the former may represent. Any single 'book' or 'part' of a treatise would anciently have been called 'volumen,' and would reckon as such in the enumeration of a collection of books. The Iliad of Homer, which in a modern library may form but a single volume, would have counted as twenty-four 'volumina' at Alexandria. We read of authors leaving behind them works reckoned,

not by volumes or tens of volumes, but by hundreds. . . . It will at once be understood that . . . the very largest assemblage of 'volumina' assigned as the total of the greatest of the ancient collections would fall far short, in its real literary contents, of the second-rate, or even third-rate collections of the present day."—*Libraries, Ancient and Modern* (*Edinburgh Rev.*, Jan., 1874).

Alexandria.—"The first of the Ptolemies, Lagns, not only endeavoured to render Alexandria one of the most beautiful and most commercial of cities, he likewise wished her to become the cradle of science and philosophy. By the advice of an Athenian emigrant, Demetrius of Phaleros, this prince established a society of learned and scientific men, the prototype of our academies and modern institutions. He caused that celebrated museum to be raised, that became an ornament to the Bruchion; and here was deposited the noble library, 'a collection,' says Titus Livius, 'at once a proof of the magnificence of those kings, and of their love of science.' Philadelphos, the successor of Lagus, finding that the library of the Bruchion already numbered 400,000 volumes, and either thinking that the edifice could not well make room for any more, or being desirous, from motives of jealousy, to render his name equally famous by the construction of a similar monument, founded a second library in the temple of Serapis, called the Serapeum, situated at some distance from the Bruchion, in another part of the town. These two libraries were denominated, for a length of time, the Mother and the Daughter. During the war with Egypt, Cæsar, having set fire to the king's fleet, which happened to be anchored in the great port, it communicated with the Bruchion; the parent library was consumed, and, if any remains were rescued from the flames, they were, in all probability, conveyed to the Serapeum. Consequently, ever after, there can be no question but of the latter. Euergetes and the other Ptolemies enlarged it successively; and Cleopatra added 200,000 manuscripts at once from the library of King Pergamos, given her by Mark Antony. . . . Aulus Gellius and Ammianus Marcellus seem to insinuate that the whole of the Alexandrian library had been destroyed by fire in the time of Cæsar. . . . But both are mistaken on this point. Ammianus, in the rest of his narrative, evidently confounds Serapeum and Bruchion. . . . Suetonius (in his life of Domitian) mentions that this emperor sent some amanuenses to Alexandria, for the purpose of copying a quantity of books that were wanting in his library; consequently a library existed in Alexandria a long while after Cæsar. Besides, we know that the Serapeum was only destroyed A. D. 391, by the order of Theodosius. Doubtless the library suffered considerably on this last-mentioned occasion; but that it still partly existed is beyond a doubt, according to the testimony of Oroses, who, twenty-four years later, made a voyage to Alexandria, and assures us that he 'saw, in several temples, presses full of books,' the remains of ancient libraries. . . . The trustworthy Oroses, in 415, is the last witness we have of the existence of a library at Alexandria. The numerous Christian writers of the fifth and sixth centuries, who have handed down to us so many trifling facts, have not said a word upon this important subject. We, there-

fore, have no certain documents upon the fate of our library from 415 to 636, or, according to others, 640, when the Arabs took possession of Alexandria,—a period of ignorance and barbarism, of war and revolutions, and vain disputes between a hundred different sects. Now, towards A. D. 636, or 640, the troops of the caliph, Omar, headed by his lieutenant, Amrou, took possession of Alexandria. For more than six centuries, nobody in Europe took the trouble of ascertaining what had become of the library of Alexandria. At length, in the year 1660, a learned Oxford scholar, Edward Pococke, who had been twice to the East, and had brought back a number of Arabian manuscripts, first introduced the Oriental history of the physician Abulfarage to the learned world, in a Latin translation. In it we read the following passage:—"In those days flourished John of Alexandria, whom we have surnamed the Grammarian, and who adopted the tenets of the Christian Jacobites. . . . He lived to the time when Amrou Ebno'l-As took Alexandria. He went to visit the conqueror; and Amrou, who was aware of the height of learning and science that John had attained, treated him with every distinction, and listened eagerly to his lectures on philosophy, which were quite new to the Arabians. Amrou was himself a man of intellect and discernment, and very clear-headed. He retained the learned man about his person. John one day said to him, "You have visited all the stores of Alexandria, and you have put your seal on all the different things you found there. I say nothing about those treasures which have any value for you; but, in good sooth, you might leave us those of which you make no use." "What then is it that you want?" interrupted Amrou. "The books of philosophy that are to be found in the royal treasury," answered John. "I can dispose of nothing," Amrou then said, "without the permission of the lord of all true believers, Omar Ebno'l-Chattab." He therefore wrote to Omar, informing him of John's request. He received an answer from Omar in these words. "As to the books you mention, either they agree with God's holy book, and then God's book is all-sufficient without them; or they disagree with God's book, in which case they ought not to be preserved." And, in consequence, Amrou Ebno'l-As caused them to be distributed amongst the different baths of the city, to serve as fuel. In this manner they were consumed in half-a-year.' When this account of Abulfarage's was made known in Europe, it was at once admitted as a fact, without the least question. . . . Since Pococke, another Arab historian, likewise a physician, was discovered, who gave pretty nearly the same account. This was Abdollatif, who wrote towards 1200, and consequently prior to Abulfarage. . . . Abdollatif does not relate any of the circumstances accessory to the destruction of the library. But what faith can we put in a writer who tells us that he has actually seen what could no longer have been in existence in his time? 'I have seen,' says he, 'the portico and the college that Alexander the Great caused to be built, and which contained the splendid library,' &c. Now, these buildings were situated within the Bruchion; and since the reign of Aurelian, who had destroyed it—that is to say, at least nine hundred years before Abdollatif—the Bruchion was a deserted spot, covered with ruins and rubbish.

Abulfarage, on the other hand, places the library in the Royal Treasury; and the anachronism is just as bad. The royal edifices were all contained within the walls of the Bruchion; and not one of them could then be left. . . . As a fact is not necessarily incontestable because advanced as such by one or even two historians, several persons of learning and research have doubted the truth of this assertion. Renaudot (*Hist. des Patriarches d'Alexandrie*) had already questioned its authenticity, by observing: 'This account is rather suspicious, as is frequently the case with the Arabians.' And, lastly, Querci, the two Asseman, Villoison, and Gibbon, completely declared themselves against it. Gibbon at once expresses his astonishment that two historians, both of Egypt, should not have said a word about so remarkable an event. The first of these is Eutychius, patriarch of Alexandria, who lived in that city 500 years after it was taken by the Saracens, and who gives a long and detailed account, in his *Annals*, both of the siege and the succeeding events; the second is Elmacin, a most voracious writer, the author of a *History of the Saracens*, and who especially relates the life of Omar, and the taking of Alexandria, with its minutest circumstances. Is it conceivable or to be believed that these two historians should have been ignorant of so important a circumstance? That two learned men who would have been deeply interested in such a loss should have made no mention of it, though living and writing in Alexandria—Eutychius, too, at no distant period from the event? and that we should learn it for the first time from a stranger who wrote, six centuries after, on the frontiers of Media? Besides, as Gibbon observes, why should the Caliph Omar, who was no enemy to science, have acted, in this one instance, in direct opposition to his character. . . . To these reasons may be added the remark of a German writer, M. Reinhard, who observes that Eutychius (*Annals of Eutychius*, vol. ii. p. 316) transcribes the very words of the letter in which Amrou gives the Caliph Omar an account of the taking of Alexandria after a long and obstinate siege. 'I have carried the town by storm,' says he, 'and without any preceding offer of capitulation. I cannot describe all the treasures it contains; suffice it to say, that it numbers 4,000 palaces, 4,000 baths, 40,000 taxable Jews, 400 theatres, 12,000 gardeners who sell vegetables. Your Mussulmans demand the privilege of pillaging the city, and sharing the booty.' Omar, in his reply, disapproves of the request, and expressly forbids all pillage or dilapidation. It is plain that, in his official report, Amrou seeks to exaggerate the value of his conquest, and to magnify its importance, like the diplomatists of our times. He does not overlook a single hovel, nor a Jew, nor a gardener. How then could he have forgotten the library, he who, according to Abulfarage, was a friend to the fine arts and philosophy? . . . Elmacin in turn gives us Amrou's letter nearly in the same terms, and not one word of the library. . . . We . . . run no great risk in drawing the conclusion, from all these premises, that the library of the Ptolemies no longer existed in 640 at the taking of Alexandria by the Saracens. . . . If it be true, as we have every reason to think, that in 640 . . . the celebrated library no longer existed, we may inquire in what manner it had been dispersed and destroyed since 415 when Oroses affirms that he

saw it? In the first place we must observe that Oroses only mentions some presses which he saw in the temples. It was not, therefore, the library of the Ptolemies as it once existed in the Serapeum. Let us call to mind, moreover, that ever since the first Roman emperors, Egypt had been the theatre of incessant civil warfare, and we shall be surprised that any traces of the library could still exist in later times."—*Historical Researches on the pretended burning of the Library of Alexandria by the Saracens* (*Fraser's Magazine*, April, 1844).—"After summing up the evidence we have been able to collect in regard to these libraries, we conclude that almost all the 700,000 volumes of the earlier Alexandrian libraries had been destroyed before the capture of the city by the Arabs; that another of considerable size, but chiefly of Christian literature, had been collected in the 250 years just preceding the Arab occupation; and that Abulpharaj, in a statement that is not literally true, gives, in the main, a correct account of the final destruction of the Alexandrian Library."—C. W. Super, *Alexandria and its Libraries* (*National Quart. Rev.*, Dec., 1875).

Pergamum. See PERGAMUM.

Rome.—Pliny states that C. Asinius Pollio was the first who established a Public Library in Rome. But "Lucullus was undoubtedly before him in this claim upon the gratitude of the lovers of books. Plutarch tells us expressly that not only was the Library of Lucullus remarkable for its extent and for the beauty of the volumes which composed it, but that the use he made of them was even more to his honour than the pains he had taken in their acquisition. The Library, he says, 'was open to all. The Greeks who were at Rome resorted thither, as it were to the retreat of the Muses.' It is important to notice that, according to Pliny, the benefaction of Asinius Pollio to the literate among the Romans was 'ex manubiis.' This expression, conjoined with the fact that the statue of M. Varro was placed in the Library of Pollio, has led a recent distinguished historian of Rome under the Empire, Mr. Merivale, to suggest, that very probably Pollio only made additions to that Library which, as we know from Suetonius, Julius Cæsar had directed to be formed for public use under the care of Varro. These exploits of Pollio, which are most likely to have yielded him the 'spoils of war,' were of a date many years subsequent to the commission given by Cæsar to Varro. It has been usually, and somewhat rashly perhaps, inferred that this project, like many other schemes that were surging in that busy brain, remained a project only. In the absence of proof either way, may it not be reasonably conjectured that Varro's bust was placed in the Library called Pollio's because Varro had in truth carried out Cæsar's plan, with the ultimate concurrence and aid of Pollio? This Library—by whomsoever formed—was probably in the 'atrium libertatis' on the Aventine Mount. From Suetonius we further learn that Augustus added porticoes to the Temple of Apollo on the Palatine Mount, with (as appears from monumental inscriptions to those who had charge of them) two distinct Libraries of Greek and Latin authors; that

Tiberius added to the Public Libraries the works of the Greek poets Euphorion, Rhianus, and Parthenius,—authors whom he especially admired and tried to imitate,—and also their statues; that Caligula (in addition to a scheme for suppressing Homer) had thoughts of banishing both the works and the busts of Virgil and of Livy—characterizing the one as a writer of no genius and of little learning, and the other (not quite so unfortunately) as a careless and verbose historian—from all the Libraries; and that Domitian early in his reign restored at vast expense the Libraries in the Capitol which had been burnt, and to this end both collected MSS. from various countries, and sent scribes to Alexandria expressly to copy or to correct works which were there preserved. In addition to the Libraries mentioned by Suetonius, we read in Plutarch of the Library dedicated by Octavia to the memory of Marcellus; in Aulus Gellius of a Library in the Palace of Tiberius and of another in the Temple of Peace; and in Dion Cassius of the more famous Ulpian Library founded by Trajan. This Library, we are told by Vopiscus, was in his day added, by way of adornment, to the Baths of Diocletian. Of private Libraries amongst the Romans one of the earliest recorded is that which Emilius Paulus found amongst the spoils of Perseus, and which he is said to have shared between his sons. The collection of Tyrannion, some eighty years later (perhaps), amounted, according to a passage in Suidas, to 30,000 volumes. That of Lucullus—which, some will think, ought to be placed in this category—has been mentioned already. With that—the most famous of all—which was the delight and the pride of Cicero, every reader of his letters has an almost personal familiarity, extending even to the names and services of those who were employed in binding and in placing the books. . . . Of the Libraries of the long-buried cities of Pompeii and Herculaneum there is not a scintilla of information extant, other than that which has been gathered from their ruins. At one time great hopes were entertained of important additions to classical learning from remains, the discovery of which has so largely increased our knowledge both of the arts and of the manners of the Romans. But all effort in this direction has hitherto been either fruitless or else only tantalizing, from the fragmentary character of the results attained.”—E. Edwards, *Memoirs of Libraries*, pp. 26–29.—“Most houses had a library, which, according to Vitruvius, ought to face the east in order to admit the light of the morning, and to prevent the books from becoming mouldy. At Herculaneum a library with book-cases containing 1,700 scrolls has been discovered. The grammarian Epaphroditus possessed a library of 30,000, and Sammanicus Serenus, the tutor of the younger Gordian, one of 62,000 books. Seneca ridicules the fashionable folly of illiterate men who adorned their walls with thousands of books, the titles of which were the delight of the yawning owner. According to Publius Victor, Rome possessed twenty-nine public libraries, the first of which was opened by Asinius Polio in the forecourt of the Temple of Peace; two others were founded during the reign of Augustus, viz., the Octavian and the Palatine libraries. Tiberius, Vespasian, Domitian, and Trajan added to their number; the Ulpian library, founded by the last-mentioned

emperor, being the most important of all.”—E. Guhl and W. Koner, *The Life of the Greeks and Romans*, p. 531.

Herculaneum.—“Herculaneum remained a subterranean city from the year 79 to the year 1706. In the latter year some labourers who were employed in digging a well came upon a statue, a circumstance which led—not very speedily but in course of time . . . —to systematic excavations. Almost half a century passed, however, before the first roll of papyrus was discovered, near to Portici at a depth from the surface of about 120 English feet. In the course of a year or two, some 250 rolls—most of them Greek—had been found. . . . In 1754, further and more careful researches were made by Camillo Paderni, who succeeded in getting together no less than 337 Greek volumes and 18 Latin volumes. The latter were of larger dimensions than the Greek, and in worse condition. Very naturally, great interest was excited by these discoveries amongst scholars in all parts of Europe. In the years 1754 and 1755 the subject was repeatedly brought before the Royal Society by Mr. Locke and other of its fellows, sometimes in the form of communications from Paderni himself; at other times from the notes and observations of travellers. In one of these papers the disinterred rolls are described as appearing at first ‘like roots of wood, all black, and seeming to be only of one piece. One of them falling on the ground, it broke in the middle, and many letters were observed, by which it was first known that the rolls were of papyrus. . . . They were in wooden cases, so much burnt, . . . that they cannot be recovered.’ . . . At the beginning of the present century the attention of the British government was, to some extent, attracted to this subject. . . . Leave was at length obtained from the Neapolitan government for a literary mission to Herculaneum, which was entrusted to Mr. Hayter, one of the chaplains to the Prince Regent. But the results were few and unsatisfactory. . . . The Commission subsequently entrusted to Dr. Sickler of Hildburghausen was still more unfortunate. . . . In 1818, a committee of the House of Commons was appointed to inquire into the matter. It reported that, after an expenditure of about £1,100, no useful results had been attained. This inquiry and the experiments of Sickler led Sir Humphrey Davy to investigate the subject, and to undertake two successive journeys into Italy for its thorough elucidation. His account of his researches is highly interesting. . . . ‘My experiments,’ says Sir Humphrey Davy . . . , ‘soon convinced me that the nature of these MSS. had been generally misunderstood; that they had not, as is usually supposed, been carbonized by the operation of fire, . . . but were in a state analogous to peat or Bovey coal, the leaves being generally cemented into one mass by a peculiar substance which had formed during the fermentation and chemical change of the vegetable matter comprising them, in a long course of ages. The nature of this substance being known, the destruction of it became a subject of obvious chemical investigation; and I was fortunate enough to find means of accomplishing this, without injuring the characters or destroying the texture of the MSS.’ These means Sir Humphrey Davy has described very minutely in his subsequent communications to the Royal Society. Briefly,

they may be said to have consisted in a mixture of a solution of glue with alcohol, enough to gelatinize it, applied by a camel's hair brush, for the separation of the layers. The process was sometimes assisted by the agency of ether, and the layers were dried by the action of a stream of air warmed gradually up to the temperature of boiling water. 'After the chemical operation, the leaves of most of the fragments separated perfectly from each other, and the Greek characters were in a high degree distinct. . . . The MSS. were probably on shelves of wood, which were broken down when the roofs of the houses yielded to the weight of the superincumbent mass. Hence, many of them were crushed and folded in a moist state, and the leaves of some pressed together in a perpendicular direction . . . in confused heaps; in these heaps the exterior MSS. . . . must have been acted on by the water; and as the ancient ink was composed of finely divided charcoal suspended in a solution of glue or gum, wherever the water percolated continuously, the characters were more or less erased.' . . . Sir Humphrey Davy proceeds to state that, according to the information given him, the number of MSS. and fragments of MSS. originally deposited in the Naples Museum was 1,696; that of these 88 had then been unrolled and found to be legible; that 319 others had been operated upon, and more or less unrolled, but were illegible; that 24 had been sent abroad as presents; and that of the remaining 1,265—which he had carefully examined—the majority were either small fragments, or MSS. so crushed and mutilated as to offer little hope of separation; whilst only from 80 to 120 offered a probability of success (and he elsewhere adds:—'this estimate, as my researches proceeded, appeared much too high'). . . . 'Of the 88 unrolled MSS. . . . the great body consists of works of Greek philosophers or sophists; nine are of Epicurus; thirty-two bear the name of Philodemus, three of Demetrius, one of each of these authors:—Colotes, Polystriatus, Carneades, Chrysippus; and the subjects of these works, . . . and of those the authors of which are unknown, are either Natural or Moral Philosophy, Medicine, Criticism, and general observations on Arts, Life, and Manners.'—E. Edwards, *Memoirs of Libraries*, v. 1, bk. 1, ch. 5.

Constantinople.—“When Constantine the Great, in the year 336, made Byzantium the seat of his empire, he in a great measure newly built the city, decorated it with numerous splendid edifices, and called it after his own name. Desires of making reparation to the Christians, for the injuries they had sustained during the reign of his tyrannical predecessor, this prince commanded the most diligent search to be made after those books which had been doomed to destruction. He caused transcripts to be made of such books as had escaped the Diocletian persecution; to these he added others, and with the whole formed a valuable Library at Constantinople. On the death of Constantine, the number of books contained in the Imperial Library was only six thousand nine hundred; but it was successively enlarged by the emperors, Julian and Theodosius the younger, the latter of whom augmented it to one hundred thousand volumes. Of these, more than half were burnt in the seventh century, by command of the emperor Leo III., in order to destroy all the monuments

that might be quoted in proof against his opposition to the worship of images. In this library was deposited the only authentic copy of the Council of Nice: it has also been asserted that the works of Homer, written in golden letters, were consumed at the same time, together with a magnificent copy of the Four Gospels, bound in plates of gold to the weight of fifteen pounds, and enriched with precious stones. The convulsions that weakened the lower empire, were by no means favourable to the interests of literature. During the reign of Constantine Porphyrogenetus (in the eleventh century) literature flourished for a short time; and he is said to have employed many learned Greeks in collecting books for a library, the arrangement of which he superintended himself. The final subversion of the Eastern Empire, and the capture of Constantinople by Mohammed II., A. D. 1453, dispersed the literati of Greece over Western Europe; but the Imperial Library was preserved by the express command of the conqueror, and continued to be kept in some apartments of the Seraglio; until Mourad (or Amurath) IV., in a fit of devotion, sacrificed (as it is reported) all the books in this Library to his hatred against the Christians.”—T. H. Horne, *Introduction to the Study of Bibliography*, pp. 23–25.

Tripoli.—**Destruction of Library by Crusaders.** See CRUSADES: A. D. 1104–1111.

Mediæval.

Monastic Libraries.—“In every monastery there was established first a library, then great studios, where, to increase the number of books, skilful calligraphers transcribed manuscripts; and finally, schools, open to all those who had need of, or desire for, instruction. At Montierender, at Lorsch, at Corvey, at Fulda, at St. Gall, at Reichenau, at Nonantula, at Monte Cassino, at Wearmouth, at St. Albans, at Croyland, there were famous libraries. At St. Michael, at Luneburg, there were two—one for the abbot and one for the monks. In other abbeys, as at Hirschau, the abbot himself took his place in the Scriptorium, where many other monks were occupied in copying manuscripts. At St. Riquier, books bought for high prices, or transcribed with the utmost care, were regarded as the most valuable jewels of the monastery. ‘Here,’ says the chronicler of the abbey, counting up with innocent pride the volumes which it contained—‘here are the riches of the cloister, the treasures of the celestial life, which fatten the soul by their sweetness. This is how we fulfil the excellent precept, Love the study of the Scriptures, and you will not love vice.’ If we were called upon to enumerate the principal centres of learning in this century, we should be obliged to name nearly all the great abbeys whose founders we have mentioned, for most of them were great homes of knowledge. . . . The principal and most constant occupation of the learned Benedictine nuns was the transcription of manuscripts. It can never be known how many services to learning and history were rendered by their delicate hands throughout the middle ages. They brought to the work a dexterity, an elegance, and an assiduity which the monks themselves could not attain, and we owe to them some of the most beautiful specimens of the marvellous calligraphy of the period. . . . Nuns, therefore, were the rivals of monks in the task of enlarging and

fertilising the field of Catholic learning. Every one is aware that the copying of manuscripts was one of the habitual occupations of monks. By it they fed the claustral libraries already spoken of, and which are the principal source of modern knowledge. Thus we must again refer to the first beginning of the Monastic Orders to find the earliest traces of a custom which from that time was, as it were, identified with the practices of religious life. In the depths of the Thebaid, in the primitive monasteries of Tabenna, every house . . . had its library. There is express mention made of this in the rule of St. Benedict. . . . In the seventh century, St. Benedict Biscop, founder and abbot of Wearmouth in England, undertook five sea-voyages to search for and purchase books for his abbey, to which each time he brought back a large cargo. In the ninth century, Loup of Ferrières transformed his monastery of St. Josse-sur-Mer into a kind of depot for the trade in books which was carried on with England. About the same time, during the wars which ravaged Lombardy, most of the literary treasures which are now the pride of the Ambrosian library were being collected in the abbey of Bobbio. The monastery of Pomposa, near Ravenna, had, according to contemporaries, a finer library than those of Rome or of any other town in the world. In the eleventh century, the library of the abbey of Croyland numbered 3,000 volumes. The library of Novalesse had 6,700, which the monks saved at the risk of their lives when their abbey was destroyed by the Saracens in 905. Hirschau contained an immense number of manuscripts. But, for the number and value of its books, Fulda eclipsed all the monasteries of Germany, and perhaps of the whole Christian world. On the other hand, some writers assure us that Monte Cassino, under the Abbot Didier, the friend of Gregory VII., possessed the richest collection which it was possible to find. The libraries thus created by the labours of monks became, as it were, the intellectual arsenals of princes and potentates. . . . There were also collections of books in all the cathedrals, in all the collegiate churches, and in many of the castles. Much has been said of the excessive price of certain books during the middle ages: Robertson and his imitators, in support of this theory, are fond of quoting the famous collection of homilies that Grecia Countess of Anjou bought, in 1056, for two hundred sheep, a measure of wheat, one of millet, one of rye, several marten-skins, and four pounds of silver. An instance like this always produces its effect; but these writers forgot to say that the books bought for such high prices were admirable specimens of calligraphy, of painting, and of carving. It would be just as reasonable to quote the exorbitant sums paid at sales by bibliomaniacs of our days, in order to prove that since the invention of printing, books have been excessive in price. Moreover, the ardent fondness of the Countess Grecia for beautiful books had been shared by other amateurs of a much earlier date. Bede relates that Alfred, King of Northumbria in the seventh century, gave eight hides of land to St. Benedict Biscop in exchange for a Cosmography which that book-loving abbot had bought at Rome. The monks loved their books with a passion which has never been surpassed in modern times. . . . It is an error to . . . sup-

pose that books of theology or piety alone filled the libraries of the monks. Some enemies of the religious orders have, indeed, argued that this was the case; but the proof of the contrary is evident in all documents relating to the subject. The catalogues of the principal monastic libraries during those centuries which historians regard as most barbarous, are still in existence; and these catalogues amply justify the sentence of the great Leibnitz, when he said, 'Books and learning were preserved by the monasteries.' It is acknowledged that if, on one hand, the Benedictines settled in Iceland collected the Eddas and the principal traditions of the Scandinavian mythology, on the other all the monuments of Greece and Rome which escaped the devastations of barbarians were saved by the monks of Italy, France, and Germany, and by them alone. And if in some monasteries the scarcity of parchment and the ignorance of the superiors permitted the destruction, by copyists, of a certain small number of precious works, how can we forget that without these same copyists we should possess nothing—absolutely nothing—of classic antiquity? . . . Aleuin enumerates among the books in the library at York the works of Aristotle, Cicero, Pliny, Virgil, Statius, Lucan, and of Trogus Pompeius. In his correspondence with Charlemagne he quotes Ovid, Horace, Terence, and Cicero, acknowledging that in his youth he had been more moved by the tears of Dido than by the Psalms of David."—Count de Montalembert, *The Monks of the West*, bk. 18, ch. 4 (v. 6).—"It is in the great houses of the Benedictine Order that we find the largest libraries, such as in England at Bury St. Edmund's, Glastonbury, Peterborough, Reading, St. Alban's, and, above all, that of Christ Church in Canterbury, probably the earliest library formed in England. Among the other English monasteries of the libraries of which we still possess catalogues or other details, are St. Peter's at York, described in the eighth century by Aleuin, St. Cuthbert's at Durham, and St. Augustine's at Canterbury. At the dissolution of the monasteries their libraries were dispersed, and the basis of the great modern libraries is the volumes thus scattered over England. In general, the volumes were disposed much as now, that is to say, upright, and in large cases affixed to a wall, often with doors. The larger volumes at least were in many cases chained, so that they could only be used within about six feet of their proper place; and since the chain was always riveted on the fore-edge of one of the sides of a book, the back of the volume had to be thrust first into the shelf, leaving the front edge of the leaves exposed to view. Many old volumes bear a mark in ink on this front edge; and when this is the case, we may be sure that it was once chained in a library; and usually a little further investigation will disclose the mark of a rivet on one of the sides. Regulations were carefully made to prevent the mixture of different kinds of books, and their overcrowding or inconvenient position; while an organized system of lending was in vogue, by which at least once a year, and less formally at shorter intervals, the monks could change or renew the volumes already on loan. . . . Let us take an example of the arrangement of a monastic library of no special distinction in A. D. 1400,—that at Titchfield Abbey,—describing it in the words of the register of the

monastery itself, only translating the Latin into English. 'The arrangement of the library of the monastery of Tychefeld is this:—There are in the library of Tychefeld four cases (columnae) in which to place books, of which two, the first and second, are on the eastern face; on the southern face is the third, and on the northern face the fourth. And each of them has eight shelves (gradus), marked with a letter and number affixed on the front of each shelf, that is to say, on the lower board of each of the aforesaid shelves; certain letters, however, are excepted, namely A, H, K, L, M, O, P, Q, which have no numbers affixed, because all the volumes to which one of those letters belongs are contained in the shelf to which that letter is assigned. [That is, the shelves with the letters A, H, K, etc., have a complete class of books in each, and in no case does that class overflow into a second shelf, so there was no need of marking these shelves with numbers as well as letters, in the way in which the rest were marked. Thus we should find 'B 1,' 'B 2,' 'B 3,' . . . 'B 7,' because B filled seven shelves; but 'A' only, because A filled one shelf alone.] So all and singular the volumes of the said library are fully marked on the first leaf and elsewhere on the shelf belonging to the book, with certain numbered letters. And in order that what is in the library may be more quickly found, the marking of the shelves of the said library, the inscriptions in the books, and the references in the register, in all points agree with each other. Anno Domini MCCCC.' . . . Titchfield Abbey was a Præmonstratensian house, founded in the thirteenth century, and never specially rich or prominent; yet we find it with a good library of sixty-eight books in theology, thirty-nine in Canon and Civil Law, twenty-nine in Medicine, thirty-seven in Arts, and in all three hundred and twenty-six volumes, many containing several treatises, so that the total number of works was considerably over a thousand."—F. Madan, *Books in Manuscript*, pp. 76-79.

Renaissance.

Italy.—On the revival of learning in Italy, "scarcity of books was at first a chief impediment to the study of antiquity. Popes and princes and even great religious institutions possessed far fewer books than many farmers of the present age. The library belonging to the Cathedral Church of S. Martino at Lucca in the ninth century contained only nineteen volumes of abridgements from ecclesiastical commentaries. The Cathedral of Novara in 1212 could boast copies of Boethius, Priscian, the Code of Justinian, the Decretals, and the Etymology of Isidorus, besides a Bible and some devotional treatises. This slender stock passed for great riches. Each of the precious volumes in such a collection was an epitome of mediæval art. Its pages were composed of fine vellum adorned with pictures. The initial letters displayed elaborate flourishes and exquisitely illuminated groups of figures. The scribe took pains to render his calligraphy perfect, and to ornament the margins with crimson, gold, and blue. Then he handed the parchment sheets to the binder, who encased them in rich settings of velvet or carved ivory and wood, embossed with gold and precious stones. The edges were gilt and stamped with patterns. The clasps were of wrought silver chased with

niello. The price of such masterpieces was enormous. . . . Of these MSS. the greater part were manufactured in the cloisters, and it was here too that the martyrdom of ancient authors took place. Lucretius and Livy gave place to chronicles, antiphonaries, and homilies. Parchment was extremely dear, and the scrolls which nobody could read might be scraped and washed. Accordingly, the copyist erased the learning of the ancients, and filled the fair blank space he gained with litanies. At the same time it is but just to the monks to add that palimpsests have occasionally been found in which ecclesiastical works have yielded place to copies of the Latin poets used in elementary education. Another obstacle to the diffusion of learning was the incompetence of the copyists. It is true that at the great universities 'stationarii,' who supplied the text-books in use to students, were certified and subjected to the control of special censors called 'pecarii.' Yet their number was not large, and when they quitted the routine to which they were accustomed their incapacity betrayed itself by numerous errors. Petrarch's invective against the professional copyists shows the depth to which the art had sunk. 'Who,' he exclaims, 'will discover a cure for the ignorance and vile sloth of these copyists, who spoil everything and turn it to nonsense? If Cicero, Livy, and other illustrious ancients were to return to life, do you think they would understand their own works? There is no check upon these copyists, selected without examination or test of their capacity.' . . . At the same time the copyists formed a necessary and flourishing class of craftsmen. They were well paid. . . . Under these circumstances it was usual for even the most eminent scholars, like Petrarch, Boccaccio, and Poggio, to make their own copies of MSS. Niccolò de' Niccoli transcribed nearly the whole of the codices that formed the nucleus of the Library of the Mark. . . . It is clear that the first step toward the revival of learning implied three things: first, the collection of MSS. wherever they could be saved from the indolence of the monks; secondly, the formation of libraries for their preservation; and, thirdly, the invention of an art whereby they might be multiplied cheaply, conveniently, and accurately. The labour involved in the collection of classical manuscripts had to be performed by a few enthusiastic scholars, who received no help from the universities and their academical scribes, and who met with no sympathy in the monasteries they were bent on ransacking. . . . The monks performed at best the work of earthworms, who unwittingly preserve fragments of Greek architecture from corrosion by heaping mounds of mould and rubbish round them. Meanwhile the humanists went forth with the instinct of explorers to release the captives and awake the dead. From the convent libraries of Italy, from the museums of Constantinople, from the abbeys of Germany and Switzerland and France, the slumbering spirits of the ancients had to be evoked. . . . This work of discovery began with Petrarch. . . . It was carried on by Boccaccio. The account given by Benvenuto da Imola of Boccaccio's visit to Monte Cassino brings vividly before us both the ardour of these first explorers and the apathy of the Benedictines (who have sometimes been called the saviours of learning) with regard to the treasures of their own libraries. . . . 'Desirous of

seeing the collection of books, which he understood to be a very choice one, he modestly asked a monk—for he was always most courteous in manners—to open the library, as a favour, for him. The monk answered stiffly, pointing to a steep staircase, “Go up; it is open.” Boccaccio went up gladly; but he found that the place which held so great a treasure was without or door or key. He entered, and saw grass sprouting on the windows, and all the books and benches thick with dust. In his astonishment he began to open and turn the leaves of first one tome and then another, and found many and divers volumes of ancient and foreign works. Some of them had lost several sheets; others were snipped and pared all round the text, and mutilated in various ways. At length, lamenting that the toil and study of so many illustrious men should have passed into the hands of most abandoned wretches, he departed with tears and sighs. Coming to the cloister, he asked a monk whom he met, why those valuable books had been so disgracefully mangled. He answered that the monks, seeking to gain a few soldi, were in the habit of cutting off sheets and making psalters, which they sold to boys. The margins too they manufactured into charms, and sold to women. . . . What Italy contained of ancient codices soon saw the light. The visit of Poggio Bracciolini to Constance (1414) opened up for Italian scholars the stores that lay neglected in transalpine monasteries. . . . The treasures he unearthed at Reichenau, Weingarten, and above all S. Gallen, restored to Italy many lost masterpieces of Latin literature, and supplied students with full texts of authors who had hitherto been known in mutilated copies. The account he gave of his visit to S. Gallen in a Latin letter to a friend is justly celebrated. . . . ‘In the middle [he says] of a well-stocked library, too large to catalogue at present, we discovered Quintilian, safe as yet and sound, though covered with dust and filthy with neglect and age. The books, you must know, were not housed according to their worth, but were lying in a most foul and obscure dungeon at the very bottom of a tower, a place into which condemned criminals would hardly have been thrust; and I am firmly persuaded that if anyone would but explore those ergastula of the barbarians wherein they incarcerate such men, we should meet with like good fortune in the case of many whose funeral orations have long ago been pronounced. Besides Quintilian, we exhumed the three first books and a half of the fourth book of the *Argonautica* of Flaccus, and the *Commentaries* of Asconius Pedianus upon eight orations of Cicero.’ . . . Never was there a time in the world’s history when money was spent more freely upon the collection and preservation of MSS., and when a more complete machinery was put in motion for the sake of securing literary treasures.”—J. A. Symonds, *Renaissance in Italy: The Revival of Learning*, ch. 3.

Modern.

Europe: Rise and growth of the greater Libraries.—In a work entitled “*Essai Statistique sur les Bibliothèques de Vienne*,” published in 1835, M. Adrien Balbi entered into an examination of the literary and numerical value of the principal libraries of ancient and modern times. M. Balbi, in this work, shows that “the Impe-

rial Library of Vienna, regularly increasing from the epoch of its formation, by means equally honorable to the sovereign and to the nation, held, until the French revolution, the first place among the libraries of Europe. Since that period, several other institutions have risen to a much higher numerical rank. . . . No one of the libraries of the first class, now in existence, dates beyond the fifteenth century. The Vatican, the origin of which has been frequently carried back to the days of St. Hilarius, in 465, cannot, with any propriety, be said to have deserved the name of library before the reign of Martin the Fifth, by whose order it was removed from Avignon to Rome in 1417. And even then, a strict attention to the force of the term would require us to withhold from it this title, until the period of its final organization by Nicholas the Fifth, in 1447. It is difficult to speak with certainty concerning the libraries, whether public or private, which are supposed to have existed previous to the fifteenth century, both on account of the doubtful authority and indefiniteness of the passages in which they are mentioned, and the custom which so readily obtained, in those dark ages, of dignifying every petty collection with the name of library. But many libraries of the fifteenth century being still in existence, and others having been preserved long enough to make them the subject of historical inquiry before their dissolution, it becomes easier to fix, with satisfactory accuracy, the date of their foundation. We find accordingly, that, including the Vatican, and the libraries of Vienna, Ratisbon, and the Laurentian of Florence, which are a few years anterior to it, no less than ten were formed between the years 1430 and 1500. The increase of European libraries has generally been slowly progressive, although there have been periods of sudden augmentation in nearly all. Most of them began with a small number of manuscripts, sometimes with a few printed volumes, and often without any. To these, gradual accessions were made, from the different sources, which have always been more or less at the command of the sovereigns and nobles of Europe. In 1453, the Vatican contained 5,000 manuscripts. . . . Far different was the progress of the Royal Library of Paris. The origin of this institution is placed in the year 1595, the date of its removal from Fontainebleau to Paris by order of Henry the Fourth. In 1660, it contained but 1,435 printed volumes. In the course of the following year, this number was raised to 16,746, both printed volumes and manuscripts. During the ensuing eight years the library was nearly doubled; and before the close of the next century, it was supposed to have been augmented by upwards of 100,000 volumes more.”—G. W. Greene, *Historical Studies*, pp. 278-281.—“The oldest of the great libraries of printed books is probably that of Vienna, which dates from 1440, and is said to have been opened to the public as early as 1575. The Town Library of Ratisbon dates from 1430; St. Mark’s Library at Venice, from 1468; the Town Library of Frankfort, from 1484; that of Hamburg, from 1529; of Strasburg, from 1531; of Augsburg, from 1537; those of Berne and Geneva, from 1550; that of Basel, from 1564. The Royal Library of Copenhagen was founded about 1550. In 1671 it possessed 10,000 volumes; in 1748, about 65,000; in 1778, 100,000; in 1820, 300,000; and it now contains 410,000

volumes. The National Library of Paris was founded in 1595, but was not made public until 1737. In 1640 it contained about 17,000 volumes; in 1684, 50,000; in 1775, 150,000; in 1790, 200,000."—E. Edwards, *A Statistical View of the Principal Public Libraries in Europe and the U. S. of N. Am.* (*Journal of the Statistical Soc.*, Aug., 1848).

Germany.—According to "Minerva" (the "Year-book of the Learned World"), for 1893-94, the Royal Library at Berlin contains 850,000 printed books and 24,622 manuscripts; the Munich University Library, 370,000 books and 50,000 pamphlets, including 2,101 incunabula; the Leipsic University Library, 500,000 printed books, and 4,000 manuscripts; Heidelberg University Library, 400,000 bound volumes (including 1,000 incunabula), and 175,000 pamphlets and "dissertationen," with a large collection of manuscripts; Dresden Royal Public Library, 300,000 printed books (including 2,000 incunabula), 6,000 manuscripts, and 20,000 maps; Freiburg University Library, 250,000 volumes and over 500 manuscripts; Königsberg University Library, 220,000 volumes and 1,100 manuscripts; Tübingen University Library, 300,000 volumes and 3,500 manuscripts; Jena University Library, 200,000 volumes and 100,000 "dissertationen"; Halle University Library, 182,000 books and 800 manuscripts, besides 12,800 books, 35,000 pamphlets and 1,040 manuscripts in the Ponickausche Bibliothek, which is united with the University Library; Hamburg City Library, about 500,000 printed books and 5,000 manuscripts; Frankfurt City Library (April, 1893), 326,139 volumes; Cologne City Library, 105,000 volumes, including 2,000 incunabula; Augsburg City and Provincial Library, about 200,000 volumes (including 1,760 incunabula) and 2,000 manuscripts; Göttingen University Library, 456,000 volumes of books and 5,300 manuscripts; Gotha Public Library, 200,000 printed books, including 1,029 incunabula, and 7,037 manuscripts, of which 3,500 are oriental; Greifswald University Library, 143 volumes of printed books and about 800 manuscripts; Bamberg Royal Public Library, 300,000 volumes, 3,132 manuscripts; Berlin University Library, 142,129 volumes; Bonn University Library, 219,000 volumes, including 1,235 incunabula, and 1,273 manuscripts; Bremen City Library, 120,000 volumes; Breslau University Library, 300,000 volumes, including about 2,500 incunabula, and about 3,000 manuscripts; Breslau City Library, 150,000 volumes and 3,000 manuscripts; Erlangen University Library, 180,000 volumes; Hanover Royal Public Library, 180,000 books and 3,500 manuscripts; Hanover City Library, 47,000 volumes; Karlsruhe Grand-ducal Library, 159,842 books and 3,754 manuscripts; Kiel University Library, 217,039 volumes, 2,375 manuscripts; Colmar City Library, 80,000 volumes; Marburg University Library, 150,000 volumes; Strasburg University Library, 700,000 volumes; Strasburg City Library, 90,000 volumes; Weimar Grand-ducal Library, 223,000 volumes and 2,000 manuscripts; Würzburg University Library, 300,000 volumes.—*Minerva*, 1893-94.—"The Munich library, . . . in matter of administration, resembles the British Museum. Here one finds carefully catalogued that great wealth of material that appears only in doctorate theses, and for this reason is most valuable to the historic

student. No tedious formalities are insisted upon, and orders for books are not subjected to long delays. The Vienna library moves slowly, as though its machinery were retarded by the weight of its royal imperial name. The catalogue is not accessible, the attendants are not anxious to please, and the worker feels no special affection for the institution. But at the royal library of Berlin there exists an opposite state of affairs—with the catalogue at hand one can readily give the information needful in filling up the call card. This being a lending library, one occasionally meets with disappointment, but, as the privilege of borrowing is easily had, this feature can have a compensatory side. The most marked peculiarity found here is the periodic delivery of books. All books ordered before nine o'clock are delivered at eleven; those before eleven, at one; those before one, at three; and those after three are delivered the same day if possible. This causes some delay, but as soon as the rule is known it has no drawback for the continuous user, and for the benefit of one who wants only a single order there is placed at the outer door of the building a box into which one can deposit the call card, and returning at the proper time find the book waiting in the reading room above. This saves the climbing of many steps, and enables one to perform other duties between ordering and receiving. As far as I know, here alone does one purchase the call cards, but as the price is only twenty cents per hundred the cost is not an important item."—J. H. Gore, *Library Facilities for Study in Europe* (*Educational Rev.*, June, 1893).—In Berlin, "the report of the city government for 1889-90 reckons 25 public free libraries; 334,837 books were read by 14,900 persons, i. e., 17,219 volumes less than last year. The expenses were 26,490 marks, the allowance from the city treasury 23,400 marks [less than \$6,000]."—*The Library Journal*, May, 1892.

France: The Bibliothèque Nationale.—"The history of the vast collection of books which is now, after many wanderings, definitely located in the Rue de Richelieu, divides itself naturally into three periods, which, for the sake of convenience, may well be called by three of the names under which the Library has, at different times, been known. The first period is that in which the Library was nothing more than the private collection of each successive sovereign of France, which sometimes accompanied him in his journeys, and but too often, as in the case of King John, or that of Charles VII., shared in his misfortunes; it was then fitly called the 'Bibliothèque du Roi.' This period may be considered as ending in the time of Henry IV., who transferred the royal collection from Fontainebleau to Paris, and gave it a temporary home in the Collège de Clermont. Although its abode has often been changed since, it has never again been attached to a royal palace, or been removed from the capital. The second period dates from this act of Henry the Fourth's, and extends down to the Revolution of 1789, during which time the Library, although open with but slight restrictions to all men of letters who were well recommended, and to the general public for two days a week, from the year 1692, was not regarded as national property, but as an appendage of the Crown, which was indeed graciously opened to the learned, but was only national

property in the same sense that the Queen's private library at Windsor is national property. Although still called the Bibliothèque du Roi during this period, it may well be here spoken of, for the sake of distinction, as the Bibliothèque Royale down to the Revolution. In 1791, the King's library was proclaimed national property, and it was decreed that it should henceforth be called 'Bibliothèque Nationale,' which name it bore till the coronation of Napoleon as Emperor of the French, in 1805, when it was styled 'Bibliothèque Impériale.' Of course it was Bibliothèque Royale again in 1815, 'Nationale' in 1848, and once again, in 1852, was declared to be the 'Bibliothèque Impériale.'—*Imperial Library of Paris* (*Westminster Rev.*, April, 1870).—After the fall of the Second Empire, the great library again became "Nationale" in name. According to a report made in the spring of 1894, the Bibliothèque Nationale of France contained, at the end of the previous year, 1,934,154 "numbers," forming at least 2,600,000 volumes." This report was made by a committee of twenty persons, appointed to consider the advisability and method of printing the catalogue of the library. The conclusions of the committee are favorable to the printing of the catalogue.—*The Nation*, May 17, 1894.—Books come to the National Library "in three ways: from (1) gifts, about 3,000 a year; . . . (2) purchase, 4,500 (the library has \$20,000 a year to spend on books and binding); (3) copyright, 22,000 articles and 6,000 pieces of music. The printer, not the publisher, is bound to make the deposit, so that if the text and the illustrations are printed at different places there is a chance, unless every one is careful, that the library will have an imperfect copy. But the greatest trouble comes from periodicals, of which the Bibliothèque Nationale receives 3,000. What would some of our librarians think of this who are inclined to boast or to lament that they receive 300? Every number of every newspaper in France must be received, sent for if it fails to come, registered, put on its pile, and at the end of the year tied up in a bundle and put away (for only the most important are bound). . . . The titles of new books are printed in a bulletin in two series, French and Foreign (causing a printer's bill of 5,000 francs a year). This began in 1875 for the foreign, and in 1882 for the French. These bulletins are cut up and the titles mounted on slips, which are fastened in a Leyden binder, three making a small folio page. The result is a series of 900 volumes, less easy to consult than a good card catalog, very much less easy than the British Museum pasted catalog, the Rudolph books, or the Rudolph machine. . . . The books received at the Bibliothèque Nationale before 1875 and 1882 are entered on some 2,000,000 slips, which are divided between two catalogs, that of the old library ('fonds ancien'), and of the intermediate library ('fonds intermédiaire'). In each of these catalogs they are arranged in series according to the subject divisions given above and under each subject alphabetically. There is no author catalog and the public are not allowed to consult these catalogs. If then a reader asks for a work received before 1875 the attendant guesses in which 'fonds' it is and what subject it treats of; if he does not find it where he looks first he tries some other division. No wonder it takes on an average half an hour for the reader to get his

book. I must bear witness to the great skill which necessity has developed in the officials charged with this work. Some of their successes in bringing me out-of-the-way books were marvellous. On the other hand, when they reported certain works not in the library I did not feel at all sure that they were right, and I dare say they doubted themselves. All this will be changed when the library gets a printed alphabetical catalog of authors and has made from it a pasted alphabetical catalog of subjects. The author catalog, by the way, is expected to fill 40,000 double-columned quarto pages. . . . The library now has 50 kilometres (31 miles) of shelves and is full. A new store-house is needed and a public reading-room ('salle de lecture'), which can be lighted by electricity, and be opened, like the British Museum, in the evening."—C. A. Cutter, *Notes on the Bibliothèque Nationale* (*Library Journal*, June, 1894).—**Paris Municipal Libraries.**—"The Bibliothèques Municipales de Paris have undergone a rapid development within the last few years. In 1878 there were only nine altogether, of which five were little used, and four practically unused. A special Bureau was then appointed by the Municipal Council to take charge of them, with the result that altogether 22 libraries have been opened, while the number of volumes lent rose from 29,339 in 1878 to 57,840 in 1879, to 147,567 in 1880, to 242,738 in 1881, and to 363,322 in 1882. . . . A sum of 3,050 francs is placed at the disposal of each library by the Municipal Council, which is thus appropriated; Books and Binding, Fr. 1,750; Librarian, 1,000; Attendant, 300. The amount of the sums thus voted by the Municipal Council in the year 1883 was 110,150 fr. For the year of 1884 the sum of 171,700 fr. has been voted, the increase being intended to provide for the establishment of fifteen new libraries in Communal Schools, as well as for the growing requirements of some of the libraries already established. The individual libraries are not, of course, as yet very considerable in point of numbers. The stock possessed by the twenty-two Bibliothèques Municipales in 1882 was 87,831 volumes, of which 20,411 had been added during that year. Information received since the publication of M. Dardenne's Report places the number in 1883 at 98,843 volumes. . . . The libraries are open to the public gratuitously every evening from 8 to 10 o'clock, and are closed on five days only during the whole year. Books may be read in the library or are lent out for home use. . . . Music is lent as well as books, the experiment having been first tried at the Mairie of the second arrondissement, in 1879, and having proved so successful that nine arrondissements have followed suit, and the total number of musical issues from the ten libraries in 1882 was 9,085. . . . Beside these libraries under the direction of the Mairies, there are a certain number of popular free libraries established and supported by voluntary efforts. Without dwelling upon the history of these libraries, all of which have been formed since 1860, it may be stated that there are now fourteen such libraries in as many arrondissements."—E. C. Thomas, *The Popular Libraries of Paris* (*Library Chronicle*, v. 1, 1884, pp. 13-14).—"The 'Journal Officiel' contains in the number for Aug. 29, of this year (1891), the substance of the following account: . . . The city of Paris has now 64 public libraries, all of which send out books

and accommodate readers in their halls; they are open at the times when the factories and shops are closed. . . . The libraries are kept in the mayoralty buildings or ward district school-houses; a central office provides for the administration and support, while in each precinct a committee of superintendence attends to the choice and ordering of new accessions. All expenses are paid by the city, which, in its last budget, in 1890, appropriated therefor the trifle of 225,000 francs. On every library in full use are bestowed yearly about 2,400 francs, while 14,000 francs are employed in founding new ones. The number of books circulated in 1890 was 1,386,642, against 29,339 in 1878, in the nine libraries then existing. In 1878 there was an average of only 3,259 readers for each library, and in the last year the average was 23,500, which shows a seven-fold use of the libraries."—*Public Libraries in Paris*; tr. from the *Börsenblatt*, Oct. 7, 1891 (*Library Jour.*, May, 1892).—**Other Libraries.**—A library of importance in Paris second only to the great National is the Mazarin, which contains 300,000 volumes (1,000 incunabula), and 5,800 manuscripts. The Library of the University has 141,678 volumes; the Library of the Museum of Natural History has 140,850 books and 2,050 manuscripts; the Sainte-Genevieve Library contains 120,000 volumes and 2,392 manuscripts; the Library of the City of Paris, 90,000 volumes and 2,000 manuscripts. The principal libraries of the provincial cities are reported as follows: Caen Municipal Library, 100,000 volumes, 620 manuscripts; Dijon Municipal Library, 100,000 volumes, 1,558 manuscripts; Marseilles City Library, 102,000 volumes, 1,656 manuscripts; Montpellier City Library, 120,000 volumes; Nantes City Library, 102,172 volumes, 2,231 manuscripts; Rheims Library, 100,000 books and 1,700 manuscripts; Lyons City Library and Library of the Palace of Arts, 160,000 volumes and 1,900 manuscripts; Toulouse City Library, 100,000 volumes and 950 manuscripts; Rouen City Library, 132,000 printed books and 3,800 manuscripts; Avignon, 117,000 volumes and 3,300 manuscripts; Bordeaux, 160,000 volumes, 1,500 manuscripts; Tours, 100,000 volumes and 1,743 manuscripts; Amiens, 80,000 volumes, 1,500 manuscripts; Besançon, 140,000 volumes and 1,850 manuscripts.—*Minerva*, 1893-94.

Italy.—"There are in Italy between thirty and forty libraries which the present National Government, in recognition of former Governmental support, is committed to maintain, at least in some degree. It is a division of resources which even a rich country would find an impediment in developing a proper National Library, and Italy, with its over-burdened Treasury, is far from being in a position to offer the world a single library of the first class. . . . Italy, to build up a library which shall rank with the great national libraries of the future, will need to concentrate her resources; for though she has libraries now which are rich in manuscripts, she has not one which is able to meet the great demands of modern scholarship for printed books. . . . If with this want of fecundity there went a corresponding slothfulness in libraries, there would be little to be hoped of Italy in amassing great collections of books. In some respects I have found a more active bibliothecal spirit in Italy than elsewhere in Europe, and I suspect

that if Italian unification has accomplished nothing else, it has unshackled the minds of librarians, and placed them more in sympathy with the modern gospel which makes a library more the servant than the master of its users. I suspect this is not, as a rule, the case in Germany. . . . I have certainly found in Italian librarians a great alertness of mind and a marked eagerness to observe the advances in library methods which have taken place elsewhere during the last five and twenty years. But at the same time, with all this activity, the miserable bureaucratic methods of which even the chance stranger sees so much in Italy, are allowed to embarrass the efforts of her best librarians. . . . In the present condition of Italian finances nothing adequate to the needs of the larger libraries can be allowed, and the wonder is that so much is done as is apparent; and it is doubtless owing to the great force of character which I find in some of the leading librarians that any progress is made at all. During the years when the new Italian kingdom had its capital in Florence a certain amount of concentration started the new Biblioteca Nazionale Centrale on its career; and when later the Government was transferred to Rome, the new capital was given another library, got together in a similar way, which is called the Biblioteca Nazionale Vittorio Emanuele. Neither collection is housed in any way suited to its functions, and the one at Florence is much the most important; indeed it is marvellously rich in early printed books and in manuscripts."—J. Winsor, *The condition of Italian Libraries* (*The Nation*, July 9, 1891).—**The Vatican Library.**—"Even so inveterate a hater of literature as the Calif, who conquered Alexandria and gave its precious volumes to the flames, would have appreciated such a library as the Vatican. Not a book is to be seen—not a shelf is visible, and there is nothing to inform the visitor that he is in the most famous library in the world. . . . The eye is bewildered by innumerable busts, statues, and columns. The walls are gay with brilliant arabesques, and the visitor passes through lofty corridors and along splendid galleries, finding in every direction something to please and interest him. . . . The printed books number about 125,000 volumes and there are about 25,000 manuscripts. The books and manuscripts are enclosed in low wooden cases around the walls of the various apartments, the cases are painted in white and gold colors, and thus harmonize with the gay appearance of the walls and ceilings. . . . The honor of founding the Vatican Library belongs to Pope Nicholas V., who, in 1447, transferred to the Palace of the Vatican the manuscripts which had been collected in the Lateran. At his death the library contained 9,000 manuscripts, but many of them were dispersed under his successor, Calixtus III. Sixtus IV. was very active in restoring and increasing the library. In 1588, the present library building was erected by Sixtus V., to receive the immense collection obtained by Leo X. In the year 1600 the value of the library was greatly augmented by the acquisition of the collection of Fulvius Ursinus and the valuable manuscripts from the Benedictine Monastery of Bobbio, composed chiefly of palimpsests. . . . The next acquisition was the Library of the Elector Palatine, captured in 1621, at Heidelberg, by De Tilley, who presented it to Gregory XV. It numbered

2,388 manuscripts, 1,956 in Latin, and 432 in Greek. In 1658 the Library founded by Duke Federico de Urbino—1,711 Greek and Latin manuscripts—was added to the valuable collection. One of the most valuable accessions was the collection of Queen Christina of Sweden, containing all the literary works which her father, Gustavus Adolphus, had captured at Prague, Bremen, etc., amounting to 2,291 manuscripts, Greek and Latin. In 1746 the magnificent library of the Ottobuoni family, containing 3,862 Greek and Latin manuscripts, enriched the Vatican collection. After the downfall of Napoleon and the restoration of the peace of Europe in 1815, the King of Prussia, at the suggestion of Humboldt, applied to Pope Pius VII for the restoration of some of the manuscripts which De Tilley had plundered from the Heidelberg Library. The Pope, mindful of the prominent part taken by Prussia in the restoration of the Papal See, immediately complied with the royal request, and many manuscripts of great value to the German historians were sent back to Germany.—E. L. Didier, *The Vatican Library* (*Literary World*, June 28, 1884).—The following recent statistics of other Italian libraries are from "Minerva," 1893-94: Florence National Central Library, 422,183 printed books, 398,845 pamphlets and 17,386 manuscripts; Rome, National Central Library of Victor Emmanuel, 241,978 books, 130,728 pamphlets, 4,676 manuscripts; Naples University Library, 181,072 printed books, 43,453 pamphlets, and 109 manuscripts; Bologna University Library, 251,700 books, 43,633 pamphlets and 5,000 manuscripts; Pavia University Library, 136,000 books, 80,000 pamphlets and 1,100 manuscripts; Turin National Library, 196,279 printed books and 4,119 manuscripts; Venice, National Library of St. Mark, 401,652 printed and bound books, 80,450 pamphlets, and 12,016 manuscripts; Pisa University Library, 108,188 books, 22,966 pamphlets and 274 manuscripts; Genoa University Library, 106,693 books, 46,231 pamphlets, and 1,586 manuscripts; Modena, the Este Library, 123,300 volumes and 5,000 manuscripts; Padua University Library, 135,837 volumes, 2,326 manuscripts, and 63,849 pamphlets, etc.; Palermo National Library, 177,892 volumes and pamphlets, and 1,527 manuscripts; Palermo Communal Library, 209,000 books, 16,000 pamphlets, etc., 3,000 manuscripts; Parma Palatine Library, 250,000 books, 20,313 pamphlets, etc., 4,769 manuscripts; Siena Communal Library 67,966 volumes, 26,968 pamphlets, 4,890 manuscripts.

Austria-Hungary.—The principal libraries in the Empire are reported to contain as follows: Vienna University Library, 416,608 volumes, 373 incunabula, 498 manuscripts; Vienna Imperial and Royal Court Library, 500,000 volumes, 6,461 incunabula, and 20,000 manuscripts; Budapest University Library, 200,000 volumes, 1,000 manuscripts; Hungarian National Museum, 400,000 volumes and 63,000 manuscripts, mostly Hungarian; Czernowitz University Library, 64,586 volumes and over 30,000 pamphlets, etc.; Graz University 131,397 volumes of books and 1,708 manuscripts; Innsbruck University Library, 135,000 printed books, including 1,653 incunabula, and 1,046 manuscripts; Cracow University Library, 283,858 volumes and 5,150 manuscripts; Lemberg University Library, 120,900 volumes; Prague University Library, 211,131 volumes, 3,848 manuscripts.—*Minerva*, 1893-94.

Switzerland.—The principal libraries of Switzerland are the following: Basle Public Library, 170,000 volumes of printed books and about 5,000 manuscripts; Berne City Library, 80,000 volumes and a valuable manuscript collection; Berne University Library, 35,000 volumes; St. Gall "Stiftsbibliothek," about 40,000 volumes, including 1,584 incunabula, and 1,730 manuscripts; Lucerne Cantonal Library, 80,000 volumes; Zurich City Library, 130,000 volumes.—*Minerva*, 1893-94.

Holland.—The following statistics of libraries in Holland are given in the German handbook, "Minerva," 1893-94: Leyden University Library, 190,000 volumes of printed books and 5,400 manuscripts, of which latter 2,400 are oriental; Utrecht University Library, 200,000 volumes, besides pamphlets; Groningen University Library, 70,000 volumes.

Belgium.—Brussels Royal Library, 375,000 volumes, and 27,000 manuscripts; Ghent, Library of the City and University of Gand, 300,000 volumes.

Denmark, Norway and Sweden.—The principal libraries of the Scandinavian kingdoms contain as follows: Christiania University Library, 312,000 volumes; Gothenburg City Library, about 60,000 volumes; Copenhagen University Library 300,000 books and 5,000 manuscripts; Lund University Library, 150,000 volumes; Stockholm Royal Library, 300,000 printed books and 11,000 manuscripts; Upsala University Library, 275,000 volumes and 11,000 manuscripts.—*Minerva*, 1893-94.

Spain.—The principal libraries in Spain are the following: Barcelona Provincial and University Library, 54,000 volumes; Madrid University Library, 200,761 volumes and 3,000 manuscripts; Madrid National Library, 450,000 volumes and 10,000 manuscripts; Salamanca University Library, 72,000 volumes and 870 manuscripts; Seville University Library, 62,000 volumes; Valencia University Library, 45,000 volumes; Valladolid University Library, 32,000 volumes.—*Minerva*, 1893-94.

Russia.—"The most notable [Russian] libraries are those founded by the government. Of these, two deserve special attention: the library of the Academy of Sciences and the Imperial Public Library in St. Petersburg. Books taken by the Russian armies from the Baltic provinces at the beginning of the eighteenth century formed the foundation of the first. The Imperial Library was the result of the Russian capture of Warsaw. Count Joseph Zalusky, bishop of Kiev, spent forty-three years collecting a rich library of 300,000 volumes and 10,000 manuscripts, devoting all his wealth to the purchase of books. His brother Andrew further enriched the library with volumes taken from the museum of the Polish king, John III. In 1747 Joseph Zalusky opened the library to the public, and in 1761 bequeathed it to a college of Jesuits in Warsaw. Six years later (1767) Zalusky was arrested and his library removed to St. Petersburg. The transfer took place in bad weather and over poor roads, so that many books were injured and many lost in transit. When the library reached St. Petersburg it numbered 262,640 volumes and 24,500 estampes. Many had been stolen during the journey, and years later there were to be found in Poland books bearing the signature of Zalusky. To the Imperial Library

Alexander I. added, in 1805, the Dubrovsky collection. . . . Dubrovsky gathered his collection during a twenty-five years' residence in Paris, Rome, Madrid, and other large cities of Europe. He acquired many during the French revolution. . . . The Imperial Library possesses many palimpsests, Greek manuscripts of the second century, . . . besides Slavonian, Latin, French, and Oriental manuscripts. . . . The library is constantly growing, about 25,000 volumes being added every year. In income, size, and number of readers it vastly surpasses all private libraries in Russia, the largest of which does not exceed 25,000 volumes. In later years the village schools began to open libraries for limited circles of readers. Small libraries were successfully maintained in cities and the demand for good reading steadily increased among the people."—A. V. Babine, *Libraries in Russia*, (*Library Journal*, March, 1893).—The principal libraries of Russia reported in the German year-book, "Minerva," 1893-94, are the following: Charkow University Library, 123,000 volumes; Dorpat University Library, 170,000 volumes, and 104,700 dissertations; Helsingfors University Library 170,000 volumes; Kasan University Library, 100,000 volumes; Kiev University Library, 118,000 volumes; Moscow University Library, 217,000 volumes; Odessa University Library, 102,000 volumes; St. Petersburg University Library, 215,700 volumes; St. Petersburg Imperial Public Library, 1,050,000 volumes, 28,000 manuscripts.

England: The King's Library and the British Museum.—"No monarch of England is known to have been an extensive collector of books (in the modern acceptance of the term) except George III., or, if the name of Charles I. should be added, it must be in a secondary rank, and with some uncertainty, because we have not the same evidence of his collection of books as we have of his pictures, in the catalogue which exists of them. A royal library had, indeed, been established in the reign of Henry VII.; it was increased, as noticed by Walpole, by many presents from abroad, made to our monarchs after the restoration of learning and the invention of printing; and naturally received accessions in every subsequent reign, if it were only from the various presents by which authors desired to show their respect or to solicit patronage, as well as from the custom of making new year's gifts, which were often books. There were also added to it the entire libraries of Lord Lumley (including those of Henry, Earl of Arundel, and Archbishop Cranmer), of the celebrated Casaubon, of Sir John Morris, and the Oriental MSS. of Sir Thomas Roe. Whilst this collection remained at St. James's Palace, the number of books amassed in each reign could have been easily distinguished, as they were classed and arranged under the names of the respective sovereigns. In 1759 King George II. transferred the whole, by letters patent, to the then newly-formed establishment of the British Museum; the arrangement under reigns was some time after departed from, and the several royal collections interspersed with the other books obtained from Sir Hans Sloane, Major Edwards, and various other sources. . . . George III., on his accession to the crown, thus found the apartments which had formerly contained the library of the Kings of England vacated by their ancient

tenants. . . . Sir F. A. Barnard states that 'to create an establishment so necessary and important, and to attach it to the royal residence, was one of the earliest objects which engaged his majesty's attention at the commencement of his reign;' and he adds that the library of Joseph Smith, Esq., the British Consul at Venice, which was purchased in 1762, 'became the foundation of the present Royal Library.' Consul Smith's collection was already well known, from a catalogue which had been printed at Venice in 1755, to be eminently rich in the earliest editions of the classics, and in Italian literature. Its purchase was effected for about £10,000, and it was brought direct to some apartments at the Queen's Palace commonly called Buckingham House. Here the subsequent collections were amassed; and here, after they had outgrown the rooms at first appropriated to them, the King erected two large additional libraries, one of which was a handsome octagon. Latterly the books occupied no less than seven apartments. . . . Early in the year 1823, it was made known to the public that King George IV. had presented the Royal Library to the British nation. . . . Shortly after, the Chancellor of the Exchequer stated in the House of Commons that it was his majesty's wish that the library should be placed in the British Museum, but in a separate apartment from the Museum Library."—*Gentleman's Magazine*, 1834, pp. 16-22. — "In the chief countries of the Continent of Europe . . . great national Museums have, commonly, had their origin in the liberality and wise foresight either of some sovereign or other, or of some powerful minister whose mind was large enough to combine with the cares of State a care for Learning. In Britain, our chief public collection of literature and of science originated simply in the public spirit of private persons. The British Museum was founded precisely at that period of our history when the distinctively national, or governmental, care for the interests of literature and of science was at its lowest, or almost its lowest, point. As regards the monarchs, it would be hard to fix on any, since the dawn of the Revival of Learning, who evinced less concern for the progress and diffusion of learning than did the first and second princes of the House of Hanover. As regards Parliament, the tardy and languid acceptance of the boon proffered, posthumously, by Sir Hans Sloane, constitutes just the one exceptional act of encouragement that serves to give saliency to the utter indifference which formed the ordinary rule. Long before Sloane's time . . . there had been zealous and repeated efforts to arouse the attention of the Government as well to the political importance as to the educational value of public museums. Many thinkers had already perceived that such collections were a positive increase of public wealth and of national greatness, as well as a powerful instrument of popular education. It had been shewn, over and over again, that for lack of public care precious monuments and treasures of learning had been lost; sometimes by their removal to far-off countries; sometimes by their utter destruction. Until the appeal made to Parliament by the Executors of Sir Hans Sloane, in the middle of the eighteenth century, all those efforts had uniformly failed. But Sir Hans Sloane cannot claim to be regarded, individually or very specially, as the Founder of

the British Museum. His last Will, indeed, gave an opportunity for the foundation. Strictly speaking, he was not even the Founder of his own Collection, as it stood in his lifetime. The Founder of the Sloane Museum was William Courten, the last of a line of wealthy Flemish refugees, whose history, in their adopted country, is a series of romantic adventures. Parliament had previously accepted the gift of the Cottonian Library, at the hands of Sir John Cotton, third in descent from its Founder, and its acceptance of that gift had been followed by almost unbroken neglect, although the gift was a noble one. Sir John, when conversing, on one occasion, with Thomas Carte, told the historian that he had been offered £60,000 of English money, together with a carte blanche for some honorary mark of royal favour, on the part of Lewis XIV., for the Library which he afterwards settled upon the British nation. It has been estimated that Sloane expended (from first to last) upon his various collections about £50,000; so that even from the mercantile point of view, the Cotton family may be said to have been larger voluntary contributors towards our eventual National Museum than was Sir Hans Sloane himself. That point of view, however, would be a very false, because very narrow, one. Whether estimated by mere money value, or by a truer standard, the third, in order of time, of the Foundation-Collections,—that of the 'Harleian Manuscripts,'—was a much less important acquisition for the Nation than was the Museum of Sloane, or the Library of Cotton; but its literary value, as all students of our history and literature know, is, nevertheless, considerable. Its first Collector, Robert Harley, the Minister of Queen Anne and the first of the Harleian Earls of Oxford, is fairly entitled to rank, after Cotton, Courten, and Sloane, among the virtual or eventual co-founders of the British Museum. Chronologically, then, Sir Robert Cotton, William Courten, Hans Sloane, and Robert Harley, rank first as Founders; so long as we estimate their relative position in accordance with the successive steps by which the British Museum was eventually organized. But there is another synchronism by which greater accuracy is attainable. Although four years had elapsed between the passing—in 1753—of 'An Act for the purchase of the Museum or Collection of Sir Hans Sloane, and of the Harleian Collection of Manuscripts, and for providing one general repository for the better reception and more convenient use of the said Collections, and of the Cottonian Library and of the additions thereto,' and the gift—in 1757—to the Trustees of those already united Collections by King George II. of the Old Royal Library of the Kings his predecessors, yet that royal collection itself had been (in a restricted sense of the words) a Public and National possession soon after the days of the first real and central Founder of the present Museum, Sir Robert Cotton. But, despite its title, that Royal Library, also, was—in the main—the creation of subjects, not of Sovereigns or Governments. Its virtual founder was Henry, prince of Wales [son of James I.]. It was acquired, out of his privy purse, as a subject, not as a Prince. He, therefore, has a title to be placed among the individual Collectors whose united efforts resulted—after long intervals of time—in the creation, eventually, of a public institution

second to none, of its kind, in the world."—E. Edwards, *Founders of the British Museum*, bk. I, ch. 1.—"Montague House was purchased by the Trustees in 1754 for a general repository, and the collections were removed to it. . . . On the 15th of January, 1759, the British Museum was opened for the inspection and use of the public. At first the Museum was divided into three departments, viz., Printed Books, Manuscripts, and Natural History; at the head of each of them was placed an officer designated as 'Under Librarian.' The increase of the collections soon rendered it necessary to provide additional accommodation for them, Montague House proving insufficient. The present by George III. of Egyptian Antiquities, and the purchase of the Hamilton and Townley Antiquities, made it moreover imperative to create an additional department—that of Antiquities and Art—to which were united the Prints and Drawings, as well as the Medals and Coins, previously attached to the library of Printed Books and Manuscripts. The acquisition of the Elgin Marbles in 1816 made the Department of Antiquities of the highest importance, and increased room being indispensable for the exhibition of those marbles, a temporary shelter was prepared for them. This was the last addition to Montague House. When, in 1823, the library collected by George III. was presented to the nation by George IV. it became necessary to erect a building fit to receive this valuable and extensive collection. It was then decided to have an entirely new edifice to contain the whole of the Museum collection, including the recently-acquired library. Sir R. Smirke was accordingly directed by the Trustees to prepare plans. The eastern side of the present structure was completed in 1828, and the Royal Library was then placed in it. The northern, southern, and western sides of the building were subsequently added, and in 1845 the whole of Montague House and its additions had disappeared; while the increasing collections had rendered it necessary to make various additions to the original design of Sir R. Smirke, some of them even before it had been carried out."—J. W. Jones, *British Museum: a Guide*, pp. ii-iii. —"The necessity of a general enlargement of the library led to the suggestion of many plans—some impracticable—some too expensive—and all involving a delay which would have been fatal to the efficiency of the Institution. . . . Fortunately . . . after much vigorous discussion, a plan which had been suggested by the . . . Principal Librarian [Mr. Panizzi] for building in the vacant quadrangle, was adopted and carried out under his own immediate and watchful superintendence. . . . The quadrangle within which the new library is built is 313 feet in length by 235 wide, comprising an area of 73,555 square feet. Of this space the building covers 47,472 feet, being 258 feet long by 184 feet in width, thus leaving an interval of from 27 to 30 feet all round. By this arrangement, the light and ventilation of the surrounding buildings is not interfered with, and the risk of fire from the outer buildings is guarded against. The Reading Room is circular. The dome is 140 feet in diameter, and its height 106 feet. The diameter of the lantern is 40 feet. Light is further obtained from twenty circular-headed windows, 27 feet high by 12 feet wide, inserted at equal intervals round the dome at a height of 35 feet from the ground. In its

diameter the dome of the Reading Room exceeds all others, with the exception of the Pantheon of Rome, which is about 2 feet wider. That of St. Peter's at Rome, and of Santa Maria in Florence are each only 139 feet; that of the tomb of Mahomet at Bejapore, 135; of St. Paul's, 112; of St. Sophia, at Constantinople, 107; and of the church of Darmstadt, 105. The new Reading Room contains 1,250,000 cubic feet of space, and the surrounding libraries 750,000. These libraries are 24 feet in height, with the exception of that part which runs round the outside of the Reading Room, which is 32 feet high; the spring of the dome being 24 feet from the floor of the Reading Room, and the ground excavated 8 feet below this level. The whole building is constructed principally of iron. . . . The Reading Room contains ample and comfortable accommodation for 303 readers. There are thirty-five tables: eight are 34 feet long, and accommodate sixteen readers, eight on each side; nine are 30 feet long, and accommodate fourteen readers, seven on each side; two are 30 feet long, and accommodate eight readers each, viz., seven on one side and one on the other—these two tables are set apart for the exclusive use of ladies; sixteen other tables are 6 feet long, and accommodate two readers each—these are fitted up with rising desks of a large size for those readers who may have occasion to consult works beyond the usual dimensions. Each person has allotted to him, at the long tables, a space of 4 feet 3 inches in length by 2 feet 1 inch in depth. He is screened from the opposite occupant by a longitudinal division, which is fitted with a hinged desk graduated on sloping racks, and a folding shelf for spare books. In the space between the two, which is recessed, an inkstand is fixed, having suitable penholders. . . . The framework of each table is of iron, forming air-distributing channels, which are contrived so that the air may be delivered at the top of the longitudinal screen division, above the level of the heads of the readers, or, if desired, only at each end pedestal of the tables, all the outlets being under the control of valves. A tubular foot-rail also passes from end to end of each table, which may have a current of warm water through it at pleasure, and be used as a foot-warmer if required. The pedestals of the tables form tubes communicating with the air-chamber below, which is 6 feet high, and occupies the whole area of the Reading Room: it is fitted with hot-water pipes arranged in radiating lines. The supply of fresh air is obtained from a shaft 60 feet high. . . . The shelves within the Reading Room contain about 60,000 volumes: the new building altogether will accommodate about 1,500,000 volumes."—*List of the Books of Reference in the Reading Room of the British Museum; preface.*—The number of volumes of printed books in the British Museum in 1893 is reported to have been 1,600,000, the number of manuscripts 50,000 and the maps and charts 200,000.—*Minerva*, 1893-94.—A purchase from the Duke of Bedford, of adjoining land, to the extent of five and a half acres, for the enlargement of the Museum, was announced by the London Times, March 18, 1894. With this addition, the area of ground occupied by the Museum will be fourteen acres.

England: The Bodleian Library.—"Its founder, Sir Thomas Bodley, was a worthy of Devon, who had been actively employed by

Queen Elizabeth as a diplomatist, and had returned tired of court life to the University, where long before he had been Fellow of Merton College. He found the ancient library of the University (which, after growing slowly with many vicissitudes from small beginnings, had suddenly been enriched in 1439-46 by a gift of 264 valuable MSS. from Humphrey, Duke of Gloucester) utterly destroyed by Edward VI.'s Commissioners, and the room built for its reception (still called 'Duke Humphrey's library') swept clear even of the readers' desks. His determination to refound the library of the University was actively carried out, and on November 8, 1602, the new institution was formally opened with about 2,000 printed and manuscript volumes. Two striking advantages were possessed by the Bodleian almost from the first. Sir Thomas Bodley employed his great influence at court and with friends to induce them to give help to his scheme, and accordingly we find not only donations of money and books from personal friends, but 240 MSS. contributed by the Deans and Chapters of Exeter and Windsor. Moreover, in 1610, he arranged with the Stationers' Company that they should present his foundation with a copy of every printed book published by a member of the Company; and from that time to this the right to every book published in the kingdom has been continuously enjoyed."—F. Madan, *Books in Manuscript*, p. 84.—In 1891 the Bodleian Library was said to contain 400,000 printed books and 30,000 manuscripts. Under the copyright act of Great Britain, the British Museum, the Bodleian Library, Oxford, the Cambridge University Library, the Advocates Library, Edinburgh, and the Trinity College Library, Dublin, are each entitled to a copy of every work published in the United Kingdom.

England: Rise and Growth of Free Town-Libraries.—In the "Encyclopædia Britannica" (9th ed.) we read, in the article "Libraries," that "the fine old library instituted by Humphrey Chetham in Manchester, in 1553, and which is still 'housed in the old collegiate buildings where Raleigh was once entertained by Dr. Dee, might be said to be the first free library' in England. Two centuries, however, before worthy Chetham had erected his free fountain of knowledge for thirsty souls, a grave fraternity known as the Guild of Kalendars had established a free library, for all comers, in connection with a church yet standing in one of the thoroughfares of Old Bristol. . . . John Leland (temp. Henry VIII.) speaks of the Kalendars as an established body about the year 1170; and when in 1216 Henry III. held a Parliament in Bristol, the deeds of the guild were inspected, and ratified on account of the antiquity and high character of the fraternity ('propter antiquitates et bonitates in eâ Gilda repertas'), and Gualo, the Papal Legate, commended the Kalendars to the care of William de Blois, Bishop of Worcester, within whose diocese Bristol then lay. It was the office of the Kalendars to record local events and such general affairs as were thought worthy of commemoration, whence their name. They consisted of clergy and laity, even women being admitted to their Order. . . . It was ordered by Wolstan, Bishop of Worcester, who in visitation of this part of his diocese, July 10, 1340, examined the ancient rules of the College, that a prior in priest's orders should be chosen by the majority

of the chaplains and lay brethren, without the solemnity of confirmation, consecration or benediction of superiors, and eight chaplains who were not bound by monastic rules, were to be joined with him to celebrate for departed brethren and benefactors every day. By an ordinance of John Carpenter, Bishop of Worcester, A. D. 1464, the Prior was to reside in the college, and take charge of a certain library newly erected at the Bishop's expense, so that every festival day from seven to eleven in the forenoon admission should be freely allowed to all desirous of consulting the Prior, to read a public lecture every week in the library, and elucidate obscure places of Scripture as well as he could to those desirous of his teachings. . . . Lest, through negligence or accident, the books should be lost, it was ordered that three catalogues of them should be kept; one to remain with the Dean of Augustinian Canons, whose 14th-century church is now Bristol Cathedral, another with the Mayor for the time being, and the third with the Prior himself. Unfortunately, they are all three lost. . . . This interesting library was destroyed by fire in 1466 through the carelessness of a drunken 'point-maker,' two adjoining houses against the steeple of the church being at the same time burnt down."—J. Taylor, *The First English Free Library and its Founders* (*Murray's Mag.*, Nov., 1891).—"Free town-libraries are essentially a modern institution, and yet can boast of a greater antiquity than is generally supposed, for we find a town-library at Auvergne in 1540, and one at a still earlier date at Aix. Either the munificence of individuals or the action of corporate authorities has given very many of the continental towns freely accessible libraries, some of them of considerable extent. In England the history of town-libraries is much briefer. There is reason to believe that London at an early date was possessed of a common library; and Bristol, Norwich, and Leicester, had each town-libraries, but the corporations proved but careless guardians of their trust, and in each case allowed it to be diverted from the free use of the citizens for the benefit of a subscription library. At Bristol, in 1613, Mr. Robert Redwood 'gave his lodge to be converted into a library or place to put books in for the furtherance of learning.' Some few years after, Tobie Matthew, Archbishop of York, left some valuable books in various departments of literature for free access 'to the merchants and shopkeepers.' . . . The paucity of our public libraries, twenty years ago, excited the attention of Mr. Edward Edwards, to whose labours in this field the country owes so much. Having collected a large amount of statistics as to the comparative number of these institutions in different States, he communicated the result of his researches to the Statistical Society, in a paper which was read on the 20th of March, 1848, and was printed in this 'Journal' in the August following. The paper revealed some unpleasant facts, and showed that, in respect of the provision of public libraries, Great Britain occupied a very unworthy position. In the United Kingdom (including Malta) Mr. Edwards could only discover 29 libraries having more than 10,000 volumes, whilst France could boast 107, Austria 41, Switzerland 13. The number of volumes to every hundred of the population of cities con-

taining libraries, was in Great Britain 43, France 125, Brunswick 2,353. Of the 29 British libraries enumerated by Mr. Edwards, some had only doubtful claims to be considered as public, and only one of them was absolutely free to all comers, without influence or formality. That one was the public library at Manchester, founded by Humphrey Chetham in 1665. The paper read before this Society twenty-two years ago was destined to be productive of great and speedy results. From the reading of it sprang the present system of free town-libraries. The seed was then sown, and it is now fructifying in the libraries which are springing up on every hand. The paper attracted the attention of the late William Ewart, Esq., M. P., and ultimately led to the appointment of a parliamentary committee on the subject of public libraries. The report of this committee paved the way for the Public Libraries Act of 1850."—W. E. A. Axon, *Statistical Notes on the Free Town-Libraries of Great Britain and the Continent* (*Journal of the Statistical Soc.*, Sept. 1870, v. 33).—"The progress of free public libraries in England under the Act of 1850 was not, for a long time, very rapid. "In the 36 years from 1850 onward—that is, down to 1886—133 places had availed themselves of the benefits of the act. That was not a very large number, not amounting quite, upon the average, to four in each of those 36 years. . . . Now, see the change which has taken place. We have only four years, from 1887 to 1890, and in those four years no less than 70 places have taken advantage of the act, so that instead of an average of less than four places in the year, we have an average of more than 17 places."—W. E. Gladstone, *Address at the Opening of the Free Public Library of St. Martin's-in-the-Fields*.—"The Clerkenwell Library Commissioners draw attention to the enormous strides London has made within the last five years in the matter of public libraries. In 1886 four parishes had adopted the Acts; by December, 1891, 29 parishes had adopted them, and there are already 30 libraries and branches opened throughout the County of London, possessing over 250,000 volumes, and issuing over 3,000,000 volumes per annum."—*The Library Journal*, Feb., 1892.—Under a new law, which came into force in 1893, "any local authority (i. e., town council or district board), save in the County of London, may establish and maintain public libraries without reference to the wishes of the rate payers."—*Library Journal*, October, 1893 (v. 18, p. 442).

United States of America: Franklin and the first Subscription Library.—When Franklin's club, at Philadelphia, the Junto, was first formed, "its meetings were held (as the custom of clubs was in that clubbing age) in a tavern; and in a tavern of such humble pretensions as to be called by Franklin an ale-house. But the leathern-aproned philosophers soon removed to a room of their own, lent them by one of their members, Robert Grace. It often happened that a member would bring a book or two to the Junto, for the purpose of illustrating the subject of debate, and this led Franklin to propose that all the members should keep their books in the Junto room, as well for reference while debating as for the use of members during the week. The suggestion being approved, one end of their little apartment was soon filled with books; and there they remained for the common benefit a year.

But some books having been injured, their owners became dissatisfied, and the books were all taken home. Books were then scarce, high-priced, and of great bulk. Folios were still common, and a book of less magnitude than quarto was deemed insignificant. . . . Few books of much importance were published at less than two guineas. Such prices as four guineas, five guineas, and six guineas were not uncommon. Deprived of the advantage of the Junto collection, Franklin conceived the idea of a subscription library. Early in 1731 he drew up a plan, the substance of which was, that each subscriber should contribute two pounds sterling for the first purchase of books, and ten shillings a year for the increase of the library. As few of the inhabitants of Philadelphia had money to spare, and still fewer cared for reading, he found very great difficulty in procuring a sufficient number of subscribers. He says: 'I put myself as much as I could out of sight, and stated it as a scheme of a number of friends, who had requested me to go about and propose it to such as they thought lovers of reading. In this way my affairs went on more smoothly, and I ever after practiced it on such occasions, and from my frequent successes can heartily recommend it.' Yet it was not until November, 1731, at least five months after the project was started, that fifty names were obtained; and not till March, 1732, that the money was collected. After consulting James Logan, 'the best judge of books in these parts,' the first list of books was made out, a draft upon London of forty-five pounds was purchased, and both were placed in the hands of one of the directors who was going to England. Peter Collinson undertook the purchase, and added to it presents of Newton's 'Principia,' and 'Gardener's Dictionary.' All the business of the library Mr. Collinson continued to transact for thirty years, and always swelled the annual parcel of books by gifts of valuable works. In those days getting a parcel from London was a tedious affair indeed. All the summer of 1732 the subscribers were waiting for the coming of the books, as for an event of the greatest interest. . . . In October the books arrived, and were placed, at first, in the room of the Junto. A librarian was appointed, and the library was opened once a week for giving out the books. The second year Franklin himself served as librarian. For many years the secretary to the directors was Joseph Breintnal, by whose zeal and diligence the interests of the library were greatly promoted. Franklin printed a catalogue soon after the arrival of the books, for which, and for other printing, he was exempted from paying his annual ten shillings for two years. The success of this library, thus begun by a few mechanics and clerks, was great in every sense of the word. Valuable donations of books, money and curiosities were frequently made to it. The number of subscribers slowly, but steadily, increased. Libraries of similar character sprung up all over the country, and many were started even in Philadelphia. Kalm, who was in Philadelphia in 1748, says that then the parent library had given rise to 'many little libraries,' on the same plan as itself. He also says that non-subscribers were then allowed to take books out of the library, by leaving a pledge for the value of the book, and paying for a folio eight pence a week, for a quarto six pence, and for all others four pence. 'The subscribers,' he

says, 'were so kind to me as to order the librarian, during my stay here, to lend me every book I should want, without requiring any payment of me.' In 1764, the shares had risen in value to nearly twenty pounds, and the collection was considered to be worth seventeen hundred pounds. In 1785, the number of volumes was 5,487; in 1807, 14,457; in 1861, 70,000. The institution is one of the few in America that has held on its way, unchanged in any essential principle, for a century and a quarter, always on the increase, always faithfully administered, always doing well its appointed work. There is every reason to believe that it will do so for centuries to come. The prosperity of the Philadelphia Library was owing to the original excellence of the plan, the good sense embodied in the rules, the care with which its affairs were conducted, and the vigilance of Franklin and his friends in turning to account passing events. Thomas Penn, for example, visited Philadelphia a year or two after the library was founded; when the directors of the library waited upon him with a dutiful address, and received, in return, a gift of books and apparatus. It were difficult to over-estimate the value to the colonies of the libraries that grew out of Franklin's original conception. They were among the chief means of educating the colonies up to Independence. 'Reading became fashionable,' says Franklin; 'and our people having no public amusements to divert their attention from study, became better acquainted with books, and in a few years were observed, by strangers, to be better instructed and more intelligent than people of the same rank generally are in other countries.' . . . What the Philadelphia Library did for Franklin himself, the libraries, doubtless, did for many others. It made him a daily student for twenty years. He set apart an hour or two every day for study, and thus acquired the substance of all the most valuable knowledge then possessed by mankind. Whether Franklin was the originator of subscription libraries, and of the idea of permitting books to be taken to the homes of subscribers, I cannot positively assert. But I can discover no trace of either of those two fruitful conceptions before his time."—J. Parton, *Life and Times of Benjamin Franklin*, pp. 200-203.—"The books were at first kept in the house of Robert Grace, whom Franklin characterizes as 'a young gentleman of some fortune, generous, lively, and witty, a lover of punning and of his friends.' Afterward they were allotted a room in the State-House; and, in 1742, a charter was obtained from the Proprietaries. In 1790, having in the interval absorbed several other associations and sustained a removal to Carpenter's Hall, where its apartment had been used as a hospital for wounded American soldiers, the Library was at last housed in a building especially erected for it at Fifth and Chestnut streets, where it remained until within the last few years. It brought only about eight thousand volumes into its new quarters, for it had languished somewhat during the Revolution and the war of words which attended our political birth. But it had received no injury. . . . Two years after removal to its quarters on Fifth street, the Library received the most valuable gift of books it has as yet had. James Logan, friend and adviser of Penn, . . . had gathered a most important collection of books. Mr. Logan was translator of Cicero's

'Cato Major,' the first classic published in America, besides being versed in natural science. His library comprised, as he tells us, 'over one hundred volumes of authors, all in Greek, with mostly their versions; all the Roman classics without exception; all the Greek mathematicians. . . . Besides there are many of the most valuable Latin authors, and a great number of modern mathematicians.' These, at first bequeathed as a public library to the city, became a branch of the Philadelphia Library under certain conditions, one of which was that, barring contingencies, one of the donor's descendants should always hold the office of trustee. And to-day his direct descendant fills the position, and is perhaps the only example in this country of an hereditary office-holder. . . . In 1869 died Dr. James Rush, son of Benjamin Rush, and himself well known as the author of a work on the human voice, and as husband of a lady who almost succeeded in naturalizing the salon in this country. By his will about one million dollars were devoted to the erection and maintenance of an isolated and fire-proof library-building, which was to be named the Ridgway Library, in memory of his wife. This building was offered to the Philadelphia Company, and the bequest was accepted. That institution had by this time accumulated about one hundred thousand volumes. . . . A building of the Doric order was erected, which with its grounds covers an entire square or block, and is calculated to contain four hundred thousand volumes, or three times as many as the Library at present has, and to this building the more valuable books of the Library were removed in 1878; the fiction and more modern works being placed in another designed in imitation of the old edifice, and nearer the center of the city."—B. Samuel, *The Father of American Libraries* (*Century Mag.*, May, 1883). —In 1893, the library of the Philadelphia Library Company contained 171,069 volumes.—**The First Library in New York.**—The New York Society Library is the oldest institution of the kind in the city of New York. "In 1729, the Rev. Dr. Millington, Rector of Newington, England, by his will, bequeathed his library to the Society for the Propagation of the Gospel in Foreign Parts. By this society the library of Dr. Millington was presented to the corporation of the city, for the use of the clergy and gentlemen of New-York and the neighbouring provinces. . . . 'In 1754 [as related in Smith's History of New York] a set of gentlemen undertook to carry about a subscription towards raising a public library, and in a few days collected near 600 pounds, which were laid out in purchasing about 700 volumes of new, well-chosen books. Every subscriber, upon payment of five pounds principal, and the annual sum of ten shillings, is entitled to the use of these books,—his right, by the articles, is assignable, and for non-compliance with them may be forfeited. The care of this library is committed to twelve trustees, annually elected by the subscribers, on the last Tuesday of April, who are restricted from making any rules repugnant to the fundamental subscription. This is the beginning of a library which, in process of time, will probably become vastly rich and voluminous, and it would be very proper for the company to have a Charter for its security and encouragement.' The library of the corporation above alluded to, appearing to

have been mismanaged, and at length entirely disused, the trustees of the New-York Society Library offered to take charge of it, and to deposit their own collection with it, in the City-Hall. This proposal having been acceded to by the corporation, the Institution thenceforward received the appellation of 'The City Library,' a name by which it was commonly known for a long time. A good foundation having been thus obtained, the library prospered and increased. . . . In 1772, a charter was granted to it by the colonial government. The war of the revolution, however, which soon after occurred, interfered with these pleasing prospects; the city fell into the possession of the enemy; the effect on all our public institutions was more or less disastrous, and to the library nearly fatal. An interval of no less than fourteen years, (of which it possesses no record whatever,) here occurs in the history of the society. At length it appears from the minutes, that 'the accidents of the late war having nearly destroyed the former library, no meeting of the proprietors for the choice of trustees was held from the last Tuesday in April, 1774, until Saturday, the 21st December, 1788, when a meeting was summoned.' In 1789, the original charter, with all its privileges, was revived by the legislature of this state; the surviving members resumed the payment of their annual dues, an accession of new subscribers was obtained, and the society, undeterred by the loss of its books, commenced almost a new collection."—*Catalogue of the N. Y. Society Library: Historical Notice.*—**Redwood Library.**—While Bishop Berkeley was residing, in 1729, on his farm near Newport, Rhode Island, "he took an active share in forming a philosophical society in Newport. . . . Among the members were Col. Updike, Judge Scott (a granduncle of Sir Walter Scott), Nathaniel Kay, Henry Collins, Nathan Townsend, the Rev. James Honeyman, and the Rev. Jeremiah Condy. . . . The Society seems to have been very successful. One of its objects was to collect books. It originated, in 1747, the Redwood Library."—A. C. Fraser, *Life and Letters of George Berkeley* (v. 4 of *Works*), p. 169. —The library thus founded took its name from Abraham Redwood, who gave £500 to it in 1747. Other subscriptions were obtained in Newport to the amount of £5,000, colonial currency, and a building for the library erected in 1750.

United States of America: Free Public Libraries.—"Mr. Ewart, in his Report of the Select Committee on Public Libraries, 1849, says: 'Our younger brethren, the people of the United States, have already anticipated us in the formation of libraries entirely open to the public.' No free public library, however, was then in operation, in the United States, yet one had been authorized by legislative action. The movements in the same direction in England and the United States seem to have gone on independently of each other; and in the public debates and private correspondence relating to the subject there seems to have been no borrowing of ideas, or scarcely an allusion, other than the one quoted, to what was being done elsewhere. In October, 1847, Josiah Quincy, Jr., Mayor of Boston, suggested to the City Council that a petition be sent to the State legislature asking for authority to lay a tax by which the city of Boston could establish a library free to all its citizens. The Massachusetts legislature, in March, 1848, passed

such an act, and in 1851 made the act apply to all the cities and towns in the State. In 1849 donations of books were made to the Boston Public Library. Late in the same year Mr. Edward Everett made to it the donation of his very complete collection of United States documents, and Mayor Bigelow a gift of \$1,000. In May, 1852, the first Board of Trustees, with Mr. Everett as president, was organized, and Mr. Joshua Bates, of London, made his first donation of \$50,000 for the use of the library. It was fortunate that the public-library system started where it did and under the supervision of the eminent men who constituted the first board of trustees of the Boston Public Library. Mr. George Ticknor was the person who mapped out the sagacious policy of that library—a policy which has never been improved, and which has been adopted by all the public libraries in this country, and, in its main features, by the free libraries of England. For fifteen years or more Mr. Ticknor gave the subject his personal attention. He went to the library every day, as regularly as any of the employes, and devoted several hours to the minutest details of its administration. Before he had any official relations with it, he gave profound consideration to, and settled in his own mind, the leading principles on which the library should be conducted. . . . Started as the public-library system was on such principles, and under the guidance of these eminent men, libraries sprang up rapidly in Massachusetts, and similar legislation was adopted in other States. The first legislation in Massachusetts was timid. The initiative law of 1848 allowed the city of Boston to spend only \$5,000 a year on its Public Library, which has since expended \$125,000 a year. The State soon abolished all limitation to the amount which might be raised for library purposes. New Hampshire, in 1849, anticipated Massachusetts, by two years, in the adoption of a general library law. Maine followed in 1854; Vermont in 1865; Ohio in 1867; Colorado, Illinois, and Wisconsin in 1872; Indiana and Iowa in 1873; Texas in 1874; Connecticut and Rhode Island in 1875; Michigan and Nebraska in 1877; California in 1878; Missouri and New Jersey in 1885; Kansas in 1886. . . . The public library law of Illinois, adopted in 1872, and since enacted by other Western States, is more elaborate and complete than the library laws of any of the New England States. . . . The law of Wisconsin is similar to that of Illinois. . . . New Jersey has a public-library law patterned after that of Illinois.”—W. F. Poole, *President's Address at the annual meeting of the American Library Association*, 1887.—The State of New York adopted a library law in 1892, under which the creation of free libraries has been promisingly begun. A law having like effect was adopted in New Hampshire in 1891.

United States of America: Library Statistics of 1891.—“As to the early statistics of libraries in this country but little can be found. Prof. Jewett, in his ‘Notices of Public Libraries,’ published by the Smithsonian Institution in 1850, gave a summary of public libraries, amounting to 694 and containing at that time 2,201,632 volumes. In the census of 1850 an attempt was made to give the number of libraries and the number of volumes they contained, exclusive of school and Sunday school libraries. This number was 1,560; the number of volumes, 2,447,086.

In 1856 Mr. Edward Edwards in his summary of libraries gave a much smaller number of libraries, being only 341, but the number of volumes was nearly the same, being 2,371,887, and was also based upon the census of 1850. Mr. William J. Rhee, in his ‘Manual of Public Libraries,’ which was printed in 1859, gave a list of 2,902 libraries, but of all this number only 1,312 had any report whatever of the number of volumes they contained. From these meager statistics it is seen that the reports do not vary very much, giving about the same number of libraries and number of volumes in them, taking account of the changes that would occur from the different classifications as to what was excepted or omitted as a library. The annual reports of the Bureau from 1870 to 1874 contained limited statistics of only a few hundred libraries, and little more is shown than the fact that there were about 2,000 public libraries of all kinds in the United States. About five years of labor was expended in collecting material for the special report of the Bureau upon public libraries, which was printed in 1876, and this gave a list of 3,649 libraries of over 300 volumes, and the total number of volumes was 12,276,964, this being about the first fairly complete collection of library statistics. In the report of the Bureau for 1884–85, after considerable correspondence and using the former work as a basis, another list of public libraries was published, amounting to 5,388 libraries of over 300 volumes, an increase of 1,869 libraries in ten years, or almost 54 per cent. The number of volumes contained in these libraries at that time was 20,622,076, or an increase of about 66 per cent, and showing that the percentage of increase in the number of volumes was even greater than that of the number of libraries. An estimate of the proportion of smaller libraries under 500 volumes in that list indicates that these smaller libraries included only about 20 per cent of the books, so that this list could be said to fairly show the extent of the libraries at that time. In the report for 1886–87, detailed statistics of the various classes of libraries were given, except those of colleges and schools, which were included in the statistics of those institutions. From the uncertainty of the data and the imperfect records given of the very small libraries, it was deemed best to restrict the statistics to collections of books that might be fairly called representative, and as those having less than 1,000 volumes made but a proportionally small percentage of the whole number of books the basis of 1,000 volumes or over was taken. This list includes the statistics only of libraries of this size and amounted to 1,777 libraries, containing 14,012,370 volumes, and were arranged in separate lists by classes as far as it could be done. . . . The number of libraries and of volumes in each of the seven special classes in the report made in 1887 was as follows: Free public lending libraries, 434; volumes, 3,721,191; free public reference libraries, 153; volumes, 3,075,099; free public school libraries, 93; volumes, 177,560; free corporate lending libraries, 241; volumes 1,727,870; libraries of clubs, associations, etc., 341; volumes, 2,460,334; subscription corporate libraries, 452; volumes, 2,644,929; and circulating libraries proper, 751; volumes, 215,487. The statistics [now] given . . . are for the year 1891, and include only libraries of 1,000 volumes and over, thus differing from the com-

plete report of 1885. . . . There were, in 1891, 3,804 libraries. Of these, 3 contain over 500,000 volumes; 1 between 300,000 and 500,000; 26 between 100,000 and 300,000; 68 between 50,000 and 100,000; 128 between 25,000 and 50,000; 383 between 10,000 and 25,000; 565 between 5,000 and 10,000; and 2,360 between 1,000 and 5,000. . . . The North Atlantic Division contains 1,913 libraries, or 50.3 per cent of the whole number; the South Atlantic, 339, or 8.88 per cent; the South Central, 256, or 6.73 per cent; the North Central, 1,098, or 28.87 per cent, and the Western, 198, or 5.22 per cent. Of the distribution of volumes in the libraries, the North Atlantic Division has 16,605,286 or 53.34 per cent; the South Atlantic, 4,276,894, or 13.71 per cent; the South Central, 1,845,708, or 4.03 per cent; the North Central, 7,330,045, or 23.32 per cent; and the Western, 1,593,974, or 5.34 per cent. . . . From [1885 to 1891] the increase in the United States in the number of libraries was from 2,987 to 3,804, an increase of 817, or 27.35 per cent; in the North Atlantic, from 1,543 to 1,913, an increase of 370, or 24 per cent; in the South Atlantic, from 289 to 339, an increase of 49, or 17 per cent; in the South Central, from 201 to 256, an increase of 55, or 27.5 per cent; in the North Central, from 813 to 1,099, an increase of 286, or 35.18 per cent; and in the Western, from 141 to 198, an increase of 57, or 40.43 per cent. These figures show that, comparatively, the largest increase in the number of libraries was in the Western Division, and of the number of volumes the greatest increase was in the North Central Division. The percentage of increase in the whole country was 66.3 for six years, or an average of over 11 per cent each year, which at this rate would double the number of volumes and libraries every nine years. . . . In the United States in 1885 there was one library to each 18,822 of the population, while in 1891 there was one to every 16,462, or a decrease of population to a library of 2,360, or 12.5 per cent; in the North Atlantic Division the decrease was from 10,246 to 9,096, 1,150, or 11.2 per cent; in the South Atlantic, from 28,740 to 26,206, 2,534, or 8.08 per cent; in the South Central, from 48,974 to 42,863, 6,111, or 12.5 per cent; in the North Central, from 24,807 to 20,348, 4,459, or 18 per cent; and in the Western, from 15,557 to 15,290, 277 or 1.8 per cent. The distribution of libraries in the North Atlantic Division shows the smallest average population to a library and the least change in the number, except the Western Division, where the increase of population from immigration has been greater than the increase in the number of libraries. But, generally, the establishment and growth in the size of libraries have been very large in nearly every section. . . . This shows that in 1885 there were in the United States in the libraries of the size mentioned 34 books to every 100 of the population, while in 1891 this number was 50, or an increase of 16 books, or 47 per cent. In the North Atlantic Division the increase was from 66 to 95, an increase of 29 books, or 34 per cent; in the South Atlantic, from 34 to 48, an increase of 14, or 41 per cent; in the South Central, from 9 to 12, an increase of 3, or 33.33 per cent; in the North Central, from 20 to 33, an increase of 13, or 65 per cent; and in the Western, from 43 to 53, an increase of 10, or 23 per cent. These figures show that, comparatively, the largest increase of

books to population has been in the great Northwest, over 11 per cent each year. In the whole country there has been an average increase of 7.8 per cent per annum; that is, the increase of the number of books in the libraries of the country has been 7.8 per cent greater than the increase of the population during the past six years."—W. Flint, *Statistics of Public Libraries* (*U. S. Bureau of Ed., Circ. of Information No. 7, 1893*).

United States of America: Massachusetts Free Libraries.—"In 1839 the Hon. Horace Mann, then Secretary of the Board of Education, stated as the result of a careful effort to obtain authentic information relative to the libraries in the State, that there were from ten to fifteen town libraries, containing in the aggregate from three to four thousand volumes, to which all the citizens of the town had the right of access; that the aggregate number of volumes in the public libraries, of all kinds, in the State was about 300,000; and that but little more than 100,000 persons, or one-seventh of the population of the State, had any right of access to them. A little over a half century has passed. There are now 175 towns and cities having free public libraries under municipal control, and 248 of the 351 towns and cities contain libraries in which the people have rights or free privileges. There are about 2,500,000 volumes in these libraries, available for the use of 2,104,224 of the 2,238,943 inhabitants which the State contains according to the census of 1890. The gifts of individuals in money, not including gifts of books, for libraries and library buildings, exceed five and a half million dollars. There are still 103 towns in the State, with an aggregate population of 134,719, which do not have the benefit of the free use of a public library. These are almost without exception small towns, with a slender valuation, and 67 of them show a decline in population in the past five years. The State has taken the initiative in aiding the formation of free public libraries in such towns."—*First Report of the Free Public Library Commission of Massachusetts, 1891, pref.*—The second report of the Commissioners, 1892, showed an addition of 36 to the towns which have established free public libraries.

United States of America: The American Library Association.—A distinctly new era in the history of American libraries—and in the history, it may be said, of libraries throughout the English-speaking world,—was opened, in 1876, by the meeting of a conference of librarians at Philadelphia, during the Centennial Exhibition of the summer of that year. The first fruit of the conference was the organization of a permanent American Library Association, which has held annual meetings since, bringing large numbers of the librarians of the country together every year, making common property of their experience, their knowledge, their ideas,—animating them with a common spirit, and enlisting them in important undertakings of coöperative work. Almost simultaneously with the Philadelphia meeting, but earlier, there was issued the first number of a "Library Journal," called into being by the sagacious energy of the same small band of pioneers who planned and brought about the conference. The Library Journal became the organ of the American Library Association, and each was stimulated and sustained by the other. Their combined influence has acted powerfully

upon those engaged in the work of American libraries, to elevate their aims, to increase their efficiency, and to make their avocation a recognized profession, exacting well-defined qualifications. The general result among the libraries of the country has been an increase of public usefulness beyond measure. To this renaissance in the library world many persons contributed; but its leading spirits were Melvil Dewey, latterly Director of the New York State Library; Justin Winsor, Librarian of Harvard University, formerly of the Boston Public Library; the late William F. Poole, LL.D., Librarian of the Newberry Library and formerly of the Chicago Public Library; Charles A. Cutter, lately Librarian of the Boston Athenæum; the late Frederick Leyboldt, first publisher of the "Library Journal," and his successor, R. R. Bowker. The new library spirit was happily defined by James Russell Lowell, in his address delivered at the opening of a free public library in Chelsea, Mass., and published in the volume of his works entitled "Democracy and other Addresses": "Formerly," he said, "the duty of a librarian was considered too much that of a watch-dog, to keep people as much as possible away from the books, and to hand these over to his successor as little worn by use as he could. Librarians now, it is pleasant to see, have a different notion of their trust, and are in the habit of preparing, for the direction of the inexperienced, lists of such books as they think best worth reading. Cataloguing has also, thanks in great measure to American librarians, become a science, and catalogues, ceasing to be labyrinths without a clew, are furnished with finger-posts at every turn. Subject catalogues again save the beginner a vast deal of time and trouble by supplying him for nothing with one at least of the results of thorough scholarship, the knowing where to look for what he wants. I do not mean by this that there is or can be any short cut to learning, but that there may be, and is, such a short cut to information that will make learning more easily accessible."

The organization of the American Library Association led to the formation, in 1877, of the Library Association of the United Kingdom, which was incident to the meeting of an international conference of Librarians held in London.

United States of America: Principal Libraries.—The following are the libraries in the United States which exceeded 100,000 volumes in 1891, as reported in the "Statistics of Public Libraries" published by the Bureau of Education. The name of each library is preceded by the date of its foundation:

- 1638. Harvard University Library, 292,000 vols.; 278,097 pamps.
- 1701. Yale College Library, New Haven, 185,000 vols.; 100,000 pamps.
- 1731. Philadelphia Library Company, 165,487 vols.; 30,000 pamps.
- 1749. University of Pa., Phila., 100,000 vols.; 100,000 pamps.
- 1754. Columbia College Library, New York, 135,000 vols.
- 1789. Library of the House of Representatives, Washington, 125,000 vols.
- 1800. Library of Congress, Washington, 659,843 vols.; 210,000 pamps.
- 1807. Boston Athenæum, 173,831 vols.; 70,000 pamps.

- 1818. New York State Library, Albany, 157,114 vols.
- 1820. New York Mercantile Library, New York, 239,793 vols.
- 1821. Philadelphia Mercantile Library, 166,000 vols.; 10,000 pamps.
- 1826. Maryland State Library, Annapolis, 100,000 vols.
- 1849. Astor Library, New York, 238,946 vols.; 12,000 pamps.
- 1852. Boston Public Library, 556,283 vols.
- 1857. Brooklyn Library, 113,251 vols.; 21,500 pamps.
- 1857. Peabody Institute, Baltimore, 110,000 vols.; 13,500 pamps.
- 1865. Library of the Surgeon-General's Office, Washington, 104,300 vols.; 161,700 pamps.
- 1865. Detroit Public Library, 108,720 vols.
- 1867. Cincinnati Public Library, 156,673 vols.; 18,326 pamps.
- 1868. Cornell University Library, Ithaca, N. Y., 111,007 vols.; 25,000 pamps.
- 1872. Chicago Public Library, 175,874 vols.; 25,293 pamps.
- 1882. Enoch Pratt Free Library, Baltimore, 106,663 vols.; 1,500 pamps.
- 1890. University of Chicago Library, 280,000 vols.
- 1891. Sutro Library, San Francisco, 200,000 vols.

United States of America: Library Gifts.

—A remarkable number of the free public libraries of the United States are the creations of private wealth, munificently employed for the common good. The greater institutions which have this origin are the Astor Library in New York, founded by John Jacob Astor and enriched by his descendants; the Lenox Library in New York, founded by James Lenox; the Peabody Institute, in Baltimore, founded by George Peabody; the Enoch Pratt Free Library, in Baltimore, founded by the gentleman whose name it bears; the Newberry Library, in Chicago, founded by the will of Walter L. Newberry, who died in 1868; the Sutro Library in San Francisco, founded by Adolph Sutro, and the Carnegie Libraries founded at Pittsburg, Alleghany City and Braddock by Andrew Carnegie. By the will of John Crerar, who died in 1889, trustees for Chicago are in possession of an estate estimated at \$2,500,000 or \$3,000,000, for the endowment of a library which will soon exist. The intention of the late Samuel J. Tilden, former Governor of the State of New York, to apply the greater part of his immense estate to the endowment of a free library in the City of New York, has been partially defeated by contesting heirs; but the just feeling of one among the heirs has restored \$2,000,000 to the purpose for which \$5,000,000 was appropriated in Mr. Tilden's intent. Steps preparatory to the creation of the library are in progress. The lesser libraries, and institutions including libraries of considerable importance, which owe their origin to the public spirit and generosity of individual men of wealth, are quite too numerous in the country to be catalogued in this place. In addition to such, the bequests and gifts which have enriched the endowment of libraries otherwise founded are beyond computation.

United States of America: Government Departmental Libraries at Washington.—A

remarkable creation of special libraries connected with the departments and bureaus of the national Government, has occurred within a few years past. The more important among them are the following: Department of Agriculture, 20,000 volumes and 15,000 pamphlets; Department of Justice, 21,500 volumes; Department of State, 50,000 volumes; Department of the Interior, 11,500; Navy Department, 24,518; Post Office Department, 10,000; Patent Office Scientific Library, 50,000 volumes and 10,000 pamphlets; Signal Office, 10,540 volumes; Surgeon General's Office, 104,300 volumes and 161,700 pamphlets (reputed to be the best collection of medical literature, as it is certainly the best catalogued medical library, in the world); Treasury Department, 21,000 volumes; Bureau of Education, 45,000 volumes and 120,000 pamphlets; Coast and Geodetic Survey, 12,000 volumes and 4,000 pamphlets; Geological Survey, 30,414 volumes and 42,917 pamphlets; Naval Observatory, 13,000 volumes and 3,000 pamphlets; United States Senate, 72,592 volumes; United States House of Representatives, 125,000 (both of these being distinct from the great Library of Congress, which contained, in 1891, 659,843 volumes); War Department, 30,000 volumes.

Canada.—"In 1779 a number of the officers stationed at Quebec, and of the leading merchants, undertook the formation of a subscription library. The Governor, General Haldimand, took an active part in the work, and ordered on behalf of the subscribers £500 worth of books from London. The selection was entrusted to Richard Cumberland, the dramatist; and an interesting letter from the Governor addressed to him, describing the literary wants of the town and the class of books to be sent, is now in the Public Archives. A room for their reception was granted in the Bishop's Palace; and as late as 1806, we learn from Lambert's Travels that it was the only library [?] in Canada. Removed several times, it slowly increased, until in 1882 it numbered 4,000 volumes. The list of subscribers having become very much reduced, it was leased to the Quebec Literary Association in 1843. In 1854 a portion of it was burnt with the Parliament Buildings, where it was then quartered; and finally in 1866 the entire library, consisting of 6,990 volumes, were sold, subject to conditions, to the Literary and Historical Society for a nominal sum of \$500. . . . Naturally on the organization of each of the provinces, libraries were established in connection with the Parliaments. We have therefore the following:—Nova Scotia, Halifax, 25,319; New Brunswick, Fredericton, 10,850; Prince Ed. Island, Charlottetown, 4,000; Quebec, Quebec, 17,400; Ontario, Toronto, 40,000; Manitoba, Winnipeg, 10,000; Northwest Territory, Regina, 1,480; British Columbia, Victoria, 1,200; Dominion of Canada, Ottawa, 120,000. Total volumes in Parliamentary libraries, 230,249. By far the most important of our Canadian libraries is the Dominion Library of Parliament at Ottawa. Almost corresponding with the Congressional Library at Washington in its sources of income and work, it has grown rapidly during the past ten years, and now numbers 120,000 volumes. Originally established on the union of the provinces of Upper and Lower Canada in 1841, it was successively removed with the seat of government from Kingston to Montreal, to Quebec, to

Toronto, again to Quebec, and finally to Ottawa. . . . The 38 colleges in Canada are provided with libraries containing 429,470 volumes, or an average of 11,302. The senior of these, Laval College, Quebec, is famous as being, after Harvard, the oldest on the continent, being founded by Bishop Laval in 1663. . . . In 1848 the late Dr. Ryerson, Superintendent of Education from 1844-1876, drafted a school bill which contained provisions for school and township libraries, and succeeded in awakening a deep interest in the subject. . . . In 1854 Parliament passed the requisite act and granted him the necessary funds to carry out his views in the matter. The regulations of the department authorized each county council to establish four classes of libraries—1. An ordinary common school library in each schoolhouse for the use of the children and ratepayers. 2. A general public lending library available to all the ratepayers in the municipality. 3. A professional library of books on teaching, school organization, language, and kindred subjects, available for teachers only. 4. A library in any public institution under the control of the municipality, for the use of the inmates, or in any county jail, for the use of the prisoners. . . . The proposal to establish the second class was however premature; and accordingly, finding that mechanics institutes were being developed throughout the towns and villages, the Educational Department wisely aided the movement by giving a small grant proportionate to the amount contributed by the members and reaching a maximum of \$200, afterwards increased to \$400 annually. In 1869 these had grown to number 26; in 1880, 74; and in 1886, 125. The number of volumes possessed by these 125 is 206,146, or an average of 1,650. . . . In the cities, however, the mechanics institute, with its limited number of subscribers, has been found unequal to the task assigned it, and accordingly, in 1882, the Free Libraries Act was passed, based upon similar enactments in Britain and the United States. . . . By the Free Libraries Act, the maximum of taxation is fixed at $\frac{1}{4}$ a mill on the annual assessment. . . . None of the other provinces have followed Ontario in this matter."—J. Bain, *Brief Review of the Libraries of Canada (Thousand Islands Conference of Librarians, 1887)*. — "The total number of public libraries in Canada of all kinds containing 1,000 or more volumes is 202, and of this number the Province of Ontario alone has 152, or over three-fourths of all, while Quebec has 27 or over one-half of the remaining fourth, the other provinces having from 2 to 6 libraries each. The total number of volumes and pamphlets in all the libraries reported is 1,478,910, of which the Province of Ontario has 863,332 volumes, or almost 60 per cent, while the Province of Quebec has 490,354, or over 33 per cent; Nova Scotia, 48,250 volumes, or $3\frac{1}{2}$ per cent; New Brunswick, 34,894 volumes, a little over $2\frac{1}{10}$ per cent; Manitoba, 31,025 volumes, or $2\frac{1}{10}$ per cent; British Columbia, 10,225 volumes, or not quite $\frac{1}{10}$ of 1 per cent; and Prince Edward Island, 5,200 volumes, or over $\frac{1}{10}$ of 1 per cent of the total number."—W. Flint, *Statistics [1891] of Public Libraries in the U. S. and Canada (U. S. Bureau of Education, Circular of Information No. 7, 1893)*.

Mexico.—The National Library of Mexico contains 155,000 books, besides manuscripts and pamphlets.

China.—The Imperial Library.—"It would be surprising if a people like the Chinese, who have the literary instinct so strongly developed, had not at an early date found the necessity of those great collections of books which are the means for carrying on the great work of civilization. China had her first great bibliothecal catastrophe two centuries before the Christian era, when the famous edict for the burning of the books was promulgated. Literature and despotism have never been on very good terms, and the despot of Tsin, finding a power at work which was unfavorable to his pretensions, determined to have all books destroyed except those relating to agriculture, divination and the history of his own house. His hatred to books included the makers of them, and the literati have not failed to make his name execrated for his double murders of men and books. When the brief dynasty of Tsin passed, the Princes of Han showed more appreciation of culture, and in 190 B. C. the atrocious edict was repealed, and the greatest efforts made to recover such literary treasures as had escaped the destroyer. Some classics are said to have been rewritten from the dictation of scholars who had committed them to memory. Some robbers broke open the tomb of Seang, King of Wei, who died B. C. 295, and found in it bamboo tablets containing more than 100,000 peen [bamboo slips]. These included a copy of the *Classic of Changes* and the *Annals of the Bamboo Books*, which indeed take their title from this circumstance. This treasure trove was placed in the Imperial Library. So the Shoo-king is said to have been found in a wall where it had been hidden by a descendant of Confucius, on the proclamation of the edict against books. Towards the close of the first century a library had been formed by Lew Heang and his son Lew Hin. . . . Succeeding dynasties imitated more or less this policy, and under the later Han dynasty great efforts were made to restore the library. . . . In the troubles at the close of the second century the palace at Lo-Yang was burned, and the greater part of the books destroyed. . . . Another Imperial collection at Lo-Yang, amounting to 29,945 books, was destroyed A. D. 311. In A. D. 431, Seiy Ling-Yuen, the keeper of the archives, made a catalogue of 4,582 books in his custody. Another catalogue was compiled in 473, and recorded 5,704 books. Buddhism and Taoism now began to contribute largely to the national literature. Amongst the other consequences of the overthrow of the Tse dynasty at the end of the fifth century was the destruction of the royal library of 18,010 books. Early in the next century a collection of 33,106 books, not including the Buddhist literature, was made chiefly, it is said, by the exertions of Jin Fang, the official curator. The Emperor Yuen-te removed his library, then amounting to 70,000 books, to King Chow, and the building was burnt down when he was threatened by the troops of Chow. The library of the later Wei dynasty was dispersed in the insurrection of 531, and the efforts made to restore it were not altogether successful. The later Chow collected a library of 10,000 books, and, on the overthrow of the Tse dynasty, this was increased by a mass of 5,000 mss. obtained from the fallen dynasty. When towards the close of the sixth century the Suy became masters of the empire they began to accumulate

books. . . . The Tang dynasty are specially remarkable for their patronage of literature. Early in the eighth century the catalogue extended to 53,915 books, and a collection of recent authors included 28,469 books. Printing began to supersede manuscript in the tenth century, plentiful editions of the classics appeared and voluminous compilations. Whilst the Sung were great patrons of literature, the Leau were at least lukewarm, and issued an edict prohibiting the printing of books by private persons. The Kin had books translated into their own tongue, for the benefit of the then Mongolian subjects. A similar policy was pursued by the Yuen dynasty, under whom dramatic literature and fiction began to flourish. In the year 1403, the printed books in the Imperial Library are said to have amounted to 300,000 printed books and twice the number of mss. . . . The great Imperial Library was founded by K'in Lung in the last century. In response to an imperial edict, many of the literati and book-lovers placed rare editions at the service of the government, to be copied. The Imperial Library has many of its books, therefore, in mss. Chinese printing, however, is only an imperfect copy of the calligraphy of good scribes. Four copies were made of each work. One was destined for the Wan Yuen Repository at Peking; a second for the Wan-tung Repository at Kang-ning, the capital of Kiang-su province; a third for the Wan-hwui Repository at Yang-chou-fu, and the fourth for the Wan-lan Repository at Hong-Chou, the capital of Cheh-Kiang. A catalogue was published from which it appears that the library contained from ten to twelve thousand distinct works, occupying 168,000 volumes. The catalogue is in effect an annotated list of Chinese literature, and includes the works which were still wanting to the library and deemed essential to its completion. Dr. D. J. McGowan, who visited the Hong-Chou collection, says that it was really intended for a public library, and that those who applied for permission to the local authorities, not only were allowed access, but were afforded facilities for obtaining food and lodging, 'but from some cause or other the library is rarely or never consulted.' Besides the Imperial, there are Provincial, Departmental and District Libraries. Thus, the examination hall of every town will contain the standard classical and historical books. At Canton and other cities there are extensive collections, but their use is restricted to the mandarins. There are collections of books and sometimes printing presses in connection with the Buddhist monasteries."—W. E. A. Axon, *Notes on Chinese Libraries* (*Library Journal*, Jan. and Feb., 1880).—For an account of the ancient library of Chinese classics in stone, see EDUCATION, ANCIENT: CHINA.

Japan.—"The Tokyo Library is national in its character, as the Congressional Library of the United States, the British Museum of Great Britain, etc. It is maintained by the State, and by the copyright Act it is to receive a copy of every book, pamphlet, etc., published in the empire. The Tokyo Library was established in 1873 by the Department of Education with about 70,000 volumes. In 1873 it was amalgamated with the library belonging to the Exhibition Bureau and two years later it was placed under the control of the Home Department, while a

new library with the title of Tokyo Library was started by the Education Department at the same time with about 28,000 volumes newly collected. Thus the Tokyo Library began its career on a quite slender basis; but in 1876, the books increased to 68,953, and in 1877 to 71,853. Since that time, both the numbers of books and visitors have steadily increased, so much so that in 1884 the former reached 102,350 and latter 115,986, averaging 359 persons per one day. The library was then open free to all classes; but the presence of too many readers of the commonest textbooks and light literature was found to have caused much hindrance to the serious students. . . . This disadvantage was somewhat remedied by introducing the fee system, which, of course, placed much restriction to the visitors of the library. . . . It is very clear from the character of the library that it is a reference library and not a circulating library. But as there are not any other large and well-equipped libraries in Tokyo, a system of 'lending out' is added, something like that of Königliche Bibliothek zu Berlin, with a subscription of 5 yen (about \$5) per annum. . . . The Tokyo Library now contains 97,550 Japanese and Chinese books and 25,559 European books, besides about 100,000 of

duplicates, popular books, etc., which are not used. The average number of books used is 337,262 a year. . . . The Library of the Imperial University, which is also under my charge, comprises all the books belonging to the Imperial University of Japan. These books are solely for the use of the instructors, students, and pupils, no admittance being granted to the general public. The library contains 77,991 European books and 101,217 Japanese and Chinese books. As to other smaller libraries of Japan, there are eight public and ten private libraries in different parts of the empire. The books contained in them are 66,912 Japanese and Chinese books and 4,731 European books with 43,911 visitors! Besides these, in most of towns of respectable size, there are generally two or three small private circulating libraries, which contain books chiefly consisting of light literature and historical works popularly treated."—I. Tanaka, *Tokyo Library* (*San Francisco Conference of Librarians*, 1891).

India.—The first free library in a native state of India was opened in 1892, with 10,000 volumes, 7,000 being in English. It was founded by the brother of the Maharajah.—*Library Journal*, v. 17, p. 395.

LIBURNIANS, The. See KORKYRA.

LIBYAN SIBYL. See SIBYLS.

LIBYANS, The.—"The name of Africa was applied by the ancients only to that small portion of country south of Cape Bon; the rest was called Libya. The bulk of the population of the northern coast, between Egypt and the Pillars of Hercules, was of the Hamitic race of Phut, who were connected with the Egyptians and Ethiopians, and to whom the name of Libyans was not applied until a later date, as this name was originally confined to some tribes of Arian or Japhetic race, who had settled among the natives. From these nations sprung from Phut descended the races now called Berbers, who have spread over the north of Africa, from the northernmost valleys of the Atlas to the southern limits of the Sahara, and from Egypt to the Atlantic; perhaps even to the Canaries, where the ancient Guanches seem to have spoken a dialect nearly approaching that of the Berbers of Morocco. These Berbers—now called Amazigh, or Shuluh, in Morocco; Kabyles, in the three provinces of Algeria, Tunis, and Tripoli; Tibboos, between Fezzan and Egypt; and Tuariks in the Sahara—are the descendants of the same great family of nations whose blood, more or less pure, still runs in the veins of the tribes inhabiting the different parts of the vast territory once possessed by their ancestors. The language they still speak, known through the labours of learned officers of the French army in Africa, is nearly related to that of Ancient Egypt. It is that in which the few inscriptions we possess, emanating from the natives of Libya, Numidia, and Mauritania in olden times, are written. The alphabet peculiar to these natives, whilst under the Carthaginian rule, is still used by the Tuariks. Sallust, who was able to consult the archives of Carthage, and who seems more accurate than any other classical writer on African history, was acquainted with the annals of the primitive period, anterior to the arrival of the Arian tribes and the settlement of the Phœnician colonies. Then only three races, un-

equally distributed in a triple zone, were to be met with throughout Northern Africa. Along the shore bordering the Mediterranean were the primitive Libyans, who were Hamites, descendants of Phut; behind them, towards the interior, but on the western half only, were the Getulians . . . ; further still in the interior, and beyond the Sahara, were the negroes, originally called by the Greek name 'Ethiopians,' which was afterwards erroneously applied to the Cushites of the Upper Nile. Sallust also learnt, from the Carthaginian traditions, of the great Japhetic invasion of the coast of Africa. . . . The Egyptian monuments have acquainted us with the date of the arrival of these Indo-Europeans in Africa, among whom were the Libyans, properly so called, the Maxyans, and Macæ. It was contemporary with the reigns of Seti I. and Ramses II."—F. Lenormant, *Manual of Ancient Hist. of the East*, bk. 6, ch. 5 (v. 2).—See, also, NUMIDIANS; and AMORITES.

LICINIAN LAWS, The. See ROME: B. C. 376-367.

LICINIUS, Roman Emperor, A. D. 307-323.

LICTORS.—FASCES.—"The fasces were bundles of rods (virgæ) of elm or birchwood, tied together round the handle of an axe (securis) with (most likely red) straps. The iron of the axe, which was the executioner's tool, protruded from the sticks. The fasces were carried on their left shoulders by the lictors, who walked in front of certain magistrates, making room for them, and compelling all people to move out of the way (summovere), barring Vestals and Roman matrons. To about the end of the Republic, when a special executioner was appointed, the lictors inflicted capital punishment. The king was entitled to twelve fasces, the same number being granted to the consuls. . . . The dictator was entitled to twenty-four lictors. . . . Since 42 B. C. the Flamen Dialis and the Vestals also were entitled to one lictor each. In case a higher official met his inferior in the street, he was saluted by the lictors of the latter withdrawing the axe and lowering the fasces."—E. Guhl and

LICTORS.

LIDUS, OR LEUD, OR LATT, The. See SLAVERY, MEDIEVAL: GERMANY.

LIÈGE: The Episcopal Principality.—“Liège lies on the borderland of the French and German speaking races. . . . It was the capital of an ecclesiastical principality, whose territory extended some distance up the river and over the wooded ridges and green valleys of the Ardennes. The town had originally sprung up round the tomb of St. Lambert—a shrine much frequented by pilgrims. . . . The Prince Bishop of Liège was the vassal of the emperor, but his subjects had long considered the kings of France their natural protectors. It was in France that they found a market for their manufactures, from France that pilgrims came to the tomb of St. Lambert or to the sylvan shrine of St. Hubert. Difference of language and rivalry in trade separated them from their Dutch-speaking neighbours. We hear, as early as the 10th century, of successful attempts on the part of the people of Liège, supported and directed by their bishops, to subdue the lords of the castles in their neighbourhood. A population of traders, artisans, and miners, were unlikely to submit to the pretensions of a feudal aristocracy. Nor was there a burgher oligarchy, as in many of the Flemish and German towns. Every citizen was eligible to office if he could obtain a majority of the votes of the whole male population. Constitutional limits were imposed on the power of the bishop; but he was the sole fountain of law and justice. By suspending their administration he could paralyse the social life of the State, and by his interdicts annihilate its religious life. Yet the burghers were involved in perpetual disputes with their bishop. When the power of the Dukes of Burgundy was established in the Low Countries, it was to them that the latter naturally applied for assistance against their unruly flock. John the Fearless defeated the citizens with great slaughter in 1408. He himself reckoned the number of slain at 25,000. In 1431 Liège was compelled to pay a fine of 200,000 crowns to the Duke of Burgundy.” The Duke—Philip the Good—afterwards forced the reigning bishop to resign in favor of a brother of the Duke of Bourbon, a dissolute boy of eighteen, whose government was reckless and intolerable.—P. F. Willert, *Reign of Lewis XI.*, pp. 93-94.

TEMBER—DECEMBER); and 1793 (FEBRUARY—APRIL).

LIEGNITZ, The Battle of (1241).—On the 9th of April, A. D. 1241, the Mongols, who had already overrun a great part of Russia, defeated the combined forces of Poland, Moravia and Silesia in a battle which filled all Europe with consternation. It was fought near Lignitz (or Liegnitz), on a plain watered by the river Keiss, the site being now occupied by a village called Wahlstadt, i. e., “Field of Battle.” “It was a Mongol habit to cut off an ear from each corpse after a battle, so as to have a record of the number slain; and we are told they filled nine sacks with these ghastly trophies,” from the field of Lignitz.—H. H. Howorth, *Hist. of the Mongols*, pt. 1, p. 144.—See MONGOLS: A. D. 1229-1294. **Battle of (1760).** See GERMANY: A. D. 1760.

LIGURIAN REPUBLIC, The.—The mediæval republic of Genoa is often referred to as the Ligurian Republic; but the name was distinctively given by Napoleon to one of his ephemeral creations in Italy. See FRANCE: A. D. 1797 (MAY—OCTOBER), and 1804-1805.

LIGURIANS, The.—“The whole of Piedmont in its present extent was inhabited by the Ligurians: Pavia, under the name of Tietum, was founded by a Ligurian tribe, the Lævians. When they pushed forward their frontier among the Apennines into the Casentino on the decline of the Etruscans, they probably only recovered what had before been wrested from them. Among the inhabitants of Corsica there were Ligurians. . . . The Ligurians and Iberians were anciently contiguous; whereas in aftertimes they were parted by the Gauls. We are told by Scylax, that from the borders of Iberia, that is, from the Pyrenees, to the Rhone, the two nations were dwelling intermixed. . . . But it is far more probable that the Iberians came from the south of the Pyrenees into Lower Languedoc, as they did into Aquitaine, and that the Ligurians were driven back by them. When the Celts, long after, moving in an opposite direction, reached the shore of the Mediterranean, they too drove the Ligurians close down to the coast, and dwelt as the ruling people amongst them, in the country about Avignon, as is implied by the name Celto-Ligurians. . . . Of their place in the family of nations we are ignorant: we only know that they were neither Iberians nor Celts.”—G. B. Niebuhr, *Hist. of Rome*, v. 1.—“On the coast of Liguria, the land on each side of the city of Genoa, a land which was not reckoned Italian in early times, we find people who seem not to have been Aryan. And these Ligurians seem to have been part of a race which was spread through Italy and Sicily before the Aryan settlements, and to have been akin to the non-Aryan inhabitants of Spain and southern Gaul, of whom the Basques . . . remain as a remnant.”—E. A. Freeman, *Hist. Geog. of Europe*, ch. 3.

LILLIBULLERO.—"Thomas Wharton, who, in the last Parliament, had represented Buckinghamshire, and who was already conspicuous both as a libertine and as a Whig, had written [A. D. 1688, just prior to the Revolution which drove James II. from the English throne] a satirical ballad on the administration of Tyrconnel [Richard Talbot, Earl of Tyrconnel, James' Lord Deputy in Ireland—see IRELAND: A. D. 1685–1688]. In this little poem an Irishman congratulates a brother Irishman, in a barbarous jargon, on the approaching triumph of Popery and of the Milesian race. . . . These verses, which were in no respect above the ordinary standard of street poetry, had for burden some gibberish which was said to have been used as a watchword by the insurgents of Ulster in 1641. The verses and the tune caught the fancy of the nation. From one end of England to the other all classes were constantly singing this idle rhyme. It was especially the delight of the English army. More than seventy years after the Revolution, a great writer delineated, with exquisite skill, a veteran who had fought at the Boyne and at Namur. One of the characteristics of the good old soldier is his trick of whistling Lillibullero. Wharton afterwards boasted that he had sung a King out of three kingdoms. But in truth the success of Lillibullero was the effect, and not the cause, of that excited state of public feeling which produced the Revolution. . . . The song of Lillibullero is among the State Poems. In Percy's *Relics* the first part will be found, but not the second part, which was added after William's landing."—Lord Macaulay, *Hist. of Eng.*, ch. 9, with foot-note.

LIMES, The.—This term was applied to certain Roman frontier-roads. "Limes is not every imperial frontier, but only that which is marked out by human hands, and arranged at the same time for being patrolled and having posts stationed for frontier-defence, such as we find in Germany and in Africa. . . . The Limes is thus the imperial frontier-road, destined for the regulation of frontier-intercourse, inasmuch as the crossing of it was allowed only at certain points corresponding to the bridges of the river boundary, and elsewhere forbidden. This was doubtless effected in the first instance by patrolling the line, and, so long as this was done, the Limes remained a boundary road. It remained so, too, when it was fortified on both sides, as was done in Britain and at the mouth of the Danube; the Britannic wall is also termed Limes."—T. Mommsen, *Hist. of Rome*, bk. 8, ch. 4, foot-note.

LIMIGANTES, The.—The Limigantes were a tribe occupying, in the fourth century, a region of country between the Danube and the Theiss, who were said to have been formerly the slaves of a Sarmatian people in the same territory and to have overpowered and expelled their masters. The latter, in exile, became dependents of the warlike nation of the Quadi. At the end of a war with the latter, A. D. 357–359, in which they were greatly humbled, the Emperor Constantius commanded the Limigantes to surrender their stolen territory to its former owners. They resisted the mandate and were exterminated.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 18–19.—The Limigantes were a branch of the Iazyges or Jazyges, a nomadic Sarmatian or Slavonic people who were settled in earlier times on the Palus Meotis.

A. D. 1755.—The great Earthquake.—"On the morning of the 1st of November in this year, at the same period, though in less or greater degree, a far-spreading earthquake ran through great part both of Europe and Barbary. In the north its effects, as usual with earthquakes in that region, were happily slight and few. Some gentle vibrations were felt as far as Dantzick.

. . . In Madrid a violent shock was felt, but no buildings, and only two human beings, perished. In Fez and in Morocco, on the contrary, great numbers of houses fell down, and great multitudes of people were buried beneath the ruins. But the widest and most fearful destruction was reserved for Lisbon. Already, in the year 1531, that city had been laid half in ruins by an earthquake. The 1st of November 1755 was All Saints' Day, a festival of great solemnity; and at nine in the morning all the churches of Lisbon were crowded with kneeling worshippers of each sex, all classes, and all ages, when a sudden and most violent shock made every church reel to its foundations. Within the intervals of a few minutes two other shocks no less violent ensued, and every church in Lisbon—tall column and towering spire—was hurled to the ground. Thousands and thousands of people were crushed to death, and thousands more grievously maimed, unable to crawl away, and left to expire in lingering agony. The more stately and magnificent had been the fabric, the wider and more grievous was the havoc made by its ruin. About one fourth, as was vaguely computed, of all the houses in the city toppled down. The encumbered streets could scarce afford an outlet to the fugitives; 'friends,' says an eye-witness, 'running from their friends, fathers from their children, husbands from their wives, because every one fled away from their habitations full of terror, confusion, and distraction.' The earth seemed to heave and quiver like an animated being. The sun was darkened with the clouds of lurid dust that arose. Frantic with fear a headlong multitude rushed for refuge to a large and newly built stone pier which jutted out into the Tagus, when a sudden convulsion of the stream turned this pier bottom uppermost, like a ship on its keel in the tempest, and then engulfed it. And of all the living creatures who had lately thronged it,—full 3,000, it is said,—not one, even as a corpse, ever rose again. From the banks of the river other crowds were looking on in speechless affright, when the river itself came rushing in upon them like a torrent, though against wind and tide. It rose at least fifteen feet above the highest spring tides, and then again subsided, drawing in or dashing to pieces every thing within its reach, while the very ships in the harbour were violently whirled around. Earth and water alike seemed let loose as scourges on this devoted city. 'Indeed every element,' says a person present, 'seemed to conspire to our destruction . . . for in about two hours after the shock fires broke out in three different parts of the city, occasioned from the goods and the kitchen fires being all jumbled together.' At this time also the wind grew into a fresh gale, which made the fires spread in extent and rage with fury during three days, until there remained but little for them to devour. Many of the maimed and wounded are believed to have perished unseen and unheeded in the flames; some few were almost miraculously rescued after being for whole days buried where they fell, without light or food or hope. The total number of deaths was computed at the time as not less than 30,000."—Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713-1783, ch. 32 (v. 4).

LIT DE JUSTICE. See **BED OF JUSTICE**.

LITHUANIA: A. D. 1235.—Formation of the Grand Duchy.—“From 1224 [when Russia was prostrated by the Mongol conquest] to 1487 . . . is a period of obscurity in Russian history, during which Russia is nothing in the Slavonian world. The hour of Russia's weakness was that in which the Lithuanians, formerly a mere chaos of Slavo-Finnish tribes, assumed organization and strength. Uniting the original Lithuanian tribes into one government, and extending his sway over those territories, formerly included in the Russian Empire, which the Mongolian destruction of the Russian power had left without a ruler, a native chief, named Rimgold, founded (1235) a new state called the Grand-Duchy of Lithuania. The limits of this state extended from the Baltic coast, which it touched at a single point, across the entire continent, almost to the Black Sea, with Lithuania proper as its northern nucleus, and the populations along the whole course of the Dnieper as its subjects. The Lithuanians, thus made formidable by the extent of their dominion, were at this time still heathens.”—*Poland: Her History and Prospects (Westminster Rev., January, 1855), p. 119.*—See, also, **RUSSIA**: A. D. 1237-1480.

A. D. 1386.—Union with Poland under the Jagellon kings. See **POLAND**: A. D. 1333-1572.

LITHUANIANS.—LETTS.—“They and the Slavonians are branches of the same Sarmatian family; so, of course, their languages, though different, are allied. But next to the Slavonic what tongues are nearest the Lithuanic? Not the speech of the Fin, the German, or the Kelt, though these are the nearest in geography. The Latin is liker than any of these; but the likeliest of all is the ancient sacred language of India—the Sanskrit of the Vedas, Puranas, the Mahabharata, and the Ramayana. And what tongue is the nearest to the Sanskrit? Not those of Tibet and Armenia, not even those of Southern India. Its nearest parallel is the obscure and almost unlettered languages of Grodno, Wilna, Vitepsk, Courland, Livonia, and East Prussia. There is a difficult problem here. . . . The present distribution of the Lithuanian populations is second only in importance to that of the Ugrians. Livonia is the most convenient starting-point. Here it is spoken at present; though not aboriginal to the province. The Polish, German, and Russian languages have encroached on the Lithuanian, the Lithuanian on the Ugrian. It is the Lett branch of the Lithuanian which is spoken by the Letts of Livonia (Liefeland), but not by the Liefs. The same is the case in Courland. East Prussia lies beyond the Russian empire, but it is not unnecessary to state that, as late as the sixteenth century, a Lithuanian tongue was spoken there. Wilna, Grodno, and Vitepsk are the proper Lithuanian provinces. There, the original proper Lithuanic tongue still survives; uncultivated, and day by day suffering from the encroachment of the Russian, but, withal, in the eyes of the ethnologist, the most important language in Europe.”—R. G. Latham, *Ethnology of Europe*, ch. 6.

LITURGIES.—“It was not only by taxation of its members that the [Athenian] State met its financial needs, but also by many other kinds of services which it demanded from them, and which, though not, like the former, producing an income, yet nevertheless saved an expense. Such services are called Liturgies [i. e., properly, services for the people.]—Foot-note]. They are partly ordinary or ‘encyclie’—such, that is, as occurred annually, even in times of peace, according to a certain order, and which all bore some relation to worship and to the celebration of festivals—and partly extraordinary, for the needs of war. Among the former class the most important is the so-called Choregia, i. e., the furnishing of a chorus for musical contests and for festivals. . . . A similar though less burdensome Liturgy was the Gymnasiarchy for those feasts which were celebrated with gymnastic contests. The gymnasiarch, as it seems, was compelled to have all who wished to come forward as competitors trained in the gymnasium, to furnish them with board during the time of training, and at the games themselves to furnish the necessary fittings and ornaments of the place of contest. . . . More important and more costly than all these ordinary or encyclie Liturgies was the extraordinary Liturgy of trierarchy, i. e., the equipment of a ship of war.”—G. F. Schömann, *Antiq. of Greece: The State*, pt. 3, ch. 3.—“The Liturgie, which are sometimes considered as peculiar to the Athenians, . . . were common to all democracies at least [in the Greek states], and even to certain aristocracies or oligarchies. . . . The Liturgie of the Greeks were distinguished by a much more generous and noble characteristic than the corresponding services and contributions of the present day. They were considered honorable services. . . . Niggardliness in the performance of them was considered disgraceful. The state needed no paid officer, or contractors to superintend or undertake their execution. . . . The ordinary Liturgie . . . are principally the choregia, the gymnasiarchia, and the feasting of the tribes [or hestiasis]. . . . The lampadarehy, if not the only kind, was certainly the most important and expensive kind of gymnasiarchy. The race on foot with a torch in the hand was a common game. The same kind of race was run with horses for the first time at Athens in the time of Socrates. The art consisted, besides other particulars, in running the fastest, and at the same time not extinguishing the torch. . . . Since the festivity was celebrated at night, the illumination of the place which was the scene of the contest was necessary. Games of this kind were celebrated specially in honor of the gods of light and fire. . . . The expenses of the feasting of the tribes were borne by a person selected for this purpose from the tribe. . . . The entertainments, the expenses of which were defrayed by means of this liturgia, were different from the great feastings

of the people, the expenses of which were paid from the treasury of the theoricæ. They were merely entertainments at the festivals of the tribes."—A. Boeckh, *Public Economy of the Athenians* (trans. by Lamb), bk. 3, ch. 1 and 21–23.

Also in: E. G. Bulwer-Lytton, *Athens*, bk. 5, ch. 2.

LITUS, The.—In the Salic law, of the Franks, the litus appears as representing a class in that Germanic nation. He "was no doubt identical with the serf whom Tacitus represents as cultivating the soil, and paying a rent in kind to his lord. That the litus was not free is evident from the mention of his master and the fact that he could be sold; though we find a weregild set upon his life equal to that of a free Roman."—W. C. Perry, *The Franks*, ch. 10.

LIVERPOOL AND MANCHESTER RAILWAY, The. See STEAM LOCOMOTION ON LAND.

LIVERPOOL MINISTRY, The. See ENGLAND: A. D. 1812–1813.

LIVERY, Origin of the term.—"After an ancient custom, the kings of France, at great solemnities, gave such of their subjects as were at court certain capes or furred mantles, with which the latter immediately clothed themselves before leaving the court. In the ancient 'comptes' (a sort of audits) these capes were called 'livrées' (whence, no doubt, our word livery), because the monarch gave them ('les livrait') himself."—J. F. Michaud, *Hist. of the Crusades*, bk. 13.

LIVERY OF SEIZIN. See FEUDAL TENURES.

LIVINGSTON MANOR, The.—Robert Livingston, "secretary of Albany," son of a Scotch clergyman, began to acquire a landed estate, by purchases from the Indians, soon after his arrival in America, which was about 1674. "The Mohegan tribes on the east side of the Hudson had become reduced to a few old Indians and squaws, who were ready to sell the lands of which they claimed the ownership. Livingston's position as clerk of Indian affairs gave him exceptional opportunities to select and to purchase the best lands in desirable localities. . . . In 1702, Lord Bellomont [then governor of New York] writes, 'I am told Livingston has on his great grant of 16 miles long and 24 broad, but four or five cottages, occupied by men too poor to be farmers, but are his vassals.' After the close of the war [Queen Anne's War], Livingston made more rapid progress in his improvements. He erected flour and timber mills, and a new manor-house." In 1715 Livingston obtained from Governor Hunter a confirmatory patent, under an exact and careful survey of his estate. "Although it does not give the number of acres, the survey computes the area of the manor to contain 160,240 acres. It was now believed to be secure against any attack. . . . Philip, the second proprietor, was not disturbed as to title or limits. He was a merchant, and resided in New York, spending his summers at the Manor House. . . . His son, Robert, succeeded him as the third proprietor, but he had hardly come into possession before he began to be harassed by his eastern neighbors, the people of Massachusetts. . . . Massachusetts, by her charter, claimed the lands lying west of her eastern boundary to the Pacific Ocean. She

had long sought to make settlements within the province of New York. Now as her population increased she pushed them westward, and gradually encroached on lands within the limits of a sister province. In April, 1752, Livingston wrote to Governor Clinton, and entered complaint against the trespassers from Massachusetts. A long correspondence between the governors of the two provinces followed, but settled nothing. The trouble continued," for a number of years, and frequent riots were incident to it, in which several men were killed. At length, "the boundary between New York and Massachusetts was finally settled, and the claimants ceased their annoyance. . . . The Revolution was approaching. The public mind was occupied with politics. . . . Land titles ceased to be topics of discussion. The proprietors of the old manor, and all bearing their name, with a few unimportant exceptions, took a decided stand in favor of independence. During the war that followed, and for some years after its close, their title and possession of their broad acres were undisputed. But in 1795 another effort was made to dispossess them. The old methods of riots and arrests were abandoned. The title was now attacked by the tenants, incited and encouraged by the envious and disaffected. A petition, numerously signed by the tenants of the manor, was sent to the Legislature. . . . The committee to which the petition was referred reported adversely, and this was approved by the House on March 23, 1795. . . . After the failure of 1795 to break the title, there was a season of comparative quiet continued for nearly forty years. Then a combination was formed by the tenants of the old manorial estates, including those of large landed proprietors in other parts of the State, termed 'anti-renters.' It was a civil association with a military organization. It was their purpose to resist the payment of rents. The tenants of the Van Rensselaer and the Livingston Manors, being the most numerous, were the projectors and leaders, giving laws and directions. . . . Landlords and officers were intimidated by bands disguised as Indians, and some property was destroyed. The anti-renters carried their grievances into politics, throwing their votes for the party which would give them the most favorable legislation. In 1844, they petitioned the Legislature to set aside as defective the Van Rensselaer title, and put the tenants in legal possession of the farms they occupied. The petition was referred to the Judiciary Committee of the Assembly, the late Judge William Allen being chairman. Anti-renters of known ability were on the committee, and a favorable report was anticipated. But after a long and thorough investigation of the title . . . the committee unanimously reported against the prayer of the petition. This put an end to the combination, and to the anti-rent war, although resistance to the collection of rents in isolated cases, with bloodshed and loss of life, is still [1885] continued. The landlords, however, particularly the Livingstons, were tired of the strife. They adopted measures of compromise, selling to their tenants the lands they occupied at reduced valuations. Only small portions of the old manor now remain in the hands of Robert Livingston's descendants."—G. W. Schuyler, *Colonial New York*, v. 1, pp. 243–285.

LIVONIA: 12th-13th Centuries.—First introduction of Commerce and Christianity.—“Till the year A. D. 1158 . . . Livonia was well-nigh utterly unknown to the rest of Europe. Some traders of Bremen then visited it, and formed several settlements along the coast. These commercial relations with their western neighbours first opened up the country to missionary enterprise, and in the year A. D. 1186 one of the merchant-ships of Bremen brought to the mouth of the Düna a venerable canon named Meinhard.” Meinhard died in 1196, having accomplished little. He was succeeded by a Cistercian abbot named Berthold, who, being driven away by the obstinate pagans, returned wrathfully in 1198, with a crusading army, which Pope Innocent III. had commissioned him to lead against them. This was the beginning of a long and merciless crusading warfare waged against the Livonians, or Lieflanders, and against their Prussian and other Slavonic neighbors, until all were forced to submit to the religious rites of their conquerors and to call themselves Christians. For the furthering of this crusade, Berthold's successor, Albert von Apeldern, of Bremen (who founded the town of Riga), “instituted, in the year A. D. 1201, with the concurrence of the emperor Otho IV. and the approbation of the Pope, the knightly ‘Order of the Sword,’ and placed it under the special protection of the Virgin Mary. The members of this order bound themselves by solemn vows to hear mass frequently, to abstain from marriage, to lead a sober and chaste life, and to fight against the heathen. In return for these services they were to have and to enjoy whatever lands they might wrest with their swords from their pagan adversaries. . . . Albert von Apeldern made Riga the starting-point of his operations. Thence, aided by Waldemar II. king of Denmark, he directed the arms of his crusaders against Esthonia, and the neighbouring countries of Semgallen and Courland. On these war-wasted districts he succeeded in imposing a nominal form of Christianity.” The Order of the Sword was subsequently united with the Teutonic Order, which turned its crusading energies from the Moslems of the Holy Land to the heathendom of the Baltic.—G. F. Maclear, *Apostles of Mediæval Europe*, ch. 15-16.

LOBBY, The.—“‘The Lobby’ is the name given in America to persons, not being members of a legislature, who undertake to influence its members, and thereby to secure the passing of bills. The term includes both those who, since they hang about the chamber, and make a regular profession of working upon the members, are called ‘lobbyists,’ and those persons who on any particular occasion may come up to advocate, by argument or solicitation, any particular measure in which they happen to be interested. The name, therefore, does not necessarily impute any improper motive or conduct, though it is commonly used in what Bentham calls a dyslogistic sense.”—J. Bryce, *The Am. Commonwealth*, v. 1, app. note (B) to ch. 16.

LOBOSITZ, OR LOWOSITZ, Battle of. See GERMANY: A. D. 1756.

LOCKE'S CONSTITUTION FOR THE CAROLINAS. See NORTH CAROLINA: A. D. 1669-1693.

LOCOFOCOS.—“In 1835, in the city and county of New York, a portion of the democrats organized themselves into the ‘equal rights’ party. At a meeting in Tammany Hall they attempted to embarrass the proceedings of the democratic nominating committee, by presenting a chairman in opposition to the one supported by the regular democrats. Both parties came to a dead lock, and, in the midst of great confusion, the committee extinguished the lights. The equal rights men immediately relighted the room with candles and locofoco matches, with which they had provided themselves. From this they received the name of locofocos, a designation which, for a time, was applied to the whole democratic party by the opposition.”—W. R. Houghton, *Hist. of Am. Politics*, p. 219.

LOCRI.—The city of Locri, or Locri Epizephyrii, an ancient Greek settlement in Southern Italy, was founded by the Locrians as early as B. C. 683. The elder Dionysius, tyrant of Syracuse, married a Locrian woman and showed great favor to the city, of which he acquired control; but it suffered terribly from his son, the younger Dionysius, who transferred his residence to Locri when first driven from Syracuse.

LOGISTÆ AND EUTHYNI, The.—“In Athens, all accounts, with the exception of those of the generals, were rendered to the logistæ and euthyni. Both authorities, before and after the archonship of Euclid, existed together at the same time. Their name itself shows that the

logistæ were auditors of accounts. The euthyni were in immediate connection with them. . . . The logistæ were the principal persons in the auditing board."—A. Boeckh, *Public Economy of Athens* (trans. by Lamb), bk. 2, ch. 8.

LOGOGRAPHI, The.—The earlier Ionian Greek historians "confined their attention to the circle of myths and antiquities connected with single families, single cities and districts. These were the Ionic 'logographi,' so called because they noted down in easy narrative the remarkable facts that they had collected and obtained by inquiry as to the foundation of the cities, the myths of the prehistoric age, and the natural, political, and social condition of different countries."—E. Curtius, *Hist. of Greece*, bk. 3, ch. 3 (v. 2).

LOGOTHETES.—A class of officers created under Justinian for the administration of the imperial finances in Italy, after its conquest from the Goths. Their functions corresponded with those of a modern auditor, or comptroller.—T. Hodgkin, *Italy and Her Invaders*, bk. 5, ch. 15 (v. 4).

LOGSTOWN.—About the middle of the 18th century, Logstown was "an important Indian village a little below the site of the present city of Pittsburg. Here usually resided Tanacharisson, a Seneca chief of great note, being head sachem of the mixed tribes which had migrated to the Ohio and its branches. He was generally surnamed the half-king, being subordinate to the Iroquois confederacy."—W. Irving, *Life of Washington*, v. 1, ch. 5.

LOKRIANS, The.—"The coast [of Greece, in ancient times] opposite to the western side of Eubœa, from the neighbourhood of Thermopylæ as far as the Boeotian frontier at Anthedon, was possessed by the Lokrians, whose northern frontier town, Alpeni, was continuous with the Malians. There was, however, one narrow strip of Phokis—the town of Daphnus, where the Phokians also touched the Eubœan sea—which broke this continuity and divided the Lokrians into two sections,—Lokrians of Mount Knemis, or Epiknemidian Lokrians, and Lokrians of Opus, or Opuntian Lokrians. . . . Besides these two sections of the Lokrian name, there was also a third, completely separate, and said to have been colonised from Opus,—the Lokrians surnamed Ozolæ,—who dwelt apart on the western side of Phokis, along the northern coast of the Corinthian Gulf. . . . Opus prided itself on being the mother-city of the Lokrian name. . . . The whole length of this Lokrian coast is celebrated for its beauty and fertility, both by ancient and modern observers."—G. Grote, *Hist. of Greece*, pt. 2, ch. 3 (v. 2).

LOLLARDS, The. See ENGLAND: A. D. 1360-1414; and BEGUINES.—BEGHARDS.

LOLLARDS' TOWER.—When the persecution of the Lollards, or disciples of Wyclif, began in England, under Henry IV., the prisons were soon crowded, and the Archbishop of Canterbury found need of building an additional tower to his palace at Lambeth for the custody of them. The Lollards' Tower, as it was named, is still standing, with the rings in its walls to which the captives were chained.

LOMBARDS, OR LANGOBARDI.—Early history.—"The Langobardi . . . are ennobled by the smallness of their numbers; since, though surrounded by many powerful nations, they derive security, not from obsequiousness, but from their martial enterprise."—Tacitus, *Germany*, Oxford trans., ch. 40.—"In the reign of Augustus, the Langobardi dwelt on this side the Elbe, between Luneburg and Magdeburg. When conquered and driven beyond the Elbe by Tiberius, they occupied that part of the country where are now Prignitz, Ruppin, and part of the Middle Marche. They afterward founded the Lombard kingdom in Italy."—Translator's note to above.—The etymology which explains the name of the Lombards or Langobardi by finding in it a reference to the length of their beards is questioned by some modern writers. Sheppard ("Fall of Rome") conjectures that the name originally meant "long-spears" rather than "long-beards." Other writers derive the name "from the district they inhabited on the banks of the Elbe, where Börde (or Bord) still signifies 'a fertile plain by the side of a river,' and a district near Magdeburg is still called the lange Börde. According to this view, Langobardi would signify 'inhabitants of the long bord of the river'; and traces of their name are supposed still to occur in such names as Bardengau and Bardewick, in the neighbourhood of the Elbe."—Dr. W. Smith, *Note to Gibbon's Decline and Fall of the Roman Empire*, ch. 42.—From the Elbe the Langobardi moved in time to the Danube. "Here they encountered the Gepidæ, who, . . . after having taken a leading part in the defeat and dispersion of the Huns in the great battle of Netad [A. D. 453], had settled in the plains of Upper Hungary and on the Transylvanian hills. For thirty years these two powerful tribes continued a contest in which both sides sought the assistance of the Greek emperor, and both were purposely encouraged in their rivalry with a view to their common destruction." In 566 the struggle was decided by a tremendous battle in which the Gepidæ were crushed. The Lombards, in this last encounter, had secured the aid of the pretended Avars, then lately arrived on the Danube; but the prestige of the overwhelming victory attached itself to the name of the young Lombard king, Alboin. "In the days of Charlemagne, the songs of the German peasant still told of his beauty, his heroic qualities, and the restless vigour of his sword. His renown crossed the Alps, and fell, with a foreboding sound, upon the startled ears of the Italians, now experienced in the varied miseries of invasion."—J. G. Sheppard, *Fall of Rome*, lect. 6.

A. D. 568-573.—Conquests and settlement in Italy.—When the Lombards and the Avars crushed the nation of the Gepidæ (see AVARS), in 566, it was one of the terms of the bargain between them that the former should surrender to the Avars, not only the conquered territory—in Wallachia, Moldavia, Transylvania and part of Hungary—but, also, their own homes in Pannonia and Noricum. No doubt the ambitious Lombard king, Alboin, had thoughts of an easy conquest of Italy in his mind when he assented to so strange an agreement. Fourteen years before, the Lombard warriors had traversed the sunny peninsula in the army of Narses, as friends and allies of the Roman-Greeks. The recollection of its charms, and of its still surviving

wealth, invited them to return. Their old leader, Narses, had been deposed from the exarchate at Ravenna; it is possible that he encouraged their coming. "It was not an army, but an entire nation, which descended the Alps of Friuli in the year 568. The exarch Longinus, who had succeeded Narses, shut himself up within the walls of Ravenna, and offered no other resistance. Pavia, which had been well fortified by the kings of the Ostrogoths, closed its gates, and sustained a siege of four years. Several other towns, Padua, Monzelice, and Mantua, opposed their isolated forces, but with less perseverance. The Lombards advanced slowly into the country, but still they advanced; at their approach, the inhabitants fled to the fortified towns upon the sea coast in the hope of being relieved by the Greek fleet, or at least of finding a refuge in the ships, if it became necessary to surrender the place. . . . The islands of Venice received the numerous fugitives from Venetia, and at their head the patriarch of Aquileia, who took up his abode at Grado; Ravenna opened its gates to the fugitives from the two banks of the Po; Genoa to those from Liguria; the inhabitants of La Romagna, between Rimini and Ancona, retired to the cities of the Pentapolis; Pisa, Rome, Gaeta, Naples, Amalfi, and all the maritime towns of the south of Italy were peopled at the same time by crowds of fugitives."—J. C. L. de Sismondi, *Fall of the Roman Empire*, ch. 11 (v. 1). —"From the Trentine hills to the gates of Ravenna and Rome, the inland regions of Italy became, without a battle or a siege, the lasting patrimony of the Lombards. . . . One city, which had been diligently fortified by the Goths, resisted the arms of a new invader; and, while Italy was subdued by the flying detachments of the Lombards, the royal camp was fixed above three years before the western gate of Ticinum, or Pavia. . . . The impatient besieger had bound himself by a tremendous oath that age, and sex, and dignity should be confounded in a general massacre. The aid of famine at length enabled him to execute his bloody vow; but as Alboin entered the gate his horse stumbled, fell, and could not be raised from the ground. One of his attendants was prompted by compassion, or piety, to interpret this miraculous sign of the wrath of Heaven; the conqueror paused and repented. . . . Delighted with the situation of a city which was endeared to his pride by the difficulty of the purchase, the prince of the Lombards disdained the ancient glories of Milan; and Pavia during some ages was respected as the capital of the kingdom of Italy."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 45.

A. D. 573-754.—Their kingdom.—Alboin survived but a short time the conquest of his Italian kingdom. He was murdered in June, 573, at the instigation of his wife, the Gepid princess Rosamond, whose alliance with him had been forced and hateful. His successor, Clef, or Clepho, a chief elected by the assembly of the nation at Pavia, reigned but eighteen months, when he, too, was murdered. After a distracted period of ten years, in which there was no king, the young son of Clepho, named Autharis, came to manhood and was raised to the throne. "Under the standard of their new king, the conquerors of Italy withstood three successive invasions [of the Franks and the Alemanni], one of which was led by Childebert himself, the last

of the Merovingian race who descended from the Alps. . . . During a period of 200 years Italy was unequally divided between the kingdom of the Lombards and the exarchate of Ravenna. . . . From Pavia, the royal seat, their kingdom [that of the Lombards] was extended to the east, the north, and the west, as far as the confines of the Avars, the Bavarians, and the Franks of Austrasia and Burgundy. In the language of modern geography, it is now represented by the Terra Firma of the Venetian republic, Tyrol, the Milanese, Piedmont, the coast of Genoa, Mantua, Parma, and Modena, the grand duchy of Tuscany, and a large portion of the ecclesiastical state from Perugia to the Adriatic. The dukes, and at length the princes, of Beneventum, survived the monarchy, and propagated the name of the Lombards. From Capua to Tarentum, they reigned near 500 years over the greatest part of the present kingdom of Naples."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 45.

A. D. 754-774.—The Fall of their monarchy.—**Charlemagne's conquest.**—Until 754 the Lombard kings pursued a generally prosperous career of aggrandizement, in Italy. They had succeeded, at the last, in expelling the exarchs of the Eastern Empire from Ravenna and in taking possession of that capital, with much of the territory and many of the cities in central Italy which depended on it. These successes inflamed their determination to acquire Rome, which had practically resumed its independence, and theoretically reconstituted itself a republic, with the Pope, in fact, ruling it as an actual prince. In 753 the Papal chair was filled by Stephen II. and the Lombard throne by King Aistulf, or Astolphus. The former, being newly threatened by the latter, made a journey to the court of the Frank king, Pippin, to solicit his aid. Pippin was duly grateful for the sanction which the preceding pope had given to his seizure of the Merovingian crown, and he responded to the appeal in a vigorous way. In a short campaign beyond the Alps, in 754, he extorted from the Lombard king a promise to make over the cities of the exarchate to the Pope and to respect his domain. But the promise was broken as soon as made. The Franks were hardly out of Italy before Aistulf was ravaging the environs of Rome and assailing its gates. On this provocation Pippin came back the next year and humbled the Lombard more effectually, stripping him of additional territory, for the benefit of the Pope, taking heavy ransom and tributes from him, and binding him by oaths and hostages to acknowledge the supremacy of the king of the Franks. This chastisement sufficed for nearly twenty years; but in 773 the Pope (now Hadrian) was driven once more to appeal to the Frank monarch for protection against his northern neighbors. Pippin was dead and his great son Charles, or Charlemagne, had quarrels of his own with Lombardy to second the Papal call. He passed the Alps at the head of a powerful army, reduced Pavia after a year-long siege and made a complete conquest of the kingdom, immuring its late king in a cloister for the remainder of his days. He also confirmed, it is said, the territorial "donations" of his father to the Holy See and added some provinces to them. "Thus the kingdom of the Lombards, after a stormy existence of over two hundred years, was

forever extinguished. Comprising Piedmont, Genoa, the Milanese, Tuscany, and several smaller states, it constituted the most valuable acquisition, perhaps, the Franks had lately achieved. Their limits were advanced by it from the Alps to the Tiber; yet, in the disposal of his spoil, the magnanimous conqueror regarded the forms of government which had been previously established. He introduced no changes that were not deemed indispensable. The native dukes and counts were confirmed in their dignities; the national law was preserved, and the distributions of land maintained, Karl receiving the homage of the Lombard lords as their feudal sovereign, and reserving to himself only the name of King of Lombardy."—P. Godwin, *Hist. of France: Ancient Gaul*, ch. 15-16.

LONATO, Battle of. See FRANCE: A. D. 1796 (APRIL—OCTOBER).

LONDINIUM.—The Roman name of the city of London. See LONDON.

LONDON: The origin of the city and its name.—"When Plautius [Aulus Plautius, who, in the reign of the Emperor Claudius, A. D. 43, led the second Roman invasion of Britain, that of Cæsar having been the first] withdrew his soldiers from the marshes they had vainly attempted to cross, he, no doubt, encamped them somewhere in the neighbourhood. I believe the place was London. The name of London refers directly to the marshes, though I cannot here enter into a philological argument to prove the fact. At London the Roman general was able both to watch his enemy and to secure the conquests he had made, while his ships could supply him with all the necessities he required. When, in the autumn of the year 43, he drew the lines of circumvallation round his camp, I believe he founded the present metropolis of Britain. The notion entertained by some antiquaries that a British town preceded the Roman camp has no foundation to rest upon, and is inconsistent with all we know of the early geography of this part of Britain."—E. Guest, *Origines Celticae*, v. 2, pt. 2, ch. 13.—"Old as it is, London is far from being one of the oldest of British cities; till the coming of the Romans, indeed, the loneliness of its site seems to have been unbroken by any settlement whatever. The 'dun' was, in fact, the centre of a vast wilderness. . . . We know nothing of the settlement of the town; but its advantages as the first landing-place along the Thames secured for it at once the command of all trading intercourse with Gaul, and through Gaul with the empire at large. So rapid was its growth that only a few years after the landing of Claudius [who joined Aulus Plautius in the

autumn of 43] London had risen into a flourishing port."—J. R. Green, *The Making of England*, ch. 3.—"The derivation of 'Londinium' from 'Llyn-din,' the lake fort, seems to agree best with the situation and the history. The Roman could not frame to pronounce the British word 'Llyn,' a word which must have sounded to his ears very much like 'Clun,' or 'Lun,' and the fact, if it is a fact, that Llyn was turned into Lon, goes to increase the probability that this is the correct derivation of the name. The first founder called his fastness the 'Fort of the Lake,' and this is all that remains of him or it. . . . London was in those days emphatically a Llyn-din, the river itself being more like a broad lake than a stream, and behind the fortress lying the 'great northern lake,' as a writer so late as Fitzstephen calls it, where is now Moorfields. I take it, it was something very like an island, if not quite—a piece of high ground rising out of lake, and swamp, and estuary."—W. J. Loftie, *Hist. of London*, ch. 1, and foot-note.

A. D. 61.—Destruction by the Iceni.—Londinium was one of the Roman towns in Britain destroyed by the Iceni, at the time of the furious insurrection to which they were incited by their outraged queen Boadicea, A. D. 61. It "was crowded with Roman residents, crowded still more at this moment with fugitives from the country towns and villas: but it was undefended by walls, its population of traders was of little account in military eyes, and Suetonius sternly determined to leave it, with all the wealth it harboured, to the barbarians, rather than sacrifice his soldiers in the attempt to save it. . . . Amidst the overthrow of the great cities of southern Britain, not less than 70,000 Roman colonists . . . perished. The work of twenty years was in a moment undone. Far and wide every vestige of Roman civilization was trodden into the soil. At this day the workmen who dig through the foundations of the Norman and the Saxon London, strike beneath them on the traces of a double Roman city, between which lies a mass of charred and broken rubbish, attesting the conflagration of the terrible Boadicea."—C. Merivale, *Hist. of the Romans*, ch. 51.

4th Century.—The Roman Augusta and its walls.—"It is certain that, either under Constantine [the emperor] himself, or under one of his immediate successors, the outer wall was built. Though the building of the Roman wall, which still in a sense defines the city boundaries, is an event in the history of London not second in importance even to its foundation, since it made a mere village and fort with a 'tête du pont' into a great city and the capital of provincial Britain, yet we have no records by which an exact date can be assigned to it. All we know is that in 350 London had no wall: and in 369 the wall existed. The new wall must have taken in an immense tract of what was until then open country, especially along the Watling Street, towards Cheap and Newgate. It transformed London into Augusta; and though the new name hardly appears on the page of history, and never without a reference to the older one, its existence proves the increase in estimation which was then accorded to the place. The object of this extensive circumvallation is not very clear. The population to be protected might very well have been crowded into a much smaller space. . . . The wall enclosed a space

of 380 acres, being 5,485 yards in length, or 3 miles and 205 yards. The portion along the river extended from Blackfriars to the Tower."—W. J. Loftie, *Hist. of London*, ch. 2 (v. 1).—"The historian Ammianus Marcellinus, who wrote about A. D. 380, in the reign of Gratian, states that Londinium (he calls it Lundinium) was in his days called Augusta. From him we learn that Lupicinus, who was sent by Julian to repress the inroads of the Scots and Picts, made Londinium his head quarters, and there concerted the plan of the campaign. In the reign of Valentinian Britain was again disturbed, not only by the northern barbarians, but also by the Franks and Saxons. Theodosius, who was appointed commander of the legions and cohorts selected for this service, came from Boulogne, by way of Rutupiae, to Londinium, the same route taken a few years previously by Lupicinus, and there he also matured his plan for the restoration of the tranquillity of the province. It is on this occasion that Marcellinus speaks twice of Londinium as an ancient town, then called Augusta. By the anonymous chorographer of Ravenna it is called Londinium Augusta; and it is in this sense, a cognomen or distinguishing appellation, as applied to a pre-eminent town or capital, that we must probably understand the term as used by Marcellinus in relation to Londinium. . . . The extent of Londinium, from Ludgate on the west to the Tower on the east, was about a mile, and about half a mile from the wall on the north (London Wall) to the Thames, giving dimensions far greater than those of any other Roman town in Britain. These were the limits of the city when the Romans relinquished the dominion of the island."—Chas. Roach Smith, *Illustrations of Roman London*, pp. 11-12.

4th Century.—The growth of the Roman city.—"That London gradually increased in importance beyond the dignity of a commercial city is plain, from the mention of it in the Itinera, which show the number of marching roads beginning and terminating there. . . . London then [in the times of Julian and Theodosius] bore the name of 'Augusta,' or 'Londinium Augusta,' and this title is only applied to cities of pre-eminent importance. The area of Roman London was considerable, and, from discoveries made at different times, appears to have extended with the growth of Roman power. The walls when the Romans left Britain reached from Ludgate, on the west, to the Tower on the east, about one mile in length, and from London Wall to the Thames. . . . It also extended across the river on the Kentish side."—H. M. Searth, *Roman Britain*, ch. 15.—"Roman London was built on the elevated ground on both sides of a stream, known in after time by the name of Wallbrook, which ran into the Thames not far from Southwark Bridge. . . . Its walls were identical with those which enclosed the mediæval city of London. . . . The northern and north-eastern parts of the town were occupied with extensive and—to judge by the remains which have been brought to light—magnificent mansions. . . . At the period to which our last chapter had brought us [A. D. 353], the city had extended to the other side of the Thames, and the borough of Southwark stands upon ground which covers the floors of Roman houses and the pavings of Roman streets."—T. Wright, *Celt, Roman and Saxon*, ch. 5.

6th-9th Centuries.—During the Saxon conquest and settlement.—For nearly half a century after its conquest by the East-Saxons (which took place probably about the middle of the 6th century) London “wholly disappears from our view.” “We know nothing of the circumstances of its conquest, of the fate of its citizens, or of the settlement of the conquerors within its walls. That some such settlement had taken place, at least as early as the close of the seventh century, is plain from the story of Mellitus, when placed as bishop within its walls [see ENGLAND: A. D. 597-685]; but it is equally plain that the settlement was an English one, that the provincials had here as elsewhere disappeared, and that the ruin of the city had been complete. Had London merely surrendered to the East-Saxons and retained its older population and municipal life, it is hard to imagine how, within less than half a century, its burghers could have so wholly lost all trace of Christianity that not even a ruined church, as at Canterbury, remained for the use of the Christian bishop, and that the first care of Mellitus was to set up a mission church in the midst of a heathen population. It is even harder to imagine how all trace of the municipal institutions to which the Roman towns clung so obstinately should have so utterly disappeared. But more direct proofs of the wreck of the town meet us in the stray glimpses which we are able to get of its earlier topographical history. The story of early London is not that of a settled community slowly putting off the forms of Roman for those of English life, but of a number of little groups scattered here and there over the area within the walls, each growing up with its own life and institutions, gilds, sokes, religious houses, and the like, and only slowly drawing together into a municipal union which remained weak and imperfect even at the Norman Conquest. . . . Its position indeed was such that traffic could not fail to recreate the town; for whether a bridge or a ferry existed at this time, it was here that the traveller from Kent or Gaul would still cross the Thames, and it was from London that the roads still diverged which, silent and desolate as they had become, furnished the means of communication to any part of Britain.”—J. R. Green, *The Conq. of Eng.*, pp. 149 and 452-459.—“London may be said after this time [early in the 9th century] to be no longer the capital of one Saxon kingdom, but to be the special property of whichever king of whichever kingdom was then paramount in all England. When the supremacy of Mercia declined, and that of Wessex arose, London went to the conqueror. In 823, Egbert receives the submission of Essex, and in 827 he is in London, and in 833 a Witan is held there, at which he presides. Such are the scanty notes from which the history of London during the so-called Heptarchy must be compiled. . . . London had to bear the brunt of the attack [of the Danes] at first. Her walls wholly failed to protect her. Time after time the freebooters broke in. If the Saxons had spared anything of Roman London, it must have disappeared now. Massacre, slavery, and fire became familiar in her streets. At last the Danes seemed to have looked on her as their headquarters, and when, in 873, Alfred was

forced to make truce with them, they actually retired to London as to their own city, to recruit. To Alfred, with his military experience and political sagacity, the possession of London was a necessity; but he had to wait long before he obtained it. His preparations were complete in 884. The story of the conflict is the story of his life. His first great success was the capture of London after a short siege: to hold it was the task of all his later years.”—W. J. Loftie, *Hist. of London*, ch. 3 (v. 1).—See, also, ENGLAND: A. D. 477-527.

A. D. 1013-1016.—Resistance to the Danes. See ENGLAND: A. D. 979-1016.

12th Century.—Magnitude and importance of the city.—“We find them [the Londoners] active in the civil war of Stephen and Matilda. The famous bishop of Winchester tells the Londoners that they are almost accounted as noblemen on account of the greatness of their city; into the community of which it appears that some barons had been received. Indeed, the citizens, themselves, or at least the principal of them, were called barons. It was certainly by far the greatest city in England. There have been different estimates of its population, some of which are extravagant; but I think it could hardly have contained less than 30,000 or 40,000 souls within its walls; and the suburbs were very populous.”—H. Hallam, *The Middle Ages*, ch. 8, pt. 3 (v. 3).

A. D. 1381.—In the hands of the followers of Wat Tyler and John Ball. See ENGLAND: A. D. 1381.

16th Century.—In Shakespeare's time.—“The London of those days did not present the gigantic uniformity of the modern metropolis, and had not as yet become wholly absorbed in the whirl of business life. It was not as yet a whole province covered with houses, but a city of moderate size, surveyable from end to end, with walls and gates, beyond which lay pleasant suburbs. . . . Compared with the London of to-day, it possessed colour and the stamp of originality; for, as in the southern climes, business and domestic operations were carried on in the streets—and then the red houses with their woodwork, high gables, oriel windows and terraces, and the inhabitants in picturesque and gay attire. The upper circles of society did not, as yet, live apart in other districts; the nobility still had their mansions among the burgher class, and the working people. Queen Elizabeth might be seen driving in an unwieldy gilt coach to some solemn service in St. Paul's Cathedral, or riding through the city to the Tower, to her hunting grounds, to a review of her troops, or might be seen starting for Richmond or Greenwich, accompanied by a brilliant retinue, on one of her magnificent barges that were kept in readiness close to where the theatres stood. Such a scene, with but little stretch of the imagination, might have led Shakespeare to think of the brilliant picture of Cleopatra on the Cydnus. The Thames was crossed by one bridge only, and was still pure and clear as crystal; swans swam about on it, and gardens and meadows lined its banks where we now have dusty wharfs and warehouses. Hundreds of boats would be skimming up and down the stream, and incessant would be the calls between the boatmen of

'Westward ho!' or 'Eastward ho!' And yet the loungers in the Temple Gardens and at Queenhithe could amuse themselves by catching salmon. In the streets crowds would be passing to and fro; above all, the well-known and dreaded apprentices, whose business it was to attract customers by calling out in front of the shops: 'What d'ye lack, gentles? what d'ye lack? My ware is best! Here shall you have your choice!' &c. Foreigners, too, of every nationality, resident in London, would be met with. Amid all this life every now and again would be seen the perambulation of one or other of the guilds, wedding processions, groups of country folk, gay companies of train-bands and archers. . . . The city was rich in springs and gardens, and the inhabitants still had leisure to enjoy their existence; time had not yet come to be synonymous with money, and men enjoyed their gossip at the barbers' and tobacconists' shops; at the latter, instruction was even given in the art of smoking, and in 1614 it is said that there were no less than 7,000 such shops in London. St. Paul's was a rendezvous for promenaders and idle folk; and on certain days, Smithfield and its Fair would be the centre of attraction; also Bartholomew Fair, with its puppet-shows and exhibitions of curiosities, where Bankes and his dancing-horse Morrocco created a great sensation for a long time; Southwark, too, with its Paris Garden, attracted visitors to see the bear-baiting; it was here that the famous bear Sackerson put the women in a pleasant state of flutter; Master Slender had seen the bear loose twenty times, and taken it by the chain. No less attractive were the bowling-alleys, the fights at the Cock-pit and the tent-pegging in the tiltyard; and yet all these amusements were even surpassed by the newly-risen star of the theatre. . . . The population of London during the reign of the Bloody Mary is estimated by the Venetian ambassador, Giovanni Micheli, at 150,000, or, according to other MS. reports of his, at 180,000 souls. The population must have increased at an almost inconceivable rate, if we are to trust the reports of a second Venetian ambassador, Marc Antonio Correr, who, in 1610, reckoned the number of inhabitants at 300,000 souls; however, according to Raumer, another Venetian, Molino, estimated the population at 300,000 in 1607. The number of foreigners in London was extremely large, and in 1621 the colony of foreigners of all nations found settled there amounted to no less than 10,000 persons. Commerce, trade, and the industries were in a very flourishing state. The Thames alone, according to John Norden in his MS. description of Essex (1594), gave occupation to 40,000 men as boatmen, sailors, fishermen, and others. Great political and historical events had put new life into the English nation, and given it an important impetus, which manifested itself in London more especially, and exercised a stimulating influence upon literature and poetry. Indeed, it may be said that Shakespeare had the good fortune of having his life cast in one of the greatest historical periods, the gravitating point of which lay principally in London.—K. Elze, *William Shakespeare*, ch. 3.

A. D. 1647.—Outbreak against the Independents and the Army. See ENGLAND: A. D. 1647 (APRIL—AUGUST).

A. D. 1665.—The Great Plague.—"The water supply, it is now generally acknowledged,

is the first cause of epidemic disease. In London, at the beginning of the reign of James I., it was threefold. Some water came to public conduits, like those in Cheap, by underground pipes from Tyburn. Some was drawn by water-wheels and other similar means from the Thames, polluted as it was, at London Bridge. A third source of supply was still more dangerous: in all the suburbs, and probably also in most houses in the city itself, people depended on wells. What wells among habitations, and especially filthy habitations, become, we know now, but in the 17th century, and much later, the idea of their danger had not been started. Such being the conditions of existence in London, the plague now and then smouldering for a year or two, now and then breaking out as in 1603, 1625, and 1636, a long drouth, which means resort to half dry and stagnant reservoirs, was sufficient to call it forth in all its strength. The heat of the summer weather in 1665 was such that the very birds of the air were imagined to languish in their flight. The 7th of June, said Pepys, was the hottest day that ever he felt in his life. The deaths from the plague, which had begun at the end of the previous year, in the suburb of St. Giles' in the Fields, at a house in Long Acre, where two Frenchmen had died of it, rose during June from 112 to 268. The entries in the diary are for four months almost continuous as to the progress of the plague. Although it was calculated that not less than 200,000 people had followed the example of the king and court, and fled from the doomed city, yet the deaths increased daily. The lord mayor, Lawrence, held his ground, as did the brave earl of Craven and General Monk, now became duke of Albemarle. Craven provided a burial-ground, the Pest Field, with a kind of cottage-hospital in Soho; but the only remedy that could be devised by the united wisdom of the corporation, fortified by the presence of the duke and the earl, was to order fires in all the streets, as if the weather was not already hot enough. Medical art seems to have utterly broken down. Those of the sick who were treated by a physician, only died a more painful death by cupping, scarifying and blistering. The city rectors, too, who had come back with the king, fled from the danger, as might be expected from their antecedents, and the nonconformist lecturers who remained had overwhelming congregations wherever they preached repentance to the terror-stricken people. . . . The symptoms were very distressing. Fever and vomiting were among the first, and every little ailment was thought premonitory, so that it was said at the time that as many died of fright as of the disease itself. . . . The fatal signs were glandular swellings which ran their course in a few hours, the plague spots turning to gangrene almost as soon as they appeared. The patients frequently expired the same day that they were seized. . . . The most terrible stories of premature burial were circulated. All business was suspended. Grass grew in the streets. No one went about. The rumbling wheels of the cart, and the cry, 'Bring out your dead!' alone broke the stillness of the night. . . . In the first weeks of September the number of fatal cases rose to 1,500 a day, the bills of mortality recording 24,000 deaths between the 1st and 21st of that month. Then at last it began to decline, but rose again at the beginning of October. A change of weather at length occurred,

and the average declined so rapidly that, by the beginning of November, the number of deaths was reduced to 1,200, and before Christmas came it had fallen to the usual number of former years. In all, the official statements enumerated 97,306 deaths during the year, and, if we add those unrecorded, a very moderate estimate of the whole mortality would place it at the appalling figure of 100,000 at least."—W. J. Loftie, *Hist. of London*, ch. 11 (v. 1).

A. D. 1666.—The Great Fire.—"While the war [with the Dutch] continued without any decisive success on either side, a calamity happened in London which threw the people into great consternation. Fire, breaking out [September 2, 1666] in a baker's house near the bridge, spread itself on all sides with such rapidity that no efforts could extinguish it, till it laid in ashes a considerable part of the city. The inhabitants, without being able to provide effectually for their relief, were reduced to be spectators of their own ruin; and were pursued from street to street by the flames which unexpectedly gathered round them. Three days and nights did the fire advance; and it was only by the blowing up of houses that it was at last extinguished. . . . About 400 streets and 13,000 houses were reduced to ashes. The causes of the calamity were evident. The narrow streets of London, the houses built entirely of wood, the dry season, and a violent east wind which blew; these were so many concurring circumstances which rendered it easy to assign the reason of the destruction that ensued. But the people were not satisfied with this obvious account. Prompted by blind rage, some ascribed the guilt to the republicans, others to the Catholics. . . . The fire of London, though at that time a great calamity, has proved in the issue beneficial both to the city and the kingdom. The city was rebuilt in a very little time, and care was taken to make the streets wider and more regular than before. . . . London became much more healthy after the fire."

—D. Hume, *Hist. of Eng.*, ch. 64.—"I went this morning [Sept. 7] on foot from Whitehall as far as London Bridge, thro' the late Fleete-street, Ludgate hill, by St. Pauls, Cheapeside, Exchange, Bishopsgate, Aldersgate, and out to Moorefields, thence through Cornhill, &c., with extraordinary difficulty, clambering over heaps of yet smoking rubbish, and frequently mistaking where I was. The ground under my feet so hot, that it even burnt the soles of my shoes. . . . At my returne I was infinitely concerned to find that goodly Church St. Pauls now a sad ruine. . . . Thus lay in ashes that most venerable church, one of the most ancient pieces of early piety in ye Christian world, besides neere 100 more. . . . In five or six miles traversing about I did not see one load of timber unconsum'd, nor many stones but what were calcin'd white as snow. . . . I then went towards Islington and Highgate, where one might have seen 200,000 people of all ranks and degrees dispers'd and lying along by their heaps of what they could save from the fire, deploring their losse, and tho' ready to perish for hunger and destitution, yet not asking one penny for reliefe, which to me appear'd a stranger sight than any I had yet beheld."—J. Evelyn, *Diary*, Sept. 7, 1666 (v. 2).

A. D. 1685.—The most populous capital in Europe.—The first lighting of the streets.—

"There is reason to believe that, in 1685, London had been, during about half a century, the most populous capital in Europe. The inhabitants, who are now [1848] at least 1,900,000, were then probably little more than half a million. London had in the world only one commercial rival, now long ago outstripped, the mighty and opulent Amsterdam. . . . There is, indeed, no doubt that the trade of the metropolis then bore a far greater proportion than at present to the whole trade of the country; yet to our generation the honest vaunting of our ancestors must appear almost ludicrous. The shipping which they thought incredibly great appears not to have exceeded 70,000 tons. This was, indeed, then more than a third of the whole tonnage of the kingdom. . . . It ought to be noticed that, in the last year of the reign of Charles II. [1685], began a great change in the police of London, a change which has perhaps added as much to the happiness of the body of the people as revolutions of much greater fame. An ingenious projector, named Edward Heming, obtained letters patent conveying to him, for a term of years, the exclusive right of lighting up London. He undertook, for a moderate consideration, to place a light before every tenth door, on moonless nights, from Michaelmas to Lady Day, and from six to twelve of the clock."—Lord Macaulay, *Hist. of Eng.*, ch. 3 (v. 1).

A. D. 1688.—The Irish Night.—"The ignominious flight of James II. from his capital, on the morning of December 11, 1688, was followed by a wild outbreak of riot in London, which no effective authority existed to promptly repress. To the cry of "No Popery," Roman Catholic chapels and the residences of ambassadors of Roman Catholic States, were sacked and burned. "The morning of the 12th of December rose on a ghastly sight. The capital in many places presented the aspect of a city taken by storm. The Lords met at Whitehall, and exerted themselves to restore tranquillity. . . . In spite, however, of the well-meant efforts of the provisional government, the agitation grew hourly more formidable. . . . Another day of agitation and terror closed, and was followed by a night the strangest and most terrible that England had ever seen." Just before his flight, King James had sent an order for the disbanding of his army, which had been composed for the most part of troops brought over from Ireland. A terrifying rumor that this disbanded Irish soldiery was marching on London, and massacring men, women and children on the road, now spread through the city. "At one in the morning the drums of the militia beat to arms. Everywhere terrified women were weeping and wringing their hands, while their fathers and husbands were equipping themselves for fight. Before two the capital wore a face of stern preparedness which might well have daunted a real enemy, if such an enemy had been approaching. Candles were blazing at all the windows. The public places were as bright as at noonday. All the great avenues were barricaded. More than 20,000 pikes and muskets lined the streets. The late daybreak of the winter solstice found the whole City still in arms. During many years the Londoners retained a vivid recollection of what they called the Irish Night. . . . The

LONDON.

panic had not been confined to London. The cry that disbanded Irish soldiers were coming to murder the Protestants had, with malignant ingenuity, been raised at once in many places widely distant from each other."—Lord Macaulay, *Hist. of Eng.*, ch. 10.

A. D. 1689.—The Siege.—James II. fled in December, 1688, to France, from the Revolution in England which gave his throne to his daughter Mary, and her husband, William of Orange. He received aid from the French king and was landed in Ireland the following March, to attempt the maintenance of his sovereignty in that kingdom, if no more. Almost immediately upon his arrival he led his forces against Londonderry, where a great part of the Protestants of Ulster had taken refuge, and William and Mary had been proclaimed. "The city in 1689 was contained within the walls; and it rose by a gentle ascent from the base to the summit of a hill. The whole city was thus exposed to the fire of an enemy. There was no moat nor counterscarp. A ferry crossed the river Foyle from the east gate, and the north gate opened upon a quay. At the entrance of the Foyle was the strong fort of Culmore, with a smaller fort on the opposite bank. About two miles below the city were two forts—Charles Fort and Grange Fort. The trumpeter sent by the king with a summons to the obstinate city found the inhabitants 'in very great disorder, having turned out their governor Lundy, upon suspicion.' The cause of this unexpected reception was the presence of 'one Walker, a minister.' He was opposed to Lundy, who thought the place untenable, and counselled the townsmen to make conditions; 'but the fierce minister of the Gospel, being of the true Cromwellian or Cameronian stamp, inspired them with bolder resolutions.' The reverend George Walker and Major Baker were appointed governors during the siege. They mustered 7,020 soldiers, dividing them into regiments under eight colonels. In the town there were about 30,000 souls; but they were reduced to a less burdensome number, by 10,000 accepting an offer of the besieging commander to restore them to their dwellings. There were, according to Lundy's estimation, only provisions for ten days. The number of cannon possessed by the besieged was only twenty. On the 20th of April the city was invested, and the bombardment was begun. . . . No impression was

LONDONDERRY.

made during nine days upon the determination to hold out; and on the 29th King James retraced his steps to Dublin, in considerable ill humour. The siege went on for six weeks with little change. Hamilton was now the commander of James's forces. The garrison of Londonderry and the inhabitants were gradually perishing from fatigue and insufficient food. But they bravely repelled an assault, in which 400 of the assailants fell. . . . Across the narrow part of the river, from Charles Fort to Grange Fort, the enemy stretched a great boom of fir-timber, joined by iron chains, and fastened on either shore by cables of a foot thick. On the 15th of June an English fleet of thirty sail was descried in the Lough. Signals were given and answered; but the ships lay at anchor for weeks. At the end of June, Baker, one of the heroic governors, died. Hamilton had been superseded in his command by Rosen, who issued a savage proclamation, declaring that unless the place were surrendered by the 1st of July, he would collect all the Protestants from the neighbouring districts, and drive them under the walls of the city to starve with those within the walls. A famished troop came thus beneath the walls of Londonderry, where they lay starving for three days. The besieged immediately threatened to hang all the prisoners within the city. This threat had its effect, and the famished crowd wended back their way to their solitary villages. It is but justice to James to say that he expressed his displeasure at this proceeding."—C. Knight, *Crown Hist. of Eng.*, ch. 34.—"The state of the city was, hour by hour, becoming more frightful. The number of the inhabitants had been thinned more by famine and disease than by the fire of the enemy. Yet that fire was sharper and more constant than ever. . . . Every attack was still repelled. But the fighting men of the garrison were so much exhausted that they could scarcely keep their legs. Several of them, in the act of striking at the enemy, fell down from mere weakness. A very small quantity of grain remained, and was doled out by mouthfuls. The stock of salted hides was considerable, and by gnawing them the garrison appeased the rage of hunger. Dogs, fattened on the blood of the slain who lay unburied round the town, were luxuries which few could afford to purchase. The price of a whelp's paw was five shillings and sixpence. Nine horses were still alive, and but barely alive. They were so lean that little meat was likely to be found upon them. It was, however, determined to slaughter them for food. . . . The whole city was poisoned by the stench exhaled from the bodies of the dead and of the half dead. . . . It was no slight aggravation of the sufferings of the garrison that all this time the English ships were seen far off in Lough Foyle." At length, positive orders from England compelled Kirke, the commander of the relieving expedition "to make an attempt which, as far as appears, he might have made, with at least an equally fair prospect of success, six weeks earlier." Two merchant ships, the Mountjoy and the Phoenix, loaded with provisions, and the Dartmouth, a frigate of thirty-six guns, made a bold dash up the river, broke the great boom, ran the gauntlet of forts and batteries, and reached the city at ten o'clock in the evening of the 28th of July. The captain of the Mountjoy

LONDONDERRY.

was killed in the heroic undertaking, but Londonderry, his native town, was saved. The enemy continued their bombardment for three days more. "But, on the third night, flames were seen arising from the camp; and, when the first of August dawned, a line of smoking ruins marked the site lately occupied by the huts of the besiegers. . . . So ended this great siege, the most memorable in the annals of the British isles. It had lasted 105 days. The garrison had been reduced from about 7,000 effective men to about 3,000. The loss of the besiegers cannot be precisely ascertained. Walker estimated it at 8,000 men."—Lord Macaulay, *Hist. of Eng.*, ch. 12.

LORD.—"Every Teutonic King or other leader was surrounded by a band of chosen warriors, personally attached to him of their own free choice [see COMITATUS]. . . . The followers served their chief in peace and in war; they fought for him to the death, and rescued or avenged his life with their own. In return, they shared whatever gifts or honours the chief could distribute among them; and in our tongue at least it was his character of dispenser of gifts which gave the chief his official title. He was the 'Hiaford,' the 'Loaf-giver,' a name which, through a series of softenings and contractions, and with a complete forgetfulness of its primitive meaning, has settled down into the modern form of Lord."—E. A. Freeman, *Hist. Norman Cong.*, ch. 3, sect. 2 (c. 1).—On the Latin equivalent, 'Dominus,' see IMPERATOR: FINAL SIGNIFICATION.

LORD DUNMORE'S WAR. See OHIO (VALLEY): A. D. 1774.

LORDS, British House of.—"The ancient National Assembly [of England] gradually ceased to be anything more than an assembly of the 'greater barons,' and ultimately developed into a hereditary House of Lords, the Upper House of the National Parliament. The hereditary character of the House of Lords—now long regarded as fixed and fundamental—accrued slowly and undesignedly, as a consequence of the hereditary descent of the baronial fiefs, practically inalienable, in right of which summonses to the national council were issued."—T. P. Taswell-Langmead, *English Const. Hist.*, ch. 7.—"The English aristocracy is a typical example of the way in which a close corporation dies out. Its members are almost always wealthy in the first instance, and their estates have been constantly added to by favour from the Crown, by something like the monopoly of the best Government appointments, and by marriages with wealthy heiresses. They are able to command the field sports and open-air life that conduce to health, and the medical advice that combats disease. Nevertheless, they die out so rapidly that only five families out of nearly six hundred go back without a break, and in the male line, to the fifteenth century. . . . 155 peers were summoned to the first Parliament of James II. In 1825, only 140 years later, only forty-eight of these nobles were represented by lineal descendants in the male line. The family has in several instances been continued by collaterals begging the peerage, which they could not have claimed at law, and in this way the change may seem less than it has really been; but the broad result appears to be that left to itself from 1688, with new creations absolutely forbidden, the

House of Lords would by this time have been practically extinguished. Of Charles II.'s six bastards, who were made dukes, only three have perpetuated the race. Three peerages have been lost to the Howard family, three to the Greys, two to the Mordaunts, two to the Hydes, two to the Gerards, and two to the Lucases. . . . It is in the lower strata of society that we have to seek for the springs of national life."—C. H. Pearson, *National Life and Character*, pp. 70-73.—"The British peerage is something unique in the world. In England there is, strictly speaking, no nobility. This saying may indeed sound like a paradox. The English nobility, the British aristocracy, are phrases which are in everybody's mouth. Yet, in strictness, there is no such thing as an aristocracy or a nobility in England. There is undoubtedly an aristocratic element in the English constitution; the House of Lords is that aristocratic element. And there have been times in English history when there has been a strong tendency to aristocracy, when the lords have been stronger than either the king or the people. . . . But a real aristocracy, like that of Venice, an aristocracy not only stronger than either king or people, but which had driven out both king and people, an aristocracy from whose ranks no man can come down and into whose ranks no man can rise save by the act of the privileged body itself,—such an aristocracy as this England has never seen. Nor has England ever seen a nobility in the true sense, the sense which the word bears in every continental land, a body into which men may be raised by the king, but from which no man may come down, a body which hands on to all its members, to the latest generations, some kind of privilege or distinction, whether its privileges consist in substantial political power, or in bare titles and precedence. In England there is no nobility. The so-called noble family is not noble in the continental sense; privilege does not go on from generation to generation; titles and precedence are lost in the second or third generation; substantial privilege exists in only one member of the family at a time. The powers and privileges of the peer himself are many; but they belong to himself only; his children are legally commoners; his grandchildren are in most cases undistinguishable from other commoners. . . . A certain great position in the state is hereditary; but nobility in the strict sense there is none. The actual holder of the peerage has, as it were, drawn to his own person the whole nobility of the family."—E. A. Freeman, *Practical Bearings of European History (Lectures to American Audiences)*, pp. 305-307.—"At the end of 1892 there were 545 members of the House of Lords, made up thus: Peers, 469; Lords of Appeal and Ex-Lords of Appeal, 5; Representative Peers of Scotland, 16; Representative Peers of Ireland, 28; Lords Spiritual, 27. The Lords of Appeal are lawyers of great distinction who are appointed by the Queen and hold office during good behavior. Their number is always about the same. Their work is mainly judicial; but these Law Lords, as they are called, also speak and vote in the deliberative and legislative proceedings of the Upper House. The position of a Lord of Appeal differs from that of an ordinary peer in that his office is not hereditary. As regards the representative peers, those from Ireland, who number 28, are elected for life; those from Scotland, who num-

ber 16, are elected at a meeting of Scotch peers, held in Holyrood Palace, Edinburgh, after each General Election, and hold office during the lifetime of a Parliament. The Lords Spiritual include (1) the Archbishop of Canterbury, the Archbishop of York, the Bishops of London, Durham, and Winchester; and (2) twenty-two out of the other twenty-nine bishops of the Church of England. The prelates whose titles have been given take their seats in the House immediately on appointment; the other bishops take their seats by order of seniority of consecration. The prelates who are without seats in the House of Lords are known as junior bishops. The Bishop of Sodor and Man has a seat in the House of Lords, but no vote."—E. Porritt, *The Englishman at Home*, ch. 6.—For an account of the transient abolition of the House of Lords in 1649, see ENGLAND: A. D. 1649 (FEBRUARY). LORRAINE: A. D. 843-870.—Formation and dissolution of the kingdom.—In the division of the empire of Charlemagne among his three grandsons, made by the treaty of Verdun, A. D. 843, the elder, Lothaire, bearing the title of Emperor, received the kingdom of Italy, and, with it, another kingdom, named, after himself, Lotharingia—afterwards called Lorraine. This latter was so formed as to be an extension north-westwardly of his Italian kingdom, and to stretch in a long belt between the Germanic dominion of his brother Ludwig and the Francia Nova, or France, of his brother Charles. It extended "from the mouth of the Rhine to Provence, bounded by that river on one frontier, by France on the other."—H. Hallam, *The Middle Ages*, ch. 1, pt. 1, note.—"Between these two states [of the Eastern and Western, or Germanic and Gallic Franks] the policy of the ninth century instinctively put a barrier. The Emperor Lothar, besides Italy, kept a long narrow strip of territory between the dominions of his Eastern and Western brothers. . . . This land, having . . . been the dominion of two Lothars, took the name of Lotharingia, Lothringen, or Lorraine, a name which part of it has kept to this day. This land, sometimes attached to the Eastern kingdom, sometimes to the Western, sometimes divided between the two, sometimes separated from both, always kept its character of a border-land. . . . Lotharingia took in the two duchies of the Riparian Lotharingia and Lotharingia on the Mosel. The former contains a large part of the modern Belgium and the neighboring lands on the Rhine, including the royal city of Aachen. Lotharingia on the Mosel answers roughly to the later duchy of that name, though its extent to the East is considerably larger."—E. A. Freeman, *Historical Geog. of Europe*, ch. 6, sect. 1.—"Upon the death of the Emperor Lothair [A. D. 855] his

share of the Carolingian inheritance, the Kingdom acquired by disobedience, violence, deceit and fraud, sustained further partitions: Lothair's piece of the rent garment was clutched and tattered again and again by his nearest of kin, his three sons, and their two uncles, and the sons and the sons' sons of his sons and uncles, till the lineage ended. . . . The Emperor Lothair had directed and confirmed the partition of his third of the Carolingian Empire, appointed to him by the treaty of Verdun." His namesake, his second son, Lothair II., received the kingdom called "Lotharingia, Lothierregne, or Lorraine," and which is defined in the terms of modern geography as follows: "The thirteen Cantons of Switzerland with their allies and tributaries, East or Free Friesland, Oldenburgh, the whole of the United Netherlands, all other territories included in the Archbishopric of Utrecht, the Trois Evêchés, Metz, Toul and Verdun, the electorates of Trêves and of Cologne, the Palatine Bishopric of Liège, Alsace and Franche-Comté, Hainault and the Cambresis, Brabant (known in intermediate stages as Basse-Lorraine, or the Duchy of Lohier), Namur, Juliers and Cleves, Luxemburg and Limburg, the Duchy of Bar and the Duchy which retained the name of Lorraine, the only memorial of the antient and dissolved kingdom. . . . After King Lothair's death [A. D. 869] nine family competitors successively came into the field for that much-coveted Lotharingia." Charles the Bald, one of the uncles of the deceased king,—he who held the Neustrian or French dominion,—took possession and got himself crowned king of Lotharingia. But the rival uncle, Louis the German, soon forced him (A. D. 870) to a division of the spoils. "The lot of Charles consisted of Burgundy and Provence, and most of those Lotharingian dominions where the French or Walloon tongue was and yet is spoken; . . . he also took some purely Belgic territories, especially that very important district successively known as Basse-Lorraine, the Duchy of Lohier, and Brabant. Modern history is dawning fast upon us. Louis-le-Germanique received Aix-la-Chapelle, Cologne, Trêves, Utrecht, Strasburgh, Metz,—indeed nearly all the territories of the Belgic and German tongues."—Sir F. Palgrave, *Hist. of Normandy and Eng.*, v. 1, pp. 361-370.—See, also, VERDUN, TREATY OF.

A. D. 911-980.—The dukedom established.—The definite separation of the East Franks, who ultimately constituted the Germany of modern history, from the West or Neustrian Franks, out of whose political organization sprang the kingdom of France, took place in 911, when the Franconian duke Conrad was elected king by the Germanic nations, and the rule of the Carolingian princes was ended for them. In this proceeding Lotharingia, or Lorraine, refused to concur. "Nobles and people held to the old imperial dynasty. . . . Opinions, customs, traditions, still rendered the Lotharingians mainly members of Romanized Gaul. They severed themselves from the Germans beyond the Rhine, separated by influences more powerful than the stream." The Lotharingians, accordingly, repudiated the sovereignty of Conrad and placed themselves under the rule of Charles the Simple, the Carolingian king then struggling to maintain his slender throne at Laon. "Twice did King Conrad attempt to win Lo-

tharingia and reunite the Rhine-kingdom to the German realm: he succeeded in obtaining Alsace, but the remainder was resolutely retained by Charles." In 916 this remainder was constituted a duchy, by Charles, and conferred upon Gilbert, son of Rainier, Count of Hainault, who had been the leader of the movement against Conrad and the Germanic nations. A little later, when the Carolingian dynasty was near its end, Henry the Fowler and his son Otho, the great German king who revived the empire, recovered the suzerainty of Lorraine, and Otho gave it to his brother Bruno, Archbishop of Cologne. Under Bruno it was divided into two parts, Upper and Lower Lorraine. Lower Lorraine was subsequently conferred by Otho II. upon his cousin Charles, brother to Lothaire, the last of the French Carolingian kings. "The nature and extent of this same grant has been the subject of elaborate critical enquiry; but, for our purposes, it is sufficient to know, that Charles is accepted by all the historical disputants as first amongst the hereditary Dukes of the 'Basse-Lorraine'; and, having received investiture, he became a vassal of the Emperor." In 980, this disposition of Lower Lorraine was ratified by Lothaire, the French king, who, "abandoning all his rights and pretensions over Lorraine, openly and solemnly renounced the dominions, and granted the same to be held without let or interference from the French, and be subjected for ever to the German Empire."—Sir F. Palgrave, *Hist. of Normandy and Eng.*, bk. 1, pt. 2, ch. 1 and ch. 4, pt. 2.—"Lotharingia retained its Carolingian princes, but it retained them only by definitively becoming a fief of the Teutonic Kingdom. Charles died in prison, but his children continued to reign in Lotharingia as vassals of the Empire. Lotharingia was thus wholly lost to France; that portion of it which was retained by the descendants of Charles in the female line still preserves its freedom as part of the independent Kingdom of Belgium."—E. A. Freeman, *Hist. of the Norman Conquest of Eng.*, ch. 4, sect. 4 (c. 1).

A. D. 1624-1663.—Quarrels and war of Duke Charles IV. with Richelieu and France.—Ruin and depopulation of the duchy.—Its possession by the French.—Early in Richelieu's administration of the French government, the first steps were taken towards the union of Lorraine with France. "Its situation, as well as its wealth and fertility, made it an acquisition specially valuable to that kingdom. . . . Lorraine had long been ruled by the present family of dukes, and in its government more had remained of feudal usages than in the monarchy that had grown up beside it. The character and career of the members of the house of Guise had brought Lorraine into very intimate connection with France, and the closeness of its relations added danger to its position as an independent state. Charles IV. became Duke of Lorraine in 1624 by virtue of

the rights of his cousin and wife, the daughter of the last duke. . . . He soon began to take part in the intrigues of the French Court, and he enrolled himself among the lovers of Mme. de Chevreuse and the enemies of Richelieu. . . . Richelieu had long sought occasion for offence against the Duke Charles. The Duke of Lorraine was bound to do honor to the French king for the Duchy of Bar [which was a fief of the French crown, while Lorraine was an imperial fief], a duty which was often omitted, and the agents of Richelieu discovered that France had ancient and valid claims to other parts of his territory. His relations with France were rendered still more uncertain by his own untrustworthy character. To tell the truth or to keep his agreement were equally impossible for Duke Charles, and he was dealing with a man with whom it was dangerous to trifle. Gustavus Adolphus had invaded Germany, and the Duke of Lorraine was eager in defending the cause of the Emperor. In January, 1632, he was forced to make a peace with France, by which he agreed to make no treaty with any other prince or state without the knowledge and permission of the French king. Charles paid no attention to this treaty, and for all these causes in June, 1633, Louis [XIII.] invaded his dominions. They lay open to the French army, and no efficient opposition could be made. On June 26th Charles was forced to sign a second treaty, by which he surrendered the city and county of Clermont, and also yielded the possession for four years of the citadels of Stenay and Jametz. . . . This treaty made little change in the condition of affairs. Charles continued to act in hostility to the Swedes, to assist Gaston [Duke of Orleans, the rebellious and troublesome brother of Louis XIII., who had married Margaret of Lorraine, the Duke's sister], and in every way to violate the conditions of the treaty he had made. He seemed resolved to complete his own ruin, and he did not have to wait long for its accomplishment. In 1633 Louis a second time invaded Lorraine, and the Swedes, in return for the duke's hostility to them, also entered the province. Charles' forces were scattered and he was helpless, but he was as false as he was weak. He promised to surrender his sister Margaret, and he allowed her to escape. He sent his brother to make a treaty and then refused to ratify it. At last, he made the most disadvantageous treaty that was possible, and surrendered his capital, Nancy, the most strongly fortified city of Lorraine, into Louis' possession until all difficulties should be settled between the king and the duke, which, as Richelieu said, might take till eternity. In January, 1634, Charles pursued his eccentric career by granting all his rights in the duchy to his brother, the Cardinal of Lorraine. The new duke also married a cousin in order to unite the rights of the two branches. . . . Charles adopted the life of a wandering soldier of fortune, which was most to his taste, and commanded the imperial forces at the battle of Nordlingen. He soon assumed again the rights which he had ceded, but his conduct rendered them constantly less valuable. The following years were filled with struggles with France, which resulted in her taking possession of still more of Lorraine, until its duke was entirely a fugitive. Such struggles brought upon its inhabitants a condition of constantly increasing want and misery.

. . . It was ravaged by the hordes of the Duke of Weimar and the Swedes [see GERMANY: A. D. 1634-1639], and on every side were pillage and burning and murders. Famine followed, and the horrors perpetrated from it were said to be more than could be described. Richelieu himself wrote that the inhabitants of Lorraine were mostly dead, villages burned, cities deserted, and a century would not entirely restore the country. Vincent de Paul did much of his charitable work in that unhappy province. . . . The duke at last, in 1641, came as a suppliant to Richelieu to ask for his duchy, and it was granted him, but on the condition that Stenay, Dun, Jametz, and Clermont should be united to France, that Nancy should remain in the king's possession until the peace, and that the duke should assist France with his troops against all enemies whenever required. . . . Charles was hardly back in his dominions before he chose to regard the treaty he had made as of no validity, and in July he violated it openly, and shortly took refuge with the Spanish army. . . . Thereupon the French again invaded Lorraine, and by October, 1641, practically the whole province was in their hands. It so continued until 1663." —J. B. Perkins, *France under [Richelieu and] Mazarin*, ch. 5 (v. 1).—"The faithfulness with which he [the Duke of Lorraine] adhered to his alliance with Austria, in spite of threatened losses, formed in the end a strong bond of reciprocal attachment and sympathy between the Hapsburgs and the Princes of Lorraine, which, at a later day, became even firmer, and finally culminated in the marriage of Stephen of Lorraine and Maria Theresa." —A. Gindely, *Hist. of the Thirty Years' War*, v. 2, ch. 6, sect. 3.

LOSE-COAT FIELD, Battle of.—In 1470 an insurrection against the government of King Edward IV. broke out in Lincolnshire, England, under the lead of Sir Robert Welles, who raised the Lancastrian standard of King Henry. The insurgents were vigorously attacked by Edward, at a place near Stamford, when the greater part of them "flung away their coats and took to flight, leaving their leader a prisoner in the hands

of his enemies. The manner in which the rebels were dispersed caused the action to be spoken of as the battle of Lose-coat Field."—J. Gairdner, *Houses of Lancaster and York*, ch. 8.—The engagement is sometimes called the Battle of Stamford.

A. D. 1698-1712.—Iberville's colonization.—Separation in government from New France.—Crozat's monopoly.—The French territorial claim.—"The court of France had been engaged in wars and political intrigues, and nothing toward colonizing Louisiana had been effected since the disastrous expedition of La Salle. Twelve years had elapsed, but his discoveries and his unfortunate fate had not been forgotten. At length, in 1698, an expedition for colonizing the region of the Lower Mississippi was set on foot by the French king. It was placed under the command of M. d' Iberville, who had been an experienced and distinguished naval commander in the French wars of Canada, and a successful agent in establishing colonies in Canada, Acadie and Cape Breton. . . . With his little fleet of two frigates, rating 30 guns each, and two smaller vessels, bearing a company of marines and 200 colonists, including a few women and children, he prepared to set sail from France for the mouth of the Mississippi. The colonists were mostly soldiers who had served in the armies of France and had received an honorable discharge. They were well supplied with provisions and implements requisite for opening settlements in the wilderness. It was on the 24th day of September, 1698, that this colony sailed from Rochelle." On the 2d of the following March, after considerable exploration of the coast, west from the Spanish settlement at Pensacola, Iberville found the mouth of the Mississippi, being confirmed in the identification of it by discovery of a letter, in the hands of the Indians, which Tonti had written to La Salle thirteen years before. "Soon afterward, Iberville selected a site and began to erect a fort upon the northeast shore of the Bay of Biloxi, about fifteen miles north of Ship Island. Here, upon a sandy shore, and under a burning sun, upon a pine barren, he settled his colony, about 80 miles northeast from the present city of New Orleans. . . . Having thus located his colony, and protected them [by a fort] from the danger of Indian treachery and hostility, he made other provision for their comfort and security, and then set sail for France, leaving his two brothers, Sauvolle and Bienville, as his lieutenants." The following September an English corvette appeared in the river, intending to explore it, but was warned off by the French, and retired. During the summer of 1699 the colonists suffered terribly from the maladies of the region, and M. Sauvolle, with many others, died. "Early

in December following d'Iberville returned with an additional colony and a detachment of troops, in company with several vessels of war. Up to this time, the principal settlements had been at Ship Island and on the Bay of Biloxi; others had been begun at the Bay of St. Louis and on the Bay of Mobile. These were made as a matter of convenience, to hold and occupy the country; for his principal object was to colonize the banks of the Mississippi itself." Iberville now built a fort and located a small colony at a point about 54 miles above the mouth of the river, and about 38 miles below the present city of New Orleans. The next year, having been joined by the veteran De Tonti with a party of French Canadians from the Illinois, Iberville ascended the river nearly 400 miles, formed a friendly alliance with the Natchez tribe of Indians, and selected for a future settlement the site of the present city of Natchez. "In the spring of 1702 war had been declared by England against France and Spain, and by order of the King of France the headquarters of the commandant were removed to the western bank of the Mobile River. This was the first European settlement within the present State of Alabama. The Spanish settlement at Pensacola was not remote; but as England was now the common enemy, the French and Spanish commandants arranged their boundary between Mobile and Pensacola Bays to be the Perdido River. . . . The whole colony of Southern Louisiana as yet did not number 30 families besides soldiers. Billious fevers had cut off many of the first emigrants, and famine and Indian hostility now threatened the remainder." Two years later, Iberville was broken in health by an attack of yellow fever and retired to France. After six further years of hardship and suffering, the colony, in 1710, still "presented a population of only 380 souls, distributed into five settlements, remote from each other. These were on Ship Island, Cat Island, at Biloxi, Mobile, and on the Mississippi. . . . Heretofore the settlements of Louisiana had been a dependence on New France, or Canada, although separated by a wilderness of 2,000 miles in extent. Now it was to be made an independent government, responsible only to the crown, and comprising also the Illinois country under its jurisdiction. The government of Louisiana was juridically placed [1711] in the hands of a governor-general. The headquarters, or seat of the colonial government, was established at Mobile, and a new fort was erected upon the site of the present city of Mobile. . . . In France it was still believed that Louisiana presented a rich field for enterprise and speculation. The court, therefore, determined to place the resources of the province under the influence of individual enterprise. For this purpose, a grant of exclusive privileges, in all the commerce of the province, for a term of 15 years, was made to Anthony Crozat, a rich and influential merchant of France. His charter was dated September 26th, 1712. At this time the limits of Louisiana, as claimed by France, were very extensive. As specified in the charter of Crozat, it was 'bounded by New Mexico on the west, by the English lands of Carolina on the east, including all the establishments, ports, havens, rivers, and principally the port and haven of the Isle of Dauphin, heretofore called Massacre; the River St. Louis, heretofore called Mississippi, from the edge of the sea as far as the Illinois,

together with the River St. Philip, heretofore called Missouri, the River St. Jerome, heretofore called Wabash, with all the lands, lakes, and rivers mediately or immediately flowing into any part of the River St. Louis or Mississippi.' Thus Louisiana, as claimed by France at that early period, embraced all the immense regions of the United States from the Alleghany Mountains on the east to the Rocky Mountains on the west, and northward to the great lakes of Canada."—J. W. Monette, *Hist. of the Discovery and Settlement of the Valley of the Mississippi*, bk. 2, ch. 5 (v. 1).

A. D. 1717-1718.—Crozat's failure and John Law's Mississippi Bubble.—The founding of New Orleans.—"Crozat's failure was, in the nature of things, foreordained. His scheme, indeed, proved a stumbling-block to the colony and a loss to himself. In five years (1717) he was glad to surrender his monopoly to the crown. From its ashes sprung the gigantic Mississippi Scheme of John Law, to whom all Louisiana, now including the Illinois country, was granted for a term of years. Compared with this prodigality Crozat's concession was but a plaything. It not only gave Law's Company proprietary rights to the soil, but power was conferred to administer justice, make peace or war with the natives, build forts, levy troops and with consent of the crown to appoint such military governors as it should think fitting. These extraordinary privileges were put in force by a royal edict, dated in September, 1717. The new company [called the Western Company] granted lands along the river to individuals or associated persons, who were sometimes actual emigrants, sometimes great personages who sent out colonists at their own cost, or again the company itself undertook the building up of plantations on lands reserved by it for the purpose. One colony of Alsations was sent out by Law to begin a plantation on the Arkansas. Others, more or less flourishing, were located at the mouth of the Yazoo, Natchez and Baton Rouge. All were agricultural plantations, though in most cases the plantations themselves consisted of a few poor huts covered with a thatch of palm-leaves. The earliest forts were usually a square earthwork, strengthened with palisades about the parapet. The company's agricultural system was founded upon African slave labor. Slaves were brought from St. Domingo or other of the West India islands. By some their employment was viewed with alarm, because it was thought the blacks would soon outnumber the whites, and might some day rise and overpower them; but we find only the feeblest protest entered against the moral wrong of slavery in any record of the time. Negroes could work in the fields, under the burning sun, when the whites could not. Their labor cost no more than their maintenance. The planters easily adopted what, indeed, already existed among their neighbors. Self-interest stifled conscience. The new company wisely appointed Bienville governor. Three ships brought munitions, troops, and stores of every sort from France, with which to put new life into the expiring colony. It was at this time (February, 1718) that Bienville began the foundation of the destined metropolis of Louisiana. The spot chosen by him was clearly but a fragment of the delta which the river had been for ages silently building of its own mud and driftwood. It had

literally risen from the sea. Elevated only a few feet above sea-level, threatened with frequent inundation, and in its primitive estate a cypress swamp, it seemed little suited for the abode of men, yet time has confirmed the wisdom of the choice. Here, then, a hundred miles from the Gulf, on the alluvial banks of the great river, twenty-five convicts and as many carpenters were set to work clearing the ground and building the humble log cabins, which were to constitute the capital, in its infancy. The settlement was named New Orleans, in honor of the Regent, Orleans, who ruled France during the minority of Louis XV."—S. A. Drake, *The Making of the Great West*, pp. 126-128.

A. D. 1719-1750.—Surrendered to the Crown.—Massacre of French by the Natchez, and destruction of that tribe.—Unsuccessful war with the Chickasaws.—"The same prodigality and folly which prevailed in France during the government of John Law, over credit and commerce, found their way to his western possessions; and though the colony then planted survived, and the city then founded became in time what had been hoped,—it was long before the influence of the gambling mania of 1718-19-20 passed away. Indeed the returns from Louisiana never repaid the cost and trouble of protecting it, and, in 1732, the Company asked leave to surrender their privileges to the crown, a favor which was granted them. But though the Company of the West did little for the enduring welfare of the Mississippi valley, it did something; the cultivation of tobacco, indigo, rice, and silk, was introduced, the lead mines of Missouri were opened, though at vast expense and in hope of finding silver; and, in Illinois, the culture of wheat began to assume some degree of stability and of importance. In the neighborhood of the river Kaskaskia, Charlevoix found three villages, and about Fort Chartres, the head quarters of the Company in that region, the French were rapidly settling. All the time, however, during which the great monopoly lasted, was, in Louisiana, a time of contest and trouble. The English, who, from an early period, had opened commercial relations with the Chickasaws, through them constantly interfered with the trade of the Mississippi. Along the coast, from Pensacola to the Rio del Norte, Spain disputed the claims of her northern neighbor: and at length the war of the Natchez struck terror into the hearts of both white and red men. Amid that nation . . . D'Herberville had marked out Fort Rosalie [on the site of the present city of Natchez], in 1700, and fourteen years later its erection had been commenced. The French, placed in the midst of the natives, and deeming them worthy only of contempt, increased their demands and injuries until they required even the abandonment of the chief town of the Natchez, that the intruders might use its site for a plantation. The inimical Chickasaws heard the murmurs of their wronged brethren, and breathed into their ears counsels of vengeance; the sufferers determined on the extermination of their tyrants. On the 28th of November, 1729,

every Frenchman in that colony died by the hands of the natives, with the exception of two mechanics; the women and children were spared. It was a fearful revenge, and fearfully did the avengers suffer for their murders. Two months passed by, and the French and Choctaws in one day took 60 of their scalps; in three months they were driven from their country and scattered among the neighboring tribes; and within two years the remnants of the nation, chiefs and people, were sent to St. Domingo and sold into slavery. So perished this ancient and peculiar race, in the same year in which the Company of the West yielded its grants into the royal hands. When Louisiana came again into the charge of the government of France, it was determined, as a first step, to strike terror into the Chickasaws, who, devoted to the English, constantly interfered with the trade on the Mississippi. For this purpose the forces of New France, from New Orleans to Detroit, were ordered to meet in the country of the inimical Indians, upon the 10th of May, 1736, to strike a blow which should be final." D'Artaguette, governor of Illinois, was promptly at the rendezvous, with a large force of Indians, and a small body of French, but Bienville, from the southern province, proved dilatory. After waiting ten days, D'Artaguette attacked the Chickasaws, carried two of their defenses, but fell and was taken prisoner in the assault of a third; whereupon his Indian allies fled. Bienville, coming up five days afterwards, was repulsed in his turn and retreated, leaving D'Artaguette and his captive companions to a fearful fate. "Three years more passed away, and again a French army of nearly 4,000 white, red and black men, was gathered upon the banks of the Mississippi, to chastise the Chickasaws. From the summer of 1739 to the spring of 1740, this body of men sickened and wasted at Fort Assumption, upon the site of Memphis. In March of the last named year, without a blow struck, peace was concluded, and the province of Louisiana once more sunk into inactivity. Of the ten years which followed we know but little that is interesting."—J. H. Perkins, *Annals of the West*, pp. 61-63.

A. D. 1728.—The Casket Girls.—Wives for the colonists.—"In the beginning of 1728 there came a vessel of the company with a considerable number of young girls, who had not been taken, like their predecessors, from houses of correction. The company had given to each of them a casket containing some articles of dress. From that circumstance they became known in the colony under the nickname of the 'filles à la cassette', or 'the casket girls.' . . . Subsequently, it became a matter of importance in the colony to derive one's origin from the casket girls, rather than from the correction girls."—C. Gayarre, *Louisiana; its Colonial Hist. and Romance*, p. 396.

A. D. 1763.—East of the Mississippi, except New Orleans, ceded to Great Britain, and west of the Mississippi, with New Orleans, to Spain. See SEVEN YEARS WAR.

A. D. 1766-1768.—Spanish occupation and the revolt against it.—The short-lived republic of New Orleans.—"Spain accepted Louisiana [west of the Mississippi, with New Orleans] with reluctance, for she lost France as her bulwark, and, to keep the territory from England, assumed new expenses and dangers. Its inhabitants loved the land of their ancestry; by every law of nature and human freedom, they had the right to protest against the transfer of their allegiance." Their protests were unavailing, however, and their appeals met the response: "France cannot bear the charge of supporting the colony's precarious existence." In March, 1766, Antonio de Ulloa arrived at New Orleans from Havana, to take possession for the Spanish king. "Ulloa landed with civil officers, three capuchin monks, and 80 soldiers. His reception was cold and gloomy. He brought no orders to redeem the seven million livres of French paper money, which weighed down a colony of less than 6,000 white men. The French garrison of 300 refused to enter the Spanish service, the people to give up their nationality, and Ulloa was obliged to administer the government under the French flag by the old French officers, at the cost of Spain. In May of the same year, the Spanish restrictive system was applied to Louisiana; in September, an ordinance compelled French vessels having special permits to accept the paper currency in pay for their cargoes, at an arbitrary tariff of prices. . . . The ordinance was suspended, but not till the alarm had destroyed all commerce. Ulloa retired from New Orleans to the Balise. Only there, and opposite Natchez, and at the river Iberville, was Spanish jurisdiction directly exercised. This state of things continued for a little more than two years. But the arbitrary and passionate conduct of Ulloa, the depreciation of the currency with the prospect of its becoming an almost total loss, the disputes respecting the expenses incurred since the session of 1762, the interruption of commerce, a capacious ordinance which made a private monopoly of the traffic with the Indians, uncertainty of jurisdiction and allegiance, agitated the colony from one end to the other. It was proposed to make of New Orleans a republic, like Amsterdam or Venice, with a legislative body of 40 men, and a single executive. The people of the country parishes crowded in a mass into the city, joined those of New Orleans, and formed a numerous assembly, in which Lafrénière, John Milhet, Joseph Milhet, and the lawyer Doucet were conspicuous. . . . On the 25th of October, 1768, they adopted an address to the superior council, written by Lafrénière and Caresse, rehearsing their griefs; and, in their petition of rights, they claimed freedom of commerce with the ports of France and America, and the expulsion of Ulloa from the colony. The address, signed by 500 or 600 persons, was adopted the next day by the council . . . ; when the French flag was displayed on the public square, children and women ran up to kiss its folds, and it was raised by 900 men, amid shouts of 'Long live the king of France! we will have no king but him.' Ulloa retreated to Havana, and sent his representations to Spain. The inhabitants elected their own treasurer and syndics, sent envoys to Paris, . . . and memorialized the French monarch to stand as intercessor between them and the Catholic king, offering no alternative but to

be a colony of France or a free commonwealth." —G. Bancroft, *Hist. of the U. S. (Author's last revision)*, v. 3, pp. 316-318.

A. D. 1769.—Spanish authority established by "Cruel O'Reilly."—"It was the fate of the Creoles—possibly a climatic result—to be slack-handed and dilatory. Month after month followed the October uprising without one of those incidents that would have succeeded in the history of an earnest people. In March, 1769, Foucault [French intendant] covertly deserted his associates, and denounced them, by letter, to the French cabinet. In April the Spanish frigate sailed from New Orleans. Three intrepid men (Loyola, Gayarre, and Navarro), the governmental staff which Ulloa had left in the province, still remained, unmolested. Not a fort was taken, though it is probable not one could have withstood assault. Not a spade was struck into the ground, or an obstruction planted, at any strategic point, throughout that whole 'Creole' spring time which stretches in its exuberant perfection from January to June. . . . One morning toward the end of July, 1769, the people of New Orleans were brought suddenly to their feet by the news that the Spaniards were at the mouth of the river in overwhelming force. There was no longer any room to postpone choice of action. Marquis, the Swiss captain, with a white cockade in his hat (he had been the leading advocate for a republic), and Petit, with a pistol in either hand, came out upon the ragged, sunburnt grass of the Place d'Armes and called upon the people to defend their liberties. About 100 men joined them; but the town was struck motionless with dismay; the few who had gathered soon disappeared, and by the next day the resolution of the leaders was distinctly taken, to submit. But no one fled. . . . Lafrénière, Marquis, and Milhet descended the river, appeared before the commander of the Spaniards, and by the mouth of Lafrénière in a submissive but brave and manly address presented the homage of the people. The captain-general in his reply let fall the word seditious. Marquis boldly but respectfully objected. He was answered with gracious dignity and the assurance of ultimate justice, and the insurgent leaders returned to New Orleans and to their homes. The Spanish fleet numbered 24 sail. For more than three weeks it slowly pushed its way around the bends of the Mississippi, and on the 18th of August it finally furled its canvas before the town. Aubry [commanding the small force of French soldiers which had remained in the colony under Spanish pay] drew up his French troops with the colonial militia at the bottom of the Place d'Armes, a gun was fired from the flagship of the fleet, and Don Alexandro O'Reilly, accompanied by 2,600 chosen Spanish troops, and with 50 pieces of artillery, landed in unprecedented pomp, and took formal possession of the province. On the 21st, twelve of the principal insurrectionists were arrested. . . . Villeré [a planter, of prominence] either 'died raving mad on the day of his arrest,' as stated in the Spanish official report, or met his end in the act of resisting the guard on board the frigate where he had been placed in confinement. Lafrénière [former attorney-general and leader of the revolt], Noyan [a young ex-captain of

cavalry], Caresse [a merchant], Marquis, and Joseph Milhet [a merchant] were condemned to be hanged. The supplications both of colonists and Spanish officials saved them only from the gallows, and they fell before the fire of a file of Spanish grenadiers." The remaining prisoners were sent to Havana and kept in confinement for a year. "'Cruel O'Reilly'—the captain-general was justly named. . . . O'Reilly had come to set up a government, but not to remain and govern. On organizing the *cabildo* [a feebly constituted body—'like a crane, all feathers,' which, for the third part of a century, ruled the pettier destinies of the Louisiana Creoles'], he announced the appointment of Don Louis de Unzaga, colonel of the regiment of Havana, as governor of the province, and yielded him the chair. But under his own higher commission of captain-general he continued for a time in control. He established in force the laws of Castile and the Indies and the use of the Spanish tongue in the courts and the public offices. . . . Spanish rule in Louisiana was better, at least, than French, which, it is true, scarcely deserved the name of government. As to the laws themselves, it is worthy of notice that Louisiana 'is at this time the only State, of the vast territories acquired from France, Spain, and Mexico, in which the civil law has been retained, and forms a large portion of its jurisprudence.' On the 29th of October, 1770, O'Reilly sailed from New Orleans with most of his troops, leaving the Spanish power entirely and peacefully established. The force left by him in the colony amounted to 1,200 men. He had dealt a sudden and terrible blow; but he had followed it only with velvet strokes."—G. W. Cable, *The Creoles of Louisiana*, ch. 10-11.

A. D. 1779-1781.—Spanish reconquest of West Florida. See FLORIDA: A. D. 1779-1781.

A. D. 1785-1800.—The question of the Navigation of the Mississippi, in dispute between Spain and the United States.—Discontent of settlers in Kentucky and Tennessee.—Wilkinson's intrigues.—"Settlers in considerable numbers had crossed the mountains into Kentucky and Tennessee while the war of Independence was in progress. . . . At once it became a question of vital importance how these people were to find avenues of commerce with the outer world. . . . Immigration to the interior must cross the mountains; but the natural highway for commerce was the Mississippi River. If the use of this river were left free, nothing better could be desired. Unfortunately it was not free. The east bank of the river, as far south as the north boundary of Florida [which included some part of the present states of Alabama and Mississippi, but with the northern boundary in dispute—see FLORIDA: A. D. 1783-1787], was the property of the United States, but the west bank, together with the island of Orleans, was held by Spain. That power, while conceding to the people of the United States the free navigation of the Mississippi as far down as the American ownership of the left bank extended, claimed exclusive jurisdiction below that line, and proposed to exact customs duties from such American commerce as should pass in or out of the mouth of the river. This pretension if yielded to would place

all that commerce at the mercy of Spain, and render not merely the navigation of the river of little value, but the very land from which the commerce sprung. It was inconceivable that such pretensions should be tolerated if successful resistance were possible, but the settlers were able to combat it on two grounds, either of which seemed, according to recognized rules of international law, conclusive. First, As citizens of the country owning one of the banks on the upper portion of the stream, they claimed the free navigation to the sea with the privilege of a landing place at its mouth as a natural right; and they were able to fortify this claim—if it needed support—with the opinions of publicists of acknowledged authority. Second, They claimed under the treaty of 1763 between Great Britain and France, whereby the latter, then the owner of Louisiana, had conceded to the former the free navigation of the Mississippi in its whole breadth and length, with passage in and out of its mouth, subject to the payment of no duty whatsoever. . . . Thus both in natural right and by treaty concession the claim of the American settlers seemed incontrovertible, and perhaps it may fairly be said that the whole country agreed in this view. When Mr. Jay, while the war of independence was still in progress, was sent to Spain to negotiate a treaty of amity and assistance, he was specially charged with the duty to see that the free navigation of the Mississippi was conceded. All his endeavors to that end, however, resulted in failure, and he was compelled to return home with the American claim still disputed. In 1785 the negotiation was transferred to this country, and Mr. Jay renewed his effort to obtain concessions, but without avail. The tenacity with which Spain held to its claim was so persistent that Congress in its anxiety to obtain a treaty of commerce finally instructed Mr. Jay on its behalf to consent that for twenty-five years the United States should forbear to claim the right in dispute. The instruction was given by the vote of the seven Northern States against a united South; and the action was so distinctly sectional as to threaten the stability of the Union. . . . In the West the feeling of dissatisfaction was most intense and uncompromising. The settlers of Kentucky already deemed themselves sufficiently numerous and powerful to be entitled to set up a state government of their own, and to have a voice in the councils of the Confederation. . . . In Tennessee as well as in Kentucky settlements had been going on rapidly; and perhaps in the former even more distinctly than in the latter a growing indifference to the national bond was manifest. . . . One of the difficult questions which confronted the new government, formed under the Federal constitution, was how to deal with this feeling and control or remove it. Spanish levies on American commerce were in some cases almost prohibitory, reaching fifty or seventy-five per cent. ad valorem, and it was quite out of the question that hardy backwoodsmen trained to arms should for any considerable time submit to pay them. If the national government failed to secure their rights by diplomacy, they would seek redress in such other way as might be open to them. . . . Among the most prominent of the Kentucky settlers was Gen. James Wilkinson, who had gone there as a merchant in 1784. He was shortly found advocating, though somewhat covertly, the setting up of an

independent State Government. In 1787 he opened trade with New Orleans, and endeavored to impress upon the Spanish authorities the importance of an amicable understanding with the settlers in the Ohio valley. His representations for a time had considerable effect, and the trade was not only relieved of oppressive burdens, but Americans were invited to make settlements within Spanish limits in Louisiana and West Florida. A considerable settlement was actually made at New Madrid under this invitation. But there is no reason to believe that genuine good feeling inspired this policy; the purpose plainly in view was to build up a Spanish party among the American settlers and eventually to detach them from the United States. But the course pursued was variable, being characterized in turn by liberality and by rigor. Wilkinson appears to have been allowed special privileges in trade, and this, together with the fact that he was known to receive a heavy remittance from New Orleans, begat a suspicion that he was under Spanish pay; a suspicion from which he was never wholly relieved, and which probably to some extent affected the judgment of men when he came under further suspicion in consequence of equivocal relations with Aaron Burr. In 1789 a British emissary made his appearance in Kentucky, whose mission seemed to be to sound the sentiments of the people respecting union with Canada. He came at a bad time for his purposes; for the feeling of the country against Great Britain was then at its height, and was particularly strong in the West, where the failure to deliver up the posts within American limits was known to have been influential in encouraging Indian hostilities. The British agent, therefore, met with anything but friendly reception. . . . Meantime Spain had become so far complicated in European wars as to be solicitous regarding the preservation of her own American possessions, then bordered by a hostile people, and at her suggestion an envoy was sent by the United States to Madrid, with whom in October 1795 a treaty was made, whereby among other things it was agreed that Spain should permit the people of the United States for the term of three years to make use of the port of New Orleans as a place of deposit for their produce and merchandise, and to export the same free from all duty or charge except for storage and incidental expenses. At the end of the three years the treaty contemplated further negotiations, and it was hoped by the American authorities that a decisive step had been taken towards the complete recognition of American claims. The treaty, however, was far from satisfying the people of Kentucky and Tennessee, who looked upon the assent of Spain to it as a mere makeshift for the protection of her territory from invasion. Projects for taking forcible possession of the mouth of the Mississippi continued therefore to be agitated. . . . The schemes of Don Francisco de Miranda for the overthrow of Spanish authority in America now became important. Miranda was of Spanish-American birth, and had been in the United States while the war of Independence was pending and formed acquaintance among the American officers. Conceiving the idea of liberating the Spanish colonies, he sought assistance from England and Russia, but when the French Revolution occurred he enlisted in the French service and for a time held important military positions.

Driven from France in 1797 he took up his old scheme again, looking now to England and America for the necessary assistance. Several leading American statesmen were approached on the subject, Hamilton among them; and while the relations between France and the United States seemed likely to result in war, that great man, who had no fear of evils likely to result from the extension of territory, listened with approval to the project of a combined attack by British and American forces on the Spanish Colonies, and would have been willing, with the approval of the government, to personally take part in it. President Adams, however, frowned upon the scheme, and it was necessarily but with great reluctance abandoned. And now occurred an event of highest interest to the people of the United States. Spain, aware of her precarious hold upon Louisiana, in 1800 retroceded it to France.—T. M. Cooley, *The Acquisition of Louisiana* (*Indiana Hist. Soc. Pamphlets*, no. 3).

A. D. 1798-1803.—The last days of Spanish rule.—The great domain transferred to France, and sold by Napoleon to the United States.—The bounds of the purchase.—"During the years 1796-97 the Spanish authorities exhausted every means for delaying a confirmation of the boundary line as set forth in the treaty of 1783. By one pretext and another, they avoided the surrender of the Natchez territory and continued to hold the military posts therein. Not until the 23d of March, 1798, was the final step taken by which the Federal Government was permitted to occupy in full the province of Mississippi. . . . Soon after this we find the newly made territory of Mississippi occupied by a Federal force, and, strange to say, with Gen. Wilkinson in command. The man who but lately had been playing the rôle of traitor, spy, insurrectionist and smuggler, was now chief commander on the border and was building a fort at Loftus Heights just above the boundary line. The new governor of Louisiana [Gayoso de Lemos], seeing the hope of detaching Kentucky and Tennessee fall dead at his feet, finally turned back to the old policy of restricting immigration and of discriminating against Protestants. By the treaty signed at Madrid in 1795, it had been stipulated that the citizens of the United States should not only have free navigation of the Mississippi River, but that they should also have the right to deposit in New Orleans all their produce during the space of three years. This limit, it was agreed, was to be extended by the Spanish Government, or, instead of an extension of time, a new point on the island of New Orleans was to be designated for depot. But at the expiration of the three years Morales, the Spanish intendant at New Orleans, declined to permit further deposits there, and refused to designate another place in accordance with the stipulation. This action aroused the people of the West; a storm of resentment broke forth and the government of the United States was forced to make a threatening demonstration in the direction of Louisiana.

Three regiments of the regular army were at once dispatched to the Ohio. The people flew to arms. Invasion appeared imminent." But the Spanish authorities gave way, and a new intendant at New Orleans "received from his Government orders to remove the interdiction issued by Gayoso and to restore to the Western people the right of deposit at New Orleans. These orders he promptly obeyed, thus reviving good feelings between his province and the United States. Trade revived; immigration increased. . . . The deluge of immigration startled the Spaniards. They saw to what it was swiftly tending. A few more years and this tide would rise too high to be resisted and Louisiana would be lost to the king, lost to the holy religion, given over to freedom, republicanism and ruin. . . . On the 18th of July . . . [1802] the king ordered that no more grants of land be given to citizens of the United States. This effectually killed the commerce of the Mississippi River, and the indignation of the Western people knew no bounds. . . . Rumors, apparently well founded, were afloat that the irresistible genius of Napoleon was wringing the province from Spain and that this meant a division of the territories between France and the United States. To a large majority of Louisiana's population these were thrillingly welcome rumors. The very thought of once more becoming the subjects of France was enough to intoxicate them with delight. The treaty of Ildefonso, however, which had been ratified at Madrid on the 21st of March, 1801, had been kept a secret. Napoleon had hoped to occupy Louisiana with a strong army, consisting of 25,000 men, together with a fleet to guard the coast; but his implacable and ever watchful foe, England, discovered his design and thwarted it. But by the terms of the treaty, the colony and province of Louisiana had gone into his hands. He must take possession and hold it, or he must see England become its master. Pressed on every side at that time by wars and political complications and well understanding that it would endanger his power for him to undertake a grand American enterprise, he gladly opened negotiations with the United States looking to the cession of Louisiana to that Government. . . . Napoleon had agreed with Spain that Louisiana should not be ceded to any other power. . . . Diplomacy very quickly surmounted so small an obstacle. . . . The treaty of cession was signed on the 30th of April, 1803, the United States agreeing to pay France 60,000,000 francs as the purchase price of the territory. . . . In addition, the sum due American citizens . . . was assumed by the United States. The treaty of April was ratified by Napoleon in May, 1803, and by the Senate of the United States in October. . . . Pausing to glance at this strange transaction, by which one republic sells outright to another republic a whole country without in the least consulting the wishes of the inhabitants, whose allegiance and all of whose political and civil rights are changed thereby, we are tempted to wonder if the republic of the United States could to-day sell Louisiana with the same impunity that attended the purchase! She bought the country and its people, just as she might have bought a desert island with its goats."—M. Thompson, *The Story of Louisiana*, ch. 6, with foot-note.—"No one could say what was the southwest boundary

of the territory acquired; whether it should be the Sabine or the Rio del Norte; and a controversy with Spain on the subject might at any time arise. The northwest boundary was also somewhat vague and uncertain, and would be open to controversy with Great Britain. [That] the territory extended west to the Rocky Mountains was not questioned, but it might be claimed that it extended to the Pacific. An impression that it did so extend has since prevailed in some quarters, and in some public papers and documents it has been assumed as an undoubted fact. But neither Mr. Jefferson nor the French, whose right he purchased, ever claimed for Louisiana any such extent, and our title to Oregon has been safely deduced from other sources. Mr. Jefferson said expressly: 'To the waters of the Pacific we can found no claim in right of Louisiana.'—Judge T. M. Cooley, *The Acquisition of Louisiana* (Indiana Hist. Soc. Pamphlets, no. 3).—"By the charter of Louis XIV., the country purchased to the north included all that was contiguous to the waters that flowed into the Mississippi. Consequently its northern boundary was the summit of the highlands in which its northern waters rise. By the tenth article of the treaty of Utrecht, France and England agreed to appoint commissioners to settle the boundary, and these commissioners, as such boundary, marked this summit on the 49th parallel of north latitude. This would not carry the rights of the United States beyond the Rocky Mountains. The claim to the territory beyond was based upon the principle of continuity, the prolongation of the territory to the adjacent great body of water. As against Great Britain, the claim was founded on the treaty of 1763, between France and Great Britain, by which the latter power ceded to the former all its rights west of the Mississippi River. The United States succeeded to all the rights of France. Besides this, there was an independent claim created by the discovery of the Columbia River by Gray, in 1792, and its exploration by Lewis and Clarke. All this was added to by the cession by Spain, in 1819, of any title that it had to all territory north of the 42d degree."—Rt. Rev. C. F. Robertson, *The Louisiana Purchase* (Papers of Am. Hist. Ass'n, v. 1, p. 259).—As its southwestern and southeastern boundaries were eventually settled by treaty with Spain [see FLORIDA: A. D. 1819-1821], the Louisiana purchase embraced 2,300 sq. miles in the present state of Alabama, west of the Perdido and on the gulf, below latitude 31° north; 3,600 sq. miles in the present state of Mississippi, south of the same latitude; the whole of the present states of Louisiana, Arkansas, Missouri, Iowa, Nebraska, and the Dakotas; Minnesota, west of the Mississippi; Kansas, all but the southwest corner; the whole of the Indian Territory, and so much of Colorado, Wyoming, and Montana as lies on the eastern slope of the Rocky Mountains. If it is held that the French claim was good to the Pacific, then we may say that we owe the remainder of Montana, with Idaho, Oregon and Washington to the same great purchase.—T. Donaldson, *The Public Domain*, p. 105.—On the constitutional and political aspects of the Louisiana purchase, see UNITED STATES: A. D. 1803.—Detailed accounts of the interesting circumstances and incidents connected with the negotiation at Paris will be found in the following works:—

H. Adams, *Hist. of the U. S.: First Administration of Jefferson*, v. 2, ch. 1-3.—D. C. Gilman, *James Monroe*, ch. 4.—B. Marbois, *Hist. of Louisiana*, pt. 2.—*Am. State Papers: Foreign Relations*, v. 2, pp. 506-583.

A. D. 1804-1805.—Lewis and Clark's exploration of the northwestern region of the purchase, to the Pacific. See UNITED STATES OF AM.: A. D. 1804-1805.

A. D. 1804-1812.—The purchase divided into the Territories of Orleans and Louisiana.—The first named becomes the State of Louisiana; the second becomes the Territory of Missouri.—“On the 26th of March, 1804, Congress passed an act dividing the province into two parts on the 33d parallel of latitude, the present northern boundary of Louisiana, and establishing for the lower portion a distinct territorial government, under the title of the territory of Orleans. The act was to go into effect in the following October. One of its provisions was the interdiction of the slave-trade. . . . The labors of the legislative council began on the 4th of December. A charter of incorporation was given by it to the city of New Orleans.”—G. E. Waring, Jr., and G. W. Cable, *Hist. and Present Condition of New Orleans (U. S. Tenth Census, v. 19)*, pp. 32-33.—“All north of the 33d parallel of north latitude was formed into a district, and styled the District of Louisiana. For judicial and administrative purposes this district, or upper Louisiana as we shall continue to call it, was attached to the territory of Indiana.” But in March, 1805, Congress passed an act “which erected the district into a territory of the first or lowest grade, and changed its title from the District to the Territory of Louisiana.” Seven years later, in June 1812, the Territory of Orleans (the lower Louisiana of old) having been received into the federal Union as the State of Louisiana, the territory which bore the ancient name was advanced by act of Congress “from the first to the second grade of territories, and its name changed to Missouri.”—L. Carr, *Missouri*, ch. 5.

A. D. 1806-1807.—Burr's Filibustering conspiracy. See UNITED STATES OF AM.: A. D. 1806-1807.

A. D. 1812.—The Territory of Orleans admitted to the Union as the State of Louisiana.—“The population of the Territory of Orleans had been augmented annually by emigration from the United States. According to the census of 1810, the whole territory, exclusive of the Florida parishes, contained an aggregate of 76,550 souls. Of this number, the city of New Orleans and its precincts contained 24,552 persons, leaving 52,000 souls for the remainder of the territory. Besides these, the inhabitants of the Florida parishes amounted, probably, to not less than 2,500, including slaves. . . . Congress, by an act approved February 11th, 1811, . . . authorized the election of a convention to adopt a Constitution, preparatory to the admission of the Territory into the Union as an independent state. The convention, consisting of 60 delegates from the original parishes, met according to law, on the first Monday in November, and concluded its labors on the 22d day of January following, having adopted a Constitution for the proposed new ‘State of Louisiana.’ . . . The Constitution was accepted by Congress, and the State of Louisiana was formally admitted into

the Union on the 8th day of April, 1812, upon an equal footing with the original states, from and after the 30th day of April, it being the ninth anniversary of the treaty of Paris. A few days subsequently, a ‘supplemental act’ of Congress extended the limits of the new state by the addition of the Florida parishes [see FLORIDA: A. D. 1810-1813]. This gave it the boundaries it has at present.”—J. W. Monette, *Discovery and Settlement of the Valley of the Mississippi*, bk. 5, ch. 15 (v. 2).

A. D. 1865-1867.—The first Reconstruction experiment.—The Riot at New Orleans.—Establishment of military rule.—“In 1865 the returned Confederates, restored to citizenship by the President's amnesty proclamation [see UNITED STATES OF AM.: A. D. 1865 (MAY—JULY)], soon got control of almost all the State [as reorganized under the constitution framed and adopted in 1864]. The Legislature was in their hands, as well as most of the State and municipal offices; so, when the President, on the 20th of August, 1866, by proclamation, extended his previous instructions regarding civil affairs in Texas so as to have them apply to all the seceded States, there at once began in Louisiana a system of discriminative legislation directed against the freedmen, that led to flagrant wrongs in the enforcement of labor contracts, and in the remote parishes to numbers of outrages and murders. To remedy this deplorable condition of things, it was proposed, by those who had established the government of 1864, to remodel the constitution of the State; and they sought to do this by re-assembling the convention, that body before its adjournment having provided for reconvening under certain conditions, in obedience to the call of its president. Therefore, early in the summer of 1866, many members of this convention met in conference at New Orleans, and decided that a necessity existed for reconvening the delegates, and a proclamation was issued accordingly by B. K. Howell, President pro tempore. Mayor

John T. Monroe and the other officials of New Orleans looked upon this proposed action as revolutionary, and by the time the convention assembled (July 30) such bitterness of feeling prevailed that efforts were made by the mayor and city police to suppress the meeting. A bloody riot followed, resulting in the killing and wounding of about 160 persons. I happened [the writer is General Sheridan, then in command of the Military Division of the Gulf] to be absent from the city at the time, returning from Texas, where I had been called by affairs on the Rio Grande. On my way up from the mouth of the Mississippi I was met on the night of July 30 by one of my staff, who reported what had occurred, giving the details of the massacre—no milder term is fitting—and informing me that, to prevent further slaughter, General Baird, the senior military officer present, had assumed control of the municipal government. On reaching the city I made an investigation, and that night sent [a brief report, which was followed, on the 6th of August, by an extended account of the facts of the riot, containing the following statements]: . . . 'The convention assembled at 12 M. on the 30th, the timid members absenting themselves because the tone of the general public was ominous of trouble. . . . About 1 P. M. a procession of say from 60 to 130 colored men marched up Burgundy Street and across Canal Street toward the convention, carrying an American flag. These men had about one pistol to every ten men, and canes and clubs in addition. While crossing Canal Street a row occurred. . . . On arrival at the front of the Institute [where the convention was held] there was some throwing of brickbats by both sides. The police, who had been held well in hand, were vigorously marched to the scene of disorder. The procession entered the Institute with the flag, about 6 or 8 remaining outside. A row occurred between a policeman and one of these colored men, and a shot was again fired by one of the parties, which led to an indiscriminate fire on the building through the windows by the policemen. This had been going on for a short time, when a white flag was displayed from the windows of the Institute, whereupon the firing ceased, and the police rushed into the building. From the testimony of wounded men, and others who were inside the building, the policemen opened an indiscriminate fire upon the audience until they had emptied their revolvers, when they retired, and those inside barricaded the doors. The door was broken in, and the firing again commenced, when many of the colored and white people either escaped throughout the door or were passed out by the policemen inside; but as they came out the policemen who formed the circle nearest the building fired upon them, and they were again fired upon by the citizens that formed the outer circle. Many of those wounded and taken prisoners, and others who were prisoners and not wounded, were fired upon by their captors and by citizens. The wounded were stabbed while lying on the ground, and their heads beaten with brickbats. . . . Some were killed and wounded several squares from the scene.' . . . Subsequently a military commission investigated the subject of the riot, taking a great deal of testimony. The commission substantially confirmed the conclusions given in my despatches, and still later there

was an investigation by a select committee of the House of Representatives. . . . A list of the killed and wounded was embraced in the committee's report, and among other conclusions reached were the following: . . . 'This riotous attack upon the convention, with its terrible results of massacre and murder, was not an accident. It was the determined purpose of the mayor of the city of New Orleans to break up this convention by armed force.' . . . The committee held that no legal government existed in Louisiana, and recommended the temporary establishment of a provisional government therein." In the following March the Military Reconstruction Acts were passed by Congress—see UNITED STATES OF AM.: A. D. 1867 (MARCH)—and General Sheridan was assigned to the command of the fifth military district therein defined, consisting of Louisiana and Texas.—P. H. Sheridan, *Personal Memoirs*, v. 2, ch. 10-11.

LOUVRE, The.—"The early history of the Louvre is involved in great obscurity. The name of its founder and the period of its erection are alike unknown; the first notice of it we meet with upon record is in the 7th century, when Dagobert kept here his horses and hounds. The kings [Merovingians] called 'fainéans' often visited it, when after dinner they rode in a sort of coach through the forest, which covered this side of the river, and in the evening returned in a boat, fishing by the way, to the city, where they supped and slept. There is no mention of this royal dwelling under the second, nor even under the third race of kings, till the reign of Philip Augustus. About the year 1204, that prince converted it into a kind of citadel, surrounded with wide ditches and flanked with towers. . . . The walls erected by Philip Augustus did not take in the Louvre, but after having remained outside of Paris more than six centuries, it was enclosed by the walls begun in 1367, under Charles V., and finished in 1383, under Charles VI. . . . Charles IX., Henry III., Henry IV., and Louis XIII., inhabited the Louvre and added to its buildings. Nothing remains of the old château of Philip Augustus, which Charles V. repaired; the most ancient part now in existence is that called 'le Vieux Louvre,' begun by Francis I. in 1539, and finished by Henry II. in 1548."—*Hist. of Paris (London, 1827), ch. 2 (n. 2).*—"The origin of the word Louvre is believed to be a Saxon word, 'Leowar' or 'Lower,' which meant a fortified camp. . . . Francis I. did little more than decide the fate of

the old Louvre by introducing the new fashion. His successors went on with the work; and the progress of it may be followed, reign after reign, till the last visible fragment of the Gothic castle had been ruthlessly carted away. . . . Vast as is the Louvre that we know, it is as nothing in comparison with the prodigious scheme imagined by Richelieu and Louis XIII.; a scheme which, though never carried out, gave a very strong impulse to the works, and ensured the completion of the present building, at least in a subsequent reign. . . . Happily for the Louvre Louis XIV. interested himself in it before he engulfed his millions at Marly and Versailles. . . . The sums of money expended on the Louvre and Tuileries defy all calculation. . . . The greatest spender on these palaces was Napoleon III."—P. G. Hamerton, *Paris in Old and Present Times*, ch. 6.

LUBECK: Origin and rise.—"Near the mouth of the river Trave there had long existed a small settlement of pirates or fishermen. The convenience of the harbour had led to this settlement and it had been much frequented by Christian merchants. The unsettled state of the country, however, afforded them little security, and it had been often taken and plundered by the Pagan freebooters. When Henry acquired the dominion of the soil [Henry the Lion, Duke of Saxony, who subdued the heathen Wendish tribe of the Oborites, A. D. 1165, and added their country to his dominions] he paid particular attention to this infant establishment, and under the shadow of his power the city of Lubeck (for so it became) arose on a broad and permanent basis. He made it . . . the seat of a bishop; he also established a mint and a custom-house, and by the grant of a municipal government, he secured the personal, while he prepared the way for the political, rights of its burghers. The ancient name of the harbour was Wisby, and by a proclamation addressed to the Danes, Norwegians, Swedes, and Russians, he invited them to frequent it, with an assurance that the ways should be open and secure by land and water. . . . This judicious policy was rewarded by a rapid and large increase to the wealth and commerce of Lubeck."—Sir A. Halliday, *Annals of the House of Hanover*, v. 1, pp. 229–230.—See, also, **IIANSA TOWNS**.

LUDI.—LUDI CIRCENSES, ETC.—

"Public games (Ludi) formed an important feature in the worship of the gods [in ancient Rome], and in the earlier ages were always regarded as religious rites; so that the words Ludi, Feriae and Dies Festi are frequently employed as synonymous. Games celebrated every year upon a fixed day were denominated Ludi Stati. Such were the Ludi Romani s. Magni, held invariably on the 21st of September; the Megalesia on 4th April; the Floralia on 28th April, and many others. . . . Another classification of Ludi was derived from the place where they were exhibited and the nature of the exhibition . . . : 1. Ludi Circenses, chariot races and other games exhibited in a circus. 2. Ludi Scenici, dramatic entertainments exhibited in a theatre. 3. Munera Gladiatoria, prize-fights, which were

LUDI.

usually exhibited in an amphitheatre."—W. Ramsay, *Manual of Roman Antiq.*, ch. 10.

LUPERCAL.—LUPERCALIA.—The Lupercal was the wolf cave in which, according to Roman legend, the twins, Romulus and Remus, were nursed by a she-wolf. It was supposed to be situated at the foot of the Palatine Hill. "The Lupercal is described by Dionysius as having once been a large grotto, shaded with thick bushes and large trees, and containing a copious spring of water. This grotto was dedicated to Lupercus, an ancient Latin pastoral divinity, who was worshipped by shepherds as the protector of their flocks against wolves. A festival was held every year, on the 15th of February, in the Lupercal, in honour of Lupercus; the place contained an altar and a grove sacred to the god. . . . Gibbon tells us the festival of the Lupercalia, whose origin had preceded the foundation of Rome, was still celebrated in the reign of Anthemius, 472 A. D."—H. M. Westropp, *Early and Imperial Rome*, p. 35.—"At the Lupercalia youths ran through the streets dressed in goats' skins, beating all those they met with strips of goats' leather."—W. Ihne, *Hist. of Rome*, bk. 1, ch. 13.

LUSITANIA.—THE LUSITANIANS.—The Lusitani or Lusitanians were the people who resisted the Roman conquest of Spain most obstinately—with even more resolution than their neighbors and kinsmen, the Celtiberians. In 153 B. C. they defeated a Roman army, which lost 6,000 men. The following year they inflicted another defeat, on the prætor Mummius, who lost 9,000 of his soldiers. Again, in 151, the prætor Galba suffered a loss of 7,000 men at their hands. But, in 150, Galba ravaged the Lusitanian country so effectually that they

LUXEMBURG.

sued for peace. Pretending to arrange terms of friendship with them, this infamous Roman persuaded three large bands of the Lusitanians to lay down their arms, which being done he surrounded them with his troops and massacred them in cold blood. One of the few who escaped was a man named Viriathus, who became thenceforth the leader of his surviving countrymen in a guerrilla warfare which lasted for ten years, and which cost the Romans thousands of men. In the end they could not vanquish Viriathus, but basely bribed some traitors in his own camp to murder him. The Roman province which was afterwards formed out of the country of the Lusitanians, and which took their name, has been mistakenly identified with the modern kingdom of Portugal, which it coincided with only in part.—W. Ihne, *Hist. of Rome*, bk. 5, ch. 6 (v. 3).

LUSTRUM.—After the [Roman] Censors had concluded the various duties committed to their charge, they proceeded in the last place to offer up, on behalf of the whole Roman people, the great expiatory sacrifice called Lustrum, and this being offered up once only in the space of five years, the term Lustrum is frequently employed to denote that space of time. . . . On the day fixed, the whole body of the people were summoned to assemble in the Campus Martius in martial order (exercitus) ranked according to their Classes and Centuries, horse and foot. The victims, consisting of a sow, a sheep, and a bull, whence the sacrifice was termed *Suovetaurilia*, before being led to the altar, were carried thrice round the multitude, who were then held to be purified and absolved from sin, and while the immolation took place the Censor recited a set form of prayer for the preservation and aggrandizement of the Roman State."—W. Ramsay, *Manual of Roman Antiq.*, ch. 5.

LUTETIA, OR LUKETIA, OR LUCOTECIA.—The beginning of the great city of Paris was represented by a small town named as above—the stronghold of the Gallic people called the *Parisii*—built on one of the islands in the Seine which Paris now covers and surrounds. See **PARIS, BEGINNING OF.**

LYCIAN LEAGUE, The.—"Probably the best constructed Federal Government that the ancient world beheld. The account given by Strabo, our sole authority, is so full, clear, and brief, that I cannot do better than translate it. The 'ancestral constitution of the Lykian League' is described by the great geographer in these words: 'There are three and twenty cities which have a share in the suffrage, and they come together from each city in the common Federal Assembly, choosing for their place of meeting any city which they think best. And, among the cities, the greatest are possessed of three votes apiece, the middle ones of two, and the rest of one; and in the same proportion they pay taxes, and take their share of other public burthens. . . . And, in the Federal Assembly, first the Lykiarch is chosen and then the other Magistrates of the League, and bodies of Federal Judges are appointed; and formerly they used to consult about war, and peace, and alliance; this now, of course, they cannot do, but these things must needs rest with the Romans.' . . . On the practical working of this constitution Strabo bestows the highest praise. Lykia was, in his day, a Roman dependency, but it retained its own laws and internal government."—E. A. Freeman, *Hist. of Federal Govt.*, ch. 4, sect. 4.

LYCIANS, The.—The people who occupied in ancient times the extreme southern peninsula of Asia Minor. "The ancients knew of no un-mixed population in this district. The Phœnicians explored the Lycian Taurus as well as the Cilician; and by land also Semitic tribes seem to have immigrated out of Syria and Cilicia; and these tribes formed the tribe of the Solymi. Another influx of population was conducted to this coast by means of the Rhodian chain of islands: men of Crete came across, who called themselves Termili or Trameii, and venerated Sarpedon as their Hero. After an arduous struggle, they gradually made themselves masters of the land encircled by sea and rock. . . . From the mouth of the Xanthus the Cretans entered the land. There Leto had first found a hospitable reception; in Patara, near by, arose the first great temple of Apollo, the god of light, or Lycius, with the worship of whom the inhabitants of the land became subsequently to such a degree identified as to receive themselves from the Greeks on whose coasts they landed the same name as the god, viz., Lycians. . . . We know that the Lycians, in courage and knowledge of the sea fully the equals of the most seafaring nation of the Archipelago, from a desire of an orderly political life, renounced at an early period the public practice of piracy, which their neighbours in Pisidia and Cilicia never relinquished. Their patriotism they proved in heroic struggles, and in the quiet of home developed a greater refine-

ment of manners, to which the special honour in which they held the female sex bears marked testimony."—E. Curtius, *Hist. of Greece*, bk. 1, ch. 3 (v. 1).

LYCURGUS, Constitution of. See SPARTA: THE CONSTITUTION.

LYDIANS, The.—"On the western coast of Asia Minor the nation of the Lydians, which possessed the vallies of the Hermus and Mæander, had early arrived at a monarchy and a point of civilization far in advance of the stages of primitive life. . . . When the Greeks forced the Phœnicians from the islands of the Ægean sea, and then, about the end of the eleventh and beginning of the tenth century, B. C., landed on the western coast of Asia Minor, the Lydians were not able any more than the Teucerians and Mysians in the North, or the Carians in the South, to prevent the establishment of the Greeks on their coasts, the loss of the ancient native sanctuaries at Smyrna, Colophon, Ephesus, and the founding of Greek cities in their land on the mouths of the Lydian rivers, the Hermus and the Cayster, though the Greek emigrants came in isolated expeditions over the sea. It was on the Lydian coasts that the most important Greek cities rose: Cyme, Phocæa, Smyrna, Colophon, Ephesus. Priene, Myus, and Miletus were on the land of the Carians."—M. Duncker, *Hist. of Antiquity*, bk. 4, ch. 17.—"On the basis of a population related to the Phrygians and Armenians arose the nation of the Lydians, which through its original ancestor, Lud, would appear in Eastern tradition also to be reckoned as a member of the Semitic family. As long as we remain unacquainted with the spoken and written language of the Lydians, it will be impossible to define with any accuracy the mixture of peoples which here took place. But, speaking generally, there is no doubt of the double relationship of this people, and of its consequent important place in civilization among the groups of the nations of Asia Minor. The Lydiaus became on land, as the Phœnicians by sea, the mediators between Hellas and Anterior Asia. . . . The Lydians are the first among the nations of Asia Minor of whom we have any intimate knowledge as a political community."—E. Curtius, *Hist. of Greece*, bk. 1, ch. 3 (v. 1).—The first, perhaps legendary, dynasty of Lydia, called the Atyadæ, was followed by one called the Herakleidæ by the Greeks, which is said to have ruled over 500 years. The last king of that family, Kandaules, was murdered, about B. C. 715, by Gyges, who founded the dynasty of the Mermnadæ, under whom the Lydian dominion was extended over most of Asia Minor, and its kings contended on fairly equal terms with the power of the Medes. But their monarchy was overthrown by Cyrus, B. C. 546, and the famous Cræsus, last of their line, ended his days as an attendant and counselor of the Persian king.—G. Grote, *Hist. of Greece*, pt. 2, ch. 17 and 32.—Recent discoveries tend to the conclusion that the primitive inhabitants of Lydia were of a race to which the Hittites belonged.—A. H. Sayce, ed., *Ancient Empires of the East*, app. 4.—See, also, ASIA MINOR: B. C. 724-539; and PERSIA: B. C. 549-521.

LYGIANS, The.—"Of all the invaders of Gaul [in the reign of Probus, A. D. 277] the most formidable were the Lygians, a distant people who reigned over a wide domain on the frontiers of Poland and Silesia. In the Lygian

nation the Aarii held the first rank by their numbers and fierceness. 'The Aarii' (it is thus that they are described by the energy of Tacitus) 'study to improve by art and circumstances the innate terrors of their barbarism. Their shields are black, their bodies are painted black. They choose for the combat the darkest hour of the night.' . . . Yet the arms and discipline of the Romans easily discomfited these horrid phantoms. The Lygii were defeated in a general engagement, and Semno, the most renowned of their chiefs, fell alive into the hands of Probus. That prudent emperor, unwilling to reduce a brave people to despair, granted them an honourable capitulation and permitted them to return in safety to their native country. But the losses which they suffered in the march, the battle, and the retreat, broke the power of the nation; nor is the Lygian name ever repeated in the history either of Germany or of the empire."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 12.—"Lygii appears to have been the generic name of the Slavonians on the Vistula. They are the same people as those called Lekhs by Nestor, the Russian chronicler of the twelfth century. These Lekhs are the ancestors of the Poles. See Latham, *The Germania of Tacitus*, p. 158."—W. Smith, *Note to above, from Gibbon*.—"The Ligii were a widely-spread tribe, comprehending several clans. Tacitus names the Harii [or Aarii], Helvecones, Manimi, Elisii, and Nahanarvali. Their territory was between the Oder and Vistula, and would include the greater part of Poland, and probably a portion of Silesia."—Church and Brodribb, *Geog. Notes to the Germania of Tacitus*.—"The Elysii are supposed to have given name to Silesia."—*Note to the Oxford Trans. of Tacitus: Germany*, ch. 43.

LYONS: Under the Romans.—Minutius Plancus, Roman governor of Gallia Comata, or the Gaul of Cæsar's conquest, founded, B. C. 43, a city called Lugdunum, at the confluence of the Rhone and the Saone. A few years later, under Augustus, it was made the capital of a province to which it gave its name—Lugdunensis—and which comprised the whole of central Gaul, between the Loire and the Seine with the Armorican peninsula. In time the name Lugdunum became softened and shorn to Lyons. Lyons, which stood on the west side of the Rhone, not so near the confluence of the Saone as now, appears to have been settled by fugitive Romans

driven out of Vienne by another party. It grew with as marvelous a rapidity as some of our western cities, for in fifteen years it swelled from a simple colony into a metropolis of considerable splendor. . . . Lugdun appears to have been a Keltic designation, and, as the 'g' in that speech took the sound of 'y' and 'd' was silent, we can easily see how the name became Lyon."—P. Godwin, *Hist. of France: Ancient Gaul*, bk. 2, ch. 5, with foot-note.—"Not having originated out of a Celtic canton, and hence always with a territory of narrow limits, but from the outset composed of Italians and in possession of the full Roman franchise, it [Lyons] stood forth unique in its kind among the communities of the three Gauls—as respects its legal relations, in some measure resembling Washington in the North American federation. . . . Only the governor of the middle or Lugdunensian province had his seat there; but when emperors or princes stayed in Gaul they as a rule resided in Lyons. Lyons was, alongside of Carthage, the only city of the Latin half of the empire which obtained a standing garrison, after the model of that of the capital. The only mint for imperial money which we can point to with certainty, for the earlier period of the empire, is that of Lyons. Here was the headquarters of the transit-dues which embraced all Gaul; and to this as a centre the Gallic network of roads converged. . . . Thus Lugdunum rapidly rose into prosperity. . . . In the later period of the empire, no doubt, it fell behind Treves."—T. Mommsen, *Hist. of Rome*, bk. 8, ch. 3.

MACE, as a symbol of authority, The.—“The club or mace, formed originally of hard wood, and the latter, subsequently either wholly or in part of metal, would naturally be adopted as one of the earliest weapons of primitive man, but it soon came to be regarded as a symbol of authority. . . . In the Middle Ages the mace was a common weapon with ecclesiastics, who, in consequence of their tenures, frequently took the field, but were, by a canon of the Church, forbidden to wield the sword. It strikes me as not improbable that in this custom we have the origin of the use of the mace as a symbol of authority by our cathedral and other ancient religious bodies. . . . In all probability its use by lay corporations may be traced to the corps of sergeants-at-mace, instituted as a body-guard both by Philip Augustus of France and our own Richard I., whilst with the Crusaders in Palestine. We learn that when the former monarch was in the Holy Land he found it necessary to secure his person from the emissaries of a sheik, called ‘the Old Man of the Mountain,’ who bound themselves to assassinate whomsoever he assigned. ‘When the king,’ says an ancient chronicler, ‘heard of this he began to reflect seriously, and took counsel how he might best guard his person. He therefore instituted a guard of sergeants-à-maces who night and day were to be about his person in order to protect him.’ These sergens-à-maces were ‘afterwards called sergeants-at-arms, for Jean Bouteiller . . . , who lived in the time of Charles VI., that is, at the conclusion of the fourteenth century tells us, ‘The sergens d’armes are the mace-bearers that the king has to perform his duty, and who carry maces before the king; these are called sergeants-at-arms, because they are sergeants for the king’s body.’” We learn further that Richard I. of England soon imitated the conduct of the French king, but he seems to have given his corps of sergeants-at-arms a more extensive power. Not only were they to watch round the king’s tent in complete armour, with a mace, a sword, a bow and arrows, but were

occasionally to arrest traitors and other offenders about the court, for which the mace was deemed a sufficient authority. . . . Hence, in all probability, was derived the custom of the chief magistrate of a municipality, who, as such, is the representative of the sovereign, being attended by his mace-bearer, as a symbol of the royal authority thus delegated to him.”—W. Kelly, *The Great Mace* (*Royal Hist. Soc. Trans.*, v. 3).

MACEDONIA AND MACEDONIANS, The.—“The Macedonians of the fourth century B. C. acquired, from the ability and enterprise of two successive kings, a great perfection in Greek military organization, without any of the loftier Hellenic qualities. Their career in Greece is purely destructive, extinguishing the free movement of the separate cities, and disarming the citizen-soldier to make room for the foreign mercenary whose sword was unhallowed by any feelings of patriotism—yet totally incompetent to substitute any good system of central or pacific administration. But the Macedonians of the seventh and sixth centuries B. C. are an aggregate only of rude inland tribes, subdivided into distinct petty principalities, and separated from the Greeks by a wider ethnical difference even than the Epirotes; since Herodotus, who considers the Epirotic Molossians and Thesprotians as children of Hellen, decidedly thinks the contrary respecting the Macedonians. In the main, however, they seem at this early period analogous to the Epirotes in character and civilization. They had some few towns, but they were chiefly village residents, extremely brave and pugnacious. . . . The original seats of the Macedonians were in the regions east of the chain of Skardus (the northerly continuation of Pindus)—north of the chain called the Cambunian mountains, which connects Olympus with Pindus, and which forms the north-western boundary of Thessaly; but they did not reach so far eastward as the Thermaic Gulf. . . . The Macedonian language was different from Illyrian, from Thracian, and seemingly also from Pæonian. It was also different from Greek, yet apparently not more widely distinct than that of the Epirotes; so that the acquisition of Greek was comparatively easy to the chiefs and people. . . . The large and comparatively productive region covered by the various sections of Macedonians, helps to explain that increase of ascendancy which they successively acquired over all their neighbours. It was not however until a late period that they became united under one government. At first, each section—how many we do not know—had its own prince or chief. The Elymiots, or inhabitants of Elymeia, the southernmost portion of Macedonia, were thus originally distinct and independent; also the Orestæ, in mountain-seats somewhat north-west of the Elymiots. . . . The section of the Macedonian name who afterwards swallowed up all the rest and became known as ‘The Macedonians’ had their original centre at Ægæ or Edessa—the lofty, commanding and picturesque site of the modern Vodhena.”—G. Grote, *Hist. of Greece*, pt. 2, ch. 25 (v. 3).

B. C. 334-330.—Invasion and conquest of the Persian empire by Alexander the Great.—Philip of Macedonia fell under the hand of an assassin in the midst of his preparations (B. C. 336) for the invasion of the Persian Empire. He was succeeded by his son, Alexander, who applied himself first, with significant energy, to the chastisement of the troublesome barbarians on his northern frontier, and to the crushing of revolt in Greece (see GREECE: B. C. 336-335). He had not yet been a year on the throne "when he stood forth a greater and more powerful sovereign than his father, with his empire united in the bonds of fear and admiration, and ready to carry out the long premeditated attack of the Greeks on the dominion of the Great king. . . . He had indeed a splendid army of all branches, heavy infantry, light infantry, slingers and archers, artillery such as the ancients could produce without gunpowder, and cavalry, both Thessalian and Macedonian, fit for both skirmishing and the shock of battle. If its numbers were not above 40,000, this moderate force was surely as much as any commander could handle in a rapid campaign with long marches through a hostile country. . . . After a Homeric landing on the coast near Ilium, and sacrifices to the Ilian goddess at her ancient shrine, with feasts and games, the king started East to meet the Persian satraps, who had collected their cavalry and Greek mercenary infantry on the plain of Zeleia, behind the river Granicus (B. C. 334). Here he fought his first great battle, and showed the nature of his tactics. He used his heavy infantry, divided into two columns or phalanxes as his left wing, flanked by Thessalian cavalry, to threaten the right of the enemy, and keep him engaged while he delivered his main attack. Developing this movement by a rapid advance in echeloned squadrons thrown forward to the right, threatening to outflank the enemy, he induced them to spread their forces towards their left wing, and so weaken their left centre. No sooner had he succeeded in this than he threw his heavy cavalry on this weak point, and after a very severe struggle in crossing the river, and climbing its rugged banks, he completely broke the enemy's line. . . . He did not strike straight into Asia, for this would have left it possible for Mentor and Memnon, the able Rhodians who commanded on the coast for Darius, either to have raised all Asia Minor against him, or to have transferred the war back to Macedon. . . . So then he seized Sardis, the key of all the highroads eastwards; he laid siege to Halicarnassus, which made a very long and stubborn resistance, and did not advance till he had his rear safe from attack.

Even with all these precautions, the Persian fleet, under Memnon, was producing serious difficulties, and had not that able general died at the critical moment (B. C. 333), the Spartan revolt, which was put down the following year in Greece, would have assumed serious proportions. Alexander now saw that he could press on, and strike at the headquarters of the enemies' power—Phœnicia and the Great king himself. He crossed the difficult range of the Taurus, the southern bulwark of the Persian Empire, and occupied Cilicia. Even the sea was supposed to have retreated to allow his army to pass along a narrow strand under precipitous cliffs. The Great king was awaiting him with a vast army—grossly exaggerated, moreover, in our Greek accounts—in the plain of Syria, near Damascus. Foolish advisers persuaded him, owing to some delay in Alexander's advance, to leave his favourable position, where the advantage of his hosts of cavalry was clear. He therefore actually crossed Alexander, who had passed on the sea side of Mount Amanus, southward, and occupied Issus on his rear. The Macedonian army was thus cut off from home, and a victory necessary to its very existence. The great battle of Issus was fought on such narrow ground, between the sea and the mountains, that neither side had room for outflanking its opponent, except by occupying the high ground on the inland side of the plain (B. C. 333). This was done by the Persians, and the banks of a little river (the Pinarus) crossing their front were fortified as at the Granicus. Alexander was obliged to advance with a large reserve to protect his right flank. As usual he attacked with his right centre, and as soon as he had shaken the troops opposed to him, wheeled to the left, and made straight for the king himself, who occupied the centre in his chariot. Had Darius withstood him bravely and for some time, the defeat of the Macedonians' left wing would probably have been complete, for the Persian cavalry on the coast, attacking the Thessalians on Alexander's left wing, were decidedly superior, and the Greek infantry was at this time a match for the phalanx. But the flight of Darius, and the panic which ensued about him, left Alexander leisure to turn to the assistance of his hard-pressed left wing, and recover the victory. . . . The greatness of this victory completely paralyzed all the revolt prepared in his rear by the Persian fleet. Alexander was now strong enough to go on without any base of operation, and he boldly (in the manifesto he addressed to Darius after the battle) proclaimed himself King of Persia by right of conquest, who would brook no equal. Nevertheless, he delayed many months (which the siege of Tyre [see TYRE: B. C. 332] cost him, B. C. 332), and then, passing through Jerusalem, and showing consideration for the Jews, he again paused at the siege of Gaza [see GAZA: B. C. 332], merely, we may suppose, to prove that he was invincible, and to settle once for all the question of the world's mastery. He delayed again for a short while in Egypt [see EGYPT: B. C. 332], when he regulated the country as a province under his sway, with kindness towards the inhabitants, and respect for their religion, and founded Alexandria; nay, he even here made his first essay in claiming divinity; and then, at last, set out to conquer the Eastern provinces of Darius' empire. The great decisive battle in the plains of

Mesopotamia (B. C. 331)—it is called either Arbela or Gaugamela—was spoken of as a trial of strength, and the enormous number of the Persian cavalry, acting on open ground, gave timid people room to fear; but Alexander had long since found out, what the British have found in their many Eastern wars, that even a valiant cavalry is helpless, if undisciplined, against an army of regulars under a competent commander.

. . . The Macedonian had again, however, failed to capture his opponent, for which he blamed Parmenio. . . . So then, though the issue of the war was not doubtful, there was still a real and legitimate rival to the throne, commanding the sympathies of most of his subjects. For the present, however, Alexander turned his attention to occupying the great capitals of the Persian empire—capitals of older kingdoms, embodied in the empire. . . . These great cities, Babylon in Mesopotamia, Susa (Shushan) in Elam, Persepolis in Persia proper, and Ecbatana in Media, were all full of ancient wealth and splendour, adorned with great palaces, and famed for monstrous treasures. The actual amount of gold and silver seized in these hoards (not less than £30,000,000 of English money, and perhaps a great deal more) had a far larger effect on the world than the discovery of gold and silver mines in recent times. Every adventurer in the army became suddenly rich; all the means and materials for luxury which the long civilization of the East had discovered and employed, were suddenly thrown into the hands of comparatively rude and even barbarous soldiers. It was a prey such as the Spaniards found in Mexico and Peru, but had a far stronger civilization, which must react upon the conquerors. And already Alexander showed clear signs that he regarded himself as no mere Macedonian or Greek king, but as the Emperor of the East, and successor in every sense of the unfortunate Darius. He made superhuman efforts to overtake Darius in his retreat from Ecbatana through the Parthian passes to the northern provinces—Balkh and Samarcand. The narrative of this famous pursuit is as wonderful as anything in Alexander's campaign. He only reached the fleeing Persian as he was dying of the wounds dealt him by the traitor Bessus, his satrap in Bactria, who had aspired to the crown (B. C. 330). Alexander signally executed the regicide, and himself married the daughter of Darius—who had no son—thus assuming, as far as possible, the character of Darius' legitimate successor."—J. P. Mahaffy, *The Story of Alexander's Empire*, ch. 2-3.

B. C. 330-323.—Alexander's conquest of Afghanistan, Bactria and Sogdiana.—His invasion of India.—His death at Babylon.—His character and aims.—"After reducing the country at the south of the Caspian, Alexander marched east and south, through what is now Persia and Afghanistan. On his way he founded the colony of Alexandria Arion, now Herat, an important military position on the western border of Afghanistan. At Prophthasia (Furrah), a little further south, he stayed two months. . . . Thence he went on eastwards and founded a city, said to be the modern Candahar, and then turned north and crossed the Hindu Koosh mountains, founding

another colony near what is now Cabul. Bessus had intended to resist Alexander in Bactria (Balkh), but he fled northwards, and was taken and put to death. Alexander kept on marching northwards, and took Mara Kanda, now Samarcand, the capital of Bokhara (B. C. 329). He crossed the river Jaxartes (Sir), running into the sea of Aral, and defeated the Scythians beyond it, but did not penetrate their country. He intended the Jaxartes to be the northern frontier of his empire. . . . The conquest of Sogdiana (Bokhara) gave Alexander some trouble, and occupied him till the year B. C. 327. In B. C. 327 Alexander set out from Bactria to conquer India [see INDIA: B. C. 327-312]. . . . Alexander was as eager for discovery as for conquest; and from the mouth of the Indus he sent his fleet, under the admiral Nearchus, to make their way along the coast to the mouth of the Euphrates. He himself marched westwards with the army through the deserts of Beloochistan, and brought them after terrible sufferings, through thirst, disease, and fatigue, again to Persepolis (B. C. 324). From this he went to Susa, where he stayed some months, investigating the conduct of his satraps, and punishing some of them severely. Since the battle of Arbela, Alexander had become more and more like a Persian king in his way of living, although he did not allow it to interfere with his activity. He dressed in the Persian manner, and took up the ceremonies of the Persian court. The soldiers were displeased at his giving up the habits of Macedonia, and at Susa he provoked them still more by making eighty of his chief officers marry Persian wives. The object of Alexander was to break down distinctions of race and country in his empire, and to abolish the great gulf that there had hitherto been between the Greeks and the Asiatics. He also enrolled many Persians in the regiments which had hitherto contained none but Macedonians, and levied 30,000 troops from the most warlike districts of Asia, whom he armed in the Macedonian manner. Since the voyage of Nearchus, Alexander had determined on an expedition against Arabia by sea, and had given orders for ships to be built in Phœnicia, and then taken to pieces and carried by land to Thapsakus on the Euphrates. At Thapsakus they were to be put together again, and so make their way to Babylon, from which the expedition was to start. In the spring of B. C. 323, Alexander set out from Susa for Babylon. On his journey he was met by embassies from nearly all the States of the known world. At Babylon he found the ships ready: fresh troops had arrived, both Greek and Asiatic; and the expedition was on the point of starting, when Alexander was seized with fever and died (June, B. C. 323). He was only thirty-two years old."—C. A. Fyffe, *Hist. of Greece (Primer)*, ch. 7.—"Three great battles and several great sieges made Alexander master of the Persian empire. And it is worth remark that the immediate results of the three battles, Granikos, Issos, and Gaugamela, coincide with lasting results in the history of the world. The victory of the Granikos made Alexander master of Asia Minor, of a region which in the course of a few centuries was thoroughly hellenized, and which remained Greek, Christian, and Orthodox, down to the Turkish invasions of the 11th century. The territory which Alexander thus won,

the lands from the Danube to Mount Tauros, answered very nearly to the extent of the Byzantine Empire for several centuries, and it might very possibly have been ruled by him, as it was in Byzantine times, from an European centre. The field of Issos gave him Syria and Egypt, lands which the Macedonian and the Roman kept for nearly a thousand years, and which for ages contained, in Alexandria and Antioch, the two greatest of Grecian cities. But Syria and Egypt themselves never became Greek; when they became Christian, they failed to become Orthodox, and they fell away at the first touch of the victorious Saracen. Their government called for an Asiatic or Egyptian capital, but their ruler might himself still have remained European and Hellenic. His third triumph at Gaugamela gave him the possession of the whole East; but it was but a momentary possession: he had now pressed onward into lands where neither Grecian culture, Roman dominion, nor Christian theology proved in the end able to strike any lasting root. . . . He had gone too far for his original objects. Lasting possession of his conquests beyond the Tigris could be kept only in the character of King of the Medes and Persians. Policy bade him put on that character. We can also fully believe that he was himself really dazzled with the splendour of his superhuman success. . . . His own deeds had outdone those which were told of any of his divine forefathers or their comrades; Achilles, Herakles, Theseus, Dionysos, had done and suffered less than Alexander. Was it then wonderful that he should seriously believe that one who had outdone their acts must come of a stock equal to their own? Was it wonderful if, not merely in pride or policy, but in genuine faith, he disclaimed a human parent in Philip, and looked for the real father of the conqueror and lord of earth in the conqueror and lord of the heavenly world? We believe then that policy, passion, and genuine superstition were all joined together in the demand which Alexander made for divine, or at least for unusual, honours. He had taken the place of the Great King, and he demanded the homage which was held to be due to him who held that place. Such homage his barbarian subjects were perfectly ready to pay; they would most likely have had but little respect for a king who forgot to call for it. But the homage which to a Persian seemed only the natural expression of respect for the royal dignity, seemed to Greeks and Macedonians an invasion of the honour due only to the immortal Gods. . . . He not only sent round to all the cities of Greece to demand divine honours, which were perhaps not worth refusing, but he ordered each city to bring back its political exiles. This last was an interference with the internal government of the cities which certainly was not warranted by Alexander's position as head of the Greek Confederacy. And, in other respects also, from this unhappy time all the worst failings of Alexander become more strongly developed. . . . The unfulfilled designs of Alexander must ever remain in darkness; no man can tell what might have been done by one of such mighty powers who was cut off at so early a stage of his career. That he looked forward to still further conquests seems beyond doubt. The only question is, Did his conquests, alike those which were won and those which were

still to be won, spring from mere ambition and love of adventure, or is he to be looked on as in any degree the intentional missionary of Hellenic culture? That such he was is set forth with much warmth and some extravagance in a special treatise of Plutarch; it is argued more soberly, but with true vigour and eloquence, in the seventh volume of Bishop Thirlwall. Mr. Grote denies him all merit of the kind."—E. A. Freeman, *Alexander (Hist. Essays, series 2)*.

B. C. 323-316.—The Partition of the Empire of Alexander.—First Period of the Wars of the Diadochi or Successors of Alexander.—Alexander "left his wife Roxana pregnant, who at the end of three months brought into the world the rightful heir to the sceptre, Alexander; he left likewise an illegitimate son, Hercules; a bastard half-brother, Arrhidæus; his mother, the haughty and cruel Olympias, and a sister, Cleopatra; both widows; the artful Eurydice, (daughter to Cyane, one of Philip's sisters,) subsequently married to the king, Arrhidæus; and Thessalonica, Philip's daughter, afterwards united to Cassander of Macedonia. The weak Arrhidæus, under the name of Philip, and the infant Alexander, were at last proclaimed kings, the regency being placed in the hands of Perdiccas, Leonnatus, and Meleager; the last of whom was quickly cut off at the instigation of Perdiccas." The provinces of the Empire which Alexander had conquered were now divided between the generals of his army, who are known in history as the Diadochi, that is, the Successors. The division was as follows: "Ptolemy son of Lagus received Egypt [see EGYPT: B. C. 323-30]; Leonnatus, Mysia; Antigonus, Phrygia, Lycia, and Pamphylia; Lysymachus, Macedonian Thrace; Antipater and Craterus remained in possession of Macedonia. . . . The remaining provinces either did not come under the new division [see SELEUCIDÆ], or else their governors are unworthy of notice."—A. H. L. Heeren, *Manual of Ancient History*, p. 222.—Meantime, "the body of Alexander lay unburied and neglected, and it was not until two years after his death that his remains were consigned to the tomb. But his followers still shewed their respect for his memory by retaining the feeble Arrhidæus on the throne, and preventing the marriage of Perdiccas with Cleopatra, the daughter of Philip; a union which manifestly was projected to open a way to the throne. But while this project of marriage occupied the attention of the regent, a league had secretly been formed for his destruction; and the storm burst forth from a quarter whence it was least expected. . . . The barbarous tribes of the Cappadocians and Paphlagonians . . . asserted their independence after the death of Alexander, and chose Ariarathes for their leader. Perdiccas sent against them Eumenes, who had hitherto fulfilled the peaceful duties of a secretary; and sent orders to Antigonus and Leonatus, the governors of Western Asia, to join the expedition with all their forces. These commands were disobeyed; and Perdiccas was forced to march with the royal army against the insurgents. He easily defeated these undisciplined troops, but sullied

his victory by unnecessary cruelty. On his return he summoned the satraps of Western Asia to appear before his tribunal, and answer for their disobedience. Antigonos, seeing his danger, entered into a league with Ptolemy the satrap of Egypt, Antipater the governor of Macedon, and several other noblemen, to crush the regency. Perdikkas, on the other hand, leaving Eumenes to guard Lower Asia, marched with the choicest divisions of the royal army against Ptolemy, whose craft and ability he dreaded even more than his power. Antipater and Craterus were early in the field; they crossed the Hellespont with the army that had been left for the defence of Macedon. . . . Seduced by . . . false information, they divided their forces; Antipater hastening through Phrygia in pursuit of Perdikkas, while Craterus and Neoptolemos marched against Eumenes. They encountered him in the Trojan plain, and were completely defeated. . . . Eumenes sent intelligence of his success to Perdikkas; but two days before the messenger reached the royal camp the regent was no more. His army, wearied by the long siege of Pelusium, became dissatisfied; their mutinous dispositions were secretly encouraged by the emissaries of Ptolemy . . . and Perdikkas was murdered in his tent (B. C. 321). . . . In the meantime a brief struggle for independence had taken place in Greece, which is commonly called the Lamian war [see GREECE: B. C. 323-322]. . . . As soon as Ptolemy had been informed of the murder of Perdikkas, he came to the royal army with a large supply of wine and provisions. His kindness and courteous manners so won upon these turbulent soldiers, that they unanimously offered him the regency; but he had the prudence to decline so dangerous an office. On his refusal, the feeble Arrhidæus and the traitor Python were appointed to the regency, just as the news arrived of the recent victory of Eumenes. This intelligence filled the royal army with indignation. . . . They hastily passed a vote proclaiming Eumenes and his adherents public enemies. . . . The advance of an army to give effect to these decrees was delayed by a new revolution. Eurydice, the wife of Arrhidæus, a woman of great ambition and considerable talent for intrigue, wrested the regency from her feeble husband and Python, but was stripped of power on the arrival of Antipater, who reproached the Macedonians for submitting to the government of a woman; and, being ably supported by Antigonos and Seleucus, obtained for himself the office of regent. No sooner had Antipater been invested with supreme power than he sent Arrhidæus and Eurydice prisoners to Pella, and entrusted the conduct of the war against Eumenes to the crafty and ambitious Antigonos. . . . Eumenes was unable to cope with the forces sent against him; having been defeated in the open field, he took shelter in Nora, a Cappadocian city, and maintained a vigorous defence, rejecting the many tempting offers by which Antigonos endeavoured to win him to the support of his designs (B. C. 318). The death of Antipater produced a new revolution in the empire; and Eumenes in the meantime escaped from Nora, accompanied by his principal friends. . . . Antipater, at his death, bequeathed the regency to Polysperchon, excluding his son Cassander from power on account of his criminal intrigues with the wicked and ambitious Eurydice. Though a

brave general, Polysperchon had not the qualifications of a statesman; he provoked the powerful resentment of Antigonos by entering into a close alliance with Eumenes; and he permitted Cassander to strengthen himself in southern Greece, where he seized the strong fortress of Munychia. . . . Polysperchon, unable to drive Cassander from Attica, entered the Peloponnesus to punish the Arcadians, and engaged in a fruitless siege of Megalopolis. In the meantime Olympias, to whom he had confided the government of Macedon, seized Arrhidæus and Eurydice, whom she had murdered in prison. Cassander hastened, at the head of all his forces, to avenge the death of his mistress: Olympias, unable to meet him in the field, fled to Pydna; but the city was forced to surrender after a brief defence, and Olympias was immediately put to death. Among the captives were Roxana the widow, Alexander Ægus the posthumous son, and Thessalonica the youngest daughter, of Alexander the Great. Cassander sought and obtained the hand of the latter princess, and thus consoled himself for the loss of his beloved Eurydice. By this marriage he acquired such influence, that Polysperchon did not venture to return home, but continued in the Peloponnesus, where he retained for some time a shadow of authority over the few Macedonians who still clung to the family of Alexander. In Asia, Eumenes maintained the royal cause against Antigonos, though deserted by all the satraps, and harassed by the mutinous dispositions of his troops, especially the Argyraspides, a body of guards that Alexander had raised to attend his own person, and presented with the silver shields from which they derived their name. After a long struggle, both armies joined in a decisive engagement; the Argyraspides broke the hostile infantry, but learning that their baggage had in the meantime been captured by the light troops of the enemy, they mutinied in the very moment of victory, and delivered their leader, bound with his own sash, into the hands of his merciless enemy (B. C. 315). The faithful Eumenes was put to death by the traitorous Antigonos; but he punished the Argyraspides for their treachery."—W. C. Taylor, *The Student's Manual of Ancient History*, ch. 11, sect. 3.

B. C. 315-310.—The first league and war against Antigonos.—Extermination of the heirs of Alexander.—"Antigonos was now unquestionably the most powerful of the successors of Alexander the Great. As master of Asia, he ruled over those vast and rich lands that extended from India to the Mediterranean Sea. . . . Although nearly seventy years old, and blind in one eye, he still preserved the vigor of his forces. . . . He was fortunate in being assisted by a son, the famous Demetrius, who, though possessed of a very passionate nature, yet from early youth displayed wonderful military ability. Above all, the prominent representatives of the royal family had disappeared, and there remained only the youthful Alexander, Herakles, the illegitimate son of Alexander the Great, who had no lawful claim whatever to the sovereignty, and two daughters of Philip, Kleopatra, who lived at Sardis, and Thessalonike, whom Kassander had recently married—none of

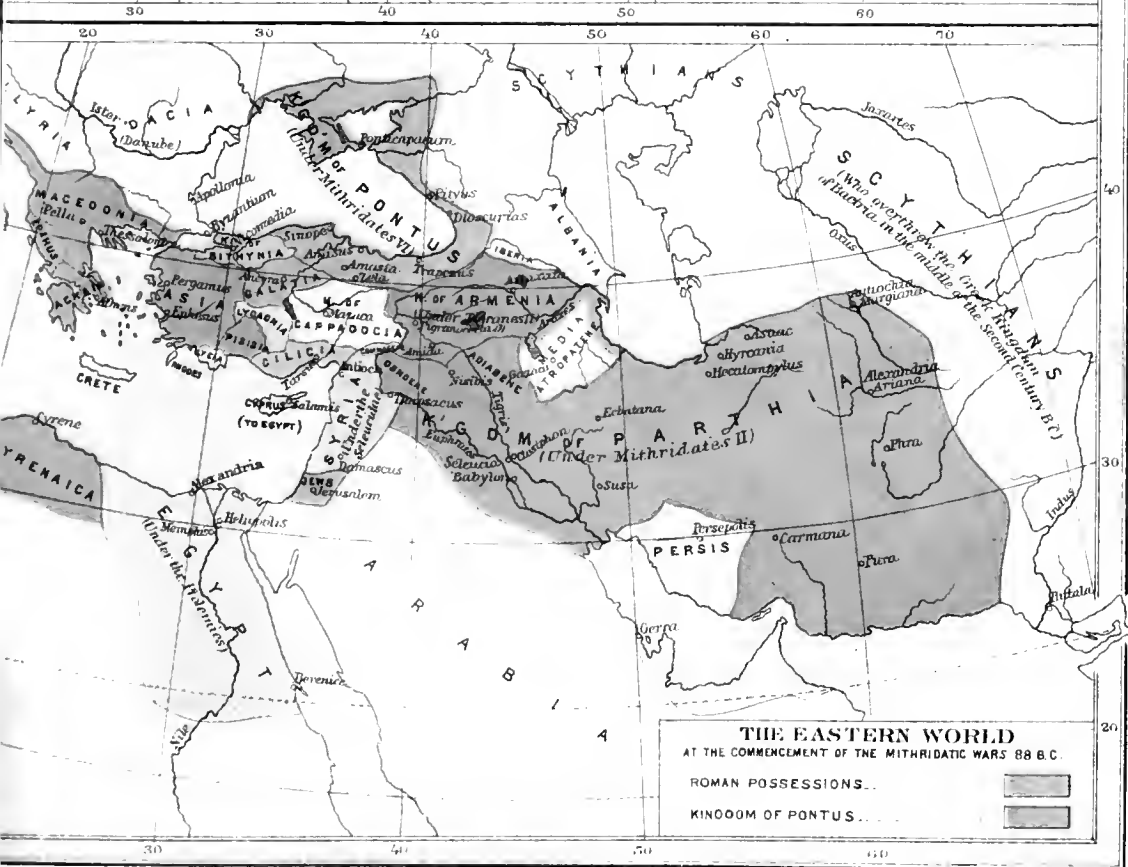

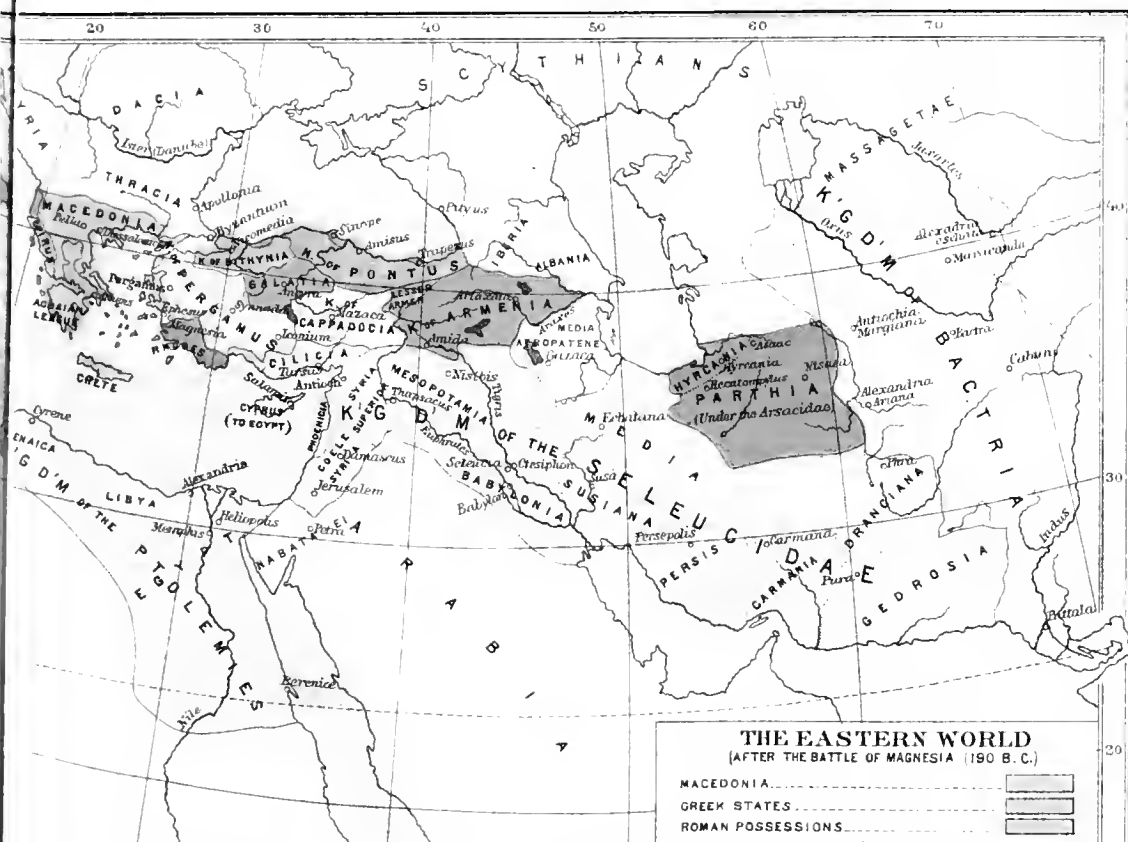

whom were sufficiently strong to assert their rights to the throne. Thus Antigonus seemed indeed destined to become vicar and master of the entire Alexandrian kingdom, and to restore the unity of the empire. But not only was this union not realized, but even the great realm which Kassander had established in Asia was doomed to inevitable destruction. The generals who possessed the various satrapies of the empire could not bear his supremacy, and accordingly entered into a convention, which gradually ripened into an active alliance against him. The principal organ of this movement was Seleukus, who, having escaped to Ptolemy of Egypt, first of all persuaded the latter to form an alliance—which Kassander of Macedonia and Lysimachus of Thrace readily joined—against the formidable power of Antigonus. The war lasted for four years, and was carried on in Asia, Europe, and Africa. Its fortunes were various [the most noteworthy event being a bloody defeat inflicted upon Demetrius the son of Antigonus, by Ptolemy, at Gaza, in 312], but the result was not decisive. . . . In 311 B. C. a compact was made between Antigonus on one side, and Kassander, Ptolemy, and Lysimachus on the other, whereby 'the supreme command in Europe was guaranteed to Kassander, until the maturity of Alexander, son of Roxana; Thrace being at the same time assured to Lysimachus, Egypt to Ptolemy, and the whole of Asia to Antigonus. It was at the same time covenanted by all that the Hellenic cities should be free.' Evidently this peace contained the seeds of new disputes and increasing jealousies. The first act of Kassander was to cause the death of Roxana and her child in the fortress of Amphipolis, where they had been confined; and thus disappeared forever the only link which apparently maintained the union of the empire, and a ready career now lay open to the ambition of the successors. Again, the name of Seleukus was not even mentioned in the peace, while it was well known at the time it was concluded that he had firmly established his rule over the eastern satrapies of Asia. . . . The troops also of Antigonus, notwithstanding the treaty, still remained in Hellas, under command of his nephew Ptolemy. Ptolemy of Egypt, therefore, accusing Antigonus of having contravened the treaty by garrisoning various Hellenic cities, renewed the war and the triple alliance against him." A series of assassinations soon followed, which put out of the way the young prince Herakles, bastard son of Alexander the Great, and Kleopatra, the sister of Alexander, who was preparing to wed Ptolemy of Egypt when Antigonus brought about her murder, to prevent the marriage. Another victim of the jealousies that were rife among the Diadochi was Antigonus' nephew Ptolemy, who had deserted his uncle's side, but who was killed by the Egyptian Ptolemy. "For more than ten years . . . Antigonus, Ptolemy, Lysimachus, and Kassander successively promised to leave the Greeks independent, free, and unguarded; but the latter never ceased to be guarded, taxed, and ruled by Macedonian despots. We may, indeed, say that the cities of Hellas never before had suffered so much as during the time when such great promises were made about their liberty. The Ætolians alone still possessed their independence. Rough, courageous, warlike, and fond

of freedom, they continued fighting against the Macedonian rule."—T. T. Timayenis, *Hist. of Greece*, pt. 9, ch. 5 (v. 2).

B. C. 310-301.—Demetrius Poliorcetes at Athens.—His siege of Rhodes.—The last combination against Antigonus.—His defeat and death at Ipsus.—Partition of his dominions.—After the war which was renewed in 310 B. C. had lasted three years, "Antigonus resolved to make a vigorous effort to wrest Greece from the hands of Cassander and Ptolemy, who held all the principal towns in it. Accordingly, in the summer of 307 B. C., he despatched his son Demetrius from Ephesus to Athens, with a fleet of 250 sail, and 5,000 talents in money. Demetrius, who afterwards obtained the surname of 'Poliorcetes,' or 'Besieger of Cities,' was a young man of ardent temperament and great abilities. Upon arriving at the Piræus, he immediately proclaimed the object of his expedition to be the liberation of Athens and the expulsion of the Macedonian garrison. Supported by the Macedonians, Demetrius the Phalerean had now ruled Athens for a period of more than ten years. . . . During the first period of his administration he appears to have governed wisely and equitably, to have improved the Athenian laws, and to have adorned the city with useful buildings. But in spite of his pretensions to philosophy, the possession of uncontrolled power soon altered his character for the worse, and he became remarkable for luxury, ostentation, and sensuality. Hence he gradually lost the popularity which he had once enjoyed. . . . The Athenians heard with pleasure the proclamations of the son of Antigonus; his namesake, the Phalerean, was obliged to surrender the city to him, and to close his political career by retiring to Thebes. . . . Demetrius Poliorcetes then formally announced to the Athenian assembly the restoration of their ancient constitution, and promised them a large donative of corn and ship-timber. This munificence was repaid by the Athenians with the basest and most abject flattery [see GREECE: B. C. 307-197]. . . . Demetrius Poliorcetes did not remain long at Athens. Early in 306 B. C. he was recalled by his father, and, sailing to Cyprus, undertook the siege of Salamis. Ptolemy hastened to its relief with 140 vessels and 10,000 troops. The battle that ensued was one of the most memorable in the annals of ancient naval warfare, more particularly on account of the vast size of the vessels engaged. Ptolemy was completely defeated; and so important was the victory deemed by Antigonus, that on the strength of it he assumed the title of king, which he also conferred upon his son. This example was followed by Ptolemy, Seleucus, and Lysimachus. Encouraged by their success at Cyprus, Antigonus and Demetrius made a vain attempt upon Egypt, which, however, proved a disastrous failure. By way of revenge, Demetrius undertook an expedition against Rhodes, which had refused its aid in the attack upon Ptolemy. It was from the memorable siege of Rhodes that Demetrius obtained his name of Poliorcetes. . . . After a year spent in the vain attempt to take the town, Demetrius was forced to retire and grant the Rhodians peace [see RHODES: B. C. 305-304]. Whilst Demetrius was thus employed, Cassander had made great progress in reducing Greece. He had taken Corinth,

and was besieging Athens, when Demetrius entered the Euripus. Cassander immediately raised the siege, and was subsequently defeated in an action near Thermopylae. When Demetrius entered Athens he was received as before with the most extravagant flatteries. He remained two or three years in Greece, during which his superiority over Cassander was decided, though no great battle was fought. In the spring of 301 B. C. he was recalled by his father Antigonus, who stood in need of his assistance against Lysimachus and Seleucus. In the course of the same year the struggle between Antigonus and his rivals was brought to a close by the battle of Ipsus in Phrygia, in which Antigonus was killed, and his army completely defeated. Antigonus had attained the age of 81 at the time of his death. Demetrius retreated with the remnant of the army to Ephesus, whence he sailed to Cyprus, and afterwards proposed to go to Athens; but the Athenians, alienated by his ill-fortune at Ipsus, refused to receive him."—W. Smith, *Hist. of Greece*, ch. 45.—"After the battle [of Ipsus] it remained for the conquerors to divide the spoil. The dominions of Antigonus were actually in the hands of Seleucus and Lysimachus, and they alone had achieved the victory. It does not appear that they consulted either of their allies on the partition, though it seems that they obtained the assent of Cassander. They agreed to share all that Antigonus had possessed between themselves. It is not clear on what principle the line of demarcation was drawn, nor is it possible to trace it. But the greater part of Asia Minor was given to Lysimachus. The portion of Seleucus included not only the whole country between the coast of Syria and the Euphrates, but also, it seems, a part of Phrygia and of Cappadocia. Cilicia was assigned to Cassander's brother Pleistarchus. With regard to Syria however a difficulty remained. The greater part of it had . . . been conquered by Ptolemy: Tyre and Sidon alone were still occupied by the garrisons of Antigonus. Ptolemy had at least as good a right as his ally to all that he possessed. . . . Seleucus however began to take possession of it, and when Ptolemy pressed his claims returned an answer, mild in sound, but threatening in its import . . . ; and it appears that Ptolemy was induced to withdraw his opposition. There were however also some native princes [Ardoates in Armenia, and Mithridates, son of Ariobarzanes, in Pontus—see *MITHRIDATIC WARS*] who had taken advantage of the contests between the Macedonian chiefs to establish their authority over extensive territories in the west of Asia. . . . So far as regards Asia, the battle of Ipsus must be considered as a disastrous event. Not because it transferred the power of Antigonus into different hands, nor because it would have been more desirable that he should have triumphed over Seleucus. But the new distribution of territory led to calamitous consequences, which might perhaps otherwise have been averted. If the empire of Seleucus had remained confined between the Indus and the Euphrates, it might have subsisted much longer, at least, as a barrier against the inroads of the barbarians, who at last obliterated all the traces of European civilisation left there by Alexander and his successors. But shortly after his victory, Seleucus founded his new capital on the Orontes, called, after his father, Antiochia, peopling it with the inhabi-

tants of Antiochia. It became the residence of his dynasty, and grew, while their vast empire dwindled into the Syrian monarchy. For the prospects of Greece, on the other hand, the fall of Antigonus must clearly be accounted an advantage, so far as the effect was to dismember his territory, and to distribute it so that the most powerful of his successors was at the greatest distance. It was a gain that Macedonia was left an independent kingdom, within its ancient limits, and bounded on the north by a state of superior strength. It does not appear that any compact was made between Cassander and his allies as to the possession of Greece. It was probably understood that he should keep whatever he might acquire there."—C. Thirlwall, *Hist. of Greece*, ch. 59 (p. 7).

ALSO IN: B. G. Niebuhr, *Lects. on Ancient Hist.*, lect. 86-87 (p. 3).

B. C. 297-280.—Death of Casander.—Intrigues of Ptolemy Keraunos.—Overthrow and death of Lysimachus.—Abdication and death of Ptolemy.—Murder of Seleucus.—Seizure of the Macedonian crown by Keraunos.—"Casander died of disease (a rare end among this seed of dragon's teeth) in 297 B. C., and so the Greeks were left to assert their liberty, and Demetrius to machinate and effect his establishment on the throne of Macedonia, as well as to keep the world in fear and suspense by his naval forces, and his preparations to reconquer his father's position. Lysimachus, Seleucus, and Ptolemy were watching one another, and alternating in alliance and in war. All these princes, as well as Demetrius and Pyrrhus, king of Epirus, were connected in marriage; they all married as many wives as they pleased, apparently without remonstrance from their previous consorts. So the whole complex of the warring kings were in close family relations. . . . Pyrrhus was now a very rising and ambitious prince; if not in alliance with Demetrius, he was striving to extend his kingdom of Epirus into Macedonia, and would doubtless have succeeded, but for the superior power of Lysimachus. This Thracian monarch, in spite of serious reverses against the barbarians of the North, who took both him and his son prisoners, and released them very chivalrously, about this time possessed a solid and secure kingdom, and moreover an able and righteous son, Agathocles, so that his dynasty might have been established, but for the poisonous influence of Arsinoe, the daughter of Ptolemy, whom he, an old man, had married in token of an alliance after the battle of Ipsus. . . . The family quarrel which upset the world arose in this wise. To seal the alliance after Ipsus, old king Ptolemy sent his daughter Arsinoe to marry his rival and friend Lysimachus, who, on his side, had sent his daughter, another Arsinoe, in marriage to the younger Ptolemy (Philadelphus). This was the second son of the great Ptolemy, who had chosen him for the throne in preference to his eldest son, Keraunos, a man of violent and reckless character, who accordingly left the country, and went to seek his fortune at foreign courts. Meanwhile the old Ptolemy, for safety's sake, installed his second son as king of Egypt during his own life, and abdicated at the age of 83 [B. C. 283], full of honours, nor did he leave the court, where he appeared as a subject before his son as king. Keraunos naturally visited, in the first instance, the Thracian court, where he

not only had a half sister (Arsinoë) queen, but where his full sister, Lysandra, was married to the crown prince, the gallant and popular Agathocles; but Keraunos and the queen conspired against this prince; they persuaded old Lysimachus that he was a traitor, and so Keraunos was directed to put him to death. This crime caused unusual excitement and odium all through the country, and the relations and party of the murdered prince called on Seleucus to avenge him. He did so, and advanced with an army against Lysimachus, whom he defeated and slew in a great battle, somewhere not far from the field of Ipsus. It was called the plain of Coron (B. C. 281). Thus died the last but one of Alexander's Companions, at the age of 80, he, too, in battle. Ptolemy was already laid in his peaceful grave (B. C. 283). There remained the last and greatest, the king of Asia, Seleucus. He, however, gave up all his Asiatic possessions from the Hellespont to the Indus to his son Antiochus, and meant to spend his last years in the home of his fathers, Macedonia; but as he was entering that kingdom he was murdered by Keraunos, whom he brought with him in his train. This bloodthirsty adventurer was thus left with an army which had no leader, in a kingdom which had no king; for Demetrius' son, Antigonus, the strongest claimant, had not yet made good his position. All the other kings, whose heads were full with their newly acquired sovereignties, viz., Antiochus in Asia and Ptolemy II. in Egypt, joined with Keraunos in buying off the dangerous Pyrrhus [king of Epirus—see *ROME*: B. C. 282-275], by bribes of men, money, and elephants, to make his expedition to Italy, and leave them to settle their affairs. The Greek cities, as usual, when there was a change of sovran in Macedonia, rose and asserted what they were pleased to call their liberty, so preventing Antigonus from recovering his father's dominions. Meanwhile Keraunos established himself in Macedonia; he even, like our Richard, induced the queen, his step-sister, his old accomplice against Agathocles, to marry him! but it was only to murder her children by Lysimachus, the only dangerous claimants to the Thracian provinces. The wretched queen fled to Samothrace, and thence to Egypt, where she ended her guilty and chequered career as queen of her full brother Ptolemy II. (Philadelphus), and was deified during her life! Such then was the state of Alexander's Empire in 280 B. C. All the first Diadochi were dead, and so were even the sons of two of them, Demetrius and Agathocles. The son of the former was a claimant for the throne of Macedonia, which he acquired after long and doubtful struggles. Antiochus, who had long been regent of the Eastern provinces beyond Mesopotamia, had come suddenly, by his father's murder, into possession of so vast a kingdom, that he could not control the coast of Asia Minor, where sundry free cities and dynasts sought to establish themselves. Ptolemy II. was already king of Egypt, including the suzerainty of Cyrene, and had claims on Palestine and Syria. Ptolemy Keraunos, the double-dyed villain and murderer, was in possession of the throne of Macedonia, but at war with the claimant Antigonus. Pyrrhus of Epirus was gone to conquer a new kingdom in the West. Such was the state of things when a terrible new scourge [the invasion of the Gauls]

broke over the world."—J. P. Mahaffy, *The Story of Alexander's Empire*, ch. 7.

B. C. 280-279.—Invasion by the Gauls.—Death of Ptolemy Keraunos. See GAULS: B. C. 280-279.

B. C. 277-244.—Strife for the throne.—Failures of Pyrrhus.—Success of Antigonus Gonatus.—His subjugation of Athens and Corinth.—"On the retirement of the Gauls, Antipater, the nephew of Cassander, came forward for the second time, and was accepted as king by a portion, at any rate, of the Macedonians. But a new pretender soon appeared upon the scene. Antigonus Gonatus, the son of Demetrius Poliorcetes, who had maintained himself since that monarch's captivity as an independent prince in Central or Southern Hellas, claimed the throne once filled by his father, and, having taken into his service a body of Gallic mercenaries, defeated Antipater and made himself master of Macedonia. His pretensions being disputed by Antiochus Soter, the son of Seleucus, who had succeeded to the throne of Syria, he engaged in war with that prince, crossing into Asia and uniting his forces with those of Nicomedes, the Bithynian king, whom Antiochus was endeavouring to conquer. To this combination Antiochus was forced to yield: relinquishing his claims, he gave his sister, Phila, in marriage to Antigonus, and recognised him as king of Macedonia. Antigonus upon this fully established his power, repulsing a fresh attack of the Gauls. . . . But he was not long left in repose. In B. C. 274, Pyrrhus finally quitted Italy, having failed in all his schemes, but having made himself a great reputation. Landing in Epirus with a scanty force, he found the condition of Macedonia and of Greece favourable to his ambition. Antigonus had no hold on the affections of his subjects, whose recollections of his father, Demetrius, were displeasing. The Greek cities were, some of them, under tyrants, others occupied against their will by Macedonian garrisons. Above all, Greece and Macedonia were full of military adventurers, ready to flock to any standard which offered them a fair prospect of plunder. Pyrrhus, therefore, having taken a body of Celts into his pay, declared war against Antigonus, B. C. 273, and suddenly invaded Macedonia. Antigonus gave him battle, but was worsted, owing to the disaffection of his soldiers, and being twice defeated became a fugitive and a wanderer. The victories of Pyrrhus, and his son Ptolemy, placed the Macedonian crown upon the brow of the former, who might not improbably have become the founder of a great power, if he could have turned his attention to consolidation, instead of looking out for fresh conquests. But the arts and employments of peace had no charm for the Epirotic knight-errant. Hardly was he settled in his seat when, upon the invitation of Cleonymus of Sparta, he led an expedition into the Peloponnese, and attempted the conquest of that rough and difficult region. Repulsed from Sparta, which he had hoped to surprise, he sought to cover his disappointment by the capture of Argos; but here he was still more unsuccessful. Antigonus, now once more at the head of an army, watched the city, prepared to dispute its occupation, while the lately threatened Spartans hung upon the invader's rear. In a

desperate attempt to seize the place by night, the adventurous Epirote was first wounded by a soldier and then slain by the blow of a tile, thrown from a housetop by an Argive woman, B. C. 271. On the death of Pyrrhus the Macedonian throne was recovered by Antigonos, who commenced his second reign by establishing his influence over most of the Peloponnese, after which he was engaged in a long war with the Athenians (B. C. 268 to 263), who were supported by Sparta and by Egypt [see ATHENS: B. C. 288-263]. These allies rendered, however, but little help; and Athens must have soon succumbed, had not Antigonos been called away to Macedonia by the invasion of Alexander, son of Pyrrhus. This enterprising prince carried, at first, all before him, and was even acknowledged as Macedonian king; but ere long Demetrius, the son of Antigonos, having defeated Alexander near Derdia, re-established his father's dominion over Macedon, and, invading Epirus, succeeded in driving the Epirotic monarch out of his paternal kingdom. The Epirots soon restored him; but from this time he remained at peace with Antigonos, who was able once more to devote his undivided attention to the subjugation of the Greeks. In B. C. 263 he took Athens, and rendered himself complete master of Attica; and, in B. C. 244, . . . he contrived by a treacherous stratagem to obtain possession of Corinth. But at this point his successes ceased. A power had been quietly growing up in a corner of the Peloponnese [the Achaian League—see GREECE: B. C. 280-146] which was to become a counterpoise to Macedonia, and to give to the closing scenes of Grecian history an interest little inferior to that which had belonged to its earlier pages."—G. MAGIANS.—**MAGI**.—The priesthood of the ancient Iranian religion—the religion of the Avesta and of Zarathustra, or Zoroaster—as it existed among the Medes and Persians. In Eastern Iran the priests were called *Athravas*. In Western Iran "they are not called *Athravas*, but *Magush*. This name is first found in the inscription which Darius caused to be cut on the rock-wall of Behistun; afterwards it was consistently used by Western writers, from Herodotus to Agathias, for the priests of Iran."—M. Duncker, *Hist. of Antiquity*, bk. 7, ch. 8 (v. 5).—"The priests of the Zoroastrians, from a time not long subsequent to Darius Hystaspis, were the *Magi*. This tribe, or caste, originally perhaps external to Zoroastrianism, had come to be recognised as a true priestly order; and was entrusted by the Sassanian princes with the whole control and direction of the religion of the state. Its chief was a personage holding a rank but very little inferior to the king. He bore the

title of 'Tenpet,' 'Head of the Religion,' or 'Movpetan Movpet,' 'Head of the Chief Magi.'"

—G. Rawlinson, *Seventh Great Oriental Monarchy*, ch. 28.—"To the whole ancient world Zoroaster's lore was best known by the name of the doctrine of the *Magi*, which denomination was commonly applied to the priests of India, Persia, and Babylonia. The earliest mention of them is made by the prophet Jeremiah (xxxix. 3), who enumerated among the retinue of King Nebuchadnezzar at his entry into Jerusalem, the 'Chief of the Magi' ('*rab mag*' in Hebrew), from which statement we may distinctly gather that the *Magi* exercised a great influence at the court of Babylonia 600 years B. C. They were, however, foreigners, and are not to be confounded with the indigenous priests. . . . The name *Magi* occurs even in the New Testament. In the Gospel according to St. Matthew (ii. 1), the *Magi* (Greek '*magoi*,' translated in the English Bible by 'wise men') came from the East to Jerusalem, to worship the new-born child Jesus at Bethlehem. That these *Magi* were priests of the Zoroastrian religion, we know from Greek writers."—M. Haug, *Essays on the Religion of the Persians*, 1.—See, also, ZOROASTRIANS.

MAGNA GRÆCIA.—"It was during the height of their prosperity, seemingly, in the sixth century B. C., that the Italic Greeks [in southern Italy] either acquired for, or bestowed upon, their territory the appellation of *Magna Græcia*, which at that time it well deserved; for not only were Sybaris and Kroton then the greatest Grecian cities situated near together, but the whole peninsula of Calabria may be considered as attached to the Grecian cities on the coast. The native *Enotrians* and *Sikels* occupying the interior had become hellenised, or semi-hellenised, with a mixture of Greeks among them—common subjects of these great cities."—G. Grote, *Hist. of Greece*, pt. 2, ch. 22.—On the Samnite conquest of *Magna Græcia*—see SAMNITES.

MAHDI, Al, Caliph, A. D. 775-785.

MAHDI, The.—"The religion of Islam acknowledges the mission of Jesus, but not His divinity. Since the Creation, it teaches, five prophets had appeared before the birth of Mahomet—Adam, Noah, Abraham, Moses, and Jesus—each being greater than his predecessor, and each bringing a fuller and higher revelation than the last. Jesus ranks above all the prophets of the old dispensation, but below those of the new, inaugurated by Mahomet. In the final struggle He will be but the servant and auxiliary of a more august personage—the Mahdi. The literal meaning of the word Mahdi is not, as the newspapers generally assert, 'He who leads,' a meaning more in consonance with European ideas, but 'He who is led.' . . . If he leads his fellow-men it is because he alone is the 'well-guided one,' led by God—the Mahdi. The word Mahdi is only an epithet which may be applied to any prophet, or even to any ordinary person; but used as a proper name it indicates him who is 'well-guided' beyond all others, the

Mahdi 'par excellence,' who is to end the drama of the world, and of whom Jesus shall only be the vicar. . . . The Koran does not speak of the Mahdi, but it seems certain that Mahomet must have announced him. . . . The idea of the Mahdi once formed, it circulated throughout the Mussulman world: we will follow it rapidly in its course among the Persians, the Turks, the Egyptians, and the Arabs of the Soudan; but without for an instant pretending to pass in review all the Mahdis who have appeared upon the prophetic stage; for their name is Legion."—J. MAHOMETAN CONQUEST AND EMPIRE.

A. D. 609-632.—The Mission of the Prophet.—Mahomet (the usage of Christendom has fixed this form of the name Mohammad) was born at Mecca, on or about the 20th day of August, A. D. 570. He sprang from "the noblest race in Mecca and in Arabia [the tribe of Koreish and the family of Hashem]. To his family belonged the hereditary guardianship of the Kaaba and a high place among the aristocracy of his native city. Personally poor, he was raised to a position of importance by his marriage with the rich widow Khadijah, whose mercantile affairs he had previously conducted. In his fortieth year he began to announce himself as an Apostle of God, sent to root out idolatry, and to restore the true faith of the preceding Prophets, Abraham, Moses, and Jesus. Slowly and gradually he makes converts in his native city; his good wife Khadijah, his faithful servant Zeyd, are the first to recognize his mission; his young cousin, the noble Ali, the brave and generous and injured model of Arabian chivalry, declares himself his convert and Vizier; the prudent, moderate and bountiful Abu-Bekr acknowledges the pretensions of the daring innovator. Through mockery and persecution the Prophet keeps unflinchingly in his path; no threats, no injuries, hinder him from still preaching to his people the unity and the righteousness of God, and exhorting to a far purer and better morality than had ever been set before them. He claims no temporal power, no spiritual domination; he asks but for simple toleration, for free permission to win men by persuasion into the way of truth. . . . As yet at least his hands were not stained with blood, nor his inner life with lust."—E. A. Freeman, *Hist. and Conquests of the Saracens*, lect. 2.—After ten years of preaching at Mecca, and of a private circulation and repetition of the successive Suras or chapters of the Koran, as the prophet delivered them, Mahomet had gained but a small following, while the opposition to his doctrines and pretensions had gained

strength. But in A. D. 620 (he being then fifty years of age) he gained the ear of a company of pilgrims from Medina and won them to his faith. Returning home, they spread the gospel of Islam among their neighbors, and the disciples at Medina were soon strong enough in numbers to offer protection to their prophet and to his persecuted followers in Mecca. As the result of two pledges, famous in Mahometan history, which were given by the men of Medina to Mahomet, in secret meetings at the hill of Acaba, a general emigration of the adherents of the new faith from Mecca to Medina took place in the spring of the year 622. Mahomet and his closest friend, Abu Bakr, having remained with their families until the last, escaped the rage of the Koreish, or Coreish, only by a secret flight and a concealment for three days in a cave on Mount Thaur, near Mecca. Their departure from the cave of Thaur, according to the most accepted reckoning, was on the 20th of June, A. D. 622. This is the date of the Hegira, or flight, or emigration of Mahomet from Mecca to Medina. The Mahometan Era of the Hegira, "though referring 'par excellence' to the flight of the Prophet, . . . is also applicable to all his followers who emigrated to Medina prior to the capture of Mecca; and they are hence called Muhājirīn, i. e., the Emigrants, or Refugees. We have seen that they commenced to emigrate from the beginning of Moharram (the first month of the Hegira era) two months before." The title of the Muhājirīn, or Refugees, soon became an illustrious one, as did that of the Ansar, or Allies, of Medina, who received and protected them. At Medina Mahomet found himself strongly sustained. Before the year of his flight ended, he opened hostilities against the city which had rejected him, by attacking its Syrian caravans. The attacks were followed up and the traffic of Mecca greatly interfered with, until January, 624, when the famous battle of Bedr, or Badr, was fought, and the first great

victory of the sword of Islam achieved. The 300 warriors of Bedr formed "the peerage of Islam." From this time the ascendancy of Mahomet was rapidly gained, and assumed a political as well as a religious character. His authority was established at Medina and his influence spread among the neighboring tribes. Nor was his cause more than temporarily depressed by a sharp defeat which he sustained, January, 625, in battle with the Koreish at Ohod. Two years later Medina was attacked and besieged by a great force of the Koreish and other tribes of Arabs and Jews, against the latter of whom Mahomet, after vainly courting their adhesion and recognition, had turned with relentless hostility. The siege failed and the retreat of the enemy was hastened by a timely storm. In the next year Mahomet extorted from the Koreish a treaty, known as the Truce of Hodeibia, which suspended hostilities for ten years and permitted the prophet and his followers to visit Mecca for three days in the following year. The pilgrimage to Mecca was made in the holy month, February, 629, and in 630 Mahomet found adherents enough within the city and outside of it to deliver the coveted shrine and capital of Arabia into his hands. Alleging a breach of the treaty of peace, he marched against the city with an army of 10,000 men, and it was surrendered to him by his obstinate opponent, Abu Sofian, who acknowledged, at last, the divine commission of Mahomet and became a disciple. The idols in the Kaaba were thrown down and the ancient temple dedicated to the worship of the one God. The conquest of Mecca was followed within no long time by the submission of the whole Arabic peninsula. The most obstinate in resisting were the great Bedouin tribe of the Hawazin, in the hill country, southeast of Mecca, with their kindred, the Bani Thackif. These were crushed in the important battle of Honein, and their strong city of Tayif was afterwards taken. Before Mahomet died, on the 8th June, A. D. 632, he was the prince as well as the prophet of Arabia, and his armies, passing the Syrian borders, had already encountered the Romans, though not gloriously, in a battle fought at Muta, not far from the Dead Sea.—Sir W. Muir, *Life of Mahomet*.

ALSO IN: E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 50.—J. W. H. Stobart, *Islam and its Founder*, ch. 3-9.—W. Irving, *Mahomet and his Successors*, ch. 6-39.—R. D. Osborn, *Islam under the Arabs*, pt. 1, ch. 1-3.—See, also, ISLAM, and ERA, MAHOMETAN.

A. D. 632-639. — Abu Bekr. — Omar. — The founding of the Caliphate.—Conquest of Syria.—The death of Mahomet left Islam without a head. The Prophet had neither named a successor (Khalif or Caliph), nor had he instituted a mode in which the choice of one should be made. His nephew and son-in-law—"the Bayard of Islam," the lion-hearted Ali—seemed the natural heir of that strangely born sovereignty of the Arab world. But its elders and chiefs were averse to Ali, and the assembly which they convened preferred, instead, the Prophet's faithful friend, the venerable Abu Bekr. This first of the caliphs reigned modestly but two years, and on his death, July, A. D. 634, the stern soldier Omar was raised to the more than royal place. By this time the armies of the crescent were already far advanced beyond the frontiers of

Arabia in their fierce career of conquest. No sooner had Abu Bekr, in 632, set his heel on some rebellious movements, which threatened his authority, than he made haste to open fields in which the military spirit and ambitions of his unquiet people might find full exercise. With bold impartiality he challenged, at once, and alike, the two dominant powers of the eastern world, sending armies to invade the soil of Persia, on one hand, and the Syrian provinces of the Roman empire, on the other. The invincible Khaled, or Caled, led the former, at first, but was soon transferred to the more critical field, which the latter proved to be. "One of the fifteen provinces of Syria, the cultivated lands to the eastward of the Jordan, had been decorated by Roman vanity with the name of 'Arabia'; and the first arms of the Saracens were justified by the semblance of a national right." The strong city of Bosra was taken, partly through the treachery of its commander, Romanus, who renounced Christianity and embraced the faith of Islam. From Bosra the Moslems advanced on Damascus, but suspended the siege of the city until they had encountered the army which the Emperor Heraclius sent to its relief. This they did on the field of Aijnadin, in the south of Palestine, July 30, A. D. 634, when 50,000 of the Roman-Greeks and Syrians are said to have perished, while but 470 Arabs fell. Damascus was immediately invested and taken after a protracted siege, which Voltaire has likened to the siege of Troy, on account of the many combats and stratagems—the many incidents of tragedy and romance—which poets and historians have handed down, in some connection with its progress or its end. The ferocity of Khaled was only half restrained by his milder colleague in command, Abu Obeidah, and the wretched inhabitants of Damascus suffered terribly at his hands. The city, itself, was spared and highly favored, becoming the Syrian capital of the Arabs. Heliopolis (Baalbec) was besieged and taken in January, A. D. 636; Emessa surrendered soon after. In November, 636, a great and decisive battle was fought with the forces of Heraclius at Yermuk, or Yermouk, on the borders of Palestine and Arabia. The Christians fought obstinately and well, but they were overwhelmed with fearful slaughter. "After the battle of Yermuk the Roman army no longer appeared in the field; and the Saracens might securely choose, among the fortified towns of Syria, the first object of their attack. They consulted the caliph whether they should march to Cæsarea or Jerusalem; and the advice of Ali determined the immediate siege of the latter. . . . After Mecca and Medina, it was revered and visited by the devout Moslems as the temple of the Holy Land, which had been sanctified by the revelation of Moses, of Jesus, and of Mahomet himself." The defense of Jerusalem, notwithstanding its great strength, was maintained with less stubbornness than that of Damascus had been. After a siege of four months, in the winter of A. D. 637, the Christian patriarch or bishop of Jerusalem, who seems to have been first in authority, proposed to give up the Holy City, if Omar, the caliph, would come in person from Medina to settle and sign the terms of surrender. Omar deemed the prize worthy of this concession and made the long journey, travelling as simply as the humblest pilgrim and entering Jerusalem on foot.

After this, little remained to make the conquest of all Syria complete. Aleppo was taken, but not easily, after a siege, and Antioch, the splendid seat of eastern luxury and wealth, was abandoned by the emperor and submitted, paying a great ransom for its escape from spoliation and the sword. The year 639 saw Syria at the feet of the Arabs whom it had despised six years before, and the armies of the caliph were ready to advance to new fields, east, northwards, and west.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 51.

ALSO IN: W. Irving, *Mahomet and His Successors*, v. 2, ch. 3-23.—S. Ockley, *Hist. of the Saracens: Abubeker*.—Sir W. Muir, *Annals of the Early Caliphate*, ch. 2, 11, 19-21.—See, also, JERUSALEM: A. D. 637; and TYRE: A. D. 638.

A. D. 632-651.—Conquest of Persia.—During the invasion of Syria, Abu Bekr, the first of the Caliphs, sent an expedition towards the Euphrates, under command of the redoubtable Khaled (633). The first object of its attack was Hira, a city on the western branch of the Euphrates, not far from modern Kufa. Hira was the seat of a small kingdom of Christian Arabs tributary to Persia and under Persian protection and control. Its domain embraced the northern part of that fertile tract between the desert and the Euphrates which the Arab writers call Sawad; the southern part being a Persian province of which the capital, Obolla, was the great emporium of the Indian trade. Hira and Obolla were speedily taken and this whole region subdued. But, Khaled being then transferred to the army in Syria, the Persians regained courage, while the energy of the Moslems was relaxed. In an encounter called the Battle of the Bridge, A. D. 635, the latter experienced a disastrous check; but the next year found them more victorious than ever. The great battle of Cadesia (Kadisiyeh) ended all hope in Persia of doing more than defend the Euphrates as a western frontier. Within two years even that hope disappeared. The new Arab general, Sa'ad Ibn Abi Wakas, having spent the interval in strengthening his forces, and in founding the city of Busrah, or Bassora, below the junction of the Euphrates and Tigris, as well as that of Kufa, which became the Moslem capital, advanced into Mesopotamia, A. D. 637, crossing the river without opposition. The Persian capital, Ctesiphon, was abandoned to him so precipitately that most of its vast treasures fell into his hands. It was not until six months later that the Persians and Arabs met in battle, at Jalula, and the encounter was fatal to the former, 100,000 having perished on the field. "By the close of the year A. D. 637 the banner of the Prophet waved over the whole tract west of Zagros, from Nineveh almost to Susa." Then a brief pause ensued. In 641 the Persian king Isdigerd—last of the Sassanian house—made a great, heroic effort to recover his lost dominions and save what remained. He staked all and lost, in the final battle of Nehavend, which the Arabs called "Fatah-hul-Futuh," or "Victory of Victories." "The defeat of Nehavend terminated the Sassanian power. Isdigerd indeed, escaping from Rei, and flying continually from place to place, prolonged an inglorious existence for the space of ten more years—from A. D. 641 to A. D. 651; but he had no longer a kingdom. Persia fell to pieces on the occasion of 'the victory of victories,' and made

no other united effort against the Arabs. Province after province was occupied by the fierce invaders; and, at length, in A. D. 651, their arms penetrated to Merv, where the last scion of the house of Babek had for some years found a refuge. . . . The order of conquest seems to have been the following:—Media, Northern Persia, Rhagiana, Azerbijan, Gurgan, Tabaristan, and Khorassan in A. D. 642; Southern Persia, Kerman, Seistan, Mekran, and Kurdistan in A. D. 643; Merv, Balkh, Herat, and Kharezmi in A. D. 650 or 652."—G. Rawlinson, *Seventh Great Oriental Monarchy*, ch. 26, and foot-notes.

ALSO IN: W. Irving, *Mahomet and his Successors*, v. 2, ch. 25-34.—Sir W. Muir, *Annals of the Early Caliphate*, ch. 10-18, 25-26.

A. D. 640-646.—Conquest of Egypt.—"It was in the nineteenth or twentieth year of the Hegira [A. D. 640 or 641] that Amru, having obtained the hesitating consent of the Caliph, set out from Palestine for Egypt. His army, though joined on its march by bands of Bedouins lured by the hope of plunder, did not at the first exceed 4,000 men. Soon after he had left, Omar, concerned at the smallness of his force, would have recalled him; but finding that he had already gone too far to be stopped, he sent heavy reinforcements, under Zobeir, one of the chief Companions, after him. The army of Amru was thus swelled to an imposing array of from 12,000 to 16,000 men, some of them warriors of renown. Amru entered Egypt by Arish, and overcoming the garrison at Faroma [ancient Pelusium], turned to the left and so passed onward through the desert, reaching thus the easternmost of the seven estuaries of the Nile. Along this branch of the river he marched by Bubastis towards Upper Egypt,"—and, so, to Heliopolis, near to the great ancient city of Misr, or Memphis. Here, and throughout their conquest of Egypt, the Moslem invaders appear to have found some goodwill towards them prevailing among the Christians of the Jacobite sect, who had never become reconciled to the Orthodox Greeks. Heliopolis and Memphis were surrendered to their arms after some hard fighting and a siege of no long duration. "Amru lost no time in marching upon Alexandria so as to reach it before the Greek troops, hastily called in from the outlying garrisons, could rally there for its defence. On the way he put to flight several columns which sought to hinder his advance; and at last presented himself before the walls of the great city, which, offering (as it still does) on the land side a narrow and well-fortified front, was capable of an obstinate resistance. Towards the sea also it was open to succour at the pleasure of the Byzantine Court. But during the siege Heraclius died, and the opportunity of relief was supinely allowed to slip away." In the end Alexandria capitulated and was protected from plunder (see LIBRARIES, ANCIENT: ALEXANDRIA), paying tribute to the conquerors. "Amru, it is said, wished to fix his seat of government at Alexandria, but Omar would not allow him to remain so far away from his camp, with so many branches of the Nile between. So he returned to Upper Egypt. A body of the Arabs crossed the Nile and settled in Ghizeh, on the western bank—a movement which Omar permitted only on condition that a strong fortress was constructed there to prevent the possibility of their being surprised and cut off. The headquarters of the

army were pitched near Memphis. Around them grew up a military station, called from its origin Fostat, or 'the Encampment.' It expanded rapidly into the capital of Egypt, the modern Cairo. . . . This name 'Cahira,' or City of the Victory, is of later date [see below: A. D. 908-1171]. . . . Zobeir urged Amru to enforce the right of conquest, and divide the land among his followers. But Amru refused; and the Caliph, as might have been expected, confirmed the judgment. 'Leave the land of Egypt,' was his wise reply, 'in the people's hands to nurse and fructify.' As elsewhere, Omar would not allow the Arabs to become proprietors of a single acre. Even Amru was refused ground whereupon to build a mansion for himself. . . . So the land of Egypt, left in the hands of its ancestral occupants, became a rich granary for the Hejaz, even as in bygone times it had been the granary of Italy and the Byzantine empire. . . . Amru, with the restless spirit of his faith, soon pushed his conquests westward beyond the limits of Egypt, established himself in Barca, and reached even to Tripoli. . . . Early in the Caliphate of Othman [A. D. 646] a desperate attempt was made to regain possession of Alexandria. The Moslems, busy with their conquests elsewhere, had left the city insufficiently protected. The Greek inhabitants conspired with the Court; and a fleet of 300 ships was sent under command of Manuel, who drove out the garrison and took possession of the city. Amru hastened to its rescue. A great battle was fought outside the walls: the Greeks were defeated, and the unhappy town was subjected to the miseries of a second and a longer siege. It was at last taken by storm and given up to plunder. . . . The city, though still maintaining its commercial import, fell now from its high estate. The pomp and circumstance of the Moslem Court were transferred to Fostat, and Alexandria ceased to be the capital of Egypt."—Sir W. Muir, *Annals of the Early Caliphate*, ch. 24, with foot-note.

A. D. 644.—Assassination of Caliph Omar.—The death of Omar, the second of the Caliphs, was a violent one. "It occurred in November, A. D. 644. One day a slave who worked for his master at the carpenter's bench came to see the Commander of the Faithful, and complained to him of being overworked, and badly treated by the citizen that owned him. Omar listened attentively, but arriving at the conclusion that the charges were false, sternly dismissed the carpenter to his bench. The man retired, vowing to be revenged. The following day was Friday, 'the day of the Assembly.' Omar, as usual, went to lead the prayers of the assembly in the great mosque. He opened his mouth to speak. He had just said 'Allah,' when the keen dagger of the offended slave was thrust into his back, and the Commander of the Faithful fell on the sacred floor, fatally wounded. The people, in a perfect frenzy of horror and rage, fell upon the assassin, but with superhuman strength he threw them off, and rushing about in the madness of despair he killed some and wounded others, and finally turning the point of his dagger to his own breast, fell dead. Omar lingered several days in great agony, but he was brave to the end. His dying words were, 'Give to my successor this parting

bequest, that he be kind to the men of this city, Medina, which gave a home to us, and to the Faith. Tell him to make much of their virtues, and to pass lightly over their faults. Bid him also treat well the Arab tribes, for verily they are the backbone of Islam. Moreover, let him faithfully fulfil the covenants made with the Christians and the Jews! O Allah! I have finished my course! To him that cometh after me, I leave the kingdom firmly established and at peace!' Thus perished one of the greatest Princes the Mohammedans were ever to know. Omar was truly a great and good man, of whom any country and any creed might be proud."—J. J. Pool, *Studies in Mohammedanism*, pp. 58-59.

A. D. 647-709.—Conquest of northern Africa.—"While Egypt was won almost without a blow, Latin Africa [northern Africa beyond Egypt] took sixty years to conquer. It was first invaded under Othman in 647, but Carthage was not subdued till 698, nor was the province fully reduced for eleven years longer. And why? Doubtless because Africa contained two classes of inhabitants, not over-friendly to each other, but both of whom had something to lose by a Saracenic conquest. The citizens of Carthage were Roman in every sense, their language was Latin, their faith was orthodox; they had no wrongs beyond those which always afflict provincials under a despotism; wrongs not likely to be alleviated by exchanging a Christian despot at Constantinople for an infidel one at Medina or Damascus. Beyond them, in the inland provinces, were the native Moors, barbarians, and many of them pagans; they had fought for their rude liberty against the Cæsars, and they had no intention of surrendering it to the Caliphs. Romans and Moors alike long preferred the chances of the sword to either Koran or tribute; but their ultimate fate was different. Latin civilization and Latin Christianity gradually disappeared by the decay and extermination of their votaries. The Moors, a people not unlike the Arabs in their unconverted state, were at last content to embrace their religion, and to share their destinies and their triumphs. Arabs and Moors intermingled went on to further conquests; and the name of the barbarian converts was more familiarly used in Western Europe to denote the united nation than the terrible name of the original compatriots of the Prophet."—E. A. Freeman, *Hist. and Conquests of the Saracens*, lect. 3.—"In their climate and government, their diet and habitation, the wandering Moors resembled the Bedouens of the desert. With the religion they were proud to adopt the language, name, and origin of Arabs; the blood of the strangers and natives was insensibly mingled; and from the Euphrates to the Atlantic the same nation might seem to be diffused over the sandy plains of Asia and Africa. Yet I will not deny that 50,000 tents of pure Arabians might be transported over the Nile and scattered through the Libyan desert; and I am not ignorant that five of the Moorish tribes still retain their barbarous idiom, with the appellation and character of 'white' Africans."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 51.—"By 647 the Barbary coast was overrun up to the gates of Roman Carthage; but the wild Berber population was more difficult to subdue than the luxurious subjects of the Sasanids of Persia or the

Greeks of Syria and Egypt. Kayrawan was founded as the African capital in 670; Carthage fell in 693, and the Arabs pushed their arms as far as the Atlantic. From Tangier they crossed into Spain in 710."—S. Lane-Poole, *The Mohammedan Dynasties*, p. 5.

A. D. 661.—Accession of the Omeyyads.—Abu Bekr, the immediate successor of Mahomet, reigned but two years, dying August, A. D. 634. By his nomination, Omar was raised to the Caliphate and ruled Islam until 644, when he was murdered by a Persian slave. His successor was Othman, who had been the secretary of the Prophet. The Caliphate of Othman was troubled by many plots and increasing disaffection, which ended in his assassination, A. D. 656. It was not until then that Ali, the nephew and son-in-law of Mahomet, was permitted to take the Prophet's seat. But the dissensions in the Moslem world had grown more bitter as the fields of ambitious rivalry were widened, and the factions opposed to Ali were implacable. "Now begins the tragic tale of the wrongs and martyrdoms of the immediate family of the Prophet. The province of Syria was now ruled by the crafty Moawiyah, whose father was Abu-Sofian, so long the bitterest enemy of Mahomet, and at last a tardy and unwilling proselyte. . . . Such was the parentage of the man who was to deprive the descendants of the Apostle of their heritage. Moawiyah gave himself out as the avenger of Othman; Ali was represented as his murderer, although his sons, the grandsons of the Prophet, had fought, and one of them received a wound, in the defence of that Caliph. . . . Ayesha, too, the Mother of the Faithful, Telha and Zobeir, the Prophet's old companions, revolted on their own account, and the whole of the brief reign of Ali was one constant succession of civil war." Syria adhered to Moawiyah. Ayesha, Zobeir and Telha gained possession of Bussorah and made that city their headquarters of rebellion. They were defeated there by Ali in a great battle, A. D. 656, called the Battle of the Camel, because the litter which bore Ayesha on the back of a camel became the center of the fight. But he gained little from the success; nor more from a long, indecisive battle fought with Moawiyah at Siffin, in July, A. D. 657. Amru, the conqueror of Egypt, had now joined Moawiyah, and his influence enlisted that great province in the revolt. At last, in 661, the civil war was ended by the assassination of Ali. His eldest son, Hassan, who seems to have been a spiritless youth, bargained away his claims to Moawiyah, and the latter became undisputed Caliph, founding a dynasty called that of the Ommyiads, or Omeyyads (from Ommiah, or Omeyya, the great grandfather of Moawiyah), which occupied the throne for almost a century—not at Medina, but at Damascus, to which city the Caliphate was now transferred. "In thus converting the Caliphate into an hereditary monarchy he utterly changed its character. It soon assumed the character of a common oriental empire. . . . The Ommyiads were masters of slaves instead of leaders of freemen; the public will was no longer consulted, and the public good as little; the Commander of the Faithful sank into an earthly

despot, ruling by force, like any Assyrian conqueror of old. The early Caliphs dwelt in the sacred city of Medina, and directed the counsels of the Empire from beside the tomb of the Prophet. Moawiyah transferred his throne to the conquered splendours of Damascus; and Mecca and Medina became tributary cities to the ruler of Syria. At one time a rival Caliph, Abdallah, established himself in Arabia; twice were the holy cities taken by storm, and the Kaaba itself was battered down by the engines of the invaders. . . . Such a revolution however did not effect itself without considerable opposition. The partisans of the house of Ali continued to form a formidable sect. In their ideas the Vicarship of the Prophet was not to be, like an earthly kingdom, the mere prize of craft or of valour. It was the inalienable heritage of the sacred descendants of the Prophet himself. . . . This was the origin of the Shiah sect, the assertors of the rights of Ali and his house."—E. A. Freeman, *Hist. and Conquests of the Saracens*, lect. 3.

A. D. 680.—The Tragedy at Kerbela.—When Ali, or Aly, the nephew and son-in-law of Mahomet, had been slain, A. D. 661, and the Caliphate had been seized by Moawiyah, the first of the Ommyiads, "the followers of 'Aly proclaimed his elder son, Hasan, Khalif; but this poor-spirited youth was contented to sell his pretensions to the throne. . . . On his death, his brother Hoseyn became the lawful Khalif in the eyes of the partisans of the House of 'Aly, who ignored the general admission of the authority of the 'Ommyiads.' . . . For a time Hoseyn remained quietly at Medina, leading a life of devotion, and declining to push his claims. But at length an opportunity for striking a blow at the rival House presented itself, and Hoseyn did not hesitate to avail himself of it. He was invited to join an insurrection which had broken out at Kufa [A. D. 680], the most mutinous and fickle of all the cities of the empire; and he set out with his family and friends, to the number of 100 souls, and an escort of 500 horsemen, to join the insurgents. As he drew nigh to Kufa, he discovered that the rising had been suppressed by the 'Ommyiad' governor of the city, and that the country round him was hostile instead of loyal to him. And now there came out from Kufa an army of 4,000 horse, who surrounded the little body of travellers [on the plain of Kerbela], and cut them off alike from the city and the river. . . . A series of single combats, in which Hoseyn and his followers displayed heroic courage, ended in the death of the Imam and the men who were with him, and the enslaving of the women and children."—S. Lane-Poole, *Studies in a Mosque*, ch. 7.—"The scene [of the massacre of Hosein and his band] . . . is still fresh as yesterday in the mind of every Believer, and is commemorated with wild grief and frenzy as often as the fatal day, the Tenth of the first month of the year [tenth of Moharram—Oct. 10], comes round. . . . The tragedy of Kerbala decided not only the fate of the Caliphate, but of Mahometan kingdoms long after the Caliphate had waned and disappeared. . . . The tragedy is yearly represented on the stage as a religious

ceremony"—in the "Passion Play" of the Moharram Festival.—Sir W. Muir, *Annals of the Early Caliphate*, ch. 49, with foot-note.—See, also, ISLAM.

A. D. 668-675.—First repulse from Constantinople. See CONSTANTINOPLE: A. D. 668-675.

A. D. 710.—Subjugation of the Turks.—"After the fall of the Persian kingdom, the river Oxus divided the territories of the Saracens and of the Turks. This narrow boundary was soon overleaped by the spirit of the Arabs; the governors of Chorassan extended their successive inroads; and one of their triumphs was adorned with the buskin of a Turkish queen, which she dropped in her precipitate flight beyond the hills of Bochara. But the final conquest of Transoxana, as well as of Spain, was reserved for the glorious reign of the inactive Walid; and the name of Catibah, the camel-driver, declares the origin and merit of his successful lieutenant. While one of his colleagues displayed the first Mahometan banner on the banks of the Indus, the spacious regions between the Oxus, the Jaxartes, and the Caspian sea were reduced by the arms of Catibah to the obedience of the prophet and of the caliph. A tribute of two millions of pieces of gold was imposed on the infidels; their idols were burned or broken; the Mussulman chief pronounced a sermon in the new mosch [mosque] of Carizme; after several battles the Turkish hordes were driven back to the desert; and the emperors of China solicited the friendship of the victorious Arabs. To their industry the prosperity of the province, the Sogdiana of the ancients, may in a great measure be ascribed; but the advantages of the soil and climate had been understood and cultivated since the reign of the Macedonian kings. Before the invasion of the Saracens, Carizme, Bochara, and Samarcand were rich and populous under the yoke of the shepherds of the North."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 51.

A. D. 711-713.—Conquest of Spain. See SPAIN: A. D. 711-713.

A. D. 715-732.—The repulse from Gaul.—"The deeds of Musa [in Africa and Spain] had been performed 'in the evening of his life,' but, to borrow the words of Gibbon, 'his breast was still fired with the ardor of youth, and the possession of Spain was considered as only the first step to the monarchy of Europe. With a powerful armament by sea and land, he was preparing to pass the Pyrenees, to extinguish in Gaul the declining kingdoms of the Franks and Lombards, and to preach the unity of God on the altar of the Vatican. Thence, subduing the barbarians of Germany, he proposed to follow the course of the Danube from its source to the Euxine Sea, to overthrow the Greek or Roman empire of Constantinople, and, returning from Europe to Asia, to unite his new acquisitions with Antioch and the provinces of Syria.' This vast enterprise . . . was freely revolved by the successors of Musa. In pursuance of it, El Haur, the new lieutenant of the califs, assailed the fugitive Goths in their retreats in Septimania (715-718). El Zamah, who succeeded him, crossed the mountains, and, seizing Narbonne, expelled the inhabitants and settled there a colony of Saracens (719). The following year they

passed the Rhone, in order to extend their dominion over Provence, but, repelled by the dukes and the militia of the country, turned their forces toward Toulouse (721). Eudo, Duke of Aquitaine, bravely defending his capital, brought on a decisive combat. . . . El Zamah fell. The carnage among his retreating men then became so great that the Arabs named the passage from Toulouse to Carcassonne the Road of Martyrs (Balat al Chouda). Supporting their terrible reverses with the characteristic resignation of their race and faith, the Arabs were still able to retain a hold of Narbonne and of other fortresses of the south, and, after a respite of four years, spent in recruiting their troops from Spain and Africa, to resume their projects of invasion and pillage in Gaul (725). Under the Wali Anbessa, they ascended the Rhone as far as the city of Lyons, devastating the towns and the fields. . . .

When, . . . at the close of his expeditions, Anbessa perished by the hands of the Infidels, all the fanaticism of the Mussulman heart was aroused into an eager desire for revenge. His successor, Abd-el-Rahman, a tried and experienced general, energetic and heroic as he was just and prudent, . . . entered into elaborate preparations for the final conquest of Gaul. For two years the ports of Syria, Egypt, and Africa swarmed with departing soldiery, and Spain resounded with the calls and cries to arms (727-729)." The storm broke first on Aquitaine, and its valiant Duke Eudes, or Eudo, rashly meeting the enemy in the open field, in front of Bordeaux, suffered an irretrievable defeat (May, 731). Bordeaux was stormed and sacked, and all Aquitaine was given up to the ravages of the unsparing Moslem host. Eudes fled, a helpless fugitive, to his enemies the Franks, and besought the aid of the great palace-mayor, Karl Martel, practical sovereign of the Frankish kingdoms, and father of the Pippin who would soon become king in name as well as in fact. But, not for Aquitaine, only, but for all Gaul, all Germany, —all Christendom in Europe,—Karl and his Franks were called on to rally and do battle against the sons of the desert, whose fateful march of conquest seemed never to end. "During all the rest of the summer, the Roman clarions and the German horns sounded and groaned through all the cities of Neustria and Austrasia, through the rustic palaces of the Frankish leudes, and in the woody gaus of western Germany.' . . . Meanwhile, Abd-el-Rahman, laden with plunder and satiated with blood, had bent his steps toward the southwest, where he concentrated his troops on the banks of the Charente. Enriched and victorious as he was, there was still an object in Gaul which provoked alike the cupidity and the zeal of his followers. This was the Basilica of St. Martin of Tours, the shrine of the Gallic Christians, where the richest treasures of the Church were collected, and in which the profoundest veneration of its members centred. He yearned for the pillage and the overthrow of this illustrious sanctuary, and, taking the road from Poitiers, he encountered the giants of the North in the same valley of the Vienne and Clain where, nearly three hundred years before, the Franks and the Wisigoths had disputed the supremacy of Gaul. There, on those autumn fields, the Koran and the Bible —Islamism and Christianity—Asia and Europe—stood face to face, ready to grapple in a deadly

* Uncertain date.

and decisive conflict. . . . Trivial skirmishes from time to time kept alive the ardor of both hosts, till at length, at dawn on Saturday, the 11th of October [A. D. 732], the signal for a general onset was given. With one loud shout of Allah-Akbar (God is great), the Arab horsemen charged like a tempest upon their foe, but the deep columns of the Franks did not bend before the blast. 'Like a wall of iron,' says the chronicler, 'like a rampart of ice, the men of the North stood unmoved by the frightful shock.' All day long the charges were renewed." Still the stout Franks held their ground, and still the indomitable warriors of Islam pressed upon them, until late in the afternoon, when the latter were thrown into confusion by an attack on their rear. Then Karl and his men charged on them and their lines were broken—their rout was bloody and complete. When night put an end to the slaughter, the Franks slept upon their arms, expecting that the dreaded Saracens would rally and resume the fight. But they vanished in the darkness. Their leader, the brave Abd-el-Rahman had fallen in the wild mêlée and no courage was left in their hearts. Abandoning everything but their horses and their arms, they fled to Narbonne. "Europe was rescued, Christianity triumphant, Karl the hero forever of Christian civilization."—P. Godwin, *Hist. of France: Ancient Gaul*, ch. 14.—The booty found by the Franks in the Moslem camp "was enormous; hard-money, ingots of the precious metals, melted from jewels and shrines; precious vases, rich stuffs, subsistence stores, flocks and herds gathered and parked in the camp. Most of this booty had been taken by the Moslemah from the Aquitanians, who now had the sorrow of seeing it greedily divided among the Franks."—H. Coppée, *Conquest of Spain by the Arab-Moors*, bk. 6, ch. 1 (v. 2).

A. D. 715-750.—Omeyyads and Abbassides.—**The dividing of the Caliphate.**—The tragic death of Hosein and his companions at Kerbela kindled a passion which time would not extinguish in the hearts of one great party among the Moslems. The first ambitious leader to take advantage of the excitement of it, as a means of overthrowing the Omeyyads, was Abdallah ibn Zobeir, who, posing first as the "Protector of the Holy House" of Ali, soon proclaimed himself Caliph and maintained for thirteen years a rival court at Mecca. In the war which raged during a great part of those years, Medina was taken by storm and given over to pillage, while the holy city of Mecca withstood a siege of forty days, during which the sacred Caaba was destroyed. Zobeir fell, at last, in a final battle fought under the walls of Mecca. Meantime, several changes in the caliphate at Damascus had taken place and the throne was soon afterwards [A. D. 705] occupied by the Caliph Welid, whose reign proved more glorious than that of any other prince of his house. "Elements of disorder still remained, but under the wise and firm sceptre of Welid they were held in check. The arts of peace prevailed; schools were founded, learning cultivated, and poets royally rewarded; public works of every useful kind were promoted, and even hospitals established for the aged, lame, and blind. Such, indeed, at this era, was the glory of the court of Damascus that Welid, of all the Caliphs both be-

fore and after, gives the precedence to Welid. It is the fashion for the Arabian historians to abuse the Omeyyads as a dissolute, intemperate, and godless race; but we must not forget that these all wrote more or less under Abbasside inspiration. . . . After Welid, the Omeyyad dynasty lasted six-and-thirty years. But it began to rest on a precarious basis. For now the agents of the house of Hashim, descendants of the Prophet and of his uncle Abbas, commenced to ply secretly, but with vigour and persistency, their task of canvass and intrigue in distant cities, and especially in the provinces of the East. For a long time, the endeavour of these agitators was directed to the advocacy of the Shiya right; that is to say, it was based upon the Divine claim of Aly, and his descendants in the Prophet's line, to the Imamate or leadership over the empire of Islam. . . . The discomfiture of the Shiya paved the way for the designing advocates of the other Hashimite branch, namely, that of the house of Abbas, the uncle of the Prophet. These had all along been plotting in the background, and watching their opportunity. They now vaunted the claims of this line, and were barefaced enough to urge that, being descended from the uncle of Mahomet through male representatives, they took precedence over the direct descendants of the Prophet himself, because these came through Fatima in the female line. About the year 130 of the Hegira, Abul Abbas, of Abbaside descent, was put forward in Persia, as the candidate of this party, and his claim was supported by the famous general Abu Muslim. Successful in the East, Abu Muslim turned his arms to the West. A great battle, one of those which decide the fate of empires, was fought on the banks of the Zab [A. D. 750]; and, through the defection of certain Kharejite and Yemen levies, was lost by the Omeyyad army. Merwan II., the last of his dynasty, was driven to Egypt, and there killed in the church of Bussir, whither he had fled for refuge. At the close of the year 132 [Aug. 5, A. D. 750], the black flag, emblem of the Abbassides, floated over the battlements of Damascus. The Omeyyad dynasty, after ruling the vast Moslem empire for a century, now disappeared in cruelty and bloodshed. . . . So perished the royal house of the Omeyyads. But one escaped. He fled to Spain, which had never favoured the overweening pretensions of the Prophet's family, whether in the line of Aly or Abbas. Accepted by the Arab tribes, whose influence in the West was paramount, Abd al Rahman now laid the foundation of a new Dynasty and perpetuated the Omeyyad name at the magnificent court of Cordova. . . . Thus, with the rise of the Abbassides, the unity of the Caliphate came to an end. Never after, either in theory or in fact, was there a successor to the Prophet, acknowledged as such over all Islam. Other provinces followed in the wake of Spain. The Aghlabite dynasty in the east of Africa, and, west of it, the Edrisites in Fez, both of Alyite descent; Egypt and Sicily under independent rulers; the Tahirite kings in Persia, their native soil; these and others, breaking away from the central government, established kingdoms of their own. The name of Caliph, however it might survive in the Abbasside lineage, or be assumed by less legitimate pretenders, had now altogether lost its virtue and significance."—Sir W. Muir, *Annals of the Early Caliphate*, ch. 50.

A. D. 717-718.—Second repulse from Constantinople. See CONSTANTINOPLE: A. D. 717-718.

A. D. 752-759.—Final expulsion from southern Gaul.—During the year of his coronation (A. D. 752) Pippin, or Pepin the Short—the first of the Carolingians to assume the Frankish crown—having taken measures to reduce Aquitaine to obedience, was diverted, on his march towards that country, into Septimania. The discord prevailing among the Moslems, who had occupied this region of Gaul for more than thirty years, “opened the prospect of an easy conquest. With little fighting, and through the treachery of a Goth named Ansemond, who commanded at Beziers, Agde, Maguelonne, and Nismes, under an Arabian wali, he was enabled to seize those strong-holds, and to leave a part of his troops to besiege Narbonne, as the first step toward future success.” Then Pippin was called away by war with the Saxons and in Brittany, and was occupied with other cares and conflicts, until A. D. 759, when he took up and finished the task of expelling the Saracens from Gaul. “His troops left in occupation of Septimania (752) had steadily prosecuted the siege of Narbonne. . . . Not till after a blockade of seven years was the city surrendered, and then through the treason of the Christians and Goths who were inside the walls, and made secret terms with the beleaguers. They rose upon the Arabs, cut them in pieces, and opened the gates to the Franks. A reduction of Elne, Caucoliberis, and Carcassone followed hard upon that of Narbonne. . . . In a little while the entire Arab population was driven out of Septimania, after an occupation of forty years; and a large and important province (equivalent nearly to the whole of Languedoc), held during the time of the Mérovingians by the Wisigoths, was secured to the possession of the Franks. The Arabs, however, though expelled, left many traces of their long residence on the manners and customs of Southern Gaul.”—P. Godwin, *Hist. of France: Ancient Gaul*, ch. 15.

A. D. 756-1031.—The Omeyyad caliphs of Cordova.—When the struggle of the house of Abbas with the house of Omeyya, for the throne of the caliphate at Damascus, was ended by the overthrow of the Omeyyads (A. D. 750), the wretched members of the fallen family were hunted down with unsparing ferocity. “A single youth of the doomed race escaped from destruction. After a long series of romantic adventures, he found his way into Spain [A. D. 756]; he there found partizans, by whose aid he was enabled to establish himself as sovereign of the country, and to resist all the attempts of the Abbassides to regain, or rather to obtain, possession of the distant province. From this Abderrahman [or Abdalrahman] the Ommiad proceeded the line of Emirs and Caliphs of Cordova, who reigned in splendour in the West for three centuries after their house had been exterminated in their original possessions. . . . When the Ommiad Abdalrahman escaped into Spain . . . the peninsula was in a very disordered state. The authority of the Caliphs of the East was nearly nominal, and governors rose and fell with very little reference to their distant sovereign. . . . The elevation of

Abdalrahman may have been the result, not so much of any blind preference of Ommiads to Abbassides, as of a conviction that nature designed the Iberian peninsula to form an independent state. But at that early period of Mahometan history an independent Mahometan state could hardly be founded, except under the guise of a rival Caliphate. . . . And undoubtedly nothing is more certain than that the Ommiads of Cordova were in every sense a rival dynasty to the Abbassides of Bagdad. The race of Moawiyah seem to have decidedly improved by their migration westward. The Caliphs of Spain must be allowed one of the highest places among Mahometan dynasties. In the duration of their house and in the abundance of able princes which it produced, they yield only to the Ottoman Sultans, while they rise incomparably above them in every estimable quality. . . . The most splendid period of the Saracen empire in Spain was during the tenth century. The great Caliph Abdalrahman Annasir Ledinallah raised the magnificence of the Cordovan monarchy to its highest pitch. . . . The last thirty years of the Ommiad dynasty are a mere wearisome series of usurpations and civil wars. In 1031 the line became extinct, and the Ommiad empire was cut up into numerous petty states. From this moment the Christians advance, no more to retreat, and the cause of Islam is only sustained by repeated African immigrations.”—E. A. Freeman, *Hist. and Conquests of the Saracens*, lect. 4-5.

ALSO IN: H. Coppée, *Conquest of Spain by the Arab-Moors*, bk. 6, ch. 5; bk. 7, ch. 1-4; bk. 8, ch. 1.

A. D. 763.—The Caliphate transferred to Bagdad.—“The city of Damascus, full as it was of memorials of the pride and greatness of the Ommiad dynasty, was naturally distasteful to the Abbassides. The Caliph Mansur had commenced the building of a new capital in the neighbourhood of Kufa, to be called after the founder of his family, Hashimiyeh. The Kufans, however, were devoted partisans of the descendants of Ali. . . . The growing jealousy and distrust between the two houses made it inadvisable for the Beni Abbas to plant the seat of their empire in immediate propinquity to the head-quarters of the Ali faction, and Mansur therefore selected another site [about A. D. 763]. This was Bagdad, on the western bank of the Tigris [fifteen miles above Medain, which was the ancient Seleucia and Ctesiphon]. It was well suited by nature for a great capital. The Tigris brought commerce from Diyar Bekr on the north, and through the Persian Gulf from India and China on the east; while the Euphrates, which here approaches the Tigris at the nearest point, and is reached by a good road, communicated directly with Syria and the west. The name Bagdad is a very ancient one, signifying ‘given or founded by the deity,’ and testifies to the importance of the site. The new city rapidly increased in extent and magnificence, the founder and his next two successors expending fabulous sums upon its embellishment, and the ancient palaces of the Sassanian kings, as well as the other principal cities of Asia, were robbed of their works of art for its adornment.”—E. H. Palmer, *Haroun Alraschid, Caliph of Bagdad*, ch. 2.—“Baghdad, answering to its proud name of ‘Dar al Salam,’ ‘The City of Peace,’ became for

a time the capital of the world, the centre of luxury, the emporium of commerce, and the seat of learning."—Sir W. Muir, *Annals of the Early Caliphate*, ch. 50.

A. D. 815-945.—Decline and temporal fall of the Caliphate at Bagdad.—"It was not until nearly the close of the first century after the Hejira that the banners of Islam were carried into the regions beyond the Oxus, and only after a great deal of hard fighting that the oases of Bokhara and Samarkand were annexed to the dominions of the khalif. In these struggles, a large number of Turks—men, women, and children—fell into the power of the Moslems, and were scattered over Asia as slaves. . . . The khalif Mamoun [son of Haroun Alraschid—A. D. 815-834] was the first sovereign who conceived the idea of basing the royal power on a foundation of regularly drilled Turkish soldiers."—R. D. Osborn, *Islam under the Khalifs of Bagdad*, pt. 3, ch. 1.—"The Caliphs from this time leaned for support on great bands of foreign mercenaries, chiefly Turks, and their captains became the real lords of the empire as soon as they realised their own strength. How thoroughly the Abbásid caliphate had been undermined was shown all at once in a shocking manner, when the Caliph Mutawakkil was murdered by his own servants at the command of his son, and the parricide Muntasir set upon the throne in his stead (Dec. 861). The power of the Caliphs was now at an end; they became the mere playthings of their own savage warriors. The remoter, sometimes even the nearer, provinces were practically independent. The princes formally recognised the Caliph as their sovereign, stamped his name upon their coins, and gave it precedence in public prayer, but these were honours without any solid value. Some Caliphs, indeed, recovered a measure of real power, but only as rulers of a much diminished State. Theoretically the fiction of an undivided empire of Islam was maintained, but it had long ceased to be a reality. The names of Caliph, Commander of the Faithful, Imám, continued still to inspire some reverence; the theological doctors of law insisted that the Caliph, in spiritual things at least, must everywhere bear rule, and control all judicial posts; but even theoretically his position was far behind that of a pope, and in practice was not for a moment to be compared to it. The Caliph never was the head of a true hierarchy; Islam in fact knows no priesthood on which such a system could have rested. In the tenth century the Buids, three brothers who had left the hardly converted Gilán (the mountainous district at the southwest angle of the Caspian Sea) as poor adventurers, succeeded in conquering for themselves the sovereign command over wide domains, and over Bagdad itself [establishing what is known as the dynasty of the Buids or Boudes, or Bowides, or Dilemites]. They even proposed to themselves to displace the Abbásids and set descendants of Ali upon the throne, and abandoned the idea only because they feared that a Caliph of the house of Ali might exercise too great an authority over their Shiíte soldiers, and so become independent; while, on the other hand, they could make use of these troops for any violence they chose against the Abbásid puppet who sat in Mansúr's seat."—T. Nöldeke, *Sketches from Eastern Hist.*, ch. 3.

A. D. 908-1171.—The Fatimite caliphs.—"Egypt, during the ninth and tenth centuries, was the theatre of several revolutions. Two dynasties of Turkish slaves, the Tulunides and the Ilkshidites, established themselves in that country, which was only reunited to the Caliphate of Bagdad for a brief period between their usurpations. But early in the ninth century a singular power had been growing up on its western border. . . . A schism arose among the followers of Ali [the shiahs, who recognized no succession to the Prophet, or Imamate—leadership in Islam—except in the line of descent from Ali, nephew of Mahomet and husband of Mahomet's daughter, Fatima] regarding the legitimate succession to the sixth Imam, Jaffer. His eldest son, Ismail or Ishmael, dying before him, Jaffer appointed another son, Moussa or Moses, his heir. But a large body of the sect denied that Jaffer had the right to make a new nomination; they affirmed the Imamate to be strictly hereditary, and formed a new party of Ishmaelians, who seem to have made something very like a deity of their hero. A chief of this sect, Mahomet, surnamed Al Mehdi, or the Leader, a title given by the Shiahs to their Imams, revolted in Africa in 908. He professed himself, though his claims were bitterly derided by his enemies, to be a descendant of Ishmael, and consequently to be the legitimate Imam. Armed with this claim, it was of course his business to acquire, if he could, the temporal power of a Caliph; and as he soon obtained the sovereignty of a considerable portion of Africa, a rival Caliphate was consequently established in that country. This dynasty assumed the name of Fatimites, in honour of their famous ancestress Fatima, the daughter of the Prophet. The fourth in succession, Muezzeddin by name, obtained possession of Egypt about 967. . . . The Ilkshidites and their nominal sovereigns, the Abbassides, lost Egypt with great rapidity. Al Muezzeddin transferred his residence thither, and founded [at Fostat—see above, A. D. 640-646] the city of Cairo, which he made his capital. Egypt thus, from a tributary province, became again, as in the days of its Pharaohs and Ptolemies, the seat of a powerful kingdom. The claims of the Egyptian Caliphs were diligently preached throughout all Islam, and their temporal power was rapidly extended into the adjoining provinces of Syria and Arabia. Palestine became again . . . the battle-field for the lords of Egypt and of the East. Jerusalem, the holy city of so many creeds, was conquered and reconquered. . . . The Egyptian Caliphate . . . played an important part in the history of the Crusades. At last, in 1171, it was abolished by the famous Saladin. He himself became the founder of a new dynasty; but the formal aspect of the change was that Egypt, so long schismatic, was again restored to the obedience of Bagdad. Saladin was lord of Egypt, but the titles of the Abbasside Caliph, the true Commander of the Faithful, appeared again on the coin and in the public prayers, instead of that of his Fatimite rival."—E. MAINE: The Name.—"Sullivan in 'Hist. of Maine,' and others, say that the territory was called the Province of Maine, in compliment to Queen Henrietta, who had that province in France for dowry. But Folsom, 'Discourse on Maine' (Maine Hist. Coll., vol. ii., p. 38), says that that province in France did not belong to Henrietta. Maine, like all the rest of the coast, was known as the 'Maine,' the mainland, and it is not unlikely that the word so much used by the early fishers on the coast, may thus have been permanently given to this part of it."—W. C. Bryant and S. H. Gay, *Hist. of the U. S.*, v. 1, p. 337, foot-note.

"Of the Plymouth Company, George Popham, brother of the Chief Justice, and Raleigh Gilbert, son of the earlier navigator and nephew of Sir Walter Raleigh, were original associates. A vessel despatched from Bristol by Sir John Popham made a further survey of the coast of New England, and returned with accounts which infused vigorous life into the undertaking; and it was now prosecuted with eagerness and liberality. But in little more than a year 'all its former hopes were frozen to death.' Three ships sailed from Plymouth with 100 settlers, amply furnished, and taking two of Gorges's Indians [kidnapped on the voyage of Captain Weymouth in 1605] as interpreters and guides. After a prosperous voyage they reached the mouth of the river called Sagadahoc, or Kennebec, in Maine, and on a projecting point proceeded to organize their community. After prayers and a sermon, they listened to a reading of the patent and of the ordinances under which it had been decreed by the authorities at home that they should live. George Popham had been constituted their President, Raleigh Gilbert was Admiral. . . . The adventurers dug wells, and built huts. More than half of the number became discouraged, and returned with the ships to England. Forty-five remained through the winter, which proved to be very long and severe. . . . When the President sickened and died, and, presently after, a vessel despatched to them with supplies brought intelligence of the death of Sir John Popham, and of Sir John Gilbert,—the latter event calling for the presence of the Admiral, Gilbert's brother and heir, in England,—they were ready to avail themselves of the excuses thus afforded for retreating from the distasteful enterprise. All yielded to their homesickness, and embarked on board of the returning ship, taking with them a small vessel which they had built, and some furs and other products of the country. Statesmen, merchants, and soldiers had not learned the conditions of a settlement in New England. 'The country was branded by the return of the plantation as being over cold, and in respect of that not habitable by Englishmen.' Still the son of the Chief Justice, 'Sir Francis Popham, could not so give it over, but continued to send thither several years after, in hope of better fortunes, but found it fruitless, and was necessitated at last to sit down with the loss he had already undergone.' Sir Francis Popham's enterprises were merely commercial. Gorges alone [Sir Ferdinando Gorges, who had been among the most active of the original

promoters of the Company], 'not doubting but God would effect that which man despaired of,' persevered in cherishing the project of a colony." —J. G. Palfrey, *Hist. of N. Eng.*, v. 1, ch. 2.

A. D. 1629-1631.—The Ligonias, or Plow Patent, and other grants.—"The coast from the Piscataqua to the Kennebec was covered by six . . . patents, issued in the course of three years by the Council for New England, with the consent, doubtless, of Gorges, who was anxious to interest as many persons as possible in the projects of colonization to which he was himself so much devoted. Several of these grants were for small tracts; the most important embraced an extent of 40 miles square, bordering on Casco Bay, and named Ligonias. The establishments hitherto attempted on the eastern coast had been principally for fishing and fur-trading; this was to be an agricultural colony, and became familiarly known as the 'Plow patent.' A company was formed, and some settlers sent out; but they did not like the situation, and removed to Massachusetts. Another of these grants was the Pemaquid patent, a narrow tract on both sides of Pemaquid Point, where already were some settlers. Pemaquid remained an independent community for the next forty years."—R. Hildreth, *Hist. of the U. S.*, ch. 7 (v. 1).—The Plow Patent "first came into notoriety in a territorial dispute in 1643. The main facts of the case are told shortly but clearly by Winthrop. According to him, in July, 1631, ten husbandmen came from England, in a ship named the Plough, with a patent for land at Sagadahock. But as the place did not please them they settled in Massachusetts, and were seemingly dispersed in the religious troubles of 1636. . . . At a later day the rights of the patentees were bought up, and were made a ground for ousting Gorges from a part of his territory."—J. A. Doyle, *The English in Am.: The Puritan Colonies*, v. 1, ch. 7.

ALSO IN: *Pemaquid Papers; and Ancient Pemaquid*, by J. W. Thornton (*Maine Hist. Soc. Coll.*, v. 5).

A. D. 1639.—A Palatine principality.—The royal charter to Sir Ferdinando Gorges.—"In April 1639 a charter was granted by the King constituting Gorges Lord Proprietor of Maine. The territory was bounded by the Sagadahock or Kennebec on the north and the Piscataqua on the south, and was to extend 120 miles inland. The political privileges of the Proprietor were to be identical with those enjoyed by the Bishop of Durham as Count Palatine. He was to legislate in conjunction with the freeholders of the province, and with the usual reservation in favour of the laws of England. His political rights were to be subject to the control of the Commissioners for Plantations, but his territorial rights were to be independent and complete in themselves. He was also to enjoy a monopoly of the trade of the colony. The only other points specially worth notice were a declaration that the religion of the colony was to be that of the Church of England, a reservation on behalf of all English subjects of the right of fishing with its necessary incidents, and the grant to the

Proprietor of authority to create manors and manorial courts. There is something painful in the spectacle of the once vigorous and enterprising soldier amusing his old age by playing at kingship. In no little German court of the last century could the forms of government and the realities of life have been more at variance. To conduct the business of two fishing villages Gorges called into existence a staff of officials which might have sufficed for the affairs of the Byzantine Empire. He even outdid the absurdities which the Proprietors of Carolina perpetrated thirty years later. They at least saw that their elaborate machinery of caciques and land-graves was unfit for practical purposes, and they waived it in favour of a simple system which had sprung up in obedience to natural wants. But Gorges tells complacently and with a deliberate care, which contrasts with his usually hurried and slovenly style, how he parcelled out his territory and nominated his officials. . . . The task of putting this cumbrous machinery into motion was entrusted by the Proprietor to his son, Thomas Gorges, as Deputy-Governor." —J. A. Doyle, *The English in Am.: The Puritan Colonies*, v. 1, ch. 7.—"The Province was divided into two counties, of one of which Agamenticus, or York, was the principal settlement; of the other, Saco. . . . The greatness of York made it arrogant; and it sent a deputation of aldermen and burgesses to the General Court at Saco, to save its metropolitan rights by a solemn protest. The Proprietary was its friend, and before long exalted it still more by a city charter, authorizing it and its suburbs, constituting a territory of 21 square miles, to be governed, under the name of 'Gorgeana,' by a Mayor, twelve Aldermen, a Common Council of 24 members, and a Recorder, all to be annually chosen by the citizens. Probably as many as two thirds of the adult males were in places of authority. The forms of proceeding in the Recorder's Court were to be copied from those of the British chancery. This grave foolery was acted more than ten years."—J. G. Palfrey, *Hist. of New Eng.*, v. 1, ch. 13.

ALSO IN: Sir F. Gorges, *Brief Narration* (*Maine Hist. Soc. Coll.*, v. 2).

A. D. 1643-1677.—Territorial jurisdiction in dispute.—The claims of Massachusetts made good.—"In 1643, the troubles in England between the King and Commons grew violent, and in that year Alexander Rigby bought the old grant called Lygonia or 'Plow Patent,' and appointed George Cleaves his deputy-president. Governor Thomas Gorges about that time returned to England, and left Vines in his place. Between Cleaves and Vines there was of course a conflict of jurisdiction, and Cleaves appealed for aid to Massachusetts; and both parties agreed to leave their claims (1645) to the decision of the Massachusetts Magistrates, who decided—that they could not decide the matter. But the next year the Commissioners for American plantations in England decided in favor of Rigby; and Vines left the country. In 1647, at last, at the age of 74, Sir Ferdinando Gorges died, and with him died all his plans for kingdoms and power in Maine. In 1651, Massachusetts, finding that her patent, which included lands lying three miles north of the head waters of the Merrimack, took in all the lower part of Maine, began to extend her jurisdiction, and as most of the

settlers favored her authority, it was pretty well established till the time of the Restoration (1660). Upon the Restoration of Charles II., the heir of Gorges claimed his rights to Maine. His agent in the province was Edward Godfrey. Those claims were confirmed by the Committee of Parliament, and in 1664 he obtained an order from the King to the Governor of Massachusetts to restore him his province. In 1664 the King's Commissioners came over, and proceeded through the Colonies, and among the rest to Maine; where they appointed various officers without the concurrence of Massachusetts; so that for some years Maine was distracted with parties, and was in confusion. In 1668, Massachusetts sent four Commissioners to York, who resumed and re-established the jurisdiction of Massachusetts, with which the majority of the people were best pleased; and in 1669 the Deputies from Maine again took their seats in the Massachusetts Court. Her jurisdiction was, however, disputed by the heirs of Mason and Gorges, and it was not finally set at rest till the year 1677, by the purchase of their claims from them, by Massachusetts, for £1,250.—C. W. Elliott, *The New Eng. Hist.*, v. 1, ch. 26.

A. D. 1820.—Separation from Massachusetts.—Recognition as a distinct commonwealth and admission into the Union.—“Petitions for the separation of the District of Maine were first preferred to the legislature of Massachusetts in 1816, and a convention was appointed to be holden at Brunswick. This convention voted in favor of the step, but the separation was not effected until 1820, at which time Maine was erected into a distinct and independent commonwealth, and was admitted into the American Union.”—G. L. Austin, *Hist. of Mass.*, p. 408.—“In the division of the property all the real estate in Massachusetts was to be forever hers; all that in Maine to be equally divided between the two, share and share alike. . . . The admission of Maine and Missouri into the Union were both under discussion in Congress at the same time. The advocates of the latter, wishing to carry it through the Legislature, without any restrictive clause against slavery, put both into a bill together,—determined each should share the same fate. . . . Several days the subject was debated, and sent from one branch to the other in Congress, till the 1st of March, when, to our joy, they were divorced; and on the 3d of the month [March, 1820] an act was passed by which Maine

was declared to be, from and after the 15th of that month, one of the United States.”—W. D. Williamson, *Hist. of Maine*, v. 2, ch. 27.—See, also, UNITED STATES OF AM.: A. D. 1818-1821.

MAJESTAS, The Law of.—“The law of Majestas or Treason . . . under the [Roman] empire . . . was the legal protection thrown round the person of the chief of the state: any attempt against the dignity or safety of the community became an attack on its glorified representative. Nevertheless, it is remarkable that the first legal enactment which received this title, half a century before the foundation of the empire, was actually devised for the protection, not of the state itself, but of a personage dear to the state, namely, the tribune of the people. Treason to the State indeed had long before been known, and defined as Perduellio, the levying of war against the commonwealth. . . . But the crime of majesty was first specified by the demagogue Apuleius, in an enactment of the year 654 [B. C. 100], for the purpose of guarding or exalting the dignity of the champion of the plebs. . . . The law of Apuleius was followed by that of another tribune, Varius, conceived in a similar spirit. . . . [After the constitution of Sulla] the distinction between Majestas and Perduellio henceforth vanishes: the crime of Treason is specifically extended from acts of violence to measures calculated to bring the State into contempt.”—C. Merivale, *Hist. of the Romans*, ch. 44.

MALATESTA FAMILY, The.—“No one with any tincture of literary knowledge is ignorant of the fame at least of the great Malatesta family—the house of the Wrongheads, as they were rightly called by some provision of their future part in Lombard history. . . . The story of Francesca da Polenta, who was wedded to the hunchback Giovanni Malatesta and murdered by him with her lover Paolo, is known not merely to students of Dante, but to readers of Byron and Leigh Hunt, to admirers of Flaxman, Ary Scheffer, Doré—to all, in fact, who have of art and letters any love. The history of these Malatesti, from their first establishment under Otho III. [A. D. 996-1002] as lieutenants for the Empire in the Marches of Ancona, down to their final subjugation by the Papacy in the

age of the Renaissance, is made up of all the vicissitudes which could befall a mediæval Italian despotism. Acquiring an unlawful right over the towus of Rimini, Cesena, Sogliano, Ghiacciuolo, they ruled their petty principalities like tyrants by the help of the Guelf and Ghibelline factions, inclining to the one or the other as it suited their humour or their interest, wrangling among themselves, transmitting the succession of their dyhasty through bastards and by deeds of force, quarrelling with their neighbours the Counts of Urbino, alternately defying and submitting to the Papal legates in Romagna, serving as condottieri in the wars of the Visconti and the state of Venice, and by their restlessness and genius for military intrigues contributing in no slight measure to the general disturbance of Italy. The Malatesti were a race of strongly marked character: more, perhaps, than any other house of Italian tyrants, they combined for generations those qualities of the fox and the lion, which Machiavelli thought indispensable to a successful despot. . . . So far as Rimini is concerned, the house of Malatesta culminated in Sigismondo Pandolfo, son of Gian Galeazzo Visconti's general, the perfidious Pandolfo. . . . Having begun by defying the Holy See, he was impeached at Rome for heresy, parricide, incest, adultery, rape, and sacrilege, burned in effigy by Pope Pius II., and finally restored to the bosom of the Church, after suffering the despoliation of almost all his territories, in 1463. The occasion on which this fierce and turbulent despiser of laws human and divine was forced to kneel as a penitent before the Papal legate in the gorgeous temple dedicated to his own pride, in order that the ban of excommunication might be removed from Rimini, was one of those petty triumphs, interesting chiefly for their picturesqueness, by which the Popes confirmed their questionable rights over the cities of Romagna. Sigismondo, shorn of his sovereignty, took the command of the Venetian troops against the Turks in the Morea, and returned in 1465, crowned with laurels, to die at Rimini."—J. A. Symonds, *Sketches in Italy and Greece*, pp. 217-220.

ALSO IN: A. M. F. Robinson, *The End of the Middle Ages*, pp. 274-299.

MALAYAN RACE, The.—Many ethnologists set up as a distinct stock "the 'Malayan' or 'Brown' race, and claim for it an importance not less than any of the darker varieties of the species. It bears, however, the marks of an origin too recent, and presents Asian analogies too clearly, for it to be regarded otherwise than as a branch of the Asian race, descended like it from some ancestral tribe in that great continent. Its dispersion has been extraordinary. Its members are found almost continuously on the land areas from Madagascar to Easter Island, a distance nearly two-thirds of the circumference of the globe; everywhere they speak dialects with such affinities that we must assume for all one parent stem, and their separation must have taken place not so very long ago to have permitted such a monoglottic trait as this. The stock is divided at present into two groups, the western or Malayan peoples, and the eastern or Polynesian peoples. There has been some discussion about the original identity of these, but we may consider it now proved by both physical, linguistic and traditional evidence. The original home of the parent stem has also excited some

controversy, but this too may be taken as settled. There is no reasonable doubt but that the Malays came from the southeastern regions of Asia, from the peninsula of Farther India, and thence spread south, east and west over the whole of the island world. Their first occupation of Sumatra and Java has been estimated to have occurred not later than 1000 B. C., and probably was a thousand years earlier, or about the time that the Aryans entered Northern India. The relationship of the Malayic with the other Asian stocks has not yet been made out. Physically they stand near to the Sinitic peoples of small stature and roundish heads of southeastern Asia. The oldest form of their language, however, was not monosyllabic and tonic, but was dissyllabic. . . . The purest type of the true Malays is seen in Malacca, Sumatra and Java. . . . It has changed slightly by foreign intermixture among the Battaks of Sumatra, the Dayaks of Borneo, the Alfures and the Bugis. But the supposition that these are so remote that they cannot properly be classed with the Malays is an exaggeration of some recent ethnographers, and is not approved by the best authorities. . . . In character the Malays are energetic, quick of perception, genial in demeanor, but unscrupulous, cruel and revengeful. Veracity is unknown, and the love of gain is far stronger than any other passion or affection. This thirst for gold made the Malay the daring navigator he early became. As merchant, pirate or explorer, and generally as all three in one, he pushed his crafts far and wide over the tropical seas through 12,000 miles of extent. On the extreme west he reached and colonized Madagascar. The Hovas there, undoubtedly of Malay blood, number about 800,000 in a population of five and a half millions, the remainder being Negroids of various degrees of fusion. In spite of this disproportion, the Hovas are the recognized masters of the island. . . . The Malays probably established various colonies in southern India. The natives at Travancore and the Sinhalese of Ceylon bear a strongly Malayan aspect. . . . Some ethnographers would make the Polynesians and Micronesians a different race from the Malays; but the farthest that one can go in this direction is to admit that they reveal some strain of another blood. This is evident in their physical appearance. . . . All the Polynesian languages have some affinities to the Malayan, and the Polynesian traditions unanimously refer to the west for the home of their ancestors. We are able, indeed, by carefully analyzing these traditions, to trace with considerable accuracy both the route they followed to the Oceanic isles, and the respective dates when they settled them. Thus, the first station of their ancestors on leaving the western group, was the small island of Buru or Boru, between Celebes and New Guinea. Here they encountered the Papuas, some of whom still dwell in the interior, while the coast people are fair. Leaving Boru, they passed to the north of New Guinea, colonizing the Caroline and Solomon islands, but the vanguard pressing forward to take possession of Savai in the Samoan group and Tonga to its south. These two islands formed a second center of distribution over the western Pacific. The Maoris of New Zealand moved from Tonga—"holy Tonga" as they call it in their songs—about 600 years ago. The Society islanders migrated from Savai, and

they in turn sent forth the population of the Marquesas, the Sandwich Islands and Easter Island. The separation of the Polynesians from the western Malays must have taken place about the beginning of our era."—D. G. Brinton, *Races and Peoples*, lect. 8, sect. 2.

MALLUM.—**MALL.**—**MALLBERG.**—"The Franks . . . constituted one great army, the main body of which was encamped round the abode of their Kyning or commander, and the rest of which was broken up into various detachments. . . . Every such detachment became ere long a sedentary tribe, and the chief of each was accustomed, as occasion required, to convene the mallum (that is, an assembly of the free inhabitants) of his district, to deliberate with him on all the affairs of his immediate locality. The Kyning also occasionally convened an assembly of the whole of the Frankish chiefs, to deliberate with him at the Champs de Mars on the affairs of the whole confederacy. But neither the mallum nor the Champs de Mars was a legislative convention. Each of them was a council of war or an assembly of warriors."—Sir J. Stephen, *Lects. on the Hist. of France*, lect. 8.—"The Court was mostly held in a field or on a hill, called 'mallstatt,' or 'mallberg,' that is, the place or hill where the 'mall' or Court assembled, and the judge set up his shield of office, without which he might not hold Court."—J. I. Mombert, *Hist. of Charles the Great*, bk. 1, ch. 3.

MAMERTINE PRISON, The.—"Near the Basilica Porcia, and at the foot of the Capitoline Hill [in ancient Rome], was the ancient carcer or prison. The original erection of it has been attributed to Ancus Martius, as we learn from Livy, who says 'he made a prison in the middle of the city, overlooking the Forum.' The name by which it is known—Mamertinus—may have been derived from its being built by Ancus Martius. Mamers was the Sabine name of the god Mars, and consequently from the name Mamertius, the Sabine way of spelling Martius, may have been derived Mamertinus. In this prison there are two chambers, one above the other, built of hewn stone. The upper is square, while the lower is semicircular. The style of masonry points to an early date, when the Etruscan style of masonry prevailed in Rome. . . . To these chambers there was no entrance except by a small aperture in the upper roof, and a similar hole in the upper floor led to the cell below. From a passage in Livy it would appear that Tullianum was the name given to the lower cell of the carcer. . . . Varro expressly tells us that the lower part of the prison which was underground was called Tullianum because it was added by Servius Tullius."—H. M. Westropp,

Early and Imperial Rome, p. 93.—“The oldest portion of the horror-striking Mamertine Prisons . . . is the most ancient among all Roman buildings still extant as originally constructed.”—C. I. Hemans, *Historic and Monumental Rome*, ch. 4.—“Here, Jugurtha, king of Mauritania, was starved to death by Marius. Here Julius Cæsar, during his triumph for the conquest of Gaul, caused his gallant enemy Vercingetorix to be put to death. . . . The spot is more interesting to the Christian world as the prison of SS. Peter and Paul.”—A. J. C. Hare, *Walks in Rome*, ch. 3.

MANETHO, List of.—“Of all the Greek writers who have treated of the history of the Pharaohs, there is only one whose testimony has, since the deciphering of the hieroglyphics, preserved any great value—a value which increases the more it is compared with the original monuments; we speak of Manetho. Once he was treated with contempt; his veracity was disputed, the long series of dynasties he unfolds to our view was regarded as fabulous. Now, all

that remains of his work is the first of all authorities for the reconstruction of the ancient history of Egypt. Manetho, a priest of the town of Sebennytus, in the Delta, wrote in Greek, in the reign of Ptolemy Philadelphus, a history of Egypt, founded on the official archives preserved in the temples. Like many other books of antiquity, this history has been lost; we possess now a few fragments only, with the list of all the kings placed by Manetho at the end of his work—a list happily preserved in the writings of some chronologers of the Christian epoch. This list divides into dynasties, or royal families, all the kings who reigned successively in Egypt down to the time of Alexander.”—F. Lenormant, *Manual of Ancient Hist. of the East*, bk. 3, ch. 1, sect. 2 (v. 1).—See, also, EGYPT: ITS HISTORICAL ANTIQUITY.

MANHATTAN ISLAND: Its aboriginal People and name.—“The earliest notice we have of the island which is now adorned by a beautiful and opulent city is to be found in Hudson's journal. ‘Mana-hata’ is therein mentioned, in reference to the hostile people whom he encountered on his return from his exploring of the river, and who resided on this island. De Laet . . . calls those wicked people Manathans, and names the river Manhatoes. . . . Hartger calls the Indians and the island Mahattan. . . . In some of the early transactions of the colony, it is spelled Monhattoes, Munhatoes, and Manhattoes. Professor Ebeling says, that at the mouth of the river lived the Manhattans or Manathanes (or as the Englishmen commonly called it, Manhados), who kept up violent animosities with their neighbours, and were at first most hostile towards the Dutch, but suffered themselves to be persuaded afterwards to sell them the island, or at least that part of it where New York now stands. Manhattan is now the name, and it was, when correctly adopted, so given by the Dutch, and by them it not only distinguished the Indians, the island and the river, but it was a general name of their plantations. . . . Mr. Heckewelder observes that hitherto all his labours had been fruitless in inquiring about a nation or tribe of Indians called the ‘Manhattos’ or ‘Manathones’; Indians both of the Mahicanni and Delaware nations assured him that they never had heard of any Indian tribe by that name. He says he is convinced that it was the Delawares or Munseys (which last was a branch of the Delawares) who inhabited that part of the country where New York now is. York Island is called by the Delawares to this day [1824] Manahattani or Manahachtanink. The Delaware word for ‘Island’ is ‘Manátey’; the Monsey word for the same is ‘Manächtey’. . . . Dr. Barton also has given as his belief that the Manhattæ were a branch of the Munsis.”—J. V. N. Yates and J. W. Moulton, *Hist. of the State of N. Y.*, v. 1, pp. 223-224.

MANICHEANS, The.—“A certain Mani (or Manes, as the ecclesiastical writers call him), born in Persia about A. D. 240, grew to manhood under Sapor, exposed to . . . various religious influences. . . . With a mind free from

prejudice and open to conviction, he studied the various systems of belief which he found established in Western Asia—the Cabalism of the Babylonian Jews, the Dualism of the Magi, the mysterious doctrines of the Christians, and even the Buddhism of India. At first he inclined to Christianity, and is said to have been admitted to priest's orders and to have ministered to a congregation; but after a time he thought that he saw his way to the formation of a new creed, which should combine all that was best in the religious systems which he was acquainted with, and omit what was superfluous or objectionable. He adopted the Dualism of the Zoroastrians, the metempsychosis of India, the angelism and demonism of the Talmud and Trinitarianism of the Gospel of Christ. Christ himself he identified with Mithra, and gave Him his dwelling in the sun. He assumed to be the Paraclete promised by Christ, who should guide men into all truth, and claimed that his 'Ertang,' a sacred book illustrated by pictures of his own painting, should supersede the New Testament. Such pretensions were not likely to be tolerated by the Christian community; and Manes had not put them forward very long when he was expelled from the church and forced to carry his teaching elsewhere. Under these circumstances he is said to have addressed himself to Sapor [the Persian king], who was at first inclined to show him some favour; but when he found out what the doctrines of the new teacher actually were, his feelings underwent a change, and Manes, proscribed, or at any rate threatened with penalties, had to retire into a foreign country. . . . Though the morality of the Manichees was pure, and though their religion is regarded by some as a sort of Christianity, there were but few points in which it was an improvement on Zoroastrianism."—G. Rawlinson, *The Seventh Great Oriental Monarchy*, ch. 4.—First in Persia and, afterwards, throughout Christendom, the Manicheans were subjected to a merciless persecution; but they spread their doctrines, notwithstanding, in the west and in the east, and it was not until several centuries had passed that the heresy became extinct.—J. L. Mosheim, *Christianity during the first 325 years, Third Century*, lect. 39–55.—See, also, PAULICIANS.

MANORS.—"The name manor is of Norman origin, but the estate to which it was given existed, in its essential character, long before the Conquest; it received a new name as the shire also did, but neither the one nor the other was created by this change. The local jurisdictions of the thegns who had grants of sac and soc, or who exercised judicial functions amongst their free neighbours, were identical with the manorial jurisdictions of the new owners. . . . The manor itself was, as Ordericus tells us, nothing more nor less than the ancient township, now held by a lord who possessed certain judicial rights varying according to the terms of the grant by which he was infeoffed. Every manor had a court baron, the ancient gemot of the township, in which by-laws were made and other local business transacted, and a court customary in which the business of the villenage was despatched. Those manors whose lords had under the Anglo-Saxon laws possessed sac and soc, or who since the Conquest had had grants in which those terms were used, had also a court-leet, or criminal jurisdiction, cut out as it were from the criminal jurisdiction of the hundred, and excusing the suitors who attended it from going to the court-leet of the hundred."—W. Stubbs, *Const. Hist. of Eng.*, ch. 9, sect. 98, and ch. 11, sect. 129 (v. 1).—"From the Conquest to the 14th century we find the same agricultural conditions prevailing over the greater part of England. Small gatherings of houses and cots appear as oases in the moorland and forest, more or less frequent, according to the early or late settlement of the district, and its freedom from, or exposure to, the ravages of war and the punishment of rebellion. These oases, townships or villis if of some extent, hamlets if of but a few houses, gather round one or more mansions of superior size and importance, the Manor houses, or abodes of the Lords of the respective Manors. Round each township stretch the great ploughed fields, usually three in number, open and uninclosed. Each field is divided into a series of parallel strips a furlong in length, a rod wide, four of which would make an acre, the strips being separated by ridges of turf called balks, while along the head of each series of strips runs a broad band of turf known as a headland, on which the plough is turned, when it does not by custom turn on some fellow-tenant's land, and which serves as a road to the various strips in the fields. These strips are allotted in rotation to a certain number of the dwellers in the township, a very common holding being that known as a virgate or yardland, consisting of about 30 acres. . . . Mr. Seebohm's exhaustive researches have conclusively connected this system of open fields and rotation of strips with the system of common ploughing, each holder of land providing so many oxen for the common plough, two being the contribution of the holder of a virgate, and eight the normal number drawing the plough, though this would vary with the character of the soil. . . . At the date of Domesday (1086), the holders of land in the common fields comprise the Lord; the free tenants, socmanni or liberi homines, when there are any; the villani or Saxon geburs, the holders of virgates or half virgates; and the bordarii or cotarii, holders of small plots of 5 acres or so, who have fewer rights and fewer duties. Besides ploughing the common-fields, the villani as part of their tenure

have to supply the labour necessary to cultivate the arable land that the Lord of the Manor keeps in his own hands as his domain, dominicum, or demesne."—T. E. Scrutton, *Commons and Common Fields*, ch. 1.—Relative to the origin of the manor and the development of the community from which it rose there are divergent views much discussed at the present day. "The interpretation, current fifteen years ago, was the natural outcome of the Mark theory and was somewhat as follows: The community was a voluntary association, a simple unit within which there were households or families of various degrees of wealth, rank and authority, but in point of status each was the equal of the other. Each was subject only to the customs and usages of the community and to the court of the Mark. The Mark was therefore a judicial and political as well as an agricultural unit, though cultivation of the soil was the primary bond of union. All offices were filled by election, but the incumbent in due time sank back into the general body of 'markgenossen.' He who was afterwards to be the lord of the manor was originally only 'the first Marksman,' who attained to this pre-eminence in part by the prestige of election to a position of headship, in part by usurpation, and in part by the prerogatives which protection and assistance to weaker Marksmen brought. Thus the first Marksman became the lord and held the others in a kind of subjection to himself, and received from them, though free, dues and services which grew increasingly more severe. The main difficulty here seems to be in the premise, and it is the evident artificiality of the voluntary association of freemen which has led to such adverse criticism upon the whole theory. . . . While the free village community was under fire at home as well as abroad, Mr. Seebohm presented a new view of an exactly opposite character, with the formula of the community in villeinage under a lord. Although this view has for the moment divided thinkers on the subject, it has proved no more satisfactory than the other; for while it does explain the origin of the lord of the manor, it leaves wholly untouched the body of free Saxons whom Earle calls the rank and file of the invading army. Other theories have sought to supply the omissions in this vague non-documentary field, all erected with learning and skill, but unfortunately not in harmony with one another. Coote and Finlason have given to the manor an unqualified Roman origin. Lewis holds to a solid British foundation, the Teutonists would make it wholly Saxon, while Gomme is inclined to see an Aryo-British community under Saxon overlordship. Thus there is a wide range from which to select; all cannot be true; no one is an explanation of all conditions, yet most of them have considerable sound evidence to support them. It is this lack of harmony which drives the student to discover some theory which shall be in touch with known tribal conditions and a natural consequence of their development, and which at the same time shall be sufficiently elastic to conform to the facts which confront us in the early historical period. An attempt has been made [in the work here quoted from] to lay down two premises, the first of which is the composite character of the tribal and village community, and the second the diverse ethnological conditions of Britain after the Conquest, conditions which would allow

for different results. . . . Kemble in his chapter on Personal Rank has a remark which is ill in keeping with his peaceful Mark theory. He says: "There can be no doubt that some kind of military organization preceded the peaceful settlement, and in many respects determined its mode and character." To this statement Earle has added another equally pregnant: "Of all principles of military regiment there is none so necessary or so elementary as this, that all men must be under a captain, and such a captain as is able to command prompt and willing obedience. Upon this military principle I conceive the English settlements were originally founded, that each several settlement was under a military leader, and that this military leader was the ancestor of the lord of the manor." Professor Earle then continues in the endeavor to apply the suggestion contained in the above quotation. He shows that the 'hundreds' represent the first permanent encampment of the invading host, and that the military occupation preceded the civil organization, the latter falling into the mould which the former had prepared. According to this the manorial organization was based upon a composite military foundation, the rank and file composing the one element, the village community; the captain or military leader composing the other, settled with suitable provision by the side of his company; the lord by the side of free owners. In this attempt to give the manor a composite origin, as the only rational means whereby the chief difficulty can be removed, and in the attempt to carry the seignorial element to the very beginning we believe him to be wholly right. But an objection must be raised to the way in which Professor Earle makes up his composite element. It is too artificial, too exclusively military; the occupiers of the village are the members of the 'company,' the occupier of the adjacent seat is the 'captain,' afterwards to become the lord. . . . We feel certain that the local community, the village, was simply the kindred, the sub-clan group, which had become a local habitation, yet when we attempt to test its presence in Anglo-Saxon Britain we meet with many difficulties."—C. McL. Andrews, *The Old Eng. Manor*, pp. 7-51.

MANTINEA.—"Mantineia was the single city of Arcadia which had dared to pursue an independent line of policy [see SPARTA: B. C. 743-510]. Not until the Persian Wars the community coalesced out of five villages into one fortified city; this being done at the instigation of Argos, which already at this early date entertained thoughts of forming for itself a confederation in its vicinity. Mantineia had endeavored to increase its city and territory by conquest, and after the Peace of Nicias had openly opposed Sparta."—E. Curtius, *Hist. of Greece*, bk. 5, ch. 5 (v. 4).

B. C. 418.—Battle. See GREECE: B. C. 421-418.

MANTINEA.

B. C. 385.—Destruction by the Spartans. See GREECE: B. C. 385.

B. C. 371-362.—Restoration of the city.—Arcadian union and disunion.—The great battle.—Victory and death of Epaminondas. See GREECE: B. C. 371; and 371-362.

B. C. 222.—Change of name.—In the war between Cleomenes of Sparta and the Achæan League, the city of Mantinea was, first, surprised by Aratus, the chief of the League, B. C. 226, and occupied by an Achæan garrison; then recaptured by Cleomenes, and his partisans, B. C. 224, and finally, B. C. 222, stormed by Antigonos, king of Macedonia, acting in the name of the League, and given up to pillage. Its citizens were sold into slavery. "The dispeopled city was placed by the conqueror at the disposal of Argos, which decreed that a colony should be sent to take possession of it under the auspices of Aratus. The occasion enabled him to pay another courtly compliment to the king of Macedonia. On his proposal, the name of the 'lovely Mantinea'—as it was described in the Homeric catalogue—was exchanged for that of Antigonea, a symbol of its ruin and of the humiliation of Greece."—C. Thirlwall, *Hist. of Greece*, ch. 62 (v. 8).

B. C. 207.—Defeat of the Lacedæmonians.—In the wars of the Achæan League, the Lacedæmonians were defeated under the walls of Mantinea with great slaughter, by the forces of the League, ably marshalled by Philopœmen, and the Lacedæmonian king Machanidas was slain. "It was the third great battle fought on the same, or nearly the same, ground. Here, in the interval between the two parts of the Peloponnesian War, had Agis restored the glory of Sparta after her humiliation at Sphakteria; here Epameinondas had fallen in the moment of victory; here now [B. C. 207] was to be fought the last great battle of independent Greece."—E. A. Freeman, *Hist. of Federal Govt.*, ch. 8, sect. 2.

MANX KINGDOM.

MANU, Laws of.—"The Indians [of Hindostan] possess a series of books of law, which, like that called after Manu, bear the name of a saint or seer of antiquity, or of a god. One is named after Gautama, another after Vasishtha, a third after Apastamba, a fourth after Yajñavalkya; others after Bandhayana and Vishnu. According to the tradition of the Indians the law of Manu is the oldest and most honourable. . . . The conclusion is . . . inevitable that the decisive precepts which we find in the collection must have been put together and written down about the year 600 [B. C.]."—M. Duncker, *Hist. of Antiquity*, bk. 5, ch. 6.—"The name, 'Laws of Manu,' somewhat resembles a 'pious fraud'; for the 'Laws' are merely the laws or customs of a school or association of Hindus, called the Manavas, who lived in the country rendered holy by the divine river Saraswati. In this district the Hindus first felt themselves a settled people, and in this neighbourhood they established colleges and hermitages, or 'asramas,' from some of which we may suppose Brahmanas, Upanishads, and other religious compositions may have issued; and under such influences we may imagine the Code of Manu to have been composed."—Mrs. Manning, *Ancient and Mediæval India*, v. 1, p. 276.

MANX KINGDOM, The.—The Isle of Man in the Irish Sea gets its English name, Mau, by an abbreviation of the native name, Mannin, the origin of which is unknown. The language, called Manx (now little used), and the inhabitants, called Manxmen, are both of Gaelic, or Irish derivation. From the sixth to the tenth century the island was successively ruled by the Scots (Irish), the Welsh and the Norwegians, finally becoming a separate petty kingdom, with Norwegian claims upon it. In the thirteenth century the little kingdom was annexed to Scotland. Subsequently, after various vicissitudes, it passed under English control and was granted by Henry IV. to Sir John Stanley. The Stanleys, after some generations, found a dignity which they esteemed higher, in the earldom of Derby, and relinquished the title of King of Man. This was done by the second Earl of Derby, 1505. In 1765 the sovereignty and revenues of the island were purchased by the British government; but its independent form of government has undergone little change. It enjoys "home rule" to perfection. It has its own legislature, called the Court of Tynwald, consisting of a council, or upper chamber, and a representative body called the House of Keys. Acts of the imperial parliament do not apply to the Isle of Man unless it is specifically named in them. It has its own courts, with judges called deemsters (who are the successors of the ancient Druidical priests), and its own governor, appointed by the crown. The divisions of the island, corresponding to English counties, are called sheadings.—S. Walpole, *The Land of Home Rule*.

MARCH.—MARK.—The frontier or boundary of a territory; a border. Hence came the title of Marquis, which was originally that of an officer charged with the guarding of some March or border district of a kingdom. In Great Britain this title ranks second in the five orders of nobility, only the title of Duke being superior to it. The old English kingdom of Mercia was formed by the Angles who were first called the "Men of the March," having settled on the Welsh border, and that was the origin of its name. The kingdom of Prussia grew out of the "Mark of Brandenburg," which was originally a military border district formed on the skirts of the German empire to resist the Wends. Various other European states had the same origin. See, also, **MARGRAVE.**

MARCOMANNI AND QUADI, The.—"The Marcomanni [an ancient German people who dwelt, first, on the Rhine, but afterwards occupied southern Bohemia] stand first in strength and renown, and their very territory, from which the Boii were driven in a former age, was won by valour. Nor are the Narisci [settled in the region of modern Ratisbon] and Quadi [who probably occupied Moravia] inferior to them. This I may call the frontier of Germany, so far as it is completed by the Danube. The Marcomanni and Quadi have, up to our time, been ruled by kings of their own nation, descended from the noble stock of Maroboduus and Tudrus. They now submit even to foreigners; but the strength and power of the monarch depend on Roman influence."—Tacitus, *Germany, trans. by Church and Brodrick, ch. 42.*—"The Marcomanni cannot be demonstrated as a distinct people before Marbod. It is very possible that the word up to that point indicates nothing but what it etymologically signifies—the land or frontier guard."—T. MARGHUSH. See MARGIANA.

MARGIANA.—The ancient name of the valley of the Murghab or Moorghab (called the Margos). It is represented at the present day by the oasis now called Merv; was the Bactrian Mouru and the Marghush of the old Persians. It was inhabited by the Margiani.—M. Duncker, *Hist. of Antiquity*, bk. 7, ch. 1.

MARGRAVE.—**MARQUIS.**—"This of Markgrafs (Grafts of the Marches, 'marked' Places, or Boundaries) was a natural invention in that state of circumstances [the circumstances of the Germany of the 10th century, under Henry the Fowler]. It did not quite originate with Henry; but was much perfected by him, he first recognising how essential it was. On all frontiers he had his 'Graf' (Count, 'Reeve,' 'G'reeve,' whom some think to be only 'Grau,' Gray, or 'Senior,' the hardest, wisest steel-gray man he could discover) stationed on the Mark, strenuously doing watch and ward there: the post of difficulty, of peril, and naturally of honour too, nothing of a sinecure by any means. Which post, like every other, always had a tendency to become hereditary, if the kindred did not fail in fit men. And hence have come the innumerable Margraves, Marquises, and such like, of modern times; titles now become chimerical, and more or less mendacious, as most of our titles are."—T. Carlyle, *Frederick the Great*, bk. 2, ch. 1.—"The title derived from the old imperial office of markgrave [margrave], 'comes marchensis,' or count of the marches, had belonged to several foreigners who were brought into relation with England in the twelfth century; the duke of Brabant was marquess of Antwerp, and the count of Maurienne marquess of Italy; but in France the title was not commonly used until the seventeenth century, and it is possible that it came to England direct from Germany. . . . The fact that, within a century of its introduction into England, it was used in so unmeaning a designation as the marquess of Montague, shows that it had lost all traces of its original application."—W. Stubbs, *Const. Hist. of Eng.*, ch. 20, sect. 751.—See MARCH; also, GRAF.

MARGUS, Treaty of.—A treaty which Attila the Hun extorted from the Eastern Roman Emperor, Theodosius, A. D. 434,—called by Sismondi "the most shameful treaty that ever monarch signed." It gave up to the savage king every fugitive from his vengeance or his jealousy whom he demanded, and even the Roman captives who had escaped from his bonds. It promised, moreover, an annual tribute to him of 700 pounds of gold.—J. C. L. de Sismondi, *Fall of the Roman Empire*, ch. 7 (v. 1).

MARK, The.—"The theory of the Mark, or as it is more generally called in its later form, the free village community, has been an accepted hypothesis for the historical and economic world for more than half a century. Elaborated and expanded by the writings of Kemble in England and v. Maurer in Germany, taken up by later English writers and given wide currency through the works of Sir Henry Maine, Green, and Freeman, it has been accepted and extended by scores of historical writers on this side of the Atlantic as well as the other until it has become a commonplace in literature. Firm as has been its hold and important as has been its work, it is almost universally conceded that further modification or entire rejection must be the next step to be taken in the presence of the more thorough and scholarly research which is becoming prominent, and before all questions can be answered which this study brings to light. A change has taken place in the thought upon this subject; a reaction against the idealism of the political thinkers of half a century ago. The history of the hypothesis forms an interesting chapter in the relation between modern thought and the interpretation of past history, and shows that in the formation of an opinion both writer and reader are unconsciously dependent upon the spirit of the age in which they live. The free village community, as it is commonly understood, standing at the dawn of English and German history is discoverable in no historical documents, and for that reason it has been accepted by prudent scholars with caution. But the causes which have made it a widely acceptable hypothesis and have served to entrench it

MARK.

firmly in the mind of scholar and reader alike, have easily supplied what was wanting in the way of exact material, and have led to conclusions which are now recognized as often too hazy, historically inaccurate, though agreeable to the thought tendencies of the age. . . . The Mark as defined by Kemble, who felt in this interpretation the influence of the German writers, . . . was a district large or small with a well-defined boundary, containing certain proportions of heath, forest, fen and pasture. Upon this tract of land were communities of families or households, originally bound by kindred or tribal ties, but who had early lost this blood relationship and were composed of freemen, voluntarily associated for mutual support and tillage of the soil, with commonable rights in the land within the Mark. The Marks were entirely independent, having nothing to do with each other, self-supporting and isolated, until by continual expansion they either federated or coalesced into larger communities. Such communities varying in size covered England, internally differing only in minor details, in all other respects similar. This view of the Mark had been taken already more or less independently by v. Maurer in Germany, and five years after the appearance of Kemble's work, there was published the first of the series of volumes which have rendered Maurer's name famous as the establisher of the theory. As his method was more exact, his results were built upon a more stable foundation than were those of Kemble, but in general the two writers did not greatly differ."—C. McL. Andrews, *The Old Eng. Manor*, pp. 1-6.

The Arab conquest, and since.—The tide of Mahometan conquest, sweeping across North Africa (see MAHOMETAN CONQUEST: A. D. 647-709), burst upon Morocco in 698. "Eleven years were required to overcome the stubborn resistance of the Berbers, who, however, when once conquered, submitted with a good grace and embraced the new creed with a facility entirely in accordance with the adaptive nature they still exhibit. Mingled bands of Moors and Arabs passed over into Spain, under Tarik and Moossa, and by the defeat of Roderic at the battle of Guadalete, in 711, the foundation of their Spanish empire was laid [see SPAIN: A. D. 711-713], on which was afterwards raised the magnificent fabric of the Western Khalifate. This is not the place to dwell on the glories of their dominion. . . . Suffice it to say, that a reflection of this glory extended to Morocco, where the libraries and universities of Fez and Morocco City told of the learning introduced by wise men, Moorish and Christian alike, who pursued their studies without fear of interruption on the

MAROCCO.

score of religious belief. The Moors in the days of their greatness, be it observed, were far more liberal-minded than the Spanish Catholics afterwards showed themselves, and allowed Christians to practise their own religion in their own places of worship—in striking contrast to the fanaticism of their descendants in Morocco at the present day. . . . The intervals of repose under the rule of powerful and enlightened monarchs, during which the above-mentioned institutions flourished, were nevertheless comparatively rare, and the general history of Morocco during the Moorish dominion in Spain seems to have been one monotonous record of strife between contending tribes and dynasties. Early in the tenth century, the Berbers got the mastery of the Arabs, who never afterwards appear in the history of the country except under the general name of Moors. Various principalities were formed [11-13th centuries—see ALMORAVIDES and ALMOHADES], of which the chief were Fez, Morocco, and Tafillet, though now and again, and especially under the Marin dynasty, in the 13th century, the two former were consolidated into one kingdom. In the 15th century the successes of the Spaniards caused the centre of Moorish power to shift from Spain to Morocco. In the declining days of the Hispano-Moorish empire, and after its final extinction, the Spaniards and Portuguese revenged themselves on their conquerors by attacking the coast-towns of Morocco, many of which they captured. It is not improbable that they would eventually have possessed themselves of the entire country, but for the disastrous defeat of King Sebastian in 1578, at the battle of the Three Kings, on the banks of the Wad El Ma Hassen, near Alcazar [see PORTUGAL: A. D. 1579-1580]. This was the turning-point in Moorish history, and an African Creasy would have to rank the conflict at Alcazar among the decisive battles of the continent. With the rout and slaughter of the Portuguese fled the last chance of civilizing the country, which from that period gradually relapsed into a state of isolated barbarism. . . . For 250 years the throne has been in the hands of members of the Sherceefian family of Filali, who have remained practically undisputed masters of the whole of the empire. All this time, as in the earlier classical ages, Morocco has been practically shut out from the world. . . . The chief events of importance in Moorish affairs in the present century were the defeat of the Moors by the French at the battle of Isly [see BARNARY STATES: A. D. 1830-1846], near the Algerian frontier, in 1844, and the subsequent bombardment of Mogador and the coast-towns, and the Spanish war which terminated in 1860 with the peace of Tetuan. These reverses taught the Moors the power of European states, and brought about a great improvement in the position of Christians in the country. The Government of Morocco is in effect a kind of graduated despotism, where every official, while possessing complete authority over those beneath him, must render absolute submission to his superiors. The supreme power is vested in the Sultan, the head of the State in all things spiritual and temporal. . . . Of the ultimate dissolution of the Moorish dominion there can be little doubt. . . . European States have long had their eyes upon it, but the same mutual distrust and jealousy which preserves the decaying

fabric of the Turkish Empire has hitherto done the like for Morocco, whose Sultan serves the same purpose on the Straits of Gibraltar as the Turkish Sultan does on the Bosphorus."—H. E. M. Stutfield, *El Maghreb*, ch. 16.—See, also, BARDARY STATES.

MARSEILLAISE, The.—Origin of the Song.—Its introduction into Paris.—In preparation for the insurrection of August 10, 1792, which overthrew the French monarchy, and made the Revolution begun in 1789 complete, the Jacobins had summoned armed bands of their supporters from all parts of France, ostensibly as volunteers to join the army on the frontier, but actually and immediately as a reinforcement for the attack which they had planned to make on the king at the Tuileries [see FRANCE: A. D. 1792 (JUNE—AUGUST)]. Among the "fédérés" who came was a battalion of 500 from Marseilles, which arrived at the capital on the 30th of July. "This battalion has been described by every historian as a collection of the vagabonds who are always to be found in a great seaport town, and particularly in one like Marseilles, where food was cheap and lodging unnecessary. But their character has lately been vindicated, and it has been shown that these Marseillais were picked men from the national guards of Marseilles, like the other fédérés, and contained the most hardy as well as the most revolutionary men of the city. . . . They left Marseilles 513 strong, with two guns, on July 2, and had been marching slowly across France, singing the immortal war-song to which they gave their name. . . . The 'Marseillaise' had in itself no very radical history. On April 24, 1792, just after the declaration of war, the mayor of Strasbourg, Dietrich, who was himself no advanced republican, but a constitutionalist, remarked at a great banquet that it was very sad that all the national war songs of France could not be sung by her present defenders, because they all treated of loyalty to the king and not to the nation as well. One of the guests was a young captain of engineers, Rouget de Lisle, who had in 1791 composed a successful 'Hymne à la Liberté,' and Dietrich appealed to him to compose something suitable. The young man was struck by the notion, and during the night he was suddenly inspired with both words and air, and on the following day he sang over to Dietrich's guests the famous song which was to

be the war-song of the French Republic. Madame Dietrich arranged the air for the orchestra; Rouget de Lisle dedicated it to Marshal Lückner, as the 'Chant de guerre pour l'armée du Rhin,' and it at once became popular in Strasbourg. Neither Dietrich nor Rouget were advanced republicans. The watchword of the famous song was not 'Sauvons la République,' but 'Sauvons la Patrie.' The air was a taking one. From Strasbourg it quickly spread over the south of France, and particularly attracted the patriots of Marseilles. . . . There are many legends on the origin of the 'Marseillaise'; the account here followed is that given by Amedée Rouget de Lisle, the author's nephew, in his 'La vérité sur la paternité de la Marseillaise,' Paris, 1865, which is confirmed by a letter of Madame Dietrich's, written at the time, and first published in 'Souvenirs d'Alsace—Rouget de Lisle à Strasbourg et à Huningue,' by Adolphe Morpain."—H. M. Stephens, *Hist. of the French Rev.*, v. 2, pp. 114-115.—A quite different but less trustworthy version of the story may be found in Lamartine's *Hist. of the Girondists*, bk. 16, sects. 26-30 (v. 1).

MARYLAND: A. D. 1632.—The charter granted to **Lord Baltimore**.—An **American palatinate**.—"Among those who had become interested in the London or Virginia Company, under its second charter, in 1609, was Sir George Calvert, afterwards the founder of Maryland. . . . Upon the dissolution of the Virginia Company . . . he was named by the king one of the royal commissioners to whom the government of that colony was confided. Hitherto he had been a Protestant, but in 1624, having become unsettled in his religious convictions, he renounced the church of England, in which he had been bred, and embraced the faith of the Catholic church. Moved by conscientious scruples, he determined no longer to hold the office of secretary of state [conferred on him in 1619], which would make him, in a manner, the instrument of persecution against those whose faith he had adopted, and tendered his resignation to the king. . . . The king, . . . while he accepted his resignation, continued him as a member of his privy council for life, and soon after created him **Lord Baltimore**, of **Baltimore**, in **Ireland**. The spirit of intolerance at that time pervaded England. . . . The laws against the Catholics in England were particularly severe and cruel, and rendered it impossible for any man to practice his religion in quiet and safety. Sir George Calvert felt this; and although he was assured of protection from the gratitude and affection of the king, he determined to seek another land and to found a new state, where conscience should be free and every man might worship God according to his own heart, in peace and perfect security. . . . At first he fixed his eyes on **New-found-land**, in the settlement of which he had been interested before his conversion. . . . Having purchased a ship, he sailed with his family to that island, in which, a few years before, he had obtained a grant of a province under the name of **Avalon**. Here he only resided two years [see **NEWFOUNDLAND**: A. D. 1610-1655], when he found the climate and soil unsuited for the establishment of a flourishing community, and determined to seek a more genial country in the south. Accordingly, in 1628, he sailed to Virginia, with the intention of settling in the

limits of that colony, or more probably to explore the uninhabited country on its borders, in order to secure a grant of it from the king. Upon his arrival within the jurisdiction of the colony, the authorities tendered him the oaths of allegiance and supremacy, to which, as then framed, no Catholic could subscribe. Lord Baltimore refused to take them, but prepared a form of an oath of allegiance which he and all his followers were willing to accept. His proposal was rejected, and being compelled to leave their waters, he explored the Chesapeake above the settlements. He was pleased with the beautiful and well wooded country, which surrounded the noble inlets and indentations of the great bay, and determined there to found his principality. . . . He returned to England to obtain a grant from **Charles I.**, who had succeeded his father, **James I.**, upon the throne. Remembering his services to his father, and perhaps moved by the intercessions of **Henrietta Maria**, his Catholic queen, who desired to secure an asylum abroad for the persecuted members of her church in England, **Charles** directed the patent to be issued. It was prepared by **Lord Baltimore** himself; but before it was finally executed that truly great and good man died, and the patent was delivered to his son **Cecilius**, who succeeded as well to his noble designs as to his titles and estates. The charter was issued on the 20th of June, 1632, and the new province, in honor of **Queen Henrietta Maria**, was named '**Terra Mariæ**'—**Maryland**."—J. McSherry, *Hist. of Maryland*, introd.—"The boundaries of Maryland, unlike those of the other colonies, were precisely defined. Its limits were: on the north, the fortieth parallel of north latitude; on the west and southwest, a line running south from this parallel to the farthest source of the Potomac, and thence by the farther or western bank of that river to Chesapeake Bay; on the south by a line running across the bay and peninsula to the Atlantic; and on the east by the ocean and the Delaware Bay and River. It included, therefore, all the present State of Delaware, a large tract of land now forming part of Pennsylvania, and another now occupied and claimed by West Virginia. The charter of Maryland contained the most ample rights and privileges ever conferred by a sovereign of England. It erected Maryland into a palatinate, equivalent to a principality, reserving only the feudal supremacy of the crown. The Proprietary was made absolute lord of the land and water within his boundaries, could erect towns, cities, and ports, make war or peace, call the whole fighting population to arms, and declare martial law, levy tolls and duties, establish courts of justice, appoint judges, magistrates, and other civil officers, execute the laws, and pardon offenders. He could erect manors with courts-baron and courts-leet, and confer titles and dignities, so that they differed from those of England. He could make laws with the assent of the freemen of the province, and, in cases of emergency, ordinances not impairing life, limb, or property, without their assent. He could found churches and chapels, have them consecrated according to the ecclesiastical laws of England, and appoint the incumbents. All this territory, with these royal rights, '**jura regalia**,' was to be held of the crown in free socage, by the delivery of two Indian arrows yearly at the palace of Windsor, and the fifth of

all gold or silver mined. The colonists and their descendants were to remain English subjects. . . . The King furthermore bound himself and his successors to lay no taxes, customs, subsidies, or contributions whatever upon the people of the province. . . . This charter, by which Maryland was virtually an independent and self-governed community, placed the destinies of the colonists in their own hands. . . . Though often attacked, and at times held in abeyance, the charter was never revoked."—W. H. Browne, *Maryland*, ch. 2.—The intention to create a palatine principality in Maryland is distinctly expressed in the fourth section of the charter, which grants to Lord Baltimore, his heirs and assigns, "as ample rights, jurisdictions, privileges, prerogatives, royalties, liberties, immunities, and royal rights . . . as any bishop of Durham, within the bishoprick or county palatine of Durham, in our kingdom of England, ever heretofore hath had, held, used, or enjoyed, or of right could, or ought to have, held, use, or enjoy."—J. L. Bozman, *Hist. of Maryland*, v. 2, p. 11.

Also in: H. W. Preston, *Docs. Illustrative of Am. Hist.*, p. 62.

A. D. 1633-1637.—The planting of the colony at St. Mary's.—"Cecil, Lord Baltimore, after receiving his charter for Maryland, in June, 1632, prepared to carry out his father's plans. Terms of settlement were issued to attract colonists, and a body of emigrants was soon collected to begin the foundation of the new province. The leading gentlemen who were induced to take part in the project were Catholics; those whom they took out to till the soil, or ply various trades, were not all or, indeed, mainly Catholics, but they could not have been very strongly Protestant to embark in a venture so absolutely under Catholic control. At Avalon Sir George Calvert, anxious for the religious life of his colonists, had taken over both Catholic and Protestant clergymen, and was ill repaid for his liberal conduct. To avoid a similar ground of reproach, Baron Cecil left each part of his colonists free to take their own clergymen. It is a significant fact that the Protestant portion were so indifferent that they neither took over any minister of religion, nor for several years after Maryland settlements began made any attempt to procure one. On behalf of the Catholic settlers, Lord Baltimore applied to Father Richard Blount, at that time provincial of the Jesuits in England, and wrote to the General of the Society, at Rome, to excite their zeal in behalf of the English Catholics who were about to proceed to Maryland. He could offer the clergy no support. . . . The Jesuits did not shrink from a mission field where they were to look for no support from the proprietary or their flock, and were to live amid dangers. It was decided that two Fathers were to go as gentlemen adventurers, taking artisans with them, and acquiring lands like others, from which they were to draw their support. . . . The Maryland pilgrims under Leonard Calvert, brother of the lord proprietary, consisted of his brother George, some 20 other gentlemen, and 200 laboring men well provided. To convey these to the land of Mary, Lord Baltimore had his own pinnace, the Dove, of 50 tons, commanded by Robert Winter, and the Ark, a chartered vessel of 350 tons burthen, Richard Lowe being captain. Leonard Calvert was appointed governor, Jerome Hawley and Thomas

Cornwaleys being joined in the commission." After many malicious hindrances and delays, the two vessels sailed from Cowes, November 22, 1633, and made their voyage in safety, though encountering heavy storms. They came to anchor in Chesapeake Bay, near one of the Heron Islands, which they named St. Clement; and on that island they raised a cross and celebrated mass. "Catholicity thus planted her cross and her altar in the heart of the English colonies in America, March 25, 1634. The land was consecrated, and then preparations were made to select a spot for the settlement. Leaving Father White at St. Clement's, the governor, with Father Altham, ran up the river in a pinnace, and at Potomac on the southern shore met Archihau, regent of the powerful tribe that held sway over that part of the land." Having won the goodwill of the savages, "Leonard Calvert sailed back to Saint Clement's. Then the pilgrims entered the Saint Mary's, a bold, broad stream, emptying into the Potomac about 12 miles from its mouth. For the first settlement of the new province, Leonard Calvert, who had landed, selected a spot a short distance above, about a mile from the eastern shore of the river. Here stood an Indian town, whose inhabitants, harassed by the Susquehannas, had already begun to emigrate to the westward. To observe strict justice with the Indian tribes, Calvert purchased from the werowance, or king, Yaocomoco, 30 miles of territory. The Indians gradually gave up some of their houses to the colonists, agreeing to leave the rest also after they had gathered in their harvest. . . . The new settlement began with Catholic and Protestant dwelling together in harmony, neither attempting to interfere with the religious rights of the other, 'and religious liberty obtained a home, its only home in the wide world, at the humble village which bore the name of St. Mary's' [Bancroft, i, 247]. . . . The settlers were soon at work. Houses for their use were erected, crops were planted, activity and industry prevailed. St. Mary's chapel was dedicated to the worship of Almighty God, and near it a fort stood, ready to protect the settlers. It was required by the fact that Clayborne [a trading adventurer and a member of the Virginia Council], the fanatical enemy of Lord Baltimore and his Catholic projects, who had already settled on Kent Island, was exciting the Indians against the colonists of Maryland. The little community gave the priests a field too limited for their zeal. . . . The Indian tribes were to be reached. . . . Another priest, with a lay brother, came to share their labors before the close of the year 1635; and the next year four priests were reported as the number assigned to the Maryland mission. Of their early labors no record is preserved. . . . Sickness prevailed in the colony, and the missionaries did not escape. Within two months after his arrival Father Knolles, a talented young priest of much hope, sank a victim to the climate, and Brother Gervase, one of the original band of settlers, also died. . . . Lord Baltimore's scheme embraced not only religious but legislative freedom, and his charter provided for a colonial assembly. . . . In less than three years an assembly of the freemen of the little colony was convened and opened its sessions on the 25-26th of January, 1637. All who had taken up lands were summoned to attend in person." Some of

the resulting legislation was disapproved by the missionaries, and "the variance of opinion was most unfortunate in its results to the colony, as impairing the harmony which had hitherto prevailed."—J. G. Shea, *The Catholic Church in Colonial Days*, ch. 2.

A. D. 1634.—Embraced in the palatine grant of New Albion. See NEW ALBION.

A. D. 1635-1638.—The troubles with Clayborne.—William Clayborne "was the person most aggrieved by the Maryland charter. Under a general license from Charles I. to trade, he had established a lucrative post on Kent Island. The King, as he had unquestioned right to do under the theory of English law, granted to Lord Baltimore a certain tract of wild land, including Kent Island. Clayborne had no legal right there except as the subject of Baltimore; but, since his real injuries coincided with the fancied ones of the Virginians generally, his claim assumed importance. . . . There was . . . so strong a feeling in favor of Clayborne in Virginia that he was soon able to send an armed pinnace up the Chesapeake to defend his invaded rights at Kent Island, but the expedition was unfortunate. Governor Calvert, after a sharp encounter, captured Clayborne's pinnace, and proclaimed its owner a rebel. Calvert then demanded that the author of this trouble should be given up by Virginia; but Harvey [the governor], who had been in difficulties himself on account of his lukewarmness toward Clayborne, refused to comply. Clayborne, however, solved the problem in his own way, by going at once to England to attack his enemies in their stronghold. . . . On his arrival in England he . . . presented a petition to the King, and by adroitly working on the cupidity of Charles, not only came near recovering Kent Island, but almost obtained a large grant besides. After involving Lord Baltimore in a good deal of litigation, Clayborne was obliged, by an adverse decision of the Lords Commissioners of Plantations, to abandon all hopes in England, and therefore withdrew to Virginia to wait for better times."—H. C. Lodge, *Short Hist. of the Eng. Colonies in Am.*, ch. 3.

ALSO IN: J. L. Bozman, *Hist. of Maryland*, v. 2, ch. 1.

A. D. 1643-1649.—Colonial disturbances from the English Civil War.—Lord Baltimore and the Puritans.—The struggle of parties incident to the overthrow of the monarchy and the civil war, in England, was attended in Maryland "with a degree of violence disproportionate to its substantial results. It is difficult to fasten the blame of the first attack definitely on either party. In 1643 or 1644 the King gave letters of marque to Leonard Calvert commissioning him to seize upon all ships belonging to the Parliament. It would seem, however, as if the other side had begun to be active, since only three months later we find the Governor issuing a proclamation for the arrest of Richard Ingle, a sea-captain, apparently a Puritan and an ally of Clayborne. . . . Ingle . . . landed at St. Mary's [1645], while Clayborne at the same time made a fresh attempt upon Kent Island. Later events showed that under a resolute leader the Maryland Royalists were capable of a determined resistance, but now either no such leader was forth-

coming, or the party was taken by surprise. Cornwallis, who seems to have been the most energetic man in the colony, was absent in England, and Leonard Calvert fled into Virginia, apparently without an effort to maintain his authority. Ingle and his followers landed and seized upon St. Mary's, took possession of the government, and plundered Cornwallis's house and goods to the value of £300. Their success was short-lived. Calvert returned, rallied his party, and ejected Clayborne and Ingle. The Parliament made no attempt to back the proceedings of its supporters, and the matter dwindled into a petty dispute between Ingle and Cornwallis, in which the latter obtained at least some redress for his losses. The Isle of Kent held out somewhat longer, but in the course of the next year it was brought back to its allegiance. This event was followed in less than a twelvemonth by the death of the Governor [June 9, 1647]. Baltimore now began to see that in the existing position of parties he must choose between his fidelity to a fallen cause and his position as the Proprietor of Maryland. As early as 1642 we find him warning the Roman Catholic priests in his colony that they must expect no privileges beyond those which they would enjoy in England. He now showed his anxiety to propitiate the rising powers by his choice of a successor to his brother. The new Governor, William Stone, was a Protestant. The Council was also reconstituted and only two Papists appeared among its members. . . . Furthermore he [Lord Baltimore] exacted from Stone an oath that he would not molest any persons on the ground of their religion, provided they accepted the fundamental dogmas of Christianity. The Roman Catholics were singled out as the special objects of this protection, though we may reasonably suppose that it was also intended to check religious dissensions. So far Baltimore only acted like a prudent, unenthusiastic man, who was willing to make the best of a defeat and save what he could out of it by a seemingly free sacrifice of what was already lost. . . . The internal condition of the colony had now been substantially changed since the failure of Ingle and Clayborne. The Puritan party there had received an important addition. . . . A number of Nonconformists had made an attempt to establish themselves on the shores of the Chesapeake Bay. . . . The toleration which was denied them by the rigid and narrow-minded Anglicanism of Virginia was conceded by the liberality or the indifference of Baltimore. The precise date and manner of their immigration cannot be discovered, but we know that by 1650 their settlement was important enough to be made into a separate county under the name of Ann Arundel, and by 1653 they formed two distinct communities, numbering between them close upon 140 householders. All that was required of them was an oath of fidelity to the Proprietor, and it seems doubtful whether even that was exacted at the outset. They seem, in the unsettled and anarchical condition of the colony, to have been allowed to form a separate and well-nigh independent body, holding political views openly at variance with those of the Proprietor. To what extent the settlers on the Isle of Kent were avowedly hostile to Baltimore's government is doubtful. But it is clear that discontent was rife among them, and that in conjunction with the new-comers they

made up a formidable body, prepared to oppose the Proprietor and support the Parliament. Symptoms of internal disaffection were seen in the proceedings of the Assembly of 1649."—J. A. Doyle, *The English in America: Virginia, Maryland, &c., ch. 10.*

ALSO IN: G. P. Fisher, *The Colonial Era, ch. 5.*
A. D. 1649.—The Act of Toleration.—"Religious liberty was a vital part of the earliest common-law of the province. At the date of the charter, Toleration existed in the heart of the proprietary. And it appeared in the earliest administration of the affairs of the province. But an oath was soon prepared by him, including a pledge from the governor and the privy counsellors, 'directly or indirectly' to 'trouble, molest, or discountenance' no 'person whatever,' in the province, 'professing to believe in Jesus Christ.' Its date is still an open question—some writers supposing it was imposed in 1637; and others, in 1648. I am inclined to think the oath of the latter was but 'an augmented edition' of the one in the former year. The grant of the charter marks the era of a special Toleration. But the earliest practice of the government presents the first, the official oath the second, the action of the Assembly in 1649 the third, and to advocates of a republican government the most important phasis, in the history of the general Toleration. . . . To the legislators of 1649 was it given . . . to take their own rank among the foremost spirits of the age. Near the close of the session, . . . by a solemn act [the 'Act Concerning Religion'], they endorsed that policy which ever since has shed the brightest lustre upon the legislative annals of the province. . . . The design was five-fold:—to guard by an express penalty 'the most sacred things of God'; to inculcate the principle of religious decency and order; to establish, upon a firmer basis, the harmony already existing between the colonists; to secure, in the fullest sense, freedom as well as protection to all believers in Christianity; and to protect quiet disbelievers against every sort of reproach or ignominy."—G. L. Davis, *The Day-star of American Freedom, ch. 4-7.*—"In the wording of this act we see evident marks of a compromise between the differing sentiments in the Assembly. . . . It was as good a compromise as could be made at the time, and an immense advance upon the principles and practice of the age. In reality, it simply formulated in a statute what had been Baltimore's policy from the first. . . . From the foundation of the colony no man was molested under Baltimore's rule on account of religion. Whenever the Proprietary's power was overthrown, religious persecution began, and was checked so soon as he was reinstated."—W. H. Browne, *Maryland, ch. 4.*

A. D. 1650-1675.—In Puritan times, and after.—"To whatever causes . . . toleration was due, it worked well in populating Maryland. There was an influx of immigration, composed in part of the Puritans driven from Virginia by Berkeley. These people, although refusing the oath of fidelity, settled at Providence, near the site of Annapolis. Not merely the Protestant but the Puritan interest was now predominant in Maryland, and in the next Assembly the Puritan faction had control. They elected one of their leaders Speaker, and expelled

a Catholic who refused to take an oath requiring secrecy on the part of the Burgesses. . . . Yet they passed stringent laws against Clayborne, and an act reciting their affection for Lord Baltimore, who had so vivid an idea of their power that he deemed it best to assent to sumptuary laws of a typically Puritan character. The Assembly appears to have acknowledged the supremacy of Parliament, while their proprietary went so far in the same direction that his loyalty was doubted, and Charles II. afterward appointed Sir William Davenant in his place to govern Maryland. This discreet conduct on the part of Lord Baltimore served, however, as a protection neither to the colonists nor to the proprietary rights. To the next Assembly, the Puritans of Providence refused to send delegates, evidently expecting a dissolution of the proprietary government, and the consequent supremacy of their faction. Nor were they deceived. Such had been the prudence of the Assembly and of Lord Baltimore that Maryland was not expressly named in the Parliamentary commission for the 'reducement' of the colonies, but, unfortunately, Clayborne was the ruling spirit among the Parliamentary commissioners, and he was not the man to let any informality of wording in a document stand between him and his revenge. . . . Clayborne and Richard Bennet, one of the Providence settlers, and also a commissioner, soon gave their undivided attention to Maryland." Stone was displaced from the Governorship, but reinstated after a year, taking sides for a time with the Puritan party. "He endeavored to trim at a time when trimming was impossible. . . . Stone's second change, however, was a decided one. Although he proclaimed Cromwell as Lord-Protector, he carried on the government exclusively in Baltimore's interest, ejected the Puritans, recalled the Catholic Councillors, and issued a proclamation against the inhabitants of Providence as factious and seditious. A flagrant attempt to convert a young girl to Catholicism added fuel to the flames. Moderation was at an end. Clayborne and Bennet, backed by Virginia, returned and called an Assembly, from which Catholics were to be excluded. In Maryland, as in England, the extreme wing of the Puritan party was now in the ascendant, and exercised its power oppressively and relentlessly. Stone took arms and marched against the Puritans. A battle was fought at Providence, in which the Puritans, who, whatever their other failings, were always ready in a fray, were completely victorious. A few executions and some sequestrations followed, and severe laws against the Catholics were passed. The policy of the Puritans was not toleration, and they certainly never believed in it. Nevertheless, Lord Baltimore kept his patent, and the Puritans did not receive in England the warm sympathy they had expected." In the end (1657) there was a compromise. The proprietary government was re-established, and Fendall, whom Baltimore had appointed Governor in place of Stone, was recognized. "The results of all this turbulence were the right to carry arms, the practical assertion of the right to make laws and lay taxes, relief from the oath of fealty with the obnoxious clauses, and the breakdown of the Catholic interest in Maryland politics. Toleration was wisely restored. The solid advantages were gained by the Puritan minority at the expense

of the lord proprietary. In the interregnum which ensued on the abdication of Richard Cromwell, the Assembly met and claimed supreme authority in the province, and denied their responsibility to any one but the sovereign in England. Fendall, a weak man of the agitator species, acceded to the claims of the Assembly; but Baltimore removed Fendall, and kept the power which the Assembly had attempted to take away. . . . Maryland did not suffer by the Restoration, as was the case with her sister colonies, but gained many solid advantages. The factious strife of years was at last allayed, and order, peace, and stability of government supervened. Philip Calvert, an illegitimate son of the first proprietary, was governor for nearly two years, and was then succeeded [1661] by his nephew, Charles, the oldest son of Lord Baltimore, whose administration lasted for fourteen. It would have been difficult to find at that time better governors than these Calverts proved themselves. Moderate and just, they administered the affairs of Maryland sensibly and well. Population increased, and the immigration of Quakers and foreigners, and of the oppressed of all nations, was greatly stimulated by a renewal of the old policy of religious toleration. The prosperity of the colony was marked."—H. C. Lodge, *Short Hist. of the Eng. Colonies*, ch. 3.

A. D. 1688-1757.—Lord Baltimore deprived of the government.—Change of faith and restoration of his son.—Intolerance revived.—Lord Baltimore, "though guilty of no maleadministration in his government, though a zealous Roman catholic, and firmly attached to the cause of king James II., could not prevent his charter from being questioned in that arbitrary reign, and a suit from being commenced to deprive him of the property and jurisdiction of a province granted by the royal favour, and peopled at such a vast expence of his own. But it was the error of that weak and unfortunate reign, neither to know its friends, nor its enemies; but by a blind precipitate conduct to hurry on everything of whatever consequence with almost equal heat, and to imagine that the sound of the royal authority was sufficient to justify every sort of conduct to every sort of people. But these injuries could not shake the honour and constancy of lord Baltimore, nor tempt him to desert the cause of his master. Upon the revolution [1688] he had no reason to expect any favour; yet he met with more than king James had intended him; he was deprived indeed of all his jurisdiction [1691], but he was left the profits of his province, which were by no means inconsiderable; and when his descendants had conformed to the church of England, they were restored [1741] to all their rights as fully as the legislature has thought fit that any proprietor should

enjoy them. When upon the revolution power changed hands in that province, the new men made but an indifferent requital for the liberties and indulgences they had enjoyed under the old administration. They not only deprived the Roman catholics of all share in the government, but of all the rights of freemen; they have even adopted the whole body of the penal laws of England against them; they are at this day [1757] meditating new laws in the same spirit, and they would undoubtedly go to the greatest lengths in this respect, if the moderation and good sense of the government in England did not set some bounds to their bigotry."—E. Burke, *Acc't of the European Settlements in America*, pt. 7, ch. 18 (v. 2).—"We may now place side by side the three tolerations of Maryland. The toleration of the Proprietaries lasted fifty years, and under it all believers in Christ were equal before the law, and all support to churches or ministers was voluntary; the Puritan toleration lasted six years, and included all but Papists, Prelatists, and those who held objectionable doctrines; the Anglican toleration lasted eighty years, and had glebes and churches for the Establishment, connivance for Dissenters, the penal laws for Catholics."—W. H. Browne, *Maryland*, ch. 11.

A. D. 1729-1730.—The founding of Baltimore.—"Maryland had never taken kindly to towns, and though in Queen Anne's reign, in conformity with the royal wish, a number were founded, the reluctant Assembly 'erecting' them by hatches—42 at once in 1706—scarcely any passed beyond the embryonic stage. . . . St. Mary's and Annapolis, the one waning as the other waxed, remained the only real towns of the colony for the first 90 years of its existence. Joppa, on the Gunpowder, was the next, and had a fair share of prosperity for 50 years and more, until her young and more vigorous rival, Baltimore, drew off her trade, and she gradually dwindled, peaked, and pined away to a solitary house and a grass-grown grave-yard, wherein slumber the mortal remains of her ancient citizens. Baltimore on the Patapsco was not the first to bear that appellation. At least two Baltimores had a name, if not a local habitation, and perished, if they can be said ever to have rightly existed, before their younger sister saw the light. . . . In 1729, the planters near the Patapsco, feeling the need of a convenient port, made application to the Assembly, and an act was passed authorising the purchase of the necessary land, whereupon 60 acres bounding on the northwest branch of the river, at the part of the harbor now called the Basin, were bought of Daniel and Charles Carroll at 40 shillings the acre. The streets and lots were laid off in the following January, and purchasers invited. The waterfronts were immediately taken up."—W. H. Browne, *Maryland*, ch. 12.

A. D. 1776.—The end of proprietary and royal government.—Formation and adoption of a state constitution.—“In Maryland the party in favor of independence encountered peculiar obstacles. Under the proprietary rule the colony enjoyed a large measure of happiness and prosperity. The Governor, Robert Eden, was greatly respected, and to the last was treated with forbearance. . . . The political power was vested in a Convention which created the Council of Safety and provided for the common defence. This was, however, so much under the control of the proprietary party and timid Whigs that, on the 21st of May [1776], it renewed its former instructions against independence. . . . The popular leaders determined ‘to take the sense of the people.’ Charles Carroll of Carrollton, and Samuel Chase, who had just returned from Canada, entered with zeal into the movement on the side of independence and revolution. Meetings were called in the counties. . . . Anne Arundel County declared that the province, except in questions of domestic policy, was bound by the decisions of Congress. . . . Charles County followed, pronouncing for independence, confederation, and a new government. . . . Frederick County (June 17) unanimously resolved: ‘That what may be recommended by a majority of the Congress equally delegated by the people of the United Colonies, we will, at the hazard of our lives and fortunes, support and maintain.’ . . . This was immediately printed. ‘Read the papers,’ Samuel Chase wrote on the 21st to John Adams, ‘and be assured Frederick speaks the sense of many counties.’ Two days afterward the British man-of-war, Fowey, with a flag of truce at her top-gallant mast, anchored before Annapolis; the next day, Governor Eden was on board; and so closed the series of royal governors on Maryland soil.”—R. Frothingham, *The Rise of the Republic*, pp. 525-527.—“Elections were held throughout the state on the 1st day of August, 1776, for delegates to a new convention to form a constitution and state government. . . . On the 14th of August this new body assembled. . . . On the 3d of November the bill of rights was adopted. On the 8th of the same month the constitution of the State was finally agreed to, and elections ordered to carry it into effect.”—J. MASORETES, OR MASSORETES—MASORETIC.—When the Hebrew language had ceased to be a living language “the so-called Masoretes, or Jewish scribes, in the sixth century after the Christian era, invented a system of symbols which should represent the pronunciation of the Hebrew of the Old Testament as read, or rather chanted, at the time in the great synagogue of Tiberias in Palestine. It is in accordance with this Masoretic mode of pronunciation that Hebrew is now taught.”—A. H. Sayce, *Fresh Light from the Ancient Monuments*, ch. 3.—“Massora denotes, in general, tradition . . . ; but more especially it denotes the tradition concerning the text of the Bible. Hence those who made this special tradition their object of study were called Massoretes. . . . As there was an eastern and western, or Babylonian and Palestinian Talmud, so likewise there developed itself a twofold Massora,—a Babylonian, or,

eastern, and a Palestinian, or western: the more important is the former. At Tiberias the study of the Massora had been in a flourishing condition for a long time. Here lived the famous Massorete, Aaron ben-Moses ben-Asher, commonly called Ben-Asher, in the beginning of the tenth century, who finally fixed the so-called

Massoretic text."—*Schaff-Herzog Encyclop. of Religious Knowledge*.

MASSACHUSETTS.

The Name.—"The name Massachusetts, so far as I have observed, is first mentioned by Captain Smith in his 'Description of New England,' 1616. He spells the word variously, but he appears to use the term Massachusset and Massachewset to denote the country, while he adds a final 's' when he is speaking of the inhabitants. He speaks of Massachusset Mount and Massachusset River, using the word also in its possessive form; while in another place he calls the former 'the high mountain of Massachusit.' To this mountain, on his map, he gives the English name of 'Chevyot Hills.' Hutchinson (i. 460) supposes the Blue Hills of Milton to be intended. He says that a small hill near Squantum, the former seat of a great Indian sachem, was called Massachusset Hill, or Mount Massachusetts, down to his time. Cotton, in his Indian vocabulary, says the word means 'a hill in the form of an arrow's head.' See, also, Neal's 'New England,' ii. 215, 216. In the Massachusetts charter the name is spelled in three or four different ways, to make sure of a description of the territory."—C. Deane, *New England (Narrative and Critical Hist. of Am., v. 3, n. 342, footnote)*.

A. D. 1620.—The Pilgrim Fathers.—Whence and why they came to New England. See INDEPENDENTS OR SEPARATISTS.

A. D. 1620.—The voyage of the Mayflower.—The landing of the Pilgrims.—The founding of Plymouth colony.—The congregation of John Robinson, at Leyden, having, after long efforts, procured from the London Company for Virginia a patent or grant of land which proved useless to them, and having closed a hard bargain with certain merchants of London who supplied to some limited extent the means necessary for their emigration and settlement (see INDEPENDENTS, OR SEPARATISTS: A. D. 1617-1620), were prepared, in the summer of 1620, to send forth the first pilgrims from their community, across the ocean, seeking freedom in the worship of God. "The means at command provided only for sending a portion of the company; and 'those that stayed, being the greater number, required the pastor to stay with them,' while Elder Brewster accompanied, in the pastor's stead, the almost as numerous minority who were to constitute a church by themselves; and in every church, by Robinson's theories, the 'governing elder,' next in rank to the pastor and the teacher, must be 'apt to teach.' A small ship,—the 'Speedwell,'—of some 60 tons burden, was bought and fitted out in Holland, and early in July those who were ready for the formidable voyage, being 'the youngest and strongest part,'

left Leyden for embarkation at Delft-Haven, nearly 20 miles to the southward,—sad at the parting, 'but,' says Bradford, 'they knew that they were pilgrims.' About the middle of the second week of the month the vessel sailed for Southampton, England. On the arrival there they found the 'Mayflower,' a ship of about 180 tons burden, which had been hired in London, awaiting them with their fellow passengers,—partly laborers employed by the merchants, partly Englishmen like-minded with themselves, who were disposed to join the colony. Mr. Weston, also, was there, to represent the merchants; but, when discussion arose about the terms of the contract, he went off in anger, leaving the contract unsigned, and the arrangements so incomplete that the Pilgrims were forced to dispose of sixty pounds' worth of their not abundant stock of provisions to meet absolutely necessary charges. The ships, with perhaps 120 passengers, put to sea about August 5/15, with hopes of the colony being well settled before winter; but the 'Speedwell' was soon pronounced too leaky to proceed without being overhauled, and so both ships put in at Dartmouth, after eight days' sail. Repairs were made, and before the end of another week they started again; but when about a hundred leagues beyond Land's End, Reynolds, the master of the 'Speedwell,' declared her in imminent danger of sinking, so that both ships again put about. On reaching Plymouth Harbor it was decided to abandon the smaller vessel, and thus to send back those of the company whom such a succession of mishaps had disheartened. . . . It was not known till later that the alarm over the 'Speedwell's' condition was owing to deception practised by the master and crew. . . . At length, on Wednesday, September 6/16, the Mayflower left Plymouth, and nine weeks from the following day, on November 9/19, sighted the eastern coast of the flat, but at that time well-wooded shores of Cape Cod. She took from Plymouth 102 passengers, besides the master and crew; on the voyage one man-servant died and one child was born, making 102 (73 males and 29 females) who reached their destination. Of these, the colony proper consisted of 34 adult males, 18 of them accompanied by their wives and 14 by minor children (20 boys and 8 girls); besides these, there were 3 maid-servants and 19 men-servants, sailors, and craftsmen,—5 of them only half-grown boys,—who were hired for temporary service. Of the 34 men who were the nucleus of the colony, more than half are known to have come from Leyden; in fact, but 4 of the 34 are certainly known to be of the Southampton accessions. . . . And whither were they bound? As we have seen, a patent was secured in 1619 in Mr. Wincob's name; but 'God so disposed as he never went nor they ever made use of this

patent,' says Bradford,—not however making it clear when the intention of colonizing under this instrument was abandoned. The 'merchant adventurers' while negotiating at Leyden seem to have taken out another patent from the Virginia Company, in February, 1620, in the names of John Peirce and of his associates; and this was more probably the authority under which the Mayflower voyage was undertaken. As the Pilgrims had known before leaving Holland of an intended grant of the northern parts of Virginia to a new company,—the Council for New England,—when they found themselves off Cape Cod, 'the patent they had being for Virginia and not for New England, which belonged to another Government, with which the Virginia Company had nothing to do,' they changed the ship's course, with intent, says Bradford, 'to find some place about Hudson's River for their habitation,' and so fulfil the conditions of their patent; but difficulties of navigation and opposition from the master and crew caused the exiles, after half a day's voyage, to retrace their course and seek a resting-place on the nearest shore. . . . Their radical change of destination exposed the colonists to a new danger. As soon as it was known, some of the hired laborers threatened to break loose (upon landing) from their engagements, and to enjoy full license, as a result of the loss of the authority delegated in the Virginia Company's patent. The necessity of some mode of civil government had been enjoined on the Pilgrims in the farewell letter from their pastor, and was now availed of to restrain these insurgents and to unite visibly the well-affected. A compact, which has often been eulogized as the first written constitution in the world, was drawn up. . . . Of the 41 signers to this compact, 34 were the adults called above the nucleus of the colony, and seven were servants or hired workmen; the seven remaining adult males of the latter sort were perhaps too ill to sign with the rest (all of them soon died), or the list of signers may be imperfect. This needful preliminary step was taken on Saturday, November 11/21, by which time the Mayflower had rounded the Cape and found shelter in the quiet harbor on which now lies the village of Provincetown; and probably on the same day they 'chose, or rather confirmed,' as Bradford has it, . . . Mr. John Carver governor for the ensuing year. On the same day an armed delegation visited the neighboring shore, finding no inhabitants. There were no attractions, however, for a permanent settlement, nor even accommodations for a comfortable encampment while such a place was being sought." Some days were spent in exploring Cape Cod Bay, and the harbor since known as Plymouth Bay was chosen for the settlement of the colony. The exploring party landed, as is believed, at the famous Rock, on Monday December 11/21. "Through an unfortunate mistake, originating in the last century, the 22d has been commonly adopted as the true date. . . . Tradition divides the honor of being the first to step on Plymouth Rock between John Alden and Mary Chilton, but the date of their landing must have been subsequent to December 11 [N. S. 21]." It was not till the end of the week, December 16/26, that the Mayflower was anchored in the chosen haven. "The selection of a site and the preparation of materials, in uncertain weather, delayed till Monday, the 25th [Jan. 4, N. S.] the

beginning of 'the first house for common use, to receive them and their goods.' Before the new year, house-lots were assigned to families, and by the middle of January most of the company had left the ship for a home on land."—F. B. Dexter, *The Pilgrim Church and Plymouth Colony (Narrative and Critical Hist. of Am., v. 3, ch. 8, with foot-notes)*.—"Before the Pilgrims landed, they by a solemn instrument founded the Puritan republic. The tone of this instrument and the success of its authors may afford a lesson to revolutionists who sever the present from the past with the guillotine, fling the illustrious dead out of their tombs, and begin history again with the year one. These men had been wronged as much as the Jacobins. 'In the name of God. Amen. We whose names are under-written, the loyal subjects of our dread Sovereign Lord King James, by the grace of God of Great Britain and Ireland, defender of the faith, etc., having undertaken, for the glory of God and advancement of the Christian faith, and honour of our king and country, a voyage to plant the first colony in the northern parts of Virginia, do by these presents solemnly and mutually, in the presence of God and of one another, covenant and combine ourselves together into a civil body politic for our better ordering and preservation, and for the furtherance of the ends aforesaid; and by virtue hereof to exact, constitute, and frame such just and equal laws, ordinances and acts, constitutions and offices, from time to time, as shall be thought most meet for the general good of the colony, unto which we promise all due submission and obedience.' And then follows the roll of plebeian names, to which the Roll of Battle Abbey is a poor record of nobility. There are points in history at which the spirit which moves the whole shows itself more clearly through the outward frame. This is one of them. Here we are passing from the feudal age of privilege and force to the age of due submission and obedience, to just and equal offices and laws, for our better ordering and preservation. In this political covenant of the Pilgrim fathers lies the American Declaration of Independence. From the American Declaration of Independence was borrowed the French Declaration of the Rights of Man. France, rushing ill-prepared, though with overweening confidence, on the great problems of the eighteenth century, shattered not her own hopes alone, but nearly at the same moment the Puritan Republic, breaking the last slight link that bound it to feudal Europe, and placing modern society firmly and tranquilly on its new foundation. To the free States of America we owe our best assurance that the oldest, the most famous, the most cherished of human institutions are not the life, nor would their fall be the death, of social man; that all which comes of Charlemagne, and all which comes of Constantine, might go to the tombs of Charlemagne and Constantine, and yet social duty and affection, religion and worship, free obedience to good government, free reverence for just laws, continue as before. They who have achieved this have little need to talk of Bunker's Hill."—Goldwin Smith, *On the Foundation of the Am. Colonies (Lects. on the Study of Hist.)*.

A. D. 1621.—The first year of the Plymouth Colony and its sufferings.—The Pierce patent.—The naming of Plymouth.—"The labor of providing habitations had scarcely begun, when sickness set in, the consequence of exposure and bad food. Within four months it carried off nearly half their number. Six died in December, eight in January, seventeen in February, and thirteen in March. At one time during the winter, only six or seven had strength enough left to nurse the dying and bury the dead. Destitute of every provision, which the weakness and the daintiness of the invalid require, the sick lay crowded in the unwholesome vessel, or in half-built cabins heaped around with snow-drifts. The rude sailors refused them even a share of those coarse sea-stores which would have given a little variety to their diet, till disease spread among the crew, and the kind ministrations of those whom they had neglected and affronted brought them to a better temper. The dead were interred in a bluff by the water-side, the marks of burial being carefully effaced, lest the natives should discover how the colony had been weakened. . . . Meantime, courage and fidelity never gave out. The well carried out the dead through the cold and snow, and then hastened back from the burial to wait on the sick; and as the sick began to recover, they took the places of those whose strength had been exhausted." In March, the first intercourse of the colonists with the few natives of the region was opened, through Samoset, a friendly Indian, who had learned from fishermen on the more eastern coast to speak a little English. Soon afterwards, they made a treaty of friendship and alliance with Massasoit, the chief of the nearest tribe, which treaty remained in force for 54 years. On the 5th of April the Mayflower set sail on her homeward voyage, "with scarcely more than half the crew which had navigated her to America, the rest having fallen victims to the epidemic of the winter. . . . She carried back not one of the emigrants, dispiriting as were the hardships which they had endured, and those they had still in prospect." Soon after the departure of the Mayflower, Carver, the Governor, died. "Bradford was chosen to the vacant office, with Isaac Allerton, at his request, for his Assistant. Forty-six of the colonists of the Mayflower were now dead,—28 out of the 48 adult men. Before the arrival of the second party of emigrants in the autumn, the dead reached the number of 51, and only an equal number survived the first miseries of the enterprise. . . . Before the winter set in, tidings from England had come, to relieve the long year's lonesomeness; and a welcome addition was made to the sadly diminished number. The *Fortune*, a vessel of 55 tons' burden, reached Plymouth after a passage of four months, with Cushman and some 30 other emigrants. The men who now arrived outnumbered those of their predecessors who were still living. . . . Some were old friends of the colonists, at Leyden. Others were persons who added to the moral as well as to the numerical strength of the settlement. But there were not wanting such as became subjects for anxiety and coercion." The *Fortune* also brought to the colonists a patent from the Council for New England, as it was commonly known—the corporation into which

the old Plymouth Company, or North Virginia branch of the Virginia Company, had been transformed (see *NEW ENGLAND*: A. D. 1620-1623). "Upon lands of this corporation Bradford and his companions had sat down without leave, and were of course liable to be summarily expelled. Informed of their position by the return of the Mayflower to England in the spring, their friends obtained from the Council a patent which was brought by the *Fortune*. It was taken out in the name of 'John Pierce, citizen and cloth-worker of London, and his associates,' with the understanding that it should be held in trust for the Adventurers, of whom Pierce was one. It allowed 100 acres of land to every colonist gone and to go to New England, at a yearly rent of two shillings an acre after seven years. It granted 1,500 acres for public uses, and liberty to 'hawk, fish, and fowl'; to 'truck, trade, and traffic with the savages'; to 'establish such laws and ordinances as are for their better government, and the same, by such officer or officers as they shall by most voices elect and choose, to put in execution'; and 'to encounter, expulse, repel, and resist by force of arms' all intruders. . . . The instrument was signed for the Council by the Duke of Hamilton, the Duke of Lenox, the Earl of Warwick, Lord Sheffield, and Sir Ferdinando Gorges. . . . The precise time of the adoption of the name which the settlement has borne since its first year is not known. Plymouth is the name recorded on Smith's map as having been given to the spot by Prince Charles. It seems very likely that the emigrants had with them this map, which had been much circulated. . . . Morton (*Memorial*, 56) assigns as a reason for adopting it that 'Plymouth in Old England was the last town they left in their native country, and they received many kindnesses from some Christians there.' In Mourt, 'Plymouth' and 'the now well-defended town of New Plymouth' are used as equivalent. Later, the name Plymouth came to be appropriated to the town, and New Plymouth to the Colony."—J. G. Palfrey, *Hist. of N. Eng.*, v. 1, ch. 5, and foot-note.

A. D. 1622-1628.—Weston at Wessagusset, Morton at Merrymount, and other settlements.—"During the years immediately following the voyage of the Mayflower, several attempts at settlement were made about the shores of Massachusetts bay. One of the merchant adventurers, Thomas Weston, took it into his head in 1622 to separate from his partners and send out a colony of seventy men on his own account. These men made a settlement at Wessagusset, some twenty-five miles north of Plymouth. They were a disorderly, thriftless rabble, picked up from the London streets, and soon got into trouble with the Indians; after a year they were glad to get back to England as best they could, and in this the Plymouth settlers willingly aided them. In June of that same year 1622 there arrived on the scene a picturesque but ill understood personage, Thomas Morton, 'of Clifford's Inn, Gent.,' as he tells on the title-page of his quaint and delightful book, the '*New English Canaan*.' Bradford disparagingly says that he 'had been a kind of pettifogger of Furnifell's Inn'; but the churchman

Samuel Maverick declares that he was a 'gentleman of good qualitie.' He was an agent of Sir Ferdinando Gorges, and came with some thirty followers to make the beginnings of a royalist and Episcopal settlement in the Massachusetts bay. He was naturally regarded with ill favour by the Pilgrims as well as by the later Puritan settlers, and their accounts of him will probably bear taking with a grain or two of salt. In 1625 there came one Captain Wollaston, with a gang of indented white servants, and established himself on the site of the present town of Quincy. Finding this system of industry ill suited to northern agriculture, he carried most of his men off to Virginia, where he sold them. Morton took possession of the site of the settlement, which he called Merrymount. There, according to Bradford, he set up a 'schoole of atheisme,' and his men did quaff strong waters and comport themselves 'as if they had anew revived and celebrated the feasts of ye Roman Goddes Flora, or the beastly practices of ye madd Bachanalians.' Charges of atheism have been freely hurled about in all ages. In Morton's case the accusation seems to have been based upon the fact that he used the Book of Common Prayer. His men so far maintained the ancient customs of merry England as to plant a Maypole eighty feet high, about which they frolicked with the redskins, while furthermore they taught them the use of firearms and sold them muskets and rum. This was positively dangerous, and in the summer of 1628 the settlers at Merrymount were dispersed by Miles Standish. Morton was sent to England, but returned the next year, and presently again repaired to Merrymount. By this time other settlements were dotted about the coast. There were a few scattered cottages or cabins at Nantasket and at the mouth of the Piscataqua, while Samuel Maverick had fortified himself on Noddle's Island, and William Blackstone already lived upon the Shawmut peninsula, since called Boston. These two gentlemen were no friends to the Puritans; they were churchmen and representatives of Sir Ferdinando Gorges."—J. Fiske, *The Beginnings of N. Eng.*, ch. 3.

A. D. 1623-1629.—Plymouth Colony.—Land allotments.—Buying freedom from the adventurers at London.—The new patent.—"In 1623 the Ann and Little James, the former of 140 tons, and the latter of 44 tons, arrived with 60 persons to be added to the colony, and a number of others who had come at their own charge and on their own account. . . . The passengers in the Ann and Little James completed the list of those who are usually called the first-comers. The Ann returned to England in September, carrying Mr. Winslow to negotiate with the merchants for needful supplies, and the Little James remained at Plymouth in the service of the company. . . . Up to that time the company had worked together on the company lands, and, each sharing in the fruits of another's labors, felt little of that personal responsibility which was necessary to secure the largest returns. . . . 'At length, after much debate of things, the Governor (with the

advise of the cheefest amongst them) gave way that they should set come every man for his owne perticuler, and in that regard trust to themselves; in all other things to goe on in the generall way as before. And so assigned to every family a parcell of land, according to the proportion of their number for that end. . . . This had very good success; for it made all hands very industrious.' . . . Such is the language of Bradford concerning a measure which was adopted from motives of necessity, but which was, to a certain extent, an infringement of the provisions of the contract with the adventurers. Before the planting season of the next year a more emphatic violation of the contract was committed. 'They (the colony) begane now highly to prise corne as more pretious then silver, and those that had some to spare begane to trade one with another for smale things, by the quarte, potle, & peck & C.: for money they had none, and if any had, corne was preferred before it. That they might therfore encrease their tillage to better advantage, they made suite to the Governor to have some portion of land given them for continuance, and not by yearly lotte. . . . Which being well considered, their request was granted. And to every person was given only one acre of land, to them and theirs, as nere the towne as might be, and they had no more till the 7 years were expired.' This experience gradually led the colony in the right track, and the growing necessity for some other circulating medium than silver secured abundant harvests." Winslow returned from England in 1624, "bringing, besides a good supply, '3 heifers & a bull the first begining of any cattle of that kind in the land.' At that time there were 180 persons in the colony, 'some cattle and goats, but many swine and poultry and thirty-two dwelling houses.' In the latter part of the year Winslow sailed again for England in the Little James and returned in 1625. The news he brought was discouraging to the colonists. The debt due to the adventurers was £1,400, and the creditors had lost confidence in their enterprise." On this intelligence, Capt. Standish was sent to England, followed next year by Mr. Allerton, "to make a composition with the adventurers," and obtain, if possible, a release from the seven years contract under which the colonists were bound. Allerton returned in 1627, having concluded an agreement with the adventurers at London for the purchase of all their rights and interests in the plantation, for the sum of £1,800. The agreement was approved by the colony, and Bradford, Standish, Allerton, Winslow, Brewster, Howland, Alden, and others, assumed the debt of £1,800, the trading privileges of the colony being assigned to them for their security. "In accordance with this agreement these gentlemen at once entered vigorously into the enterprise, and by the use of wampum, as a circulating medium, carried on so extensive a trade with the natives, in the purchase of furs and other articles for export to England as within the prescribed period [six years] to pay off the entire debt and leave the colony in the undisputed possession of their lands. No legal-tender scheme, in these later days, has been bolder in its conception, or more successful in its career, than that of the Pilgrim Fathers, which, with the shells of the shore, relieved their community from debt, and established on a permanent basis the wealth and prosperity of New England. . . . After the negotiations

with the adventurers had been completed, the colonists were anxious to obtain another patent from the New England Company conferring larger powers and defining their territorial limits. After three visits to England, Allerton was sent a fourth time, in 1629, and secured a patent dated January 13, 1629 (old style), and signed by the Earl of Warwick on behalf of the Council of New England, enlarging the original grant, and establishing the boundaries of what has been since known as the Old Colony. It granted to William Bradford and his associates 'all that part of New England in America, the tract and tracts of land that lie within or between a certain rivolet or rundlett, then commonly called Coahasset alias Conahasset, towards the north, and the river commonly called Naraganset river towards the south, and the great Western ocean towards the east,' and between two lines described as extending, severally, from the mouth of the Naraganset and the mouth of the Coahasset, "up into the mainland westward," "to the utmost limits and bounds of a country or place in New England called Pokernacutt, alias Puckenackick, alias Sawaamset."—W. T. Davis, *Ancient Landmarks of Plymouth*, ch. 2.

A. D. 1623-1629.—The Dorchester Company and the royal Charter to the Governor and Company of Massachusetts Bay.—"While the people of Plymouth were struggling to establish their colony, some of the English Puritans, restless under the growing despotism of Charles, began to turn their eyes to New England. Under the lead of the Rev. John White, the Dorchester Company was formed for trading and fishing, and a station was established at Cape Ann [A. D. 1623]; but the enterprise did not prosper, the colonists were disorderly, and the Company made an arrangement for Roger Conant and others, driven from Plymouth by the rigid principles of the Separatists, to come to Cape Ann. Still matters did not improve and the Company was dissolved; but White held to his purpose, and Conant and a few others moved to Naumkeag, and determined to settle there. Conant induced his companions to persevere, and matters in England led to a fresh attempt; for discontent grew rapidly as Charles proceeded in his policy. A second Dorchester Company, not this time a small affair for fishing and trading, but one backed by men of wealth and influence, was formed, and a large grant of lands [from three miles north of the Merrimac to three miles south of the Charles, and to extend from the Atlantic to the Western Ocean] was made by the Council for New England to Sir Henry Roswell and five others [March, 1628]. One of the six patentees, John Endicott, went out during the following summer with a small company, assumed the government at Naumkeag, which was now called Salem, and sent out exploring parties. The company thus formed in England was merely a voluntary partnership, but it paved the way for another and much larger scheme. Disaffection had become wide-spread. The Puritans began to fear that religious and political liberty alike were not only in danger but were doomed to destruction, and a large portion of the party resolved to combine for the preservation of all that was dearest to them by removal to the New World. The Dorchester Company was enlarged, and a royal charter was obtained incorporating the Governor and Company of Massachusetts Bay,"

March 4, 1629.—H. C. Lodge, *Short Hist. of the Eng. Colonies in Am.*, ch. 18.—"This [the royal charter named above] is the instrument under which the Colony of Massachusetts continued to conduct its affairs for 55 years. The patentees named in it were Roswell and his five associates, with 20 other persons, of whom White was not one. It gave power forever to the freemen of the Company to elect annually, from their own number, a Governor, Deputy-Governor, and 18 Assistants, on the last Wednesday of Easter term, and to make laws and ordinances not repugnant to the laws of England, for their own benefit and the government of persons inhabiting their territory. Four meetings of the Company were to be held in a year, and others might be convened in a manner prescribed. Meetings of the Governor, Deputy-Governor, and Assistants, were to be held once a month or oftener. The Governor, Deputy-Governor, and any two Assistants, were authorized, but not required, to administer to freemen the oaths of supremacy and allegiance. The Company might transport settlers not 'restrained by special name.' They had authority to admit new associates, and establish the terms of their admission, and elect and constitute such officers as they should see fit for the ordering and managing of their affairs. They were empowered to 'encounter, repulse, repel, and resist by force of arms . . . all such person and persons as should at any time thereafter attempt or enterprise the destruction, invasion, detriment, or annoyance to the said plantation or inhabitants.' Nothing was said of religious liberty. The government may have relied upon its power to restrain it, and the emigrants on their distance and obscurity to protect it."—J. G. Palfrey, *Hist. of N. Eng.*, v. 1, ch. 8.—"In anticipation of a future want the grantees resisted the insertion of any condition which should fix the government of the Company in England. Winthrop explicitly states that the advisers of the Crown had originally imposed such a condition, but that the patentees succeeded, not without difficulty, in freeing themselves from it. That fact is a full answer to those who held that in transferring the government to America the patentees broke faith with the Crown."—J. A. Doyle, *The English in Am.: The Puritan Colonies*, v. 1, ch. 3.

A. D. 1629-1630.—The immigration of the Governor and Company of Massachusetts Bay, with their Royal Charter.—"Several persons, of considerable importance in the English nation, were now enlisted among the adventurers, who, for the unmolested enjoyment of their religion, were resolved to remove into Massachusetts. Foreseeing, however, and dreading the inconvenience of being governed by laws made for them without their own consent, they judged it more reasonable that the colony should be ruled by men residing in the plantation, than by those dwelling at a distance of three thousand miles, and over whom they should have no control. At a meeting of the company on the 28th of July [1629], Matthew Cradock, the governor, proposed that the charter should be transferred to those of the freemen who should become inhabitants of the colony, and the powers conferred

by it be executed for the future in New England. An agreement was accordingly made at Cambridge, in England, on the 26th of August, between Sir Richard Saltonstall, Thomas Dudley, Isaac Johnson, John Winthrop, and a few others, that, on those conditions, they would be ready the ensuing March, with their persons and families, to embark for New England, for the purpose of settling in the country. The governor and company, entirely disposed to promote the measure, called a general court [at which, after a serious debate, adjourned from one day to the next,] . . . it was decreed that the government and the patent of the plantation should be transferred from London to Massachusetts Bay. An order was drawn up for that purpose, in pursuance of which a court was holden on the 20th of October for a new election of officers, who would be willing to remove with their families; and 'the court having received extraordinary great commendation of Mr. John Winthrop, both for his integrity and sufficiency, as being one very well fitted for the place, with a full consent chose him governor for the year ensuing.' . . . Preparations were now made for the removal of a large number of colonists, and in the spring of 1630 a fleet of 14 sail was got ready. Mr. Winthrop having by the consent of all been chosen for their leader, immediately set about making preparations for his departure. He converted a fine estate of £600 or £700 per annum into money and in March embarked on board the *Arbella*, one of the principal ships. Before leaving Yarmouth, an address to their fathers and brethren remaining in England was drawn up, and subscribed on the 7th of April by Governor Winthrop and others, breathing an affectionate farewell to the Church of England and their native land. . . . In the same ship with Governor Winthrop came Thomas Dudley, who had been chosen deputy governor after the embarkation, and several other gentlemen of wealth and quality; the fleet containing about 840 passengers, of various occupations, some of whom were from the west of England, but most from the neighborhood of London. The fleet sailed early in April; and the *Arbella* arrived off Cape Ann on Friday, the 1st of June, and on the following day entered the harbor of Salem. A few days after their arrival, the governor, and several of the principal persons of the colony, made an excursion some 20 miles along the bay, for the purpose of selecting a convenient site for a town. They finally pitched down on the north side of Charles river (Charlestown), and took lodgings in the great house built there the preceding year; the rest of the company erected cottages, booths, and tents, for present accommodation, about the town hill. Their place of assembling for divine service was under a spreading tree. On the 8th of July, a day of thanksgiving was kept for the safe arrival of the fleet. On the 30th of the same month, after a day of solemn prayer and fasting, the foundation of a church was laid at Charlestown, afterwards the first church of Boston, and Governor Winthrop, Deputy Governor Dudley, and the Rev. Mr. Wilson, entered into church covenant. The first court of assistants was held at Charlestown, on the 23d of August, and the first question proposed was a suitable provision for the support of the gospel. Towards the close of autumn, Governor Winthrop and most of the assistants removed to the peninsula of Shaw-

mut (Boston), and lived there the first winter, intending in the spring to build a fortified town, but undetermined as to its situation. On the 6th of December they resolved to fortify the isthmus of that peninsula; but, changing their minds before the month expired, they agreed upon a place about three miles above Charlestown, which they called first Newtown, and afterwards Cambridge, where they engaged to build houses the ensuing spring. The rest of the winter they suffered much by the severity of the season, and were obliged to live upon acorns, groundnuts, and shell-fish. . . . They had appointed the 6th of February for a fast, in consequence of their alarm for the safety of a ship which had been sent to Ireland for provisions; but fortunately the vessel arrived on the 5th, and they ordered a public thanksgiving instead thereof."—J. B. Moore, *Lives of the Governors of New Plymouth and Mass. Bay*; pt. 2: *Winthrop*.

A. D. 1630.—The founding of Boston.—"The English people who came with Governor Winthrop first located upon the peninsula of Mishawum, which they called Charlestown. . . . They found here a single white man named Thomas Walford, living very peaceably and contentedly among the Indians. They also discovered that the peninsula of Shawmut had one solitary white inhabitant whose name was William Blackstone. They could see every day the smoke curling above this man's lonely cabin. He, too, was a Puritan clergyman, like many of those who had now come to make a home in the New World, free from the tyranny of the English bishops. Still another Englishman, Samuel Maverick by name, had built a house, and with the help of David Thompson, a fort which mounted four small cannon, truly called 'murderers,' and was living very comfortably on the island that is now East Boston. And again, by looking across the bay, to the south, the smoke of an English cottage, on Thompson's Island, was probably seen stealing upward to the sky. So that we certainly know these people were the first settlers of Boston. But scarcity of water, and sickness, which soon broke out among them, made the settlers at Charlestown very discontented. They began to scatter. Indeed this peninsula was too small properly to accommodate all of them with their cattle. Therefore good William Blackstone, with true hospitality, came in their distress to tell them there was a fine spring of pure water at Shawmut, and to invite them there. Probably his account induced quite a number to remove at once; while others, wishing to make farms, looked out homes along the shores of the mainland, at Medford, Newtown (Cambridge), Watertown and Roxbury. A separate company of colonists also settled at Mattapan, or Dorchester. The dissatisfaction with Charlestown was so general that at last only a few of the original settlers remained there. . . . While those in chief authority were still undecided, Isaac Johnson, one of the most influential and honored men among the colonists, began, with others, in earnest, the settlement of Boston. He chose for himself the square of land now enclosed by Tremont, Court,

Washington and School Streets. Unfortunately this gentleman, who was much beloved, died before the removal to Boston became general. . . . Although the chief men of the colony continued for some time yet to favor the plan of a fortified town farther inland, Boston had now become too firmly rooted, and the people too unwilling, to make a second change of location practicable, or even desirable. So this project was abandoned, though not before high words passed between Winthrop and Dudley about it. The governor then removed the frame of his new house from Cambridge, or Newtown, to Boston, setting it up on the land between Milk Street, Spring Lane, and Washington Street. One of the finest springs being upon his lot, the name Spring Lane is easily traced. The people first located themselves within the space now comprised between Milk, Bromfield, Tremont, and Hanover Streets, and the water, or, in general terms, upon the southeasterly slope of Beacon Hill. Pemberton Hill soon became a favorite locality. The North End, including that portion of the town north of Union Street, was soon built up by the new emigrants coming in, or by removals from the South End, as all the town south of this district was called. In time a third district on the north side of Beacon Hill grew up, and was called the West End. And in the old city these general divisions continue to-day. Shawmut, we remember, was the first name Boston had. Now the settlers at Charlestown, seeing always before them a high hill topped with three little peaks, had already, and very aptly too, we think, named Shawmut Trimountain [the origin of the name Tremont in Boston]. But when they began to remove there they called it Boston, after a place of that name in England, and because they had determined beforehand to give to their chief town this name. So says the second highest person among them, Deputy Governor Thomas Dudley. The settlers built their first church on the ground now covered by Brazer's Building, in State Street. . . . Directly in front of the meeting-house was the town market-place. Where Quincy Market is was the principal landing-place. The Common was set apart as a pasture-ground and training-field. . . . A beacon was set up on the summit of Trimountain and a fort upon the southernmost hill of the town. From this time these hills took the names of Windmill, Beacon, and Fort Hills."—S. A. Drake, *Around the Hub*, ch. 2.—"The order of the Court of Assistants,—Governor Winthrop presiding,—'That Trimontaine shall be called Boston,' was passed on the 7th of September, old style, or, as we now count it, the 17th of September, 1630. The name of Boston was specially dear to the Massachusetts colonists, from its association with the old St. Botolph's town, or Boston, of Lincolnshire, England, from which the Lady Arbella Johnson and her husband had come, and where John Cotton was still preaching in its noble parish church. But the precise date of the removal of the Governor and Company to the peninsula is nowhere given."—R. C. Winthrop, *Boston Founded* (*Memorial Hist. of Boston*; ed. by J. Winsor, v. 1), pp. 116-117.

ALSO IN: C. F. Adams, Jr., *Earliest Expl. and Settlement of Boston Harbor* (*Mem. Hist.*, pp. 63-86).

A. D. 1631-1636.—The Puritan Theocracy and its intolerance.—"The charter of the Mas-

sachusetts Company had prescribed no condition of investment with its franchise,—or with what under the circumstances which had arisen was the same thing, the prerogatives of citizenship in the plantation,—except the will and vote of those who were already freemen. At the first Cisatlantic General Court for election, 'to the end the body of the commons may be preserved of honest and good men,' it was 'ordered and agreed, that, for the time to come, no man shall be admitted to the freedom of this body politic, but such as are members of some of the churches within the limits of the same.' The men who laid this singular foundation for the commonwealth which they were instituting, had been accustomed to feel responsibility, and to act upon well-considered reasons. By charter from the English crown, the land was theirs as against all other civilized people, and they had a right to choose according to their own rules the associates who should help them to occupy and govern it. Exercising this right, they determined that magistracy and citizenship should belong only to Christian men, ascertained to be such by the best test which they knew how to apply. They established a kind of aristocracy hitherto unknown."—J. G. Palfrey, *Hist. of N. Eng.*, v. 1, ch. 9.—"The aim of Winthrop and his friends in coming to Massachusetts was the construction of a theocratic state which should be to Christians, under the New Testament dispensation, all that the theocracy of Moses and Joshua and Samuel had been to the Jews in Old Testament days. They should be to all intents and purposes freed from the jurisdiction of the Stuart king, and so far as possible the text of the Holy Scriptures should be their guide both in weighty matters of general legislation and in the shaping of the smallest details of daily life. In such a scheme there was no room for religious liberty as we understand it."—J. Fiske, *The Beginnings of New England*, ch. 4.—"The projected religious commonwealth was to be founded and administered by the Bible, the whole Bible, not by the New Testament alone. . . . They revered and used and treated the Holy Book as one whole. A single sentence from any part of it was an oracle to them: it was as a slice or crumb from any part of a loaf of bread, all of the same consistency. God, as King, had been the Lawgiver of Israel: he should be their Lawgiver too. . . . The Church should fashion the State and be identical with it. Only experienced and covenanted Christian believers, pledged by their profession to accordance of opinion and purpose with the original proprietors and exiles, should be admitted as freemen, or full citizens of the commonwealth. They would restrain and limit their own liberty of conscience, as well as their own freedom of action, within Bible rules. In fact,—in spirit even more than in the letter,—they did adopt all of the Jewish code which was in any way practicable for them. The leading minister of the colony was formally appointed by the General Court to adapt the Jewish law to their case [1636]; and it was enacted that, till that work was really done, 'Moses, his Judicials,' should be in full force. Mr. Cotton in due time presented the results of his labor in a code of laws illustrated by Scripture texts. This code was not formally adopted by the Court; but the spirit of it, soon rewrought into another body, had full sway. . . . That frankly

avowed and practically applied purpose of the Fathers, of establishing here a Bible Commonwealth, 'under a due form of government, both civil and ecclesiastical,' furnishes the key to, the explanation of, all dark things and all the bright things in their early history. The young people educated among us ought to read our history by that simple, plain interpretation. The consciences of our Fathers were not free in our sense of that word. They were held under rigid subjection to what they regarded as God's Holy Word, through and through in every sentence of it, just as the consciences of their Fathers were held, under the sway of the Pope and the Roman Church. The Bible was to them supreme. Their church was based on it, modelled by it, governed by it; and they intended their State should be also."—G. E. Ellis, *Lowell Inst. Lects. on the Early Hist. of Mass.*, pp. 50-55.—"Though communicants were not necessarily voters, no one could be a voter who was not a communicant; therefore the town-meeting was nothing but the church meeting, possibly somewhat attenuated, and called by a different name. By this insidious statute the clergy seized the temporal power, which they held till the charter fell. The minister stood at the head of the congregation and moulded it to suit his purposes and to do his will. . . . Common men could not have kept this hold upon the inhabitants of New England, but the clergy were learned, resolute, and able, and their strong but narrow minds burned with fanaticism and love of power; with their beliefs and under their temptations persecution seemed to them not only their most potent weapon, but a duty they owed to Christ—and that duty they unflinchingly performed."—B. Adams, *The Emancipation of Mass.*, ch. 1.

A. D. 1633-1635.—Hostilities between the Plymouth Colony and the French on the Maine coast. See NOVA SCOTIA: A. D. 1621-1668.

A. D. 1634-1637.—Threatening movements in England.—The Charter demanded.—"That the government of Charles I. should view with a hostile eye the growth of a Puritan state in New England is not at all surprising. The only fit ground for wonder would seem to be that Charles should have been willing at the outset to grant a charter to the able and influential Puritans who organized the Company of Massachusetts Bay. Probably, however, the king thought at first it would relieve him at home if a few dozen of the Puritan leaders could be allowed to concentrate their minds upon a project of colonization in America. It might divert attention for a moment from his own despotic schemes. Very likely the scheme would prove a failure and the Massachusetts colony incur a fate like that of Roanoke Island; and at all events the wealth of the Puritans might better be sunk in a remote and perilous enterprise than employed at home in organizing resistance to the crown. Such, very likely, may have been the king's motive in granting the Massachusetts charter two days after turning his Parliament out of doors. But the events of the last half-dozen years had come to present the case in a new light. The young colony was not languishing. It was full of

sturdy life; it had wrought mischief to the schemes of Gorges; and what was more, it had begun to take unheard-of liberties with things ecclesiastical and political. Its example was getting to be a dangerous one. It was evidently worth while to put a strong curb upon Massachusetts. Any promise made to his subjects Charles regarded as a promise made under duress which he was quite justified in breaking whenever it suited his purpose to do so. Enemies of Massachusetts were busy in England. Schismatics from Salem and revellers from Merry-mount were ready with their tales of woe, and now Gorges and Mason were vigorously pressing their territorial claims."—J. Fiske, *The Beginnings of New Eng.*, ch. 3.—In April, 1634, "the superintendence of the colonies was . . . removed from the privy council to an arbitrary special commission, of which William Laud, archbishop of Canterbury, and the archbishop of York, were the chief. These, with ten of the highest officers of State, were invested with full power to make laws and orders, . . . to appoint judges and magistrates and establish courts for civil and ecclesiastical affairs, . . . to revoke all charters and patents which had been surreptitiously obtained, or which conceded liberties prejudicial to the royal prerogative. Cradock, who had been governor of the corporation in England before the transfer of the charter of Massachusetts, was strictly charged to deliver it up; and he wrote to the governor and council to send it home. Upon receipt of his letter, they resolved 'not to return any answer or excuse at that time.' In September, a copy of the commission to Archbishop Laud and his associates was brought to Boston; and it was at the same time rumored that the colonists were to be compelled by force to accept a new governor, the discipline of the church of England, and the laws of the commissioners. The intelligence awakened 'the magistrates and deputies to discover their minds each to other, and to hasten their fortifications,' towards which, poor as was the colony, £600 were raised. In January, 1635, all the ministers assembled at Boston; and they unanimously declared against the reception of a general governor, saying: 'We ought to defend our lawful possessions, if we are able; if not, to avoid and protract.' In the month before this declaration, it is not strange that Laud and his associates should have esteemed the inhabitants of Massachusetts to be men of refractory humors. . . . Restraints were placed upon emigration; no one above the rank of a serving man might remove to the colony without the special leave of Laud and his associates. . . . Willingly as these acts were enforced by religious bigotry, they were promoted by another cause. A change had come over the character of the great Plymouth council for the colonization of New England," which now schemed and bargained with the English court to surrender its general charter, on the condition that the vast territory which it had already ceded to the Massachusetts Company and others should be reclaimed by the king and granted anew, in severalty, to its members (see NEW ENGLAND: A. D. 1635). "At the Trinity term of the court of king's bench, a quo warranta was brought against the Company of the Massachusetts bay. At the ensuing Michaelmas, several of its members who resided in England made their appearance, and judgment was

pronounced against them individually; the rest of the patentees stood outlawed, but no judgment was entered against them. The unexpected death of Mason, the proprietary of New Hampshire, in December, 1635, removed the chief instigator of these aggressions. In July, 1637, the king, professing 'to redress the mischiefs that had arisen out of the many different humours,' took the government of New England into his own hands, and appointed over it Sir Ferdinando Gorges as governor-general. . . . But the measure was feeble and ineffectual." Gorges "never left England, and was hardly heard of except by petitions to its government." Troubles had thickened about king Charles and his creature Laud until they no longer had time or disposition to bestow more of their thoughts on Massachusetts. A long-suffering nation was making ready to put an end to their malignant activities, and the Puritans of New England and Old England were alike delivered.—G. Bancroft, *Hist. of the U. S. (Author's last rev.)*, pt. 1, ch. 17 (v. 1).

A. D. 1636.—The banishment of Roger Williams.—"The intolerance of England had established the New England colonies. The time was at hand when those colonies should in their turn alienate from them their own children, and be the unwilling parents of a fresh state. In 1631, there arrived at Boston a young minister, Roger Williams, 'godly and zealous, having precious gifts.' . . . His theological doctrines seem to have been those generally received among the Puritans, but in questions of church discipline he went far beyond most of his sect. He was a rigid separatist, and carried the doctrine of toleration, or, as perhaps it might be more properly called, state indifference, to its fullest length. Accordingly it was impossible to employ him as a minister at Boston. He went to Salem, which was then without a preacher, and was appointed to the vacant office. But a message from Winthrop and the assistants compelled the church of Salem to retract its choice, and the young enthusiast withdrew to Plymouth," where he remained two years, until August, 1633, when he returned to Salem. "In 1634, he incurred the displeasure of some of his congregation by putting forward the doctrine that no tenure of land could be valid which had not the sanction of the natives. His doctrine was censured by the court at Boston, but on his satisfying the court of his 'loyalty,' the matter passed over. But before long he put forward doctrines, in the opinion of the government, yet more dangerous. He advocated complete separation from the Church of England, and denounced compulsory worship and a compulsory church establishment. Carrying the doctrine of individual liberty to its fullest extent, he asserted that the magistrate was only the agent of the people, and had no right to protect the people against itself; that his power extends only as far as such cases as disturb the public peace. . . . On the 8th of August, 1635, Williams was summoned before the general

court; his opinions were denounced as 'erroneous and very dangerous,' and notice was given to the church at Salem that, unless it could explain the matter to the satisfaction of the court, Williams must be dismissed. In October, Williams was again brought before the court, and after a 'disputation' with Mr. Hooker, which failed to reduce him from any of his errors, he was sentenced to depart out of the jurisdiction of Massachusetts in six weeks. The church of Salem acquiesced in the condemnation of their pastor. Their own experience might have taught the fathers of New England that the best way to strengthen heresy is to oppose it. The natural result followed: the people were 'much taken with the apprehension of Williams' godliness,' and a large congregation, including 'many devout women,' gathered round him. Since they had failed to check the evil, the Massachusetts government resolved to exterminate it and to ship Williams for England. The crew of a pinnace was sent to arrest him, but, fortunately for the future of New England, he had escaped. . . . He had set out [January, 1636] for the territory of Narragansett, and there founded the village of Providence."—J. A. Doyle, *The American Colonies*, ch. 2.—"His [Roger Williams'] own statement is, it was 'only for the holy truth of Christ Jesus that he was denied the common air to breathe in, and a civil cohabitation upon the same common earth.' But the facts of the case seem to show that it was because his opinions differed from the opinions of those among whom he lived, and were considered by them as dangerous and seditious, tending to the utter destruction of their community, that he was a sacrifice to honest convictions of truth and duty. . . . The sentence of banishment, however, was not passed without reluctance. Governor Winthrop remained his friend to the day of his death, and even proposed, in view of his services in the Pequot war, that his sentence should be revoked. Governor Haynes, of Connecticut, who pronounced his sentence, afterwards regretted it. Governor Winslow, of Plymouth, who had no hand in his expulsion, 'put a piece of gold in the hands of his wife,' to relieve his necessities, and though Mr. Cotton hardly clears himself from the charge of having procured his sentence, there was no private feud between them. Cotton Mather concedes that 'many judicious persons judged him to have had the root of the matter in him.' Later writers declare him, 'from the whole course and tenor of his life and conduct, to have been one of the most disinterested men that ever lived, a most pious and heavenly-minded soul.' And the magnanimous exile himself says, 'I did ever from my soul honor and love them, even when their judgment led them to afflict me.'"—J. S. Barry, *Hist. of Mass.*, v. 1, ch. 9.

A. D. 1636-1638.—Mrs. Anne Hutchinson and the Antinomian troubles.—"The agitation and strife connected with the Antinomian controversy, opened by Mrs. Ann Hutchinson, came dangerously near to bringing the fortunes of the young Massachusetts colony to a most disastrous

ruin. . . . The peril overhung at a time when the proprietary colonists had the most reasonable and fearful forebodings of the loss of their charter by the interference of a Privy Council Commission. . . . Ominously enough, too, Mrs. Hutchinson arrived here, Sept. 18, 1634, in the vessel which brought the copy of that commission. Winthrop describes her as a woman of a 'ready wit and bold spirit.' Strongly gifted herself, she had a gentle and weak husband, who was guided by her. She had at home enjoyed no ministrations so much as those of Cotton, and her brother-in-law, Mr. Wheelwright. She came here to put herself again under the preaching of the former. . . . She had been here for two years, known as a ready, kindly, and most serviceable woman, especially to her own sex in their straits and sicknesses. But she anticipated the introduction of 'the woman question' among the colonists in a more troublesome form than it has yet assumed for us. Joined by her brother-in-law, who was also admitted to the church, after those two quiet years she soon made her influence felt for trouble, as he did likewise. . . . The male members of the Boston Church had a weekly meeting, in which they discussed the ministrations of Cotton and Wilson. Mrs. Hutchinson organized and presided over one, held soon twice in a week, for her own sex, attended by nearly a hundred of the principal women on the peninsula and in the neighborhood. It was easy to foresee what would come of it, through one so able and earnest as herself, even if she had no novel or disjointed or disproportioned doctrine to inculcate; which, however, it proved that she had. Antinomian means a denying, or, at least, a weakening, of the obligation to observe the moral law, and to comply with the external duties; to do the works associated with the idea of internal, spiritual righteousness. It was a false or disproportioned construction of St. Paul's great doctrine of justification by faith, without the works of the law. . . . Mrs. Hutchinson was understood to teach, that one who was graciously justified by a spiritual assurance, need not be greatly concerned for outward sanctification by works. She judged and approved, or censured and discredited, the preachers whom she heard, according as they favored or repudiated that view. Her admirers accepted her opinions. . . . Word soon went forth that Mrs. Hutchinson had pronounced in her meetings, that Mr. Cotton and her brother-in-law Wheelwright, alone of all the ministers in the colony, were under 'a covenant of grace,' the rest being 'legalists,' or under 'a covenant of works.' These reports, which soon became more than opinions, were blazing brands that it would be impossible to keep from reaching inflammable material. . . . As the contention extended it involved all the principal persons of the colony. Cotton and all but five members of the Boston Church—though one of these five was Winthrop, and another was Wilson—proved to be sympathizers with Mrs. Hutchinson; while the ministers and leading people outside in the other hamlets were strongly opposed to her. She had a partisan, moreover, of transcending influence in the young Governor, Sir Henry Vane, who had come over from England the year before, and who had been chosen at the next election for Governor, with Winthrop as deputy. "Though pure and devout, and ardent in zeal, he had not

then the practical wisdom for which Milton afterwards praised him in his noble sonnet:—'Vane, young in years, but in sage counsels old.' . . . With his strong support, and that of two other prominent magistrates, and of so overwhelming a majority of the Boston Church, Mrs. Hutchinson naturally felt emboldened." But in the end her Church and party were overcome by the ministers and their supporters in the other parts of the colony; she was excommunicated and banished (November, 1637, and March, 1638), going forth to perish six years later at the hands of the Indians, while living on the shore of Long Island Sound, at a place now known as Pelham Neck, near New Rochelle. "As the summing up of the strife, 76 persons were disarmed; two were disfranchised and fined; 2 more were fined; 8 more were disfranchised; 3 were banished; and 11 who had asked permission to remove had leave, in the form of a limitation of time within which they must do it. The more estimable and considerable of them apologized and were received back."—G. E. Ellis, *Lowell Inst. Lects. on the Early Hist. of Mass.*, pp. 95-100.

A. D. 1637.—The first Synod of the Churches and its dealings with Heresy.—The election of Sir Harry Vane to be Governor of the colony, in place of John Winthrop, "took place in the open air upon what is now Cambridge Common on the 27th day of May [1637]. Four months later it was followed by the gathering of the first Synod of Massachusetts churches; which again, meeting here in Cambridge, doubtless held its sessions in the original meeting-house standing on what is now called Mount Auburn Street. The Synod sat through twenty-four days, during which it busied itself unearthing heterodox opinions and making the situation uncomfortable for those suspected of heresy, until it had spread upon its record no less than eighty-two such 'opinions, some blasphemous, others erroneous, and all unsafe,' besides 'nine unwholesome expressions,' all alleged to be rife in the infant community. Having performed this feat, it broke up amid general congratulations 'that matters had been carried on so peaceably, and concluded so comfortably in all love.' . . . As the twig is bent, the tree inclines. The Massachusetts twig was here and then bent; and, as it was bent, it during hard upon two centuries inclined. The question of Religious Toleration was, so far as Massachusetts could decide it, decided in 1637 in the negative. . . . The turning point in the history of early Massachusetts was the Cambridge Synod of September, 1637, . . . which succeeded in spreading on its record, as then prevailing in the infant settlement, eighty-two 'opinions, some blasphemous, others erroneous and all unsafe,' besides 'nine unwholesome expressions,' the whole mighty mass of which was then incontinently dismissed, in the language of one of the leading divines who figured in that Assembly, 'to the devil of hell, from whence they came.' The mere enumeration of this long list of heresies as then somewhere prevailing is strong evidence of

intellectual activity in early Massachusetts,—an activity which found ready expression through such men as Roger Williams, John Cotton, John Wheelwright and Sir Henry Vane, to say nothing of Mrs. Hutchinson, while the receptive condition of the mental soil is likewise seen in the hold the new opinions took. It was plainly a period of intellectual quickening,—a dawn of promise. Of this there can no doubt exist. It was freely acknowledged at the time; it has been stated as one of the conditions of that period by all writers on it since. The body of those who listened to him stood by Roger Williams; and the magistrates drove him away for that reason. Anne Hutchinson so held the ear of the whole Boston community that she had 'some of all sorts and quality, in all places to defend and patronize' her opinions; 'some of the magistrates, some gentlemen, some scholars and men of learning, some Burgesses of our General Court, some of our captains and soldiers, some chief men in towns, and some men eminent for religion, parts and wit.' These words of a leader of the clerical faction,—one of those most active in the work of repression,—describe to the life an active-minded, intelligent community quick to receive and ready to assimilate that which is new. Then came the Synod. It was a premonition. It was as if the fresh new sap,—the young budding leaves,—the possible, incipient flowers, had felt the chill of an approaching glacier. And that was exactly what it was;—a theological glacier then slowly settled down upon Massachusetts,—a glacier lasting through a period of nearly one hundred and fifty years."—C. F. Adams, *Massachusetts: Its Historians and its History*, pp. 10-59.

A. D. 1646-1651.—The Presbyterian Cabal and the Cambridge Platform.—"There had now come to be many persons in Massachusetts who disapproved of the provision which restricted the suffrage to members of the Independent or Congregational churches of New England, and in 1646 the views of these people were presented in a petition to the General Court. . . . The leading signers of this menacing petition were William Vassall, Samuel Maverick, and Dr. Robert Child. . . . Their request would seem at first sight reasonable enough. At a superficial glance it seems conceived in a modern spirit of liberalism. In reality it was nothing of the sort. In England it was just the critical moment of the struggle between Presbyterians and Independents which had come in to compli-

cate the issues of the great civil war. Vassall, Child, and Maverick seem to have been the leading spirits in a cabal for the establishment of Presbyterianism in New England, and in their petition they simply took advantage of the discontent of the disfranchised citizens in Massachusetts in order to put in an entering wedge. This was thoroughly understood by the legislature of Massachusetts, and accordingly the petition was dismissed and the petitioners were roundly fined. Just as Child was about to start for England with his grievances, the magistrates overhauled his papers and discovered a petition to the parliamentary Board of Commissioners, suggesting that Presbyterianism should be established in New England, and that a viceroy or governor-general should be appointed to rule there. To the men of Massachusetts this last suggestion was a crowning horror. It seemed scarcely less than treason. The signers of this petition were the same who had signed the petition to the General Court. They were now fined still more heavily and imprisoned for six months. By and by they found their way, one after another, to London, while the colonists sent Edward Winslow, of Plymouth, as an advocate to thwart their schemes. . . . The cabal accomplished nothing because of the decisive defeat of Presbyterianism in England. 'Pride's Purge' settled all that. The petition of Vassall and his friends was the occasion for the meeting of a synod of churches at Cambridge, in order to complete the organization of Congregationalism. In 1648 the work of the synod was embodied in the famous Cambridge Platform, which adopted the Westminster Confession as its creed, carefully defined the powers of the clergy, and declared it to be the duty of magistrates to suppress heresy. In 1649 the General Court laid this platform before the congregations; in 1651 it was adopted; and this event may be regarded as completing the theocratic organization of the Puritan commonwealth in Massachusetts. It was immediately preceded and followed by the deaths of the two foremost men in that commonwealth. John Winthrop died in 1649 and John Cotton in 1652."—J. Fiske, *The Beginnings of New Eng.*, ch. 4.

A. D. 1649-1651.—Under Cromwell and the Commonwealth of England.—"Massachusetts had, from the outset, sympathized with Parliament in its contest with the king, and had blended her fortunes with the fortunes of the reformers. She had expressed her willingness to 'rise and fall with them,' and 'sent over useful men, others going voluntarily, to their aid, who were of good use, and did acceptable service to the army.' Her loyalty, therefore, procured for her the protection of Parliament. Yet the execution of Charles, which royalists have ever regarded with the utmost abhorrence, was not openly approved here. 'I find,' says Hutchinson, 'scarce any marks of approbation of the tragical scene of which this year they received intelligence.' The few allusions we have discovered are none of them couched in terms of exultation. Virginia pursued a different course, and openly resisted Parliament, refused to submit to its decrees, and adhered to the cause of royalty. . . . Yet the legislation of the commonwealth was not wholly favorable even to Massa-

chusetts. The proclamation relative to Virginia asserted, in general terms, the power of appointing governors and commissioners to be placed in all the English colonies, without exception; and by Mr. Winslow, their agent in England, they were informed that it was the pleasure of Parliament the patent of Massachusetts should be returned, and a new one taken out, under which courts were to be held and warrants issued. With this request the people were indisposed to comply; and, too wary to hazard the liberties so dearly purchased, a petition, was drawn up, pleading the cause of the colony with great force, setting forth its allegiance, and expressing the hope that, under the new government, things might not go worse with them than under that of the king, and that their charter might not be recalled, as they desired no better. This remonstrance was successful; the measure was dropped, and the charter of Charles continued in force. Parliament was not 'foiled' by the colony. Its request was deemed reasonable; and there was no disposition to invade forcibly its liberties. We have evidence of this in the course of Cromwell. After his success in the 'Emerald Isle,' conceiving the project of introducing Puritanism into Ireland, an invitation was extended to the people of Massachusetts to remove thither and settle. But they were too strongly attached to the land of their adoption, and to its government, 'the happiest and wisest this day in the world,' readily to desert it. Hence the politic proposal of the lord protector was respectfully declined."—J. S. Barry, *Hist. of Mass.*, v. 1, ch. 12.

A. D. 1651-1660.—The absorption of Maine. See MAINE: A. D. 1643-1677.

A. D. 1656-1661.—The persecution of the Quakers.—"In July, 1656, Mary Fisher and Ann Austin came to Boston from Barbadoes; and shortly after, nine others, men and women, arrived in the ship *Speedwell* from London. It was at once known, for they did not wish to conceal it, that they were 'Friends,' vulgarly called 'Quakers'; and the Magistrates at once took them in hand, determined that no people holding (as they considered them) such damnable opinions, should come into the Colony. A great crowd collected to hear them questioned, and Boston was stirred up by a few illiterate enthusiasts. They stood up before the Court with their hats on, apparently without fear, and had no hesitation in calling governor Endicott plain 'John.' . . . The replies which these men and women made were direct and bold, and were considered rude and contemptuous. . . . They . . . were committed to prison for their 'Rudeness and Insolence'; there being no law then under which they could be punished for being Quakers." Before the year closed, this defect of law was remedied by severe enactments, "laying a penalty of £100 for bringing any Quaker into the Colony: forty shillings for entertaining them for an hour; Quaker men who came against these prohibitions were, upon first conviction, to lose one ear, upon the second, the other ear; and women were to be whipped. Upon the third conviction, their tongues were to be bored with a hot iron. But these things seemed useless, for the Quakers, knowing their fate, swarmed into Massachusetts; and the Magistrates were fast

getting more business than they could attend to. It was then determined to try greater severity, and in October, 1658, a law was passed in Massachusetts (resisted by the Deputies, urged by the Magistrates), punishing Quakers, who had been banished, with death." The first to challenge the dread penalty were a woman, Mary Dyer, and two men, William Robinson and Marmaduke Stevenson, who, after being banished (September, 1659), came defiantly back the next month. "Governor Endicott pronounced sentence of death against them. . . . On the 27th of October, in the afternoon, a guard of 200 men, attended with a drummer, conducted them to the gallows." Stevenson and Robinson were hanged; but Mary Dyer was reprieved. "Her mind was made up for death, and her reprieve brought her no joy. She was taken away by her son. . . . Mary Dyer was a 'comely and valiant woman,' and in the next Spring she returned. What now was to be done? The law said she must be hung, and Endicott again pronounced sentence, and she was led out to die a felon's death. Some scoffed and jeered her, but the most pitied; she died bravely, fearing nothing. . . . There seemed no end; for Quaker after Quaker came; they were tried, they were whipped, and the prison was full. . . . William Ledra [banished in 1657] came back (September, 1660), and was subject to death. They offered him his life, if he would go away and promise not to return; he said: 'I came here to bear my testimony, and to tell the truth of the Lord, in the ears of this people. I refuse to go.' So he was hanged in the succeeding March (14th). Wenlock Christopherson, or Christison, came, and was tried and condemned to die. . . . The death of Ledra, and the return of Wenlock Christison, brought confusion among the Magistrates, and some said 'Where will this end?' and declared it was time to stop. Governor Endicott found it difficult to get a Court to agree to sentence Christison to death; but he halted not, and pronounced the sentence. . . . But a few days afterward the jailor opened the prison doors, and Wenlock (with 27 others) was set at liberty, much to his and their surprise." The friends of the Quakers in England had prevailed upon King Charles II., then lately restored, "to order the persecutions to cease in New England (Sept. 1661). Samuel Shattock, a banished Quaker, was sent from England by Charles, with a letter to Governor Endicott [the subject of Whittier's poem, 'The King's Missive'], commanding that no more Quakers should be hanged or imprisoned in New England, but should be sent to England for trial. This ended the persecutions; for, on the 9th of December, 1661, the Court ordered all Quakers to be set at liberty."—C. W. Elliott, *The New England Hist.*, v. 1, ch. 36.—"Some of our writers, alike in prose and in poetry, have assumed, and have written on the assumption, that the deliverance of the Quakers was effected by the interposition in their behalf of King Charles II. . . . The royal letter . . . had . . . been substantially anticipated as to its principal demand by the action of the Court [in Massachusetts]. The general jail delivery of 31 Quakers, including the three under the death sentence who had voluntarily agreed to go off, was ordered by the Court in October, 1660. The King's letter was dated at Whitehall a year afterward. Let us claim whatever of relief we can find in

reminding ourselves that it was the stern opposition and protest of the majority of the people of the Puritan Colony, and not the King's command, that had opened the gates of mercy."—G. E. Ellis, *The Puritan Age and Rule*, pp. 477-479.—While the Quakers first arrested at Boston were lying in jail, "the Federal Commissioners, then in session at Plymouth, recommended that laws be forthwith enacted to keep these dreaded heretics out of the land. Next year they stooped so far as to seek the aid of Rhode Island, the colony which they had refused to admit into their confederacy. . . . Roger Williams was then president of Rhode Island, and in full accord with his noble spirit was the reply of the assembly. 'We have no law amongst us whereby to punish any for only declaring by words their minds and understandings concerning the things and ways of God as to salvation and our eternal condition.' As for these Quakers, we find that where they are 'most of all suffered to declare themselves freely and only opposed by arguments in discourse, there they least of all desire to come.' Any breach of the civil law shall be punished, but the 'freedom of different consciences shall be respected.' This reply enraged the confederated colonies, and Massachusetts, as the strongest and most overbearing, threatened to cut off the trade of Rhode Island, which forthwith appealed to Cromwell for protection. . . . In thus protecting the Quakers, Williams never for a moment concealed his antipathy to their doctrines. . . . The four confederated colonies all proceeded to pass laws banishing Quakers. . . . Those of Connecticut . . . were the mildest."—J. Fiske, *The Beginnings of New Eng.*, ch. 4.

A. D. 1657-1662.—The Halfway Covenant. See Boston: A. D. 1657-1669.

A. D. 1660-1665.—Under the Restored Monarchy.—The first collision with the crown.—"In May, 1660, Charles II. mounted the throne of his ancestors. . . . In December of this year, intelligence of the accession of a new king had reached Massachusetts; the General Court convened and prepared addresses to his majesty. . . . In the following May a reply, signed by Mr. Secretary Morrice, together with a mandate for the arrest of Goffe and Whalley, the regicides who had escaped to Massachusetts, was received in Boston. The king's response contained a general expression of good will, which, however, did not quiet the apprehensions of the colonists. The air was filled with rumors, and something seemed to forebode an early collision with the crown. At a special session of the court, held in June, 'a declaration of natural and chartered rights' was approved and published. In this document the people affirmed their right 'to choose their own governor, deputy governor, and representatives; to admit freemen on terms to be prescribed at their own pleasure; to set up all sorts of officers, superior and inferior, and point out their power and places; to exercise, by their annually elected magistrates and deputies, all power and authority, legislative, executive, and judicial; to defend themselves by force of arms against every aggression; and to reject, as an infringement of their rights, any parliamentary or royal imposition, prejudicial to the country, and contrary to any just act of colonial

legislation.' More than a year elapsed from the restoration of Charles II. to his public recognition at Boston. . . . Even the drinking of his health was forbidden, and the event was celebrated only amid the coldest formalities. Meanwhile the colonists not only declared, but openly assumed, their rights; and in consequence complaints were almost daily instituted by those who were hostile to the government. Political opinion was diversified; and while 'a majority were for sustaining, with the charter, an independent government in undiminished force, a minority were willing to make some concessions.' In the midst of the discussions, John Norton, 'a friend to moderate counsels,' and Simon Bradstreet were induced to go to England as agents of the colony. Having been instructed to convince the king of the loyalty of the people of Massachusetts, and to 'engage to nothing prejudicial to their present standing according to their patent, and to endeavor the establishment of the rights and privileges then enjoyed,' the commissioners sailed from Boston on the 10th of February, 1662. In England they were courteously received by king Charles, and from him obtained, in a letter dated June 28, a confirmation of their charter, and an amnesty for all past offences. At the same time the king rebuked them for the irregularities which had been complained of in the government; directed 'a repeal of all laws derogatory to his authority,' the taking of the oath of allegiance; the administration of justice in his name; a concession of the elective franchise to all freeholders of competent estate; and as 'the principle of the charter was the freedom of the liberty of conscience,' the allowance of that freedom to those who desired to use 'the booke of common prayer, and perform their devotion in the manner established in England.' These requisitions of the king proved anything but acceptable to the people of Massachusetts. With them the question of obedience became a question of freedom, and gave rise to the parties which continued to divide the colony until the establishment of actual independence. It was not thought best to comply immediately with his majesty's demands; on the other hand, no refusal to do so was promulgated." Presently a rumor reached America "that royal commissioners were to be appointed to regulate the affairs of New England. Precautionary measures were now taken. The patent and a duplicate of the same were delivered to a committee of four, with instructions to hold them in safe keeping. Captain Davenport, at Castle Fort, was ordered to give early announcement of the arrival of his majesty's ships. Officers and soldiers were forbidden to land from ships, except in small parties. . . . On the 23d of July, 1664, 'about five or six of the clock at night,' the 'Guinea,' followed by three other ships of the line, arrived in Boston harbor. They were well manned and equipped for the reduction of the Dutch settlements on the Hudson, and brought commissioners hostile to colonial freedom, and who were charged by the king to determine 'all complaints and appeals in all causes and matters, as well military as criminal and civil,' and to 'proceed in all things for the providing for and settling the peace and security of the country, according to their good and sound discretions.' Colonel Richard Nichols and Colonel George Cartwright were the chief members of the commission. At

the earliest possible moment they produced their legal warrant, the king's letter of April 23, and requested the assistance of the colonies in the reduction of the Dutch. Shortly afterwards the fleet set out for New Netherlands. On the 3d of August the General Court convened, and the state of affairs was discussed." As the result of the discussion it was agreed that a force of 200 men should be raised to serve against the Dutch, and that the old law of citizenship should be so far modified as to provide "that all English subjects, being freeholders, and of a competent estate, and certified by the ministers of the place to be orthodox in faith, and not vicious in their lives, should be made freemen, although not members of the church." Before the session closed, Massachusetts published an order forbidding the making of complaints to the commissioners, and adopted a spirited address to the king. When, in February, 1665, three of the commissioners returned to Boston, they soon found that they were not to be permitted to take any proceedings which could call in question "the privilege of government within themselves" which the colony claimed. Attempting in May to hold a court for the hearing of charges against a Boston merchant, they were interrupted by a herald from the governor who sounded his trumpet and forbade, in the name of the king, any abetting of their proceedings. On this they wrathfully departed for the north, after sending reports of the contumacy of Massachusetts to the king. The latter now summoned governor Bellingham to England, but the summons was not obeyed. "'We have already furnished our views in writing [said the General Court], so that the ablest persons among us could not declare our case more fully.' . . . The defiance of Massachusetts was followed by no immediate danger. For a season the contest with the crown ceased. The king himself was too much engaged with his women to bestow his attention upon matters of state; and thus, while England was lamenting the want of a good government, the colonies, true to themselves, their country, and their God, flourished in purity and peace."—G. L. Austin, *Hist. of Mass., ch. 4.—Records of the Gov. and Co. of Mass. Bay, v. 4, pt. 2.*—See, also, NEW YORK: A. D. 1664.

A. D. 1671-1686.—The struggle for the charter and its overthrow.—"Although the colonists were alarmed at their own success, there was nothing to fear. At no time before or since could England have been so safely defied. . . . The discord between the crown and Parliament paralyzed the nation, and the wastefulness of Charles kept him always poor. By the treaty of Dover in 1670 he became a pensioner of Louis XIV. The Cabal followed, probably the worst ministry England ever saw; and in 1672, at Clifford's suggestion, the exchequer was closed and the debt repudiated to provide funds for the second Dutch war. In March fighting began, and the tremendous battles with De Ruyter kept the navy in the Channel. At length, in 1673, the Cabal fell, and Danby became prime minister. Although during these years of disaster and disgrace Massachusetts was not molested by Great Britain, they were not all years during which the theocracy could tranquilly enjoy its victory. . . . With the rise of Danby a more regular administration opened, and, as usual, the attention of the government was fixed upon Massachusetts

by the clamors of those who demanded redress for injuries alleged to have been received at her hands. In 1674 the heirs of Mason and Gorges, in despair at the reoccupation of Maine, proposed to surrender their claim to the king, reserving one third of the product of the customs for themselves. The London merchants also had become restive under the systematic violation of the Navigation Acts. The breach in the revenue laws had, indeed, been long a subject of complaint, and the commissioners had received instructions relating thereto; but it was not till this year that these questions became serious. . . . New England was fast getting its share of the carrying trade. London merchants already began to feel the competition of its cheap and untaxed ships, and manufacturers to complain that they were undersold in the American market, by goods brought direct from the Continental ports. A petition, therefore, was presented to the king, to carry the law into effect. . . . The famous Edward Randolph now appears. The government was still too deeply embarrassed to act with energy. A temporizing policy was therefore adopted; and as the experiment of a commission had failed, Randolph was chosen as a messenger to carry the petitions and opinions to Massachusetts; together with a letter from the king, directing that agents should be sent in answer thereto. After delivering them, he was ordered to devote himself to preparing a report upon the country. He reached Boston June 10, 1676. Although it was a time of terrible suffering from the ravages of the Indian war, the temper of the magistrates was harsher than ever. The repulse of the commissioners had convinced them that Charles was not only lazy and ignorant, but too poor to use force; and they also believed him to be so embroiled with Parliament as to make his overthrow probable. Filled with such feelings, their reception of Randolph was almost brutal. John Leverett was governor, who seems to have taken pains to mark his contempt in every way in his power. Randolph was an able, but an unscrupulous man, and probably it would not have been difficult to have secured his good-will. Far however from bribing, or even flattering him, they so treated him as to make him the bitterest enemy the Puritan Commonwealth ever knew. . . . The legislature met in August, 1676, and a decision had to be made concerning agents. On the whole, the clergy concluded it would be wiser to obey the crown, 'provided they be, with utmost care & caution, qualified as to their instructions.' Accordingly, after a short adjournment, the General Court chose William Stoughton and Peter Bulkely; and having strictly limited their power to a settlement of the territorial controversy, they sent them on their mission. . . . The controversy concerning the boundary was referred to the two chief justices, who promptly decided against the Company; and the easy acquiescence of the General Court must raise a doubt as to their faith in the soundness of their claims. And now again the fatality which seemed to pursue the theocracy in all its dealings with England led it to give fresh provocation to the king by secretly buying the title of Gorges for 1,250 pounds. Charles had intended to settle Maine on the Duke of Monmouth. It was a worthless possession, whose revenue never paid for its defence; yet so stubborn was the colony that it made haste to anticipate the crown

and thus became 'Lord Proprietary' of a burdensome province at the cost of a slight which was never forgiven. Almost immediately the Privy Council had begun to open other matters, such as coining and illicit trade; and the attorney-general drew up a list of statutes which, in his opinion, were contrary to the laws of England. . . . In the spring the law officers gave an opinion that the misdemeanors alleged against Massachusetts were sufficient to avoid her patent; and the Privy Council, in view of the encroachments and injuries which she had continually practised on her neighbors, and her contempt of his majesty's commands, advised that a 'quo warranto' should be brought against the charter. Randolph was appointed collector at Boston. Even Leverett now saw that some concessions must be made, and the General Court ordered the oath of allegiance to be taken; nothing but perversity seems to have caused the long delay. The royal arms were also carved in the courthouse; and this was all, for the clergy were determined upon those matters touching their authority. . . . Nearly half a century had elapsed since the emigration, and with the growth of wealth and population changes had come. In March, John Leverett, who had long been the head of the high-church party, died, and the election of Simon Bradstreet as his successor was a triumph for the opposition. Great as the clerical influence still was, it had lost much of its old despotic power, and the congregations were no longer united in support of the policy of their pastors. . . . Boston and the larger towns favored concession, while the country was the ministers' stronghold. The result of this divergence of opinion was that the moderate party, to which Bradstreet and Dudley belonged, predominated in the Board of Assistants, while the deputies remained immovable. The branches of the legislature thus became opposed; no course of action could be agreed on, and the theocracy drifted to its destruction. . . . Meanwhile Randolph had renewed his attack. He declared that in spite of promises and excuses the revenue laws were not enforced; that his men were beaten, and that he hourly expected to be thrown into prison; whereas in other colonies, he asserted, he was treated with great respect. There can be no doubt ingenuity was used to devise means of annoyance; and certainly the life he was made to lead was hard. In March he sailed for home, and while in London he made a series of reports to the government which seem to have produced the conviction that the moment for action had come. In December he returned, commissioned as deputy-surveyor and auditor-general for all New England, except New Hampshire. . . . Hitherto the clerical party had procrastinated, buoyed up by the hope that in the fierce struggle with the commons Charles might be overthrown; but this dream ended with the dissolution of the Oxford Parliament, and further inaction became impossible. Joseph Dudley and John Richards were chosen agents, and provided with instructions bearing the peculiar tinge of ecclesiastical statesmanship. . . . The agents were urged to do what was possible to avert, or at least delay, the stroke; but they were forbidden to consent to appeals, or to alterations in the qualifications required for the admission of freemen. They had previously been directed to pacify the king by a present of 2,000 pounds; and this ill-judged

attempt at bribery had covered them with ridicule. Further negotiation would have been futile. Proceedings were begun at once, and Randolph was sent to Boston to serve the writ of 'quo warranto'; he was also charged with a royal declaration promising that, even then, were submission made, the charter should be restored with only such changes as the public welfare demanded. Dudley, who was a man of much political sagacity, had returned and strongly urged moderation. The magistrates were not without the instincts of statesmanship: they saw that a breach with England must destroy all safeguards of the common freedom, and they voted an address to the crown accepting the proffered terms. But the clergy strove against them: the privileges of their order were at stake; they felt that the loss of their importance would be 'destructive to the interest of religion and of Christ's kingdom in the colony,' and they roused their congregations to resist. The deputies did not represent the people, but the church. . . . The influence which had moulded their minds and guided their actions controlled them still, and they rejected the address. . . . All that could be resolved on was to retain Robert Humphrys of the Middle Temple to interpose such delays as the law permitted; but no attempt was made at defence upon the merits of their cause, probably because all knew well that no such defence was possible. Meanwhile, for technical reasons, the 'quo warranto' had been abandoned, and a writ of 'scire facias' had been issued out of chancery. On June 18, 1684, the lord keeper ordered the defendant to appear and plead on the first day of the next Michaelmas Term. The time allowed was too short for an answer from America, and judgment was entered by default. . . . So perished the Puritan Commonwealth. The child of the Reformation, its life sprang from the assertion of the freedom of the mind; but this great and noble principle is fatal to the temporal power of a priesthood, and during the supremacy of the clergy the government was doomed to be both persecuting and repressive. Under no circumstance could the theocracy have endured: it must have fallen by revolt from within if not by attack from without." — Brooks Adams, *The Emancipation of Massachusetts*, ch. 6. — "December 19, 1686, Sir Edmund Andros arrived at Nantasket, in the Kingfisher, a 50 gun ship, with commissions from King James for the government of New England." — T. A. D. 1686-1689.—The tyranny of Andros and its downfall.—"With the charter were swept away representative government, and every right and every political institution reared during half a century of conflict. The rule of Andros was on the model dear to the heart of his royal master — a harsh despotism, but neither

strong nor wise; it was wretched misgovernment, and stupid, blundering oppression. And this arbitrary and miserable system Andros undertook to force upon a people of English race, who had been independent and self-governing for fifty years. He laid taxes at his own pleasure, and not even according to previous rates, as he had promised; he denied the Habeas Corpus to John Wise, the intrepid minister of Ipswich, arrested for preaching against taxation without representation, and he awakened a like resistance in all directions. He instituted fees, was believed to pack juries, and made Randolph licenser of the press. Worst of all, he struck at property, demanded the examination of the old titles, declared them worthless, extorted quit-rents for renewal, and issued writs of intrusion against those who resisted; while, not content with attacking political liberty and the rights of property, he excited religious animosity by forbidding civil marriages, seizing the old South church for the Episcopal service, and introducing swearing by the Book in courts of justice. He left nothing undone to enrage the people and prepare for revolution; and when he returned from unsuccessful Indian warfare in the east, the storm was ready to burst. News came of the landing of the Prince of Orange. Andros arrested the bearer of the tidings, and issued a proclamation against the Prince; but the act was vain. Without apparent concert or preparation Boston rose in arms, the signal-fire blazed on Beacon Hill, and the country people poured in, hot for revenge. Some of the old magistrates met at the town-house, and read a 'declaration of the gentlemen, merchants, and inhabitants,' setting forth the misdeeds of Andros, the illegality of the Dudley government by commission, and the wrongful suppression of the charter. Andros and Dudley were arrested and thrown into prison, together with the captain of the Rose frigate, which lay helpless beneath the guns of the fort, and a provisional government was established, with Bradstreet at its head. William and Mary were proclaimed, the revolution was complete, and Andros soon went back a prisoner to England."—H. C. Lodge, *Short Hist. of the English Colonies*, ch. 18.

A. D. 1689-1692.—The procuring of the new Charter.—The Colonial Republic transformed into a Royal Province.—The absorption of Plymouth.—"A little more than a month from the overthrow of Andros a ship from England arrived at Boston, with news of the proclamation of William and Mary. This was joyful intelligence to the body of the people. The magistrates were at once relieved from their fears, for the revolution in the old world justified that in the new. Three days later the proclamation was published with unusual ceremony. . . . A week later the representatives of the several towns, upon a new choice, met at Boston, and proposals were made that charges should be forthwith drawn up against Andros, or that all the prisoners but Andros should be liberated on bail; but both propositions were rejected. The representatives likewise urged the unconditional resumption of the charter, declaring that they could not act in any thing until this was conceded. Many opposed the motion; but it was

finally adopted; and it was resolved that all the laws in force May 12, 1686, should be continued until further orders. Yet the magistrates, conscious of the insecurity of the position they occupied, used prudently the powers intrusted to them." Meantime, Increase Mather, who had gone to England before the Revolution took place as agent for the colony, had procured an audience with the new king, William III., and received from him an assurance that he would remove Andros from the government of New England and call him to an account for his administration. "Anxious for the restoration of the old charter and its privileges, under which the colony had prospered so well, the agent applied himself diligently to that object, advising with the wisest statesmen for its accomplishment. It was the concurrent judgment of all that the best course would be to obtain first a reversion of the judgment against the charter by an act of Parliament, and then apply to the king for such additional privileges as were necessary. Accordingly, in the House of Commons, where the whole subject of seizing charters in the reign of Charles II. was up for discussion, the charters of New England were inserted with the rest; and, though enemies opposed the measure, it was voted that their abrogation was a grievance, and that they should be forthwith restored." But before the bill having this most satisfactory effect had been acted on in the House of Lords, the Convention Parliament was prorogued, then dissolved, and the next parliament proved to be less friendly. An order was obtained, however, from the king, continuing the government of the colony under the old charter until a new one was settled, and requiring Andros and his fellow prisoners to be sent to England for trial. On the trial, much court influence seemed to go in favor of Sir Edmund; the proceedings against him were summarily quashed, and he was discharged. Soon afterwards he was made governor of Virginia, while Dudley received appointment to the office of chief justice at New York. Contending against the intrigues of the Andros party, and many other adverse influences, the agents of Massachusetts were reluctantly forced at last to relinquish all hopes of the restoration of the old charter, and "application was made for a new grant, which should confirm the privileges of the old instrument, and such in addition as the experience of the people had taught them would be of benefit. . . . The king was prevailed upon to refer the affairs of New England to the two lords chief justices and the attorney and solicitor-general, all of whom were supposed to be friendly to the applicants. Mr. Mather was permitted to attend their meetings." Difficulties arose in connection with Plymouth Colony. It was the determination in England that Plymouth should no longer be separately chartered, but should be joined to Massachusetts or New York. In opposing the former more natural union, the Plymouth people very nearly brought about their annexation to New York; but Mather's influence averted that result. "The first draught of a charter was objected to by the agents, because of its limitation of the powers of the governor, who was to be appointed by the king. The second draught was also objected to; whereupon the agents were informed that they 'must not consider themselves as plenipotentiaries from a foreign state, and that if they were unwilling

to submit to the pleasure of the king, his majesty would settle the country without them, and they might take what would follow.' Nothing remained, therefore, but to decide whether they would submit, or continue without a charter, and at the mercy of the king." The two colleagues who had been associated with Mather opposed submission, but the latter yielded, and the charter was signed. "By the terms of this new charter the territories of Massachusetts, Plymouth, and Maine, with a tract farther east, were united into one jurisdiction, whose officers were to consist of a governor, a deputy governor, and a secretary, appointed by the king, and 28 councillors, chosen by the people. A General Court was to be holden annually, on the last Wednesday in May, and at such other times as the governor saw fit; and each town was authorized to choose two deputies to represent them in this court. The choice of these deputies was conceded to all freeholders having an estate of the value of forty pounds sterling, or land yielding an income of at least forty shillings per annum; and every deputy was to take the oath of allegiance prescribed by the crown. All residents of the province and their children were entitled to the liberties of natural born subjects; and liberty of conscience was secured to all but Papists. . . . To the governor was given a negative upon all laws enacted by the General Court; without his consent in writing none were valid; and all receiving his sanction were to be transmitted to the king for approval, and if rejected at any time within three years were to be of no effect. The governor was empowered to establish courts, levy taxes, convene the militia, carry on war, exercise martial law, with the consent of the council, and erect and furnish all requisite forts. . . . Such was the province charter of 1692—a far different instrument from the colonial charter of 1629. It effected a thorough revolution in the country. The form of government, the powers of the people, and the entire foundation and objects of the body politic, were placed upon a new basis; and the dependence of the colonies upon the crown was secured. . . . It was on Saturday, the 14th of May, 1692, that Sir William Phips arrived at Boston as the first governor of the new province."—J. S. Barry, *Hist. of Mass.*, v. 1, ch. 18.

A. D. 1692.—The Salem Witchcraft madness: in its beginning.—"The people of Massachusetts in the 17th century, like all other Christian people at that time,—at least, with extremely rare individual exceptions,—believed in the reality of a hideous crime called 'witchcraft.' . . . In a few instances witches were believed to have appeared in the earlier years of New England. But the cases had been sporadic. . . . With three or four exceptions . . . no person appears to have been punished for witchcraft in Massachusetts, nor convicted of it, for more than sixty years after the settlement, though

there had been three or four trials of other persons suspected of the crime. At the time when the question respecting the colonial charter was rapidly approaching an issue, and the public mind was in feverish agitation, the ministers sent out a paper of proposals for collecting facts concerning witchcrafts and other 'strange apparitions.' This brought out a work from President [Increase] Mather entitled 'Illustrious Providences,' in which that influential person related numerous stories of the performances of persons leagued with the Devil. The imagination of his restless young son [Cotton Mather] was stimulated, and circumstances fed the flame." A poor Irish washerwoman, in Boston, accused by some malicious children named Goodwin, who played antics which were supposed to signify that they had been bewitched, was tried, convicted and sent to the gallows (1688) as a witch. "Cotton Mather took the oldest 'afflicted' girl to his house, where she dexterously played upon his self-conceit to stimulate his credulity. She satisfied him that Satan regarded him as his most terrible enemy, and avoided him with especial awe. . . . Mather's account of these transactions ['Late Memorable Providences relating to Witchcrafts and Possessions'], with a collection of other appropriate matter, was circulated not only in Massachusetts, but widely also in England, where it obtained the warm commendation of Richard Baxter; and it may be supposed to have had an important effect in producing the more disastrous delusion which followed three years after. . . . Mr. Samuel Parris was minister of a church in a part of Salem which was then called 'Salem Village,' and which now as a separate town bears the name of Danvers. He was a man of talents, and of repute for professional endowments, but avaricious, wrong-headed, and ill-tempered. Among his parishioners, at the time of his installation and afterwards, there had been angry disputes about the election of a minister, which had never been composed. Neighbors and relations were embittered against each other. Elizabeth Parris, the minister's daughter, was now nine years old. A niece of his, eleven years old, lived in his family. His neighbor, Thomas Putnam, the parish clerk, had a daughter named Ann, twelve years of age. These children, with a few other young women, of whom two were as old as twenty years or thereabouts, had become possessed with a wild curiosity about the sorceries of which they had been hearing and reading, and used to hold meetings for study, if it may be so called, and practice. They learned to go through motions similar to those which had lately made the Goodwin children so famous. They forced their limbs into grotesque postures, uttered unnatural outcries, were seized with cramps and spasms, became incapable of speech and of motion. By and by [March, 1692], they interrupted public worship. . . . The families were distressed. The neighbors were alarmed. The physicians were perplexed and baffled, and at length declared that nothing short of witchery was the trouble. The kinsfolk of the 'afflicted children' assembled for fasting and prayer. Then the neighboring ministers were sent for, and held at Mr. Parris's house a prayer-meeting which lasted through the day. The children performed in their presence, and the result was a confirmation by the ministers of the opinion of the doctors. Of course, the next inquiry was

by whom the manifest witchcraft was exercised. It was presumed that the unhappy girls could give the answer. For a time they refused to do so. But at length, yielding to an importunity which it had become difficult to escape unless by an avowal of their fraud, they pronounced the names of Good, Osborn, and Tituba. Tituba—half Indian, half negro—was a servant of Mr. Parris, brought by him from Barbadoes, where he had formerly been a merchant. Sarah Good was an old woman, miserably poor. Sarah Osborn had been prosperous in early life. She had been married twice, and her second husband was still living, but separated from her. Her reputation was not good, and for some time she had been bedridden, and in a disturbed nervous state. . . . Tituba, whether in collusion with her young mistress, or, as was afterwards said, in consequence of having been scourged by Mr. Parris, confessed herself to be a witch, and charged Good and Osborn with being her accomplices. The evidence was then thought sufficient, and the three were committed to gaol for trial. Martha Corey and Rebecca Nurse were next cried out against. Both were church-members of excellent character, the latter, seventy years of age. They were examined by the same Magistrates, and sent to prison, and with them a child of Sarah Good, only four or five years old, also charged with diabolical practices.”—J. G. Palfrey, *Hist. of N. Eng.*, bk. 4, ch. 4 (c. 4).

A. D. 1692.—The Salem Witchcraft madness: in its culmination.—“Now a new feature of this thing showed itself. The wife of Thomas Putnam joined the children, and ‘makes most terrible shrieks’ against Goody Nurse—that she was bewitching her, too. On the 3d of April, Minister Parris preached long and strong from the Text, ‘Have I not chosen you twelve, and one of you is a devil?’ in which he bore down so hard upon the Witches accused that Sarah Cloyse, the sister of Nurse, would not sit still, but ‘went out of meeting’; always a wicked thing to do, as they thought, but now a heinous one. At once the children cried out against her, and she was clapt into prison with the rest. Through the months of April and May, Justices Hawthorne and Curwin (or Corwin), with Marshal George Herrick, were busy getting the Witches into jail, and the good people were startled, astounded, and terror-struck, at the numbers who were seized. . . . Bridget Bishop, only, was then brought to trial, for the new Charter and new Governor (Phips), were expected daily. She was old, and had been accused of witchcraft twenty years before. . . . So, as there was no doubt about her, she was quickly condemned, and hung on the 10th day of this pleasant June, in the presence of a crowd of sad and frightened people. . . . The new Governor, Phips, one of Mather’s Church, fell in with the prevailing fear, and a new bench of special Judges, composed of Lieutenant-Governor Stoughton, Major Saltonstall, Major Richards, Major Gidney, Mr. Wait Winthrop, Captain Sewall, and Mr. Sargent, were sworn in, and went to work. On the 30th of June, Sarah Good, Rebekah Nurse, Susannah Martin, Elizabeth How, and Sarah Wilder, were brought to trial; all were found guilty, and sentenced to death, except Nurse,

who, being a Church member, was acquitted by the jury. At this, the ‘afflicted’ children fell into fits, and others made great outcries; and the popular dissatisfaction was so great, that the Court sent them back to the jury room, and they returned shortly, with a verdict of Guilty! The Rev. Mr. Noyes, of Salem, then excommunicated Nurse, delivered her to Satan, and they all were led out to die. Minister Noyes told Susannah Martin that she was a witch, and knew it, and she had better confess it; but she refused, and told him that ‘he lied,’ and that he knew it; and, ‘that if he took away her life, God would give him blood to drink;’ which curse is now traditionally believed, and that he was choked with blood. They were hanged, protesting their innocence; and there was none to pity them. On the 5th of August, a new batch was haled before the Court. Reverend George Burroughs, John Proctor and his wife, John Willard, George Jacobs, and Martha Carrier. Burroughs was disliked by some of the Clergy, for he was tainted with Roger Williams’s Heresies of Religious Freedom; and he was particularly obnoxious to Mather, for he had spoken slightly of witchcraft, and had even said there was no such thing as a witch. Willard had been a constable employed in seizing witches, but, becoming sick of the business, had refused to do it any more. The children at once cried out, that he, too, was a witch; he fled for his life, but was caught at Nashua, and brought back. Old Jacobs was accused by his own grand-daughter; and Carrier was convicted upon the testimony of her own children. They were all quickly convicted and sentenced. . . . All but Mrs. Proctor saw the last of earth on the 19th of August. They were hanged on Gallows Hill. Minister Burroughs made so moving a prayer, closing with the Lord’s Prayer, which it was thought no witch could say, that there was fear lest the crowd should hinder the hanging. As soon as he was turned off, Mr. Mather, sitting on his horse, addressed the people, to prove to them that Burroughs was really no Minister, and to show how he must be guilty, notwithstanding his prayer, for the devil could change himself into an angel of light. . . . Giles Cory, an old man of 80, saw that the accused were prejudged, and refused to plead to the charge against him. What could be done with him? It was found that for this, by some sort of old law, he might be pressed to death. So on the 16th of September, just as the autumn tints were beginning to glorify the earth, he was laid on the ground, bound hand and foot, and stones were piled upon him, till the tongue was pressed out of his mouth; ‘the Sheriff with his cane forced it in again when he was dying.’ Such cruel things did fear—fear of the Devil—lead these people to do. He was the first and last who died in New England in this way. On the 22d of September, eight of the sentenced were carted up Gallows Hill and done to death. Amid a great concourse of men, women, and children, from the neighboring villages, and from Boston, the victims went crying and singing, dragged through the lines of terror-stricken or pitying people. Some would have rescued them, but they had no leaders, and knew not how to act; so that tragedy was consummated; and the Reverend Mr. Noyes, pointing at them, said, ‘What a sad thing it is to see eight fire-brands of hell hanging there!’ Sad indeed! Nineteen

had now been hung. One pressed to death. Eight were condemned. A hundred and fifty were in prison; and two hundred more were accused by the 'afflicted.' Some fifty had acknowledged themselves witches, of whom not one was executed. . . . It was now October, and this mischief seemed to be spreading like fire among the dry grass of the Prairies; and a better quality of persons was beginning to be accused by the bewitched. . . . But these accusations made people consider, and many began to think that they had been going on too fast. 'The juries changed sooner than the judges, and they sooner than the Clergy.' 'At last,' says one of them, 'it was evidently seen that there must be a stop put, or the generation of the church of God would fall under that condemnation.' In other words, the better class of church members were in danger! At the January session, only three were convicted, and they were reprieved; whereat Chief Justice Stoughton rose in anger, and said, 'The Lord be merciful to this country!' In the spring, Governor Phips, being about to leave the country, pardoned all who were condemned, and the jails were delivered. The excitement subsided as rapidly as it had arisen, but the evil work was done."—C. W. Elliott, *The New Eng. History*, v. 2, ch. 3.

ALSO IN: S. P. Fowler, ed., *Salem Witchcraft (including Calef's "More Wonders of the Invisible World," etc.)*.—C. S. Osgood and H. M. Batchelder, *Hist. Sketch of Salem*, ch. 2.—J. S. Barry, *Hist. of Mass.*, v. 2, ch. 2.

A. D. 1692-1693.—The Salem Witchcraft madness: its ending, and the reaction.—"On the second Wednesday in October, 1692, about a fortnight after the last hanging of eight at Salem, the representatives of the colony assembled; and the people of Andover, their minister joining with them, appeared with their remonstrance against the doings of the witch tribunals. Of the discussions that ensued no record is preserved; we know only the issue. The general court ordered by bill a convocation of ministers, that the people might be led in the right way as to the witchcraft. . . . They abrogated the special court, established a tribunal by statute, and delayed its opening till January of the following year. This interval gave the public mind security and freedom; and though Phips still conferred the place of chief judge on Stoughton, yet jurors acted independently. When, in January, 1693, the court met at Salem, six women of Andover, renouncing their confessions, treated the witchcraft but as something so called, the bewildered but as 'seemingly afflicted.' A memorial of like tenor came from the inhabitants of Andover. Of the presentments, the grand jury dismissed more than half; and of the twenty-six against whom bills were found through the testimony on which others had been condemned, verdicts of acquittal followed. . . . The people of Salem village drove Parris from the place; Noyes regained favor only by a full confession and consecrating the remainder of his life to deeds of mercy. Sewall, one of the judges, by rising in his pew in the Old South meeting-house on a fast-day and reading to the whole congregation a paper in which he bewailed his great offence, recovered public esteem. Stoughton never repented. The diary of Cotton Mather proves that he, who had sought the foundation of faith in tales of wonders, himself 'had temptations to

atheism, and to the abandonment of all religion as a mere delusion."—G. Bancroft, *Hist. of the U. S. (Author's last rev.)*, pt. 3, ch. 3 (v. 2).—"It was long before the public mind recovered from its paralysis. No one knew what ought to be said or done, the tragedy had been so awful. The parties who had acted in it were so numerous, and of such standing, including almost all the most eminent and honored leaders of the community from the bench, the bar, the magistracy, the pulpit, the medical faculty, and in fact all classes and descriptions of persons; the mysteries connected with the accusers and confessors; the universal prevalence of the legal, theological, and philosophical theories that had led to the proceedings; the utter impossibility of realizing or measuring the extent of the calamity; and the general shame and horror associated with the subject in all minds; prevented any open movement. . . . Dr. Bentley describes the condition of the community in some brief and pregnant sentences . . . : 'As soon as the judges ceased to condemn, the people ceased to accuse. . . . Terror at the violence and guilt of the proceedings succeeded instantly to the conviction of blind zeal; and what every man had encouraged all professed to abhor. Few dared to blame other men, because few were innocent. The guilt and the shame became the portion of the country, while Salem had the infamy of being the place of the transactions.'"—C. W. Upham, *Salem Witchcraft*, v. 2, supplement.—"The probability seems to be that those who began in harmless deceit found themselves at length involved so deeply, that dread of shame and punishment drove them to an extremity where their only choice was between sacrificing themselves, or others to save themselves. It is not unlikely that some of the younger girls were so far carried along by imitation or imaginative sympathy as in some degree to 'credit their own lie.' . . . Parish and boundary feuds had set enmity between neighbors, and the girls, called on to say who troubled them, cried out upon those whom they had been wont to hear called by hard names at home. They probably had no notion what a frightful ending their comedy was to have; but at any rate they were powerless, for the reins had passed out of their hands into the sterner grasp of minister and magistrate. . . . In one respect, to which Mr. Upham first gives the importance it deserves, the Salem trials were distinguished from all others. Though some of the accused had been terrified into confession, yet not one persevered in it, but all died protesting their innocence, and with unshaken constancy, though an acknowledgment of guilt would have saved the lives of all. This martyr proof of the efficacy of Puritanism in the character and conscience may be allowed to outweigh a great many sneers at Puritan fanaticism."—J. R. Lowell, *Witchcraft (Among My Books, series 1)*.

A. D. 1761.—Harsh enforcement of revenue laws.—The Writs of Assistance and Otis's speech.—“It was in 1761, immediately after the overthrow of the French in Canada, that attempts were made to enforce the revenue laws more strictly than heretofore; and trouble was at once threatened. Charles Paxton, the principal officer of the custom-house in Boston, applied to the Superior Court to grant him the authority to use ‘writs of assistance’ in searching for smuggled goods. A writ of assistance was a general search-warrant, empowering the officer armed with it to enter, by force if necessary, any dwelling-house or warehouse where contraband goods were supposed to be stored or hidden. A special search-warrant was one in which the name of the suspected person, and the house which it was proposed to search, were accurately specified, and the goods which it was intended to seize were as far as possible described. In the use of such special warrants there was not much danger of gross injustice or oppression. . . . But the general search-warrant, or ‘writ of assistance,’ as it was called because men try to cover up the ugliness of hateful things by giving them innocent names, was quite a different affair. It was a blank form upon which the custom-house officer might fill in the names of persons and descriptions of houses and goods to suit himself. . . . The writ of assistance was therefore an abominable instrument of tyranny. Such writs had been allowed by a statute of the evil reign of Charles II.; a statute of William III. had clothed custom-house officers in the colonies with like powers to those which they possessed in England; and neither of these statutes had been repealed. There can therefore be little doubt that the issue of such search-warrants was strictly legal, unless the authority of Parliament to make laws for the colonies was to be denied. James Otis then held the crown office of advocate-general, with an ample salary and prospects of high favour from government. When the revenue officers called upon him, in view of his position, to defend their cause, he resigned his office and at once undertook to act as counsel for the merchants of Boston in their protest against the issue of the writs. A large fee was offered him, but he refused it. ‘In such a cause,’ said he, ‘I despise all fees.’ The case was tried in the council-chamber at the east end of the old town-hall, or what is now known as the ‘Old State-House,’ in Boston. Chief-justice Hutchinson presided, and Jeremiah Gridley, one of the greatest lawyers of that day, argued the case for the writs in a very powerful speech. The reply of Otis, which took five hours in the

delivery, was one of the greatest speeches of modern times. It went beyond the particular legal question at issue, and took up the whole question of the constitutional relations between the colonies and the mother-country. At the bottom of this, as of all the disputes that led to the Revolution, lay the ultimate question whether Americans were bound to yield obedience to laws which they had no share in making. This question, and the spirit that answered it flatly and doggedly in the negative, were heard like an undertone pervading all the arguments in Otis's wonderful speech, and it was because of this that the young lawyer John Adams, who was present, afterward declared that on that day ‘the child Independence was born.’ Chief-justice Hutchinson . . . reserved his decision until advice could be had from the law-officers of the crown in London; and when next term he was instructed by them to grant the writs, this result added fresh impetus to the spirit that Otis's eloquence had aroused. The custom-house officers, armed with their writs, began breaking into warehouses and seizing goods which were said to have been smuggled. In this rough way they confiscated private property to the value of many thousands of pounds; but sometimes the owners of warehouses armed themselves and barricaded their doors and windows, and thus the officers were often successfully defied, for the sheriff was far from prompt in coming to aid them.”—J. Fiske, *The War of Independence*, ch. 4.

A. D. 1774.—Organization of an independent Provisional Government.—The Committee of Safety.—Minute-men.—“Governor Gage issued writs, dated September 1, convening the General Court at Salem on the 5th of October, but dissolved it by a proclamation dated September 28, 1774. The members elected to it, pursuant to the course agreed upon, resolved themselves into a Provincial Congress. This body, on

the 26th of October, adopted a plan for organizing the militia, maintaining it, and calling it out when circumstances should render it necessary. It provided that one quarter of the number enrolled should be held in readiness to muster at the shortest notice, who were called by the popular name of minute-men. An executive authority—the Committee of Safety—was created, clothed with large discretionary powers; and another called the Committee of Supplies.”—R. Frothingham, *Hist. of the Siege of Boston*, p. 41.—Under the Provincial Congress and the energetic Committee of Safety (which consisted at the beginning of Hancock, Warren and Church, of Boston, Richard Devens of Charlestown, Benj. White of Brookline, Joseph Palmer of Braintree, Abraham Watson of Cambridge, Azor Orne of Marblehead, and Norton Quincy, who declined) a complete and effective administration of government, entirely independent of royal authority, was brought into operation. Subsequently, John Pigeon of Newton, William Heath of Roxbury, and Jabez Fisher of Wrentham, were added to the committee.—R. A. D. 1776 (April—May).—Independence assumed and urged upon the General Congress.—“Massachusetts had for nearly a year acted independently of the officers of the crown.

... The General Court, at their session in April [1776], passed a resolve to alter the style of writs and other legal processes—substituting ‘the people and government of Massachusetts’ for George III.; and, in dating official papers, the particular year of the king was omitted, and only the year of our Lord was mentioned. Early in May, likewise, an order was passed and published, by which the people of the several towns in the province were advised to give instructions to their respective representatives, to be chosen for the following political year, on the subject of independence. It is not contended that this was the first instance in which such a proposition was publicly made; for North Carolina had, two weeks before, authorized her delegates to join with the other colonies in declaring independence; and Rhode Island and Connecticut had indicated their inclination by dispensing with the oath of allegiance to the king, though a month elapsed before the Connecticut Assembly instructed their delegates to vote for independence. The returns from the towns of Massachusetts were highly encouraging, and in nearly every instance the instructions to their representatives were favorable to an explicit declaration of independence.”—J. S. Barry, *Hist. of Mass.*, v. 3, ch. 3.

A. D. 1786-1787.—The Shays Rebellion.—

“The Shays Rebellion, which takes its name from the leader of the insurgents, Daniel Shays, lately a captain in the Continental army, had its taproot in the growing spirit of lawlessness. But special causes of discontent were traceable to an unequal distribution of wealth and excessive land taxation in Massachusetts, the sole seat of the outbreak. Governor Bowdoin and his party strove vigorously to reduce the State debt and keep up the public credit at a period of great public depression. But this strained severely the farmers and citizens of moderate means in the inland towns. Private creditors pressed their debtors, while the State pressed all. Attachments were put upon the poor man’s cattle and teams, and his little homestead was sacrificed under the sheriff’s hammer. It was no sign of prosperity that the dockets of the county courts were crowded, and that lawyers and court officers put in the sickle. There was common complaint of the high salaries of public officials and the wasteful cost attending litigation. One might suppose that a legislature annually chosen would soon remedy this state of things. But the inhabitants of the western counties took the short cut of resisting civil process and openly defying the laws. And herein their error lay. Shays rallied so large a force of malcontents about Worcester in the fall of 1786 that the sheriff and his deputies were powerless against them, and no court could be held. . . . This first success of the Massachusetts insurgents alarmed the friends of order throughout the Union. . . . Congress, by this time an adept in stealthy and diplomatic methods, offered secret aid to the authorities of Massachusetts upon the pretext of dispatching troops against the Indians. But the tender was not accepted; for in James Bowdoin the State had an executive equal to the emergency. Availing himself of a temporary loan from patriotic citizens, he raised and equipped a militia force, large enough to overawe the rebels, which, under General Lincoln’s command, was promptly marched against them. Shays appears to have had more of the demagogue than warrior about him, and his followers fled as the troops advanced [being finally surprised and routed at Petersham, Feb. 4, 1787]. By midwinter civil order was restored; but the legislature made some concessions not less just than prudent. The vanquished rebels were treated with marked clemency. But Governor Bowdoin’s energy lost him a re-election the following

spring, and one of the manliest pioneers of Continental reform was remitted to private life for the rest of his days. To him succeeded the veteran Hancock, whose light shone through a horn-lantern of vanity and love of popular applause."—J. Schouler, *Hist. of the U. S.*, v. 1, ch. 1, sect. 1.

MAYOR OF THE PALACE.—"The Mayor of the Palace is met with in all the Frankish kingdoms.... The mayors were at first merely the first superintendents, the first administrators of the interior of the palace of the king; the chiefs whom he put at the head of his companions, of his leudes, still united around him. It was their duty to maintain order among the king's men, to administer justice, to look to all the affairs, to all the wants, of that great domestic society. They were the men of the king with the leudes; this was their first character, their first state. Now for the second. After having exercised the power of the king over his leudes, his mayors of the palace usurped it to their own profit. The leudes, by grants of public charges and fiefs, were not long before they became great proprietors. This new situation was superior to that of companions of the king; they detached themselves from him, and united in order to defend their common interests. According as their fortune dictated, the mayors of the palace sometimes resisted them, more often united with them, and, at first servants of the king, they at last became the chiefs of an aristocracy, against whom royalty could do nothing. These are the two principal phases of this institution: it gained more extension and fixedness in Austrasia, in the family of the Pepins, who possessed it almost a century and a half, than anywhere else."—F. Guizot, *Hist. of Civilization*, v. 2 (*France*, v. 1), lect. 19.

MEDAIN.—Medain, "the twin city," combined in one, under this Arabic name, the two contiguous Persian capitals, Seleucia and Ctesiphon. The name Medain signifies "cities," and "it is said to have comprised a cluster of seven towns, but it is ordinarily taken to designate the twin cities of Seleucia and Ctesiphon."—Sir W. Muir, *Annals of the Early Caliphate*, ch. 10 and 17.

MEDIA AND THE MEDES.—The country of the Medes, in its original extent, coincided very nearly with the northwestern part of modern Persia, between Farsistan and the Elburz mountains. "The boundaries of Media are given somewhat differently by different writers, and no doubt they actually varied at different periods; but the variations were not great, and the natural limits, on three sides at any rate, may be laid down with tolerable precision. Towards the north the boundary was at first the mountain chain closing in on that side the Urumiyeh

basin, after which it seems to have been held that the true limit was the Araxes, to its entrance on the low country, and then the mountain chain west and south of the Caspian. Westward, the line of demarcation may be best regarded as, towards the south, running along the centre of the Zagros region; and, above this, as formed by that continuation of the Zagros chain which separates the Urumiyeh from the Van basin. Eastward, the boundary was marked by the spur from the Elburz, across which lay the pass known as the Pylæ Caspiæ, and below this by the great salt desert, whose western limit is nearly in the same longitude. Towards the south there was no marked line or natural boundary. . . . We may place the southern limit with much probability about the line of the thirty-second parallel, which is nearly the present boundary between Irak and Fars."—G. Rawlinson, *Five great Monarchies: Media*, ch. 1.—"The nation of the Medes belongs to the group of the Arian tribes, which occupied the table-land of Iran. This has been already proved by the statement of Herodotus that in ancient times the Medians were called Areans by all men, by the religion of the Medes, and by all the Median words and names that have come down to us. According to Herodotus the nation consisted of six

tribes: the Arizanti, Busac, Struchates, Budii, Paraetaceni, and Magi. . . . The Magians we have already found to be a hereditary order of Priests."—M. Duncker, *Hist. of Antiquity*, bk. 8, ch. 1.—The Medes, who seem to have been long without any centralizing authority among them, became, at last, united under a monarchy which grew in power, until, in the later part of the seventh century B. C., it combined with Babylonia against the decaying Assyrian kingdom. Nineveh was destroyed by the confederates, and the dominions of Assyria were divided between them. The Median empire which then rose, by the side of the Babylonian, endured little more than half a century. It was the first of the conquests of Cyrus (see PERSIA: B. C. 549–521), or Kyros, the founder of the Persian empire (B. C. 549).—A. H. Sayce, *Ancient Empires of the East*, appendix 5.

MEDICAL SCIENCE.

Chronology of Development.—Renouard, in his "History of Medicine," arranges the chronology of the development of medical knowledge in three grand divisions or Ages, subdivided into eight periods. "The First Age commences with the infancy of society, as far back as historic tradition carries us, and terminates toward the end of the second century of the Christian era, at the death of Galen, during the reign of Septimius Severus. This lapse of time constitutes, in Medicine, the Foundation Age. The germ of the Healing Art, concealed, at first, in the instincts of men, is gradually developed; the basis of the science is laid, and great principles are discussed. . . . The Second Age, which may be called the Age of Transition, offers very little material to the history of Medicine. We see no longer the conflicts and discussions between partisans of different doctrines; the medical sects are confounded. The art remains stationary, or imperceptibly retrogrades. I can not better depict this epoch than by comparing it to the life of an insect in the nymphæ state; though no exterior change appears, an admirable metamorphosis is going on, imperceptibly, within. The eye of man only perceives the wonder after it has been finished. Thus from the 15th century, which is the beginning of the third and last Age of Medicine, or the Age of Renovation, Europe offers us a spectacle of which the most glorious eras of the republics of Greece and Rome only can give us an idea. It would seem as if a new life was infused into the veins of the inhabitants of this part of the world; the sciences, fine arts, industry, religion, social institutions, all are changed. A multitude of schools are open for teaching Medicine. Establishments which had no models among the ancients, are created for the purpose of extending to the poorer classes the benefits of the Healing Art. The

ingenious activity of modern Christians explores and is sufficient for everything. These three grand chronological divisions do not suffice to classify, in our minds, the principal phases of the history of Medicine; consequently, I have subdivided each age into a smaller number of sections, easy to be retained, and which I have named Periods. The first Age embraces four periods, the second and third ages, each, two. . . . The first period, which we name Primitive Period, or that of instinct, ends with the ruin of Troy, about twelve centuries before the Christian era. The second, called the Mystic or Sacred Period, extends from the dissolution of the 'Pythagorean Society' to about the year 500 A. C. The third period, which ends at the foundation of the Alexandrian Library, A. C., 320, we name the Philosophic Period. The fourth, which we designate the Anatomic, extends to the end of the first age, i. e., to the year 200 of the Christian era. The fifth is called the Greek Period; it ends at the destruction of the Alexandrian Library, A. D. 640. The sixth receives the surname of Arabic, and closes with the 14th century. The seventh period, which begins the third age, comprises the 15th and 16th centuries; it is distinguished as the Erudite. Finally, the eighth, or last period, embraces the 17th and 18th centuries [beyond which the writer did not carry his history]. I call it the Reform Period."—P. V. Renouard, *History of Medicine*, introd.

Egyptian.—"Medicine is practised among them [the Egyptians] on a plan of separation; each physician treats a single disorder, and no more; thus the country swarms with medical practitioners, some undertaking to cure diseases of the eye, others of the head, others again of the teeth, others of the intestines, and some those which are not local."—Herodotus, *History*,

tr. by Rawlinson, bk. 2, ch. 84.—“Not only was the study of medicine of very early date in Egypt, but medical men there were in such repute that they were sent for at various times from other countries. Their knowledge of medicine is celebrated by Homer (Od. iv. 229), who describes Polydamna, the wife of Thonis, as giving medicinal plants ‘to Helen, in Egypt, a country producing an infinite number of drugs . . . where each physician possesses knowledge above all other men.’ ‘O virgin daughter of Egypt,’ says Jeremiah (lxvi. 11), ‘in vain shalt thou use many medicines.’ Cyrus and Darius both sent to Egypt for medical men (Her. iii. 1, 132); and Pliny (xix. 5) says post mortem examinations were made in order to discover the nature of maladies. Doctors received their salaries from the treasury; but they were obliged to conform in the treatment of a patient to the rules laid down in their books, his death being a capital crime, if he was found to have been treated in any other way. But deviations from, and approved additions to, the sacred prescriptions were occasionally made; and the prohibition was only to prevent the experiments of young practitioners, whom Pliny considers the only persons privileged to kill a man with impunity. Aristotle indeed says ‘the Egyptian physicians were allowed after the third day to alter the treatment prescribed by authority, and even before, taking upon themselves the responsibility’ (Polit. iii. 11). Experience gradually taught them many new remedies; and that they had adopted a method (of no very old standing in modern practice) of stopping teeth with gold is proved by some mummies found at Thebes. Besides the protection of society from the pretensions of quacks, the Egyptians provided that doctors should not demand fees on a foreign journey or on military service, when patients were treated free of expense (Diod. i. 82); and we may conclude that they were obliged to treat the poor gratis, on consideration of the allowance paid them as a body by government. . . . Poor and superstitious people sometimes had recourse to dreams, to wizards, to donations to sacred animals, and to exvotos to the gods. . . . Charms were also written for the credulous, some of which have been found on small pieces of papyrus, which were rolled up and worn as by the modern Egyptians. Accoucheurs were women; which we learn from Exodus i. 15, and from the sculptures, as in modern Egypt. . . . The Egyptian doctors were of the sacerdotal order, like the embalmers, who are called (in Genesis i. 2) ‘Physicians,’ and were ‘commanded by Joseph to embalm his father.’ They were of the class called Pastophori, who, according to Clemens (Strom. lib. 6), being physicians, were expected to know about all things relating to the body, and diseases, and remedies, contained in the six last sacred books of Hermes. Manetho tells us that Athothes, the second king of Egypt, who was a physician, wrote the anatomical books; and his name, translated Hermogenes, may have been the origin of the tradition that ascribed them to Hermes, the Egyptian Thoth. Or the fable may mean that they were the result of intellect personified by Thoth, or Hermes.”—G. Rawlinson, *Note to Herodotus, as above*.—“The ancient Egyptians, though medical science was zealously studied by them, also thought that the efficacy of the treatment was enhanced

by magic formulæ. In the Ebers Papyrus, an important and very ancient manual of Egyptian medicine, the prescriptions for various medicaments are accompanied by the forms of exorcism to be used at the same time, and yet many portions of this work give evidence of the advanced knowledge of its authors.”—G. Ebers, *Egypt, v. 2, pp. 61–62*.—“Works on medicine abounded in Egypt from the remotest times, and the great medical library of Memphis, which was of immemorial antiquity, was yet in existence in the second century before our era, when Galen visited the Valley of the Nile. . . . Ateta, third king of the First Dynasty, is the reputed author of a treatise on anatomy. He also covered himself with glory by the invention of an infallible hair-wash, which, like a dutiful son, he is said to have prepared especially for the benefit of his mother. No less than five medical papyri have come down to our time, the finest being the celebrated Ebers papyrus, bought at Thebes by Dr. Ebers in 1874. This papyrus contains one hundred and ten pages, each page consisting of about twenty-two lines of bold hieratic writing. It may be described as an Encyclopædia of Medicine as known and practised by the Egyptians of the Eighteenth Dynasty; and it contains prescriptions for all kinds of diseases—some borrowed from Syrian medical lore, and some of such great antiquity that they are ascribed to the mythologic ages, when the gods yet reigned personally upon earth. Among others, we are given the recipe for an application whereby Osiris cured Ra of the headache. The Egyptians attached great importance to these ancient medical works, which were regarded as final. The physician who faithfully followed their rules of treatment might kill or cure with impunity; but if he ventured to treat the patient according to his own notions, and if that patient died, he paid for the experiment with his life. Seeing, however, what the canonical remedies were, the marvel is that anybody ever recovered from anything. Raw meat; horrible mixtures of nitre, beer, milk, and blood, boiled up and swallowed hot; the bile of certain fishes; and the bones, fat, and skins of all kinds of unsavory creatures, such as vultures, bats, lizards and crocodiles, were among their choicest remedies.”—A. B. Edwards, *Pharaohs, Fellahs and Explorers, ch. 6*.—“In Egypt . . . man does not die, but some one or something assassinates him. The murderer often belongs to our world, and can be easily pointed out. . . . Often, though, it belongs to the invisible world, and only reveals itself by the malignity of its attacks: it is a god, a spirit, the soul of a dead man, that has cunningly entered a living person, or that throws itself upon him with irresistible violence. . . . Whoever treats a sick person has therefore two equally important duties to perform. He must first discover the nature of the spirit in possession, and, if necessary, its name, and then attack it, drive it out, or even destroy it. He can only succeed by powerful magic, so he must be an expert in reciting incantations, and skilful in making amulets. He must then use medicine to contend with the disorders which the presence of the strange being has produced in the body; this is done by a finely graduated régime and various remedies. The cure-workers are therefore divided into several categories. Some incline towards sorcery, and have faith in formulas

and talismen only; they think they have done enough if they have driven out the spirit. Others extol the use of drugs; they study the qualities of plants and minerals, describe the diseases to which each of the substances provided by nature is suitable, and settle the exact time when they must be procured and applied: certain herbs have no power unless they are gathered during the night at the full moon, others are efficacious in summer only, another acts equally well in winter or summer. The best doctors carefully avoid binding themselves exclusively to either method."—G. Maspéro, *Life in Ancient Egypt and Assyria*, ch. 7.—"The employment of numerous drugs in Egypt has been mentioned by sacred and profane writers; and the medicinal properties of many herbs which grow in the deserts, particularly between the Nile and Red Sea, are still known to the Arabs, though their application has been but imperfectly recorded and preserved. . . . Homer, in the *Odyssey*, describes the many valuable medicines given by Polydamna, the wife of Thonis, to Helen, while in Egypt, 'a country whose fertile soil produces an infinity of drugs, some salutary and some pernicious, where each physician possesses knowledge above all other men'; and Pliny makes frequent mention of the productions of that country, and their use in medicine. He also notices the physicians of Egypt; and as if their number was indicative of the many maladies to which the inhabitants were subject, he observes that it was a country productive of numerous diseases. In this, however, he does not agree with Herodotus, who affirms that, 'after the Libyans, there are no people so healthy as the Egyptians, which may be attributed to the invariable nature of the seasons in their country.' In Pliny's time the introduction of luxurious habits and excess had probably wrought a change in the people; and to the same cause may be attributed the numerous complaints among the Romans, 'unknown to their fathers and ancestors.' The same author tells us that the Egyptians examined the bodies after death, to ascertain the nature of the diseases of which they had died; and we can readily believe that a people so far advanced in civilization and the principles of medicine as to assign each physician his peculiar branch, would have resorted to this effectual method of acquiring knowledge and experience for the benefit of the community. It is evident that the medical skill of the Egyptians was well known even in foreign and distant countries; and we learn from Herodotus, that Cyrus and Darius both sent to Egypt for medical men. . . . The Egyptians, according to Pliny, claimed the honour of having invented the art of curing diseases."—Sir J. G. Wilkinson, *Manners and Customs of the Ancient Egyptians*, ch. 10 (v. 2).—"The Ptolemies, down to the very termination of their dominion over Egypt, appear to have encouraged the curative art, and for the purpose of restoring declining health, surrounded themselves with the most illustrious physicians of the age. . . . The science of medicine of the period was fully represented at the Museum by distinguished professors, who, according to Athenæus, restored the knowledge of this art to the towns and islands of the Grecian Archipelago. . . . About the period of the absorption of the Egyptian kingdom into the expanding dominion of the Romans, the schools of Alexandria still

continued to be the centre of medical studies; and notwithstanding the apparent dissidence between the demands of a strict science and public affairs, its professors exhibited, equally with their brother philosophers, a taste for diplomacy. Dioscorides and Serapion, two physicians of Alexandria, were the envoys of the elder Ptolemy to Rome, and at a later date were bearers of dispatches from Cæsar to one of his officers in Egypt."—G. F. Fort, *Medical Economy During the Middle Ages*, ch. 3.

Babylonian.—"The Babylonians 'have no physicians, but when a man is ill, they lay him in the public square, and the passers-by come up to him, and if they have ever had his disease themselves or have known anyone who has suffered from it, they give him advice, recommending him to do whatever they found good in their own case, or in the case known to them. And no one is allowed to pass the sick man in silence without asking him what his ailment is.'—Herodotus, *History*, trans. by G. Rawlinson, bk. 1, ch. 197 (v. 1).—"The incantations against diseases describe a great variety of cases. . . . But the most numerous are those which aim at the cure of the plague, fever, and 'disease of the head;' this latter, judging from the indications which are given of its symptoms and its effects, appears to have been a sort of erysipelas, or cutaneous disease. . . . These are the principal passages of a long incantation against 'the disease of the head;' the tablet on which we find it bears six other long formulæ against the same evil. 'The disease of the head exists on man. The disease of the head, the ulceration of the forehead exists on man. The disease of the head marks like a tiara, the disease of the head from sunrise to sunset. In the sea and the vast earth a very small tiara is become the tiara, the very large tiara, his tiara. The diseases of the head pierce like a bull, the diseases of the head shoot like the palpitation of the heart. . . . The diseases of the head, like doves to their dove-cotes, like grasshoppers into the sky, like birds into space may they fly away. May the invalid be replaced in the protecting hands of his god!' This specimen will give the reader an idea of the uniform composition of these incantations against diseases, which filled the second book of the work under consideration. They all follow the same plan throughout, beginning with the definition of the disease and its symptoms, which occupies the greater part of the formula; and ending with a desire for deliverance from it, and the order for it to depart. Sometimes, however, the incantation of the magician assumes a dramatic form at the end. . . . We must add . . . the use of certain enchanted drinks, which, doubtless, really contained medicinal drugs, as a cure for diseases, and also of magic knots, the efficacy of which was so firmly believed in, even up to the middle ages. Here is a remedy which one of the formulæ supposes to have been prescribed by Hea against a disease of the head: 'Knot on the right and arrange flat in regular bands, on the left a woman's diadem; divide it twice in seven little bands; . . . gird the head of the invalid with it; gird the forehead of the invalid with it; gird the seat of life with it; gird his hands and his feet; seat him on his bed; pour on him enchanted waters. Let the disease of his head be carried away into the heavens like a violent wind; . . . may

the earth swallow it up like passing waters!' Still more powerful than the incantations were conjurations wrought by the power of numbers."—F. Lenormant, *Chaldean Magic*, ch. 1 and 3.

Finnish.—"The Finnish incantations for exorcising the demons of diseases were composed in exactly the same spirit, and founded upon the same data, as the Accadian incantations destined for the like purpose. They were formulae belonging to the same family, and they often showed a remarkable similarity of language; the Egyptian incantations, on the contrary, having been composed by people with very different ideas about the supernatural world, assumed quite another form. This is an incantation from one of the songs of the Kalevala: 'O malady, disappear into the heavens; pain, rise up to the clouds; inflamed vapour, fly into the air, in order that the wind may take thee away, that the tempest may chase thee to distant regions, where neither sun nor moon give their light, where the warm wind does not inflame the flesh. O pain, mount upon the winged steed of stone, and fly to the mountains covered with iron. For he is too robust to be devoured by disease, to be consumed by pains. Go, O diseases, to where the virgin of pains has her hearth, where the daughter of Wäinämöinen cooks pains, go to the hill of pains. There are the white dogs, who formerly howled in torments, who groaned in their sufferings.'"—F. Lenormant, *Chaldean Magic*, ch. 17.

Hindu.—"There is reason to . . . conclude, from the imperfect opportunities of investigation we possess, that in medicine, as in astronomy and metaphysics, the Hindus once kept pace with the most enlightened nations of the world; and that they attained as thorough a proficiency in medicine and surgery as any people whose acquisitions are recorded, and as indeed was practicable, before anatomy was made known to us by the discoveries of modern enquirers. It might easily be supposed that their patient attention and natural shrewdness would render the Hindus excellent observers; whilst the extent and fertility of their native country would furnish them with many valuable drugs and medicaments. Their Nidana or Diagnosis, accordingly, appears to define and distinguish symptoms with great accuracy, and their Dravyabhidhana, or Materia Medica, is sufficiently voluminous. They have also paid great attention to regimen and diet, and have a number of works on the food and general treatment, suited to the complaint, or favourable to the operation of the medicine administered. This branch they entitle Pathyapathya. To these subjects are to be added the Chikitsa, or medical treatment of diseases—on which subject they have a variety of compositions, containing much absurdity, with much that is of value; and the Rasavidyā, or Pharmacy, in which they are most deficient. All these works, however, are of little avail to the present generation, as they are very rarely studied, and still more rarely understood, by any of the practising empirics. The divisions of the science thus noticed, as existing in books, exclude two important branches, without which the whole system must be defective—Anatomy and Surgery. We can easily imagine, that these were not likely to have been much cultivated in Hindustan. . . . The Ayur Veda, as the medical writings of highest antiquity and authority are collectively called, is considered to

be a portion of the fourth or Atharva Veda, and is consequently the work of Brahma—by him it was communicated to Daksha, the Prajapati, and by him the two Aswins, or sons of Surya, the Sun, were instructed in it, and they then became the medical attendants of the gods—a genealogy that cannot fail recalling to us the two sons of Esculapius, and their descent from Apollo. Now what were the duties of the Aswins, according to Hindu authorities?—the gods, enjoying eternal youth and health, stood in no need of physicians, and consequently they held no such sinecure station. The wars between the gods and demons, however, and the conflicts amongst the gods themselves, in which wounds might be suffered, although death might not be inflicted, required surgical aid—and it was this, accordingly, which the two Aswins rendered. . . . The meaning of these legendary absurdities is clear enough, and is conformable to the tenor of all history. Man, in the semi-barbarous state, if not more subject to external injuries than internal disease, was at least more likely to seek remedies for the former, which were obvious to his senses, than to imagine the means of relieving the latter, whose nature he could so little comprehend. Surgical, therefore, preceded medicinal skill; as Celsus has asserted, when commenting on Homer's account of Podalirius and Machaon, who were not consulted, he says, during the plague in the Grecian camp, although regularly employed to extract darts and heal wounds. . . . We may be satisfied that Surgery was once extensively cultivated, and highly esteemed by the Hindus. Its rational principles and scientific practice are, however, now, it may be admitted, wholly unknown to them. . . . It would be an enquiry of some interest to trace the period and causes of the disappearance of Surgery from amongst the Hindus: it is evidently of comparatively modern occurrence, as operative and instrumental practice forms so principal a part of those writings, which are undeniably most ancient; and which, being regarded as the composition of inspired writers, are held of the highest authority."—H. H. Wilson, *Essays on Sanskrit Literature*, pp. 269–276, and 391. "The number of medical works and authors is extraordinarily large. The former are either systems embracing the whole domain of the science, or highly special investigations of single topics, or, lastly, vast compilations prepared in modern times under the patronage of kings and princes. The sum of knowledge embodied in their contents appears really to be most respectable. Many of the statements on dietetics and on the origin and diagnosis of diseases bespeak a very keen observation. In surgery, too, the Indians seem to have attained a special proficiency, and in this department European surgeons might perhaps even at the present day still learn something from them, as indeed they have already borrowed from them the operation of rhinoplasty. The information, again, regarding the medicinal properties of minerals (especially precious stones and metals), of plants, and animal substances, and the chemical analysis and decomposition of these, covers certainly much that is valuable. Indeed, the branch of Materia Medica generally appears to be handled with great predilection, and this makes up to us in some measure at least for the absence of investigations in the field of natural science. On the diseases, &c., of horses and

elephants also there exist very special monographs. For the rest, during the last few centuries medical science has suffered great detriment from the increasing prevalence of the notion, in itself a very ancient one, that diseases are but the result of transgressions and sins committed, and from the consequent very general substitution of fastings, alms, and gifts to the Brahmans, for real remedies. . . . The influence . . . of Hindu medicine upon the Arabs in the first centuries of the Hijra was one of the very highest significance; and the Khalifs of Bagdad caused a considerable number of works upon the subject to be translated. Now, as Arabian medicine constituted the chief authority and guiding principle of European physicians down to the seventeenth century, it directly follows—just as in the case of astronomy—that the Indians must have been held in high esteem by these latter; and indeed Charaka is repeatedly mentioned in the Latin translations of Avicenna (Ibn Sina), Rhazes (Al Rasi), and Serapion (Ibn Serabi).”—A. Weber, *Hist. of Indian Literature*, pp. 269-271.

Jewish.—"If we are to judge from the frequent mention of physicians (Ex. xv. 26; Isa. iii. 7; Jer. viii. 22; Sir. x. 11, xxxviii. 1 ff.; Matt. ix. 12; Mark v. 26; Luke iv. 23, etc.), the Israelites must have given much attention to medicine from ancient times. The physicians must have understood how to heal wounds and external injuries with bandaging, mollifying with oil (Isa. i. 6; Luke x. 34), balsam (Jer. xli. 11, li. 8), plasters (2 Kings xx. 7), and salves prepared from herbs (Sir. xxxviii. 8; Ex. xxi. 19; 2 Kings viii. 29; Ezek. xxx. 21). The ordinances respecting leprosy also show that the lawgiver was well acquainted with the various kinds of skin eruptions (comp. sect. 114). And not only Moses, but other Israelites also may have acquired much practical knowledge of medicine in Egypt, where the healing art was cultivated from high antiquity. But as to how far the Israelitish physicians advanced in this art, we have not more exact information. From the few scattered hints in the Old and New Testaments, so much only is clear, that internal diseases were also treated (2 Chron. xvi. 12; Luke viii. 43), and that the medicinal springs which Palestine possesses were much used by invalids. It by no means follows from the fact that the superintendence of lepers and the pronouncing of them clean are assigned by the law to the priests, that these occupied themselves chiefly with medicine. The task which the law laid on them has nothing to do with the healing of leprosy. Of the application of charms, there is not a single instance in Scripture."—C. F. Keil, *Manual of Biblical Archaeology*, v. 2, pp. 276-277.—"The surgery of the Talmud includes a knowledge of dislocations of the thigh, contusions of the head, perforation of the lungs and other organs, injuries of the spinal cord and trachea, and fractures of the ribs. Polypus of the nose was considered to be a punishment for past sins. In sciatica the patient is advised to rub the hip sixty times with meat-broth. Bleeding was performed by mechanics or barbers. The pathology of the Talmud ascribes diseases to a constitutional vice, to evil influences acting on the body from without, or to the effect of magic. Jaundice is recognized as arising from retention of the bile, dropsy from suppression of the urine. The Talmudists divided dropsy into anasarca, ascites, and tympanites.

Rupture and atrophy of the kidneys were held to be always fatal. Hydatids of the liver were more favourably considered. Suppuration of the spinal cord, induration of the lungs, etc., are incurable. Dr. Baas says that these are 'views which may have been based on the dissection of (dead) animals, and may be considered the germs of pathological anatomy.' Some critical symptoms are sweating, sneezing, defecation, and dreams, which promise a favourable termination of the disease. Natural remedies, both external and internal, were employed. Magic was also Talmudic. Dispensations were given by the Rabbis to permit sick persons to eat prohibited food. Onions were prescribed for worms; wine and pepper for stomach disorders; goat's milk for difficulty of breathing; emetics in nausea; a mixture of gum and alum for menorrhagia (not a bad prescription); a dog's liver was ordered for the bite of a mad dog. Many drugs, such as assafoetida, are evidently adopted from Greek medicine. The dissection of the bodies of animals provided the Talmudists with their anatomy. It is, however, recorded that Rabbi Ishmael, at the close of the first century, made a skeleton by boiling the body of a prostitute. We find that dissection in the interests of science was permitted by the Talmud. The Rabbis counted 252 bones in the human skeleton."—E. Berdoe, *The Origin and Growth of the Healing Art*, bk. 2, ch. 2.

Greek.—"It is well known that the oldest documents which we possess relative to the practice of Medicine, are the various treatises contained in the Collection which bears the name of Hippocrates. Their great excellence has been acknowledged in all ages, and it has always been a question which has naturally excited literary curiosity, by what steps the art had attained to such perfection at so early a period. . . . It is clearly established that, long before the birth of philosophy, medicine had been zealously and successfully cultivated by the Asclepiadae, an order of priest-physicians that traced its origin to a mythical personage bearing the distinguished name of Æsculapius. Two of his sons, Podalirius and Machaon, figure in the Homeric poems, not however as priests, but as warriors possessed of surgical skill in the treatment of wounds, for which they are highly complimented by the poet. It was probably some generations after this time (if one may venture a conjecture on a matter partaking very much of the legendary character) that Æsculapius was deified, and that Temples of Health, called 'Asclepia,' presided over by the Asclepiadae, were erected in various parts of Greece, as receptacles for the sick, to which invalids resorted in those days for the cure of diseases, under the same circumstances as they go to hospitals and spas at the present time. What remedial measures were adopted in these temples we have no means of ascertaining so fully as could be wished, but the following facts, collected from a variety of sources, may be pretty confidently relied upon for their accuracy. In the first place, then, it is well ascertained that a large proportion of these temples were built in the vicinity of thermae, or medicinal springs, the virtues of which would no doubt contribute greatly to the cure of the sick. At his entrance into the temple, the devotee was subjected to purifications, and made to go through a regular course of bathing, accom-

panied with methodical frictions, resembling the oriental system now well known by the name of shampooing. Fomentations with decoctions of odoriferous herbs were also not forgotten. A total abstinence from food was at first prescribed, but afterwards the patient would no doubt be permitted to partake of the flesh of the animals which were brought to the temples as sacrifices. Every means that could be thought of was used for working upon the imagination of the sick, such as religious ceremonies of an imposing nature, accompanied by music, and whatever else could arouse their senses, conciliate their confidence, and, in certain cases, contribute to their amusement. . . . It is also well known that the Asclepiadæ noted down with great care the symptoms and issue of every case, and that, from such observations, they became in time great adepts in the art of prognosis. . . . The office of priesthood was hereditary in certain families, so that information thus acquired would be transmitted from father to son, and go on accumulating from one generation to another. Whether the Asclepiadæ availed themselves of the great opportunities which they must undoubtedly have had of cultivating human and comparative anatomy, has been much disputed in modern times. . . . It is worthy of remark, that Galen holds Hippocrates to have been a very successful cultivator of anatomy. . . . Of the 'Asclepia' we have mentioned above, it will naturally be supposed that some were in much higher repute than others, either from being possessed of peculiar advantages, or from the prevalence of fashion. In the beginning of the fifth century before the Christian era the temples of Rhodes, Cnidos, and Cos were held in especial favour, and on the extinction of the first of these, another rose up in Italy in its stead. But the temple of Cos was destined to throw the reputation of all the others into the background, by producing among the priests of Æsculapius the individual who, in all after ages, has been distinguished by the name of the Great Hippocrates. . . . That Hippocrates was lineally descended from Æsculapius was generally admitted by his countrymen, and a genealogical table, professing to give a list of the names of his forefathers, up to Æsculapius, has been transmitted to us from remote antiquity. . . . Of the circumstances connected with the life of Hippocrates little is known for certain. . . . Aulus Gellius, . . . in an elaborate disquisition on Greek and Roman chronology, states decidedly that Socrates was contemporary with Hippocrates, but younger than he. Now it is well ascertained that the death of Socrates took place about the year 400 A. C., and as he was then nearly seventy years old, his birth must be dated as happening about the year 470 A. C. . . . It will readily occur to the reader, then, that our author flourished at one of the most memorable epochs in the intellectual development of the human race. . . . From his forefathers he inherited a distinguished situation in one of the most eminent hospitals, or Temples of Health, then in existence, where he must have enjoyed free access to all the treasures of observations collected during many generations, and at the same time would have an opportunity of assisting his own father in the management of the sick. Thus from his youth he must have been familiar with the principles of medicine, both in the abstract and in the con-

crete. . . . Initiated in the theory and first principles of medicine, as now described, Hippocrates no doubt commenced the practice of his art in the Asclepion of Cos, as his forefathers had done before him. Why he afterwards left the place of his nativity, and visited distant regions of the earth, whither the duties of his profession and the calls of humanity invited him, cannot now be satisfactorily determined. . . . According to all the accounts which have come down to us of his life, he spent the latter part of it in Thessaly, and died at Larissa, when far advanced in years. . . . As a medical author the name of Hippocrates stands pre-eminently illustrious. . . . Looking upon the animal system as one whole, every part of which conspires and sympathises with all the other parts, he would appear to have regarded disease also as one, and to have referred all its modifications to peculiarities of situation. Whatever may now be thought of his general views on Pathology, all must admit that his mode of prosecuting the cultivation of medicine is in the true spirit of the Inductive Philosophy; all his descriptions of disease are evidently derived from patient observation of its phenomena, and all his rules of practice are clearly based on experience. Of the fallaciousness of experience by itself he was well aware, however. . . . Above all others Hippocrates was strictly the physician of experience and common sense. In short, the basis of his system was a rational experience, and not a blind empiricism, so that the Empirics in after ages had no good grounds for claiming him as belonging to their sect. What he appears to have studied with particular attention is the natural history of diseases, that is to say, their tendencies to a favorable or fatal issue. . . . One of the most distinguishing characteristics, then, of the Hippocratic system of medicine, is the importance attached in it to prognosis, under which was comprehended a complete acquaintance with the previous and present condition of the patient and the tendency of the disease. . . . In the practice of surgery he was a bold operator. He fearlessly, and as we would now think, in some cases unnecessarily, perforated the skull with the trepan and the trephine in injuries of the head. He opened the chest also in empyema and hydrothorax. His extensive practice, and no doubt his great familiarity with the accidents occurring at the public games of his country, must have furnished him with ample opportunities of becoming acquainted with dislocations and fractures of all kinds; and how well he had profited by the opportunities which he thus enjoyed, every page of his treatises 'On Fractures,' and 'On the Articulations,' abundantly testifies.—F. Adams, *Preliminary Discourse (Genuine Works of Hippocrates)*, sect. 1.—"The school of the Asclepiadæ has been responsible for certain theories which have been more or less prominent during the earlier historical days. One of these which prevailed throughout the Hippocratic works is that of Cœction and Crisis. By the former term is meant thickening or elaboration of humors in the body, which was supposed to be necessary for their elimination in some tangible form. Disease was regarded as an association of phenomena resulting from efforts made by the conservative principles of life to effect a cœction, i. e., a combination, of the morbid matter in the economy, it being held that the latter could not be

properly expelled until thus united and prepared so as to form excrementitious material. This elaboration was supposed to be brought about by the vital principles which some called nature (*Phusis*), some spirit (*Psyche*), some breath (*Pneuma*), and some heat (*Thermon*). The gradual climax of morbid phenomena has, since the days of Hippocrates, been commonly known as *Crisis*. All this was regarded as the announcement of the completion of this union by coction. The day on which it was accomplished was termed 'critical,' as were also the signs which preceded or accompanied it, and for the crisis the physician anxiously watched. Coction having been effected and crisis occurring, it only remained to evacuate the morbid material, which nature sometimes spontaneously accomplished by the critical sweat, urination, or stools; or sometimes the physician had to come to her relief by the administration of diuretics, purgatives, et cetera. The term 'critical period' was given to the number of days necessary for coction, which in its perfection was supposed to be four, the so-called quaternary, while the septenary was also held in high consideration. . . . This doctrine of crisis in disease left an impress upon the medical mind not yet fully eliminated."—Roswell Park, *Lects. on the Hist. of Medicine (in MS.)*.—"Making no pretension . . . to describe the regular medical practice among the Greeks, I shall here, nevertheless, introduce some few particulars more or less connected with it, which may be regarded as characteristic of the age and people. Great were the virtues which they ascribed to the herb *alysson*, (*biscutella didyma*), which, being pounded and eaten with meat cured hydrophobia. Nay, more, being suspended in the house, it promoted the health of its inhabitants; it protected likewise both man and cattle from enchantment; and, bound in a piece of scarlet flannel round the necks of the latter, it preserved them from all diseases. Coriander-seed, eaten in too great quantity, produced, they thought, a derangement of the intellect. Ointment of saffron had an opposite effect, for the nostrils and heads of lunatics being rubbed therewith they were supposed to receive considerable relief. Melampus the goatherd was reported to have cured the daughters of Prætos of their madness by large doses of black hellebore, which thereafter received from him the name of *Melampodium*. Sea-onions suspended over the doors preserved from enchantment, as did likewise a branch of *rhamnus* over doors or windows. A decoction of rosemary and of the leaves and stems of the *anemone* was administered to nurses to promote the secretion of milk, and a like potion prepared from the leaves of the Cretan dittany was given to women in labour. This herb, in order to preserve its virtues unimpaired, and that it might be the more easily transported to all parts of the country, was preserved in a joint of a ferula or reed. A plaster of incense, Cimolian earth, and oil of roses, was applied to reduce the swelling of the breasts. A medicine prepared from mule's fern, was believed to produce sterility, as were likewise the waters of a certain fountain near *Pyrrhia*, while to those about *Thespie* a contrary effect was attributed, as well as to the wine of *Heraclea* in *Arcadia*. The inhabitants of this primitive region drank milk as an aperient in the Spring, because of the medicinal herbs on which the cattle were then supposed to feed. Medicines of

laxative properties were prepared from the juice of the wild cucumber, which were said to retain their virtues for two hundred years, though simples in general were thought to lose their medicinal qualities in less than four. The oriental gum called *kankamon* was administered in water or honeyed vinegar to fat persons to diminish their obesity, and also as a remedy for the toothache. For this latter purpose the gum of the Ethiopian olive was put into the hollow tooth, though more efficacy perhaps was attributed to the root of dittander which they suspended as a charm about the neck. A plaster of the root of the white thorn or iris roots prepared with flour of copper, honey, and great centaury, drew out thorns and arrow heads without pain. An unguent procured from fern was sold to rustics for curing the necks of their cattle galled by the yoke. A decoction of marsh-mallow leaves and wine or honeyed vinegar was administered to persons who had been stung by bees or wasps or other insects; bites and burns were healed by an external application of the leaf smeared with oil, and the powdered roots cast into water caused it to freeze if placed out during the night in the open air; an unguent was prepared with oil from reeds, green or dry, which protected those who anointed themselves with it from the stings of venomous reptiles. Cinnamon unguent, or terebinth and myrtle-berries, boiled in wine, were supposed to be a preservative against the bite of the tarantula or scorpion, as was the pistachio nut against that of serpents. Some persons ate a roasted scorpion to cure its own bite; a powder, moreover, was prepared from sea-crabs supposed to be fatal to this reptile. Vipers were made to contribute their part to the *materia medica*; for, being caught alive, they were enclosed with salt and dried figs in a vase which was then put into a furnace till its contents were reduced to charcoal, which they esteemed a valuable medicine. A considerable quantity of viper's flesh was in the last century imported from Egypt into Venice, to be used in the composition of medicinal treacle. From the flowers of the sneezewort, a sort of snuff appears to have been manufactured, though probably used only in medicines. The ashes of old leather cured burns, galls, and blistered feet. The common remedy when persons had eaten poisonous mushrooms was a dose of nitre exhibited in vinegar and water; with water it was esteemed a cure for the sting of a burn-cow, and with benzoin it operated as an antidote against the poison of bulls' blood."—J. A. St. John, *The Hellenes*, bk. 6, ch. 6 (v. 3).

The Hippocratic Oath.—"Medical societies or schools seem to have been as ancient as Hippocrates. The Hippocratic oath, as it is called, has been preserved, and is one of the greatest curiosities we have received from antiquity: 'I swear by Apollo the physician, by *Æsculapius*, by *Hygieia*, by *Panacea*, and by all gods and goddesses, that I will fulfil religiously, according to the best of my power and judgment, the solemn vow which I now make. I will honour as my father the master who taught me the art of medicine; his children I will consider as my brothers, and teach them my profession without fee or reward. I will admit to my lectures and discourses my own sons, my master's sons, and those pupils who have taken the medical oath; but no one else. I will prescribe such medicines

as may be best suited to the cases of my patients, according to the best of my judgment; and no temptation shall ever induce me to administer poison. I will religiously maintain the purity of my character and the honour of my art. I will not perform the operation of lithotomy, but leave it to those to whose calling it belongs. Into whatever house I enter, I will enter it with the sole view of relieving the sick, and conduct myself with propriety towards the women of the family. If during my attendance I happen to hear of anything that should not be revealed, I will keep it a profound secret. If I observe this oath, may I have success in this life, and may I obtain general esteem after it; if I break it, may the contrary be my lot."—*Ancient Physic and Physicians* (*Dublin Univ. Mag.*, April, 1856).

1st Century.—Greek physicians in Rome.—Pliny's Picture.—Pliny's account of the Greek physicians in Rome in his time (first century) is not flattering to the profession. He says: "For the cure of King Antiochus—to give our first illustration of the profits realized by the medical art—Erasistratus received from his son, King Ptolemæus, the sum of one hundred talents. . . . I pass over in silence many physicians of the very highest celebrity, the Cassii, for instance, the Calpetani, the Arruntii, and the Rubrii, men who received fees yearly from the great, amounting to no less than 250,000 sesterces. As for Q. Stertinius, he thought that he conferred an obligation upon the emperors in being content with 500,000 sesterces per annum; and indeed he proved, by an enumeration of the several houses, that a city practice would bring him in a yearly income of not less than 600,000 sesterces. Fully equal to this was the sum lavished upon his brother by Claudius Cæsar; and the two brothers, although they had drawn largely upon their fortunes in beautifying the public buildings at Neapolis, left to their heirs no less than 30,000,000 of sesterces! such an estate as no physician but Arruntius had till then possessed. Next in succession arose Vettius Valens, rendered so notorious by his adulterous connection with Messalina, the wife of Claudius Cæsar, and equally celebrated as a professor of eloquence. When established in public favour, he became the founder of a new sect. It was in the same age, too, during the reign of the Emperor Nero, that the destinies of the medical art passed into the hands of Thessalus, a man who swept away all the precepts of his predecessors, and declaimed with a sort of frenzy against the physicians of every age; but with what discretion and in what spirit, we may abundantly conclude from a single trait presented by his character—upon his tomb, which is still to be seen on the Appian Way, he had his name inscribed as the 'Iatronices'—the 'Conqueror of the Physicians.' No stage-player, no driver of a three-horse chariot, had a greater throng attending him when he appeared in public: but he was at last eclipsed in credit by Crinas, a native of Massilia, who, to wear an appearance of greater discreteness and more devoutness, united in himself the pursuit of two sciences, and prescribed diets to his patients in accordance with the movements of the heavenly bodies, as indicated by the almanacks of the mathematicians, taking observations himself of the various times and seasons. It was but recently that he died, leaving 10,000,000 of sesterces, after having expended hardly a less

sum upon building the walls of his native place and of other towns. It was while these men were ruling our destinies, that all at once, Charmis, a native also of Massilia, took the City by surprise. Not content with condemning the practice of preceding physicians, he proscribed the use of warm baths as well, and persuaded people, in the very depth of winter even, to immerse themselves in cold water. His patients he used to plunge into large vessels filled with cold water, and it was a common thing to see aged men of consular rank make it a matter of parade to freeze themselves; a method of treatment, in favour of which Anneus Seneca gives his personal testimony, in writings still extant. There can be no doubt whatever, that all these men, in the pursuit of celebrity by the introduction of some novelty or other, made purchase of it at the downright expense of human life. Hence those woeful discussions, those consultations at the bedside of the patient, where no one thinks fit to be of the same opinion as another, lest he may have the appearance of being subordinate to another; hence, too, that ominous inscription to be read upon a tomb, 'It was the multitude of physicians that killed me.' The medical art, so often modified and renewed as it has been, is still on the change from day to day, and still are we impelled onwards by the puffs which emanate from the ingenuity of the Greeks. . . . Cassius Hemina, one of our most ancient writers, says that the first physician that visited Rome was Archagathus, the son of Lysanias, who came over from Peloponnesus, in the year of the City 535, L. Æmilius and M. Livius being consuls. He states also, that the right of free citizenship was granted him, and that he had a shop provided for his practice at the public expense in the Æilian Cross-way; that from his practice he received the name of 'Vulnerarius'; that on his arrival he was greatly welcomed at first, but that soon afterwards, from the cruelty displayed by him in cutting and searing his patients, he acquired the new name of 'Carnifex,' and brought his art and physicians in general into considerable disrepute. That such was the fact, we may readily understand from the words of M. Cato, a man whose authority stands so high of itself, that but little weight is added to it by the triumph which he gained, and the Censorship which he held. I shall, therefore, give his own words in reference to this subject. 'Concerning those Greeks, son Marcus, I will speak to you more at length on the befitting occasion. I will show you the results of my own experience at Athens, and that, while it is a good plan to dip into their literature, it is not worth while to make a thorough acquaintance with it. They are a most iniquitous and intractable race, and you may take my word as the word of a prophet, when I tell you, that whenever that nation shall bestow its literature upon Rome it will mar everything; and that all the sooner, if it sends its physicians among us. They have conspired among themselves to murder all barbarians with their medicine; a profession which they exercise for lucre, in order that they may win our confidence, and dispatch us all the more easily. They are in the common habit, too, of calling us barbarians, and stigmatize us beyond all other nations, by giving us the abominable appellation of Opici. I forbid you to have anything to do with physicians.' Cato, who wrote to this

effect, died in his eighty-fifth year, in the year of the City 605; so that no one is to suppose that he had not sufficient time to form his experience, either with reference to the duration of the republic, or the length of his own life. Well then—are we to conclude that he has stamped with condemnation a thing that in itself is most useful? Far from it, by Hercules! . . . Medicine is the only one of the arts of Greece, that, lucrative as it is, the Roman gravity has hitherto refused to cultivate. It is but very few of our fellow-citizens that have even attempted it.”—Pliny, *Natural Hist.* (Bohn's trans.), bk. 29, ch. 3–8 (v. 5).

2d Century.—Galen and the development of Anatomy and Pathology.—“In the earliest conceptions which men entertained of their power of moving their own members, they probably had no thought of any mechanism or organization by which this was effected. The foot and the hand, no less than the head, were seen to be endowed with life; and this pervading life seemed sufficiently to explain the power of motion in each part of the frame, without its being held necessary to seek out a special seat of the will, or instruments by which its impulses were made effective. But the slightest inspection of dissected animals showed that their limbs were formed of a curious and complex collection of cordage, and communications of various kinds, running along and connecting the bones of the skeleton. These cords and communications we now distinguish as muscles, nerves, veins, arteries, &c.; and among these, we assign to the muscles the office of moving the parts to which they are attached, as cords move the parts of a machine. Though this action of the muscles on the bones may now appear very obvious, it was, probably, not at first discerned. It is observed that Homer, who describes the wounds which are inflicted in his battles with so much apparent anatomical precision, nowhere employs the word muscle. And even Hippocrates of Cos, the most celebrated physician of antiquity, is held to have had no distinct conception of such an organ. . . . Nor do we find much more distinctness on this subject even in Aristotle, a generation or two later. . . . He is held to have really had the merit of discovering the nerves of sensation, which he calls the ‘canals of the brain’ . . . , but the analysis of the mechanism of motion is left by him almost untouched. . . . His immediate predecessors were far from remedying the deficiencies of his doctrines. Those who professed to study physiology and medicine were, for the most part, studious only to frame some general system of abstract principles, which might give an appearance of connexion and profundity to their tenets. In this manner the successors of Hippocrates became a medical school, of great note in its day, designated as the Dogmatic school; in opposition to which arose an Empiric sect, who professed to deduce their modes of cure, not from theoretical dogmas, but from experience. These rival parties prevailed principally in Asia Minor and Egypt, during the time of Alexander's successors,—a period rich in names, but poor in discoveries; and we find no clear evidence of any decided advance in anatomy. . . . The victories of Lucullus and Pompeius, in Greece and Asia, made the Romans acquainted with the Greek philosophy; and the consequence soon was, that

shoals of philosophers, rhetoricians, poets, and physicians streamed from Greece, Asia Minor, and Egypt, to Rome and Italy, to traffic their knowledge and their arts for Roman wealth. Among these was one person whose name makes a great figure in the history of medicine, Asclepiades of Prusa in Bithynia. This man appears to have been a quack, with the usual endowments of his class. . . . He would not, on such accounts, deserve a place in the history of science, but that he became the founder of a new school, the Methodic, which professed to hold itself separate both from the Dogmatics and the Empirics. I have noticed these schools of medicine, because, though I am not able to state distinctly their respective merits in the cultivation of anatomy, a great progress in that science was undoubtedly made during their domination, of which the praise must, I conceive, be in some way divided among them. The amount of this progress we are able to estimate, when we come to the works of Galen, who flourished under the Antonines, and died about A. D. 203. The following passage from his works will show that this progress in knowledge was not made without the usual condition of laborious and careful experiment, while it implies the curious fact of such experiment being conducted by means of family tradition and instruction, so as to give rise to a caste of dissectors. In the opening of his Second Book on Anatomical Manipulations, he speaks thus of his predecessors: ‘I do not blame the ancients, who did not write books on anatomical manipulation; though I praise Marinus, who did. For it was superfluous for them to compose such records for themselves or others, while they were, from their childhood, exercised by their parents in dissecting, just as familiarly as in writing and reading; so that there was no more fear of their forgetting their anatomy, than of forgetting their alphabet. But when grown men, as well as children, were taught, this thorough discipline fell off; and, the art being carried out of the family of the Asclepiads, and declining by repeated transmission, books became necessary for the student.’ That the general structure of the animal frame, as composed of bones and muscles, was known with great accuracy before the time of Galen, is manifest from the nature of the mistakes and deficiencies of his predecessors which he finds it necessary to notice. . . . Galen was from the first highly esteemed as an anatomist. He was originally of Pergamus; and after receiving the instructions of many medical and philosophical professors, and especially of those of Alexandria, which was then the metropolis of the learned and scientific world, he came to Rome, where his reputation was soon so great as to excite the envy and hatred of the Roman physicians. The emperors Marcus Aurelius and Lucius Verus would have retained him near them; but he preferred pursuing his travels, directed principally by curiosity. When he died, he left behind him numerous works, all of them of great value for the light they throw on the history of anatomy and medicine; and these were for a long period the storehouse of all the most important anatomical knowledge which the world possessed. In the time of intellectual barrenness and servility, among the Arabians and the Europeans of the dark ages, the writings of Galen had almost unquestioned authority; and it was only by an

uncommon effort of independent thinking that Abdollatif ventured to assert, that even Galen's assertions must give way to the evidence of the senses. In more modern times, when Vesalius, in the sixteenth century, accused Galen of mistakes, he drew upon himself the hostility of the whole body of physicians."—W. Whewell, *History of the Inductive Sciences*, bk. 17, ch. 1, sect. 1 (v. 2).—"Galen strongly denied being attached to any of the sects of his day, and regarded as slaves those who took the title of Hippocratists, Praxagoreans, or Herophilists, and so on. Nevertheless his predilection in favor of the Hippocratic writings is well marked, for he explains, comments upon them, and amplifies them at length, refutes the objections of their adversaries and gives them the highest place. He says, 'No one before me has given the true method of treating disease; Hippocrates, I confess, has heretofore shown the path, but as he was the first to enter it he was not able to go as far as he wished. . . . He has not made all the necessary distinction, and is often obscure, as is usually the case with ancients when they attempt to be concise. He says very little of complicated diseases; in a word, he has only sketched what another was to complete; he has opened the path, but has left it for a successor to enlarge and make it plain.' This implies how he regarded himself as the successor of Hippocrates, and how little weight he attached to the labors of others. He held that there were three sorts of principles in man—spirits, humors, and solids. Throughout his metaphysical speculations Galen reproduces and amplifies the Hippocratic dogmatism. Between perfect health and disease there were, he thought, eight kinds of temperaments or imperfect mixtures compatible with the exercise of the functions of life. With Plato and Aristotle he thought the human soul to be composed of three faculties or parts, the vegetative, residing in the liver; the irascible, having its seat in the heart, and the rational, which resided in the brain. He divided diseases of the solids of the body into what he called distempers; he distinguished between the continued and intermittent fevers, regarding the quotidian as being caused by phlegm, the tertian as due to yellow bile, and the quartan due to atrabile. In the doctrine of coction, crises, and critical days, he agreed with Hippocrates; with him he also agreed in the positive statement that diseases are cured by their contraries."—Roswell Park, *Lects. on the Hist. of Medicine* (in MS.).

7-11th Centuries.—Medical Art of the Arabs.—"It probably sounds paradoxical (though it is not) to affirm that, throughout the first half of the Middle Ages, science made its home chiefly with the Semites and Græco-Romans (its founders), while, in opposition to the original relations, faith and its outgrowths alone were fostered by the Germans. In the sterile wastes of the desert the Arabians constructed a verdant oasis of science, in lands to-day the home once more of absolute or partial barbarism. A genuine meteor of civilization were these Arabians. . . . The Arabians built their medicine upon the principles and theories of the Greeks (whose medical writings were studied and copied mostly in translations only), and especially upon those of Galen, in such a way, that, on the whole, they added to it very little matter of their own, save numerous subtle definitions and amplifications. But Indian

medical views and works, as well as those of other earlier Asiatic peoples (e. g., the Chaldeans), exercised demonstrably, but in a subordinate degree, an influence upon Arabian medicine. The Arabians interwove too into their medical views various philosophical theorems, especially those of Aristotle, already corrupted by the Alexandrians and still further falsified by themselves with portions of the Neo-Platonic philosophy; and finally they added thereto a goodly share of the absurdities of astrology and alchemy. Indeed it is nowadays considered proven that they even made use of ancient Egyptian medical works, e. g., the papyrus Ebers. Thus the medicine of the Arabians, like Grecian medicine its parent, did not greatly surpass the grade of development of mere medical philosophy, and, so far as regards its intrinsic worth, it stands entirely upon Grecian foundations. . . . Yet they constantly advanced novelties in the sciences subsidiary to medicine, materia medica and pharmacy, from the latter of which chemistry, pharmacies and the profession of the apothecary were developed. . . . The mode of transfer of Greek medicine to the Arabians was probably as follows: The inhabitants of the neighboring parts of Asia, including both the Persians and Arabians, as the result of multifarious business connexions with Alexandria, came, even at an early date, in contact with Grecian science, and by degrees a permanent alliance was formed with it. In a more evident way the same result was accomplished by the Jewish schools in Asia, the great majority of which owed their foundation to Alexandria. Such schools were established at Nisibis, at Nahardea in Mesopotamia, at Mathæ-Mechasja on the Euphrates, at Sura, &c., and their period of prime falls in the 5th century. The influence of the Nestorian universities was especially favorable and permanent, particularly the school under Greek management founded at Edessa, in Mesopotamia, where Stephen of Edessa, the reputed father of Alexander of Tralles, taught (A. D. 530). . . . Still more influential in the transfer of Grecian science to the Arabians was the banishment of the 'heathen' philosophers of the last so-called Platonic school of Athens, by the 'Christian' despot Justinian I. (529). These philosophers were well received at the court of the infidel Chosroës, and in return manifested their gratitude by the propagation of Grecian science. . . . From all these causes it resulted that, even as early as the time of Mohammed (571-632), physicians educated in the Grecian doctrines lived among the Arabians. . . . Arabian culture (and of course Arabian medicine) reached its zenith at the period of the greatest power and greatest wealth of the Caliphate in the 9th and 10th centuries. At that time intellectual life was rooted in the schools of the mosques, i. e., the Arabian universities, which the great caliphs were zealous in founding. Such Arabian universities arose and existed in the progress of time (even as late as the 14th century) at Bagdad, Bassora, Cufa, Samarcand, Ispahan, Damascus, Bokhara, Firuzabad and Khurdistan, and under the scholastic Fatimides (909-1171) in Alexandria. Under the Ommiyades (755-1031), after the settlement of the Arabians in Spain in the beginning of the 8th century, were founded the famous universities of Cordova (possessing in the 10th century a library of 250,000 volumes), Seville, Toledo, Almeria and Murcia under the

three caliphs named Abderrahman and Al Hakem. Less important were the universities of Granada and Valencia, and least important of all, those founded by the Edrisi dynasty (800-986) in the provinces of Tunis, Fez and Morocco. In spite of all these institutions the Arabians possessed no talent for productive research; still less, like the ancient Semites, did they create any arts, save poesy and architecture. Their whole civilization bore the stamp of its foreign origin. . . . 'The Prince of Physicians' (el Sheik el Reis — he was also a poet) was the title given by the Arabians to Abu Ali el Hossein ebn Abdallah ebn Sina (Ebn Sina, Avicenna), 980-1037, in recognition of his great erudition, of which the chief evidences are stored in his 'Canon.' This work, though it contains substantially merely the conclusions of the Greeks, was the text-book and law of the healing art, even as late as the first century of modern times."—J. H. Baas, *Outlines of the History of Medicine*, pp. 216-229.—"The Saracens commenced the application of chemistry, both to the theory and practice of medicine, in the explanation of the functions of the human body and in the cure of its diseases. Nor was their surgery behind their medicine. Albucasis, of Cordova, shrinks not from the performance of the most formidable operations in his own and in the obstetrical art; the actual cautery and the knife are used without hesitation. He has left us ample descriptions of the surgical instruments then employed; and from him we learn that, in operations on females in which considerations of delicacy intervened, the services of properly instructed women were secured. How different was all this from the state of things in Europe: the Christian peasant, fever-stricken or overtaken by accident, hied to the nearest saint-shrine and expected a miracle; the Spanish Moor relied on the prescription or lancet of his physician, or the bandage and knife of his surgeon."—J. W. Draper, *Hist. of the Intellectual Development of Europe*, v. 2, ch. 2.—"The accession of Gehwer to the throne of Mussulman Spain, early in the eleventh century, was marked by the promulgation of regulations so judiciously planned, touching medical science and its practice, that he deserves the highest commendation for the unwavering zeal with which he supervised this important branch of learning taught in the metropolis. Those evils which the provinces had suffered previous to his rule, through the practice of medicine by debased empirics, were quickly removed by this sagacious Caliph. Upon the publication of his rescripts, such medical charlatans or ambulatory physicians as boldly announced themselves to be medici, without a knowledge of the science, were ignominiously expelled from the provincial towns. He decreed that a college of skilled surgeons should be forthwith organized, for the single specified function of rigidly examining into the assumed qualifications of applicants for licenses to exercise the curative art in municipal or rural departments, or sought professional employment as physicians in the numerous hospitals upon the Mahometan domains."—G. F. Fort, *Medical Economy during the Middle Ages*, ch. 17.—"Anatomy and physiology, far from making any conquests under Arabian rule, followed on the contrary a retrograde movement. As those physicians never devoted themselves to dissections, they were under the necessity of conforming entirely to the accounts of Galen.

. . . Pathology was enriched in the Arabian writings by some new observations. . . . The physicians of this nation were the first . . . who began to distinguish eruptive fevers by the exterior characters of the eruption, while the Greeks paid but little attention to these signs. Therapeutics made also some interesting acquisitions under the Arab physicians. It owes to them, among other things, the introduction of mild purgatives, such as cassia, senna, and manna, which replaced advantageously, in many cases, the drastics employed by the ancients; it is indebted to them, also, for several chemical and pharmaceutical improvements, as the confection of syrups, tinctures, and distilled waters, which are very frequently and usefully employed. Finally, external therapeutics, or surgery, received some minor additions, such as pomades, plasters, and new ointments; but these additions were very far from compensating for the considerable losses which it suffered by their abandoning a multitude of operations in use among the Greeks."—P. V. Renouard, *History of Medicine*, p. 267.

12-17th Centuries.—Mediæval Medicine.—"The difficulties under which medical science laboured may be estimated from the fact that dissection was forbidden by the clergy of the Middle Ages, on the ground that it was impious to mutilate a form made in the image of God. We do not find this pious objection interfering with such mutilation when effected by means of the rack and the wheel and such other clerical rather than medical instruments. But in the reign of Philip the Second of Spain a famous Spanish doctor was actually condemned by the Inquisition to be burnt for having performed a surgical operation, and it was only by royal favour that he was permitted instead to expiate his crime by a pilgrimage to the Holy Land, where he died in poverty and exile. This being the attitude of the all-powerful Church towards medical progress, it is not surprising that medical science should have stagnated, and that Galen and Dioscorides were permitted to lay down the law in the sixteenth century as they had done since the beginning of the Christian era. Some light is thrown upon the state of things herefrom resulting by a work translated from the German in the year 1561, and entitled 'A most excellent and perfecte homish apothecarye or physicke booke, for all the grefes and diseases of the bodye.' The first chapter is 'Concerning the Head and his partes.' 'Galen sayth, the head is divided into foure partes: in the fore part hath blood the dominion; Colera in the ryght syde, Melancholy in the left syde, and Flegma beareth rule in the hindermost part. If the head doth ake so sore by reason of a runninge that he cannot snoffe hys nose, bath hys fete in a depe tub untill the knees and give him this medicine . . . which riseth into hys head and dryeth hys moyst braynes. Galen sayth He that hath payne in the hindermost part of hys head, the same must be let blood under the chynne, specially on the right side; also were it good ofte to burn the heyre of a man before hys nose. The braynes are greved many wayes; many there are whom the head whyrleth so sore that he thinketh the earth turneth upsyde doune: Cummin refraineth the whyrling, comforteth the braynes and maketh them to growe agayne: or he may take the braynes of a hogge, rost the

same upon a grede yron and cut slices thereof and lay to the greved parts.' This doctrine of like helping like was of universal application, and in medical works of the Middle Ages we meet constantly with such prescriptions as these:—'Take the right eye of a Frogg, lap it in a peece of russet cloth and hang it about the neck; it cureth the right eye if it bee enflamed or bleared. And if the left eye be greved, do the like by the left eye of the said Frogg.' Again—'The skin of a Raven's heel is good against the gout, but the right heel skin must be laid upon the right foot if that be gouty, and the left upon the left. . . . If you would have a man become bold or impudent let him carry about him the skin or eyes of a Lion or a Cock, and he will be fearless of his enemies, nay, he will be very terrible unto them. If you would have him talkative, give him tongues, and seek out those of water frogs and ducks and such creatures notorious for their continuall noise making.' On the same principle we find it prescribed as a cure for the quartane ague to lay the fourth book of Homer's Iliad under the patient's head; a remedy which had at least the negative merit of not being nauseous. . . . For weak eyes the patient is to 'take the tounge of a foxe, and hange the same about his necke, and so long it hangeth there his sight shall not wax feeble, as sayth Pliny.' The hanging of such amulets round the neck was very frequently prescribed, and the efficacy of them is a thing curiously well attested. Elias Ashmole in his diary for 1681 has entered the following—'I tooke this morning a good dose of elixir, and hung three spiders about my neck, and they drove my ague away. Deo gratias!' A baked toad hung in a silk bag about the neck was also held in high esteem, as was a toad, either alive or dried, laid upon the back of the neck as a means of stopping a bleeding at the nose; and again, 'either frogg or toade, the nails whereof have been clipped, hanged about one that is sick of quartane ague, riddeth away the disease forever, as sayth Pliny.' We have even a striking instance of the benefit derived from an amulet by a horse, who could not be suspected of having helped forward the cure by the strength of his faith in it. 'The root of cut Malowe hanged about the neck driveth away blemishes of the eyen, whether it be in a man or a horse, as I Jerome of Brunswieg, have seene mysele. I have mysele done it to a blind horse that I bought for X crounes, and was sold again of XL crounes—a trick distinctly worth knowing.'—E. A. King, *Medieval Medicine* (*Nineteenth Century*, July 1893).—'If we survey the social and political state of Europe from the twelfth to the sixteenth century, in its relation to the development of medical art, our attention is at once arrested by Italy, which at this period was far ahead of the rest of the world. Taking the number of universities as an index of civilization, we find that, before the year 1500, there were sixteen in Italy,—while in France there were but six; in Germany, including Hungary, Bohemia, Bavaria, &c., there were eight; and in Britain, two; making sixteen in all,—the exact number which existed in Italy alone. The Italian Universities were, likewise, no less superior in number than in fame to those of the north. . . . In many of the Italian republics, during the twelfth, thirteenth, and fourteenth centuries, the power was chiefly in the hands of the middle

classes; and it is probable that the physicians occupied a high and influential position among them. Galvanis Flamma describes Milan in 1288, as having a population of 200,000, among whom were 600 notaries, 200 physicians, 80 schoolmasters, and fifty transcribers of manuscripts or books. Milan was about this period at a pitch of glory which has not been equalled since the Greek republics.'—J. R. Russell, *History and Heroes of the Art of Medicine*, ch. 5.—'Three schools, as early as 1158, had a reputation which extended throughout the whole of Europe: Paris for theological studies, Bologna for Roman or civil law, and Salerno as the chief medical school of the west.'—G. F. Fort, *Medical Economy during the Middle Ages*, ch. 24.—'In 1215 Pope Innocent III. fulminated an anathema specially directed against surgery, by ordaining, that as the church abhorred all cruel or sanguinary practices, no priest should be permitted to follow surgery, or to perform any operations in which either instruments of steel or fire were employed; and that they should refuse their benediction to all those who professed and pursued it. . . . The saints have proved sad enemies to the doctors. Miraculous cures are attested by monks, abbots, bishops, popes, and consecrated saints. . . . Pilgrimages and visits to holy shrines have usurped the place of medicine, and, as in many cases at our own watering places, by air and exercise, have unquestionably effected what the employment of regular professional aid had been unable to accomplish. St. Dominic, St. Bellinus, and St. Vitus have been greatly renowned in the cure of diseases in general; the latter particularly, who takes both poisons and madness of all kinds under his special protection. Melton says 'the saints of the Romanists have usurped the place of the zodiacal constellations in their governance of the parts of man's body, and that "for every limbe they have a saint." Thus St. Otilia keepes the head instead of Aries; St. Blasius is appointed to governe the necke instead of Taurus; St. Lawrence keepes the backe and shoulders instead of Gemini, Cancer, and Leo; St. Erasmus rules the belly with the entrayles, in the place of Libra and Scorpius; in the stead of Sagittarius, Capricornus, Aquarius, and Pisces, the holy church of Rome hath elected St. Burgarde, St. Rochus, St. Quirinus, St. John, and many others, which governe the thighes, feet, shinnes, and knees.' This supposed influence of the Romish saints is more minutely exhibited, according to Hone, in two very old prints, from engravings on wood, in the collection of the British Museum. Right hand: the top joint of the thumb is dedicated to God, the second joint to the Virgin; the top joint of the fore-finger to St. Barnabas, the second joint to St. John, the third to St. Paul; the top joint of the second finger to Simon Cleophas, the second joint to Tathideo, the third to Joseph; the top joint of the third finger to Zaccheus, the second to Stephen, the third to the evangelist Luke; the top joint of the little finger to Leatus, the second to Mark, the third to Nicodemus. Left hand: the top joint of the thumb is dedicated to Christ, the second joint to the Virgin; the top joint of the fore-finger to St. James, the second to St. John the Evangelist, the third to St. Peter; the first joint of the second finger to St. Simon, the second joint to St. Matthew, the third to St. James the Great; the top joint of the third

finger to St. Jude, the second joint to St. Bartholomew, the third to St. Andrew; the top joint of the little finger to St. Matthias, the second to St. Thomas, the third joint to St. Philip. . . . "The credulity of mankind has never been more strongly displayed than in the general belief afforded to the authenticity of remarkable cures of diseases said to have been effected by the imposition of royal hands. The practice seems to have originated in an opinion that there is something sacred or divine attaching either to the sovereign or his functions. . . . The practice appears to be one of English growth, commencing with Edward the Confessor, and descending only to foreign potentates who could show an alliance with the royal family of England. The kings of France, however, claimed the right to dispense the Gift of Healing, and it was certainly exercised by Philip the First; but the French historians say that he was deprived of the power on account of the irregularity of his life. Laurentius, first physician to Henry IV, of France, who is indignant at the attempt made to derive its origin from Edward the Confessor, asserts the power to have commenced with Clovis I, A. D. 481, and says that Louis I, A. D. 814, added to the ceremonial of touching, the sign of the cross. Mezeray also says, that St. Louis, through humility, first added the sign of the cross in touching for the king's evil. . . . If credit is to be given to a statement . . . by William of Malmesbury, with respect to Edward the Confessor, we must admit that in England, for a period of nearly 700 years, the practice of the royal touch was exercised in a greater or lesser degree, as it extended to the reign of Queen Anne. It must not however be supposed that historical documents are extant to prove a regular continuance of the practice during this time. No accounts whatever of the first four Norman kings attempting to cure the complaint are to be found. In the reign of William III, it was not on any occasion exercised. He manifested more sense than his predecessors, for he withheld from employing the royal touch for the cure of scrofula; and Rapiu says, that he was so persuaded he should do no injury to persons afflicted with this distemper by not touching them, that he refrained from it all his reign. Queen Elizabeth was also averse to the practice, yet she extensively performed it. It flourished most in the time of Charles II, particularly after his restoration, and a public register of cases was kept at Whitehall, the principal scene of its operation."—T. J. Pettigrew, *Superstitions connected with the History and Practice of Medicine and Surgery*, pp. 34-37, and 117-121.

16th Century.—Paracelsus.—Paracelsus, of whose many names this one stands alone in history to represent him, was an extraordinary person, born in Switzerland, in 1493. He died in 1541. "His character has been very variously estimated. The obstructives of his own age and many hasty judges since have pronounced him a quack. This is simply ridiculous. As a chemist, he is considered to have been the discoverer of zinc, and perhaps of bismuth. He was acquainted with hydrogen, muriatic, and sulphurous gases. He distinguished alum from the vitriols; remarking that the former contained an earth, and the latter metals. He perceived the part played by the atmosphere in combustion, and recognized the analogy between combustion and

respiration. He saw that in the organic system chemical processes are constantly going on. Thus, to him is due the fundamental idea from which have sprung the chemico-physiological researches of Liebig, Mulder, Boussingault, and others. By using in medicine, not crude vegetables, but their active principles, he opened the way to the discovery of the proximate principles of vegetables, organic alkalis, and the like. But perhaps the greatest service he rendered to chemistry, was by declaring it an essential part of medical education, and by showing that its true practical application lay not in gold-making, but in pharmacy and the industrial arts. In medicine he scouted the fearfully complex electuaries and mixtures of the Galenists and the Arabian polypharmacists, recommending simpler and more active preparations. He showed that the idea of poison is merely relative, and knew that poisons in suitable doses may be employed in medicine. He prescribed tin as a remedy for intestinal worms, mercury as an anti-syphilitic, and lead in the diseases of the skin. He also used preparations of antimony, arsenic, and iron. He employed sulphuric acid in the treatment of saturnine affections. The astonishing cures which he undoubtedly performed were, however, due not so much to his peculiar medicines, as to his eminent sagacity and insight. He showed the importance of a chemical examination of urine for the diagnosis of disease."—J. W. Slater, *Paracelsus (Imperial Dict. of Univ. Biog.)*.

16th Century.—The first English College of Physicians.—"The modern doctor dates only from the reign of Henry VIII., when the College of Physicians in England was founded as a body corporate by letters patent in the tenth year of the reign. This grant was in response to a petition from a few of the most notable members of the profession resident in London, who were perhaps moved by both a laudable zeal in the interests of science, and a compassion for the sufferings of the subjects of astrological and toxicological experiments. The charter thus obtained, though probably drafted by the promoters themselves, was found to be so inadequately worded and expressed, that it became necessary to obtain powers to amend it by Act of Parliament. Among these early members were Linacre, Wotton, and others, famous scholars beyond doubt, though possibly but indifferent practitioners. In fact, we are constantly struck throughout the early history of the profession by the frequent occurrence of names associated with almost every other branch of study than that strictly appertaining to the art of medicine. We have naturalists, magneticians, astronomers, mathematicians, logicians, and classical scholars, but scarce one who accomplished anything worthy to be recorded in the annals of medical science. Indeed it is difficult to conceive any useful object that could have been attained by the existence of the College as a professional licensing body, other than the pecuniary interests of the orthodox. . . . It is most significant as to the social degradation of the science of medicine, that most of the notorious empirics of the latter half of the sixteenth century were both highly recommended and strenuously supported in their resistance to the proctors of orthodoxy by some of the greatest names of the age. These self-deluded victims of quackery were not indeed adverse in theory to the pretensions of more

regular members of the profession. They would patronize the Court physicians, or, if favorites of the Crown, they might even submit to the Sovereign's recommendation in that behalf; but none the less their family doctor was in far too many cases some outlandish professor of occult arts, retained in learned state on the premises, who undertook the speedy, not to say miraculous, cure of his patron's particular disease by all the charms of the Cabala."—H. Hall, *The Early Medicus (Merry England; also in Eclectic Magazine, June, 1884)*.

16th Century.—The System of Van Helmont.—John Baptist van Helmont "was born at Brussels in the year 1577. . . . His parents were noble, and he was heir to great possessions. He pursued in Louvain the usual course of scholastic philosophy. . . . Becoming accidentally acquainted with the writings of Thomas à Kempis and John Tauler, he from that day adopted what goes by the vague term of mysticism. That is, thoroughly convinced that there was a spiritual world in intimate and eternal union with the spirit of man; that this spiritual world was revealed to that human soul which submitted to receive it in humility; and that the doctrines of Christianity were not to be looked upon as a system of philosophy, but as a rule of life, he resolved to follow them to the letter. The consequence of this resolution was, that he devoted himself to the art of medicine, in imitation of the Great Healer of the body as well as of the soul; and as the prejudices of his time and country made his rank and wealth an obstacle to his entrance into the medical profession, he made over all his property, with its honours, to his sister; that, 'laying aside every weight, he might run the race that was set before him.' He entered on his new studies with all the zeal of his character, and very soon had so completely mastered the writings of Hippocrates and Galen, as to excite the surprise of his contemporaries. But although styled a dreamer, and having a mind easily moved to belief in spiritual manifestation, he was not of a credulous nature in regard to matters belonging to the senses. And as he believed that Christianity was to be practised, and to be found true by the test of experiment, so he believed that the doctrines of Hippocrates and of Galen were to be subjected to a similar trial. An opportunity soon occurred to himself. He caught the itch and turned to Galen for its cure. Galen attributes this disease to overheated bile and sour phlegm, and says that it is to be cured by purgatives. Van Helmont, with the implicit faith of his simple nature, procured the prescribed medicines, and took them as ordered by Galen. Alas, no cure of the itch followed, but great exhaustion of his whole body: so Galen was not to be trusted. This was a serious discovery; for if he could not trust Galen, by whom the whole medical world swore, to whom was he to turn? . . . Van Helmont resolved to work out for himself a solution of the great problem to which he had devoted his life. Van Helmont's system may be called spiritual vitalism. The primary cause of all organization was Archæus. By Archæus, a man is much more nearly allied, he says, to the world of spirits and the Father of spirits than to the external world. Archæus is the creative spirit which, working upon the raw material of water or fluidity, by means of 'a ferment' ex-

cites all the endless actions which result in the growth and nourishment of the body. Thus, digestion is neither a chemical nor a mechanical operation; nor is it, as was then supposed, the effects of heat, for it is arrested instead of aided by fever, and goes on in perfection in fishes and cold-blooded animals; but, on the command of Archæus, an acid is generated in the stomach, which dissolves the food. This is the first digestion. The second consists in the neutralization of this acid by the bile out of the gall bladder. The third takes place in the vessels of the mesentery. The fourth goes on in the heart, by the action of the vital spirits. The fifth consists in the conversion of the arterial blood into vital spirits, chiefly in the brain. The sixth consists of the preparation of nourishment in the laboratory of each organ, during which operation Archæus, present everywhere, is itself regenerated, and superintends the momentary regeneration of the whole frame. If for digestion we substitute the word nutrition, we cannot fail to be struck by the near approach to accuracy in this description of the succession of processes by which it is brought about. Van Helmont's pathology was quite consistent with his physiology. As life and all vital action depended upon Archæus, so the perturbation of Archæus gave rise to fevers, and derangements of the blood and secretions. Thus, gout was a disease not confined to the part in which it showed itself, but was the result of Archæus. It will be seen that by this theory the entire system of Galen was unsuited. There is no place for the elements and the humours."—J. R. Russell, *History and Heroes of the Art of Medicine, ch. 8*.

17th Century.—Harvey and the Discovery of the Circulation of the Blood.—William Harvey, "physician and discoverer of the circulation of the blood, was born at Folkestone, Kent, 1 April 1578, in a house which was in later times the posthouse of the town and which still belongs to Caius College, Cambridge, to which Harvey bequeathed it. His father was Thomas Harvey, a Kentish yeoman. . . . In 1588 William was sent to the King's School, Canterbury. Thence he went to Cambridge, where he was admitted a pensioner in Gonville and Caius College, 31 May 1593. . . . He graduated B. A. 1597, and, determining to study medicine, travelled through France and Germany to Padua, the most famous school of physic of that time. . . . He returned to England, graduated M. D. at Cambridge 1602, and soon after took a house in the parish of St. Martin-extra-Ludgate in London. . . . On 4 Aug. 1615 he was elected Lumleian lecturer at the College of Physicians, . . . and in the following April, on the 16th, 17th, and 18th, he delivered at the college in Knightbridge Street, near St. Paul's Cathedral, the lectures in which he made the first public statement of his thoughts on the circulation of the blood. The notes from which he delivered these lectures exist in their original manuscript and binding at the British Museum. . . . In 1628, twelve years after his first statement of it in his lectures, he published at Frankfurt, through William Fitzer, his discovery of the circulation of the blood. The book is a small quarto, entitled 'Exercitatio Anatomica de Motu Cordis et Sanguinis in Animalibus,' and contains seventy-two pages and two plates of diagrams. The printers evidently had difficulty in reading the author's handwriting,

and there are many misprints. . . . He begins by modestly stating how the difficulties of the subject had gradually become clear to him, and by expressing with a quotation from the 'Andria' of Terence, the hope that his discovery might help others to still further knowledge. He then describes the motions of arteries, of the ventricles of the heart, and of its auricles, as seen in living animals, and the use of these movements. He shows that the blood coming into the right auricle from the vena cava, and passing then to the right ventricle, is pumped out to the lungs through the pulmonary artery, passes through the parenchyma of the lungs, and comes thence by the pulmonary veins to the left ventricle. This same blood, he shows, is then pumped out to the body. It is carried out by arteries and comes back by veins, performing a complete circulation. He shows that, in a live snake, when the great veins are tied some way from the heart, the piece of vein between the ligature and the heart is empty, and further, that blood coming from the heart is checked in an artery by a ligature, so that there is blood between the heart and the ligature and no blood beyond the ligature. He then shows how the blood comes back to the heart by the veins, and demonstrates their valves. These had before been described by Hieronymus Fabricius of Aquapendente, but before Harvey no exact explanation of their function had been given. He gives diagrams showing the results of obstructing the veins, and that these valves may thus be seen to prevent the flow of blood in the veins in any direction except towards the heart. After a summary of a few lines in the fourteenth chapter he further illustrates the perpetual circuit of the blood, and points out how morbid materials are carried from the heart all over the body. The last chapter gives a masterly account of the structure of the heart in men and animals, and points out that the right ventricle is thinner than the left because it has only to send the blood a short way into the lungs, while the left ventricle has to pump it all over the body. This great and original book at once attracted attention and excited discussion. In the College of Physicians of London, where Harvey had mentioned the discovery in his lectures every year since 1616, the Exercitatio received all the honour it deserved. On the continent of Europe it was received with less favour, but neither in England nor abroad did any one suggest that the discovery was to be found in other writers. . . . Before his death the great discovery of Harvey was accepted throughout the medical world. The modern controversy . . . as to whether the discovery was taken from some previous author is sufficiently refuted by the opinion of the opponents of his views in his own time, who agreed in denouncing the doctrine as new; by the laborious method of gradual demonstration obvious in his book and lectures; and, lastly, by the complete absence of lucid demonstration of the action of the heart and course of the blood in Cæsalpinus, Servetus, and all others who have been suggested as possible originals of the discovery. It remains to this day the greatest of the discoveries of physiology, and its whole honour belongs to Harvey."—N. Moore, *Harvey (Dict. of National Biog., v. 25)*.

ALSO IN: R. Willis, *William Harvey: A history of the Discovery of the Circulation of the Blood*.

17th Century.—Discovery of the Lymphatic Circulation.—"The discovery of the lymphatic vessels and their purpose was scarcely less remarkable than that of the circulation of the blood. It has about it less of éclat, because it was not the work of one man, but was a matter of slow development. Herophilus and Erasistratus had seen white vessels connected with the lymph nodes in the mesentery of certain animals, and had supposed them to be arteries full of air. Galen disputed this, and believed the intestinal chyle to be carried by the veins of the mesentery into the liver. In 1563 Eustachius had described the thoracic duct in the horse; in 1622 Aselli, professor of anatomy at Milan, discovered the lacteal vessels in a dog which had been killed immediately after eating. Having pricked one of these by mistake, he saw a white fluid issue from it. Repeating the same experiment at other times he became certain that the white threads were vessels which drew the chyle from the intestines. He observed the valves with which they are supplied, and supposed these vessels to all meet in the pancreas and to be continued into the liver. In 1647 Pecquet, who was still a student at Montpellier, discovered the lymph reservoir, or receptaculum chyli, and the canal which leads from it, i. e., the thoracic duct, which he followed to its termination in the left subclavian vein. Having ligated it he saw it swell below, and empty itself above the ligature. He studied the courses of the lacteals, and convinced himself that they all entered into the common reservoir. His discovery gave the last blow to the ancient theory, which attributed to the liver the function of blood making, and it confirmed the doctrine of Harvey, while, like it, it had been very strongly opposed. Strangely enough, Harvey in this instance united with his great opponent, Riola, in making common cause against the discovery of Pecquet and its significance. From that time the lymphatic vessels and glands became objects of common interest and were investigated by many anatomists, especially Bartholin, Ruysch, the Hunters, Hewson, and above all by Mascagni. He was the first to give a graphic description of the whole lymphatic apparatus."—Roswell Park, *Lects. on the Hist. of Medicine (in MS.)*.

17th Century.—Descartes and the dawn of modern Physiological science.—"The essence of modern, as contrasted with ancient, physiological science appears to me to lie in its antagonism to animistic hypotheses and animistic phraseology. It offers physical explanations of vital phenomena, or frankly confesses that it has none to offer. And, so far as I know, the first person who gave expression to this modern view of physiology, who was bold enough to enunciate the proposition that vital phenomena, like all the other phenomena of the physical world, are, in ultimate analysis, resolvable into matter and motion was René Descartes. The fifty-four years of life of this most original and powerful thinker are widely overlapped, on both sides, by the eighty of Harvey, who survived his younger contemporary by seven years, and takes pleasure in acknowledging the French philosopher's appreciation of his great discovery. In fact, Descartes accepted the doctrine of the circulation as propounded by 'Harvæus medicus d'Angleterre,' and gave a full account of it in his first work, the famous 'Discours de la Méthode,' which was

published in 1637, only nine years after the exertion 'De motu cordis;' and, though differing from Harvey on some important points (in which it may be noted, in passing, Descartes was wrong and Harvey right), he always speaks of him with great respect. And so important does the subject seem to Descartes that he returns to it in the 'Traité des Passions' and in the 'Traité de l'Homme.' It is easy to see that Harvey's work must have had a peculiar significance for the subtle thinker, to whom we owe both the spiritualistic and the materialistic philosophies of modern times. It was in the very year of its publication, 1628, that Descartes withdrew into that life of solitary investigation and meditation of which his philosophy was the fruit. . . . Descartes uses 'thought' as the equivalent of our modern term 'consciousness.' Thought is the function of the soul, and its only function. Our natural heat and all the movements of the body, says he, do not depend on the soul. Death does not take place from any fault of the soul, but only because some of the principal parts of the body become corrupted. . . . Descartes' 'Treatise on Man' is a sketch of human physiology, in which a bold attempt is made to explain all the phenomena of life, except those of consciousness, by physical reasonings. To a mind turned in this direction, Harvey's exposition of the heart and vessels as a hydraulic mechanism must have been supremely welcome. Descartes was not a mere philosophical theorist, but a hardworking dissector and experimenter, and he held the strongest opinion respecting the practical value of the new conception which he was introducing. . . . 'It is true,' says he, 'that as medicine is now practised, it contains little that is very useful; but without any desire to depreciate, I am sure that there is no one, even among professional men, who will not declare that all we know is very little as compared with that which remains to be known; and that we might escape an infinity of diseases of the mind, no less than of the body, and even perhaps from the weakness of old age, if we had sufficient knowledge of their causes and of all the remedies with which nature has provided us.' So strongly impressed was Descartes with this, that he resolved to spend the rest of his life in trying to acquire such a knowledge of nature as would lead to the construction of a better medical doctrine. The anti-Cartesians found material for cheap ridicule in these aspirations of the philosopher; and it is almost needless to say that, in the thirteen years which elapsed between the publication of the 'Discours' and the death of Descartes, he did not contribute much to their realisation. But, for the next century, all progress in physiology took place along the lines which Descartes laid down. The greatest physiological and pathological work of the seventeenth century, Borelli's treatise 'De Motu Animalium,' is, to all intents and purposes, a development of Descartes' fundamental conception; and the same may be said of the physiology and pathology of Boerhaave, whose authority dominated in the medical world of the first half of the eighteenth century. With the origin of modern chemistry, and of electrical science, in the latter half of the eighteenth century, aids in the analysis of the phenomena of life, of which Descartes could not have dreamed, were offered to the physiologist. And the greater part of the gigantic progress which has been

made in the present century is a justification of the prevision of Descartes. For it consists, essentially, in a more and more complete resolution of the grosser organs of the living body into physico-chemical mechanisms. 'I shall try to explain our whole bodily machinery in such a way, that it will be no more necessary for us to suppose that the soul produces such movements as are not voluntary, than it is to think that there is in a clock a soul which causes it to show the hours.' These words of Descartes might be appropriately taken as a motto by the author of any modern treatise on physiology."—T. H. Huxley, *Connection of the Biological Sciences with Medicine (Science and Culture, etc., lect. 13).*

17th Century.—Introduction of Peruvian Bark.—"The aborigines of South America appear, except perhaps in one locality, to have been ignorant of the virtues of Peruvian bark. This sovereign remedy is absent in the wallets of itinerant doctors, whose materia medica has been handed down from father to son, since the days of the Incas. It is mentioned neither by the Ynca Garcilasso de la Vega, nor by Acosta, in their lists of Indian medicines. It seems probable, nevertheless, that the Indians were aware of the virtues of Peruvian bark in the neighborhood of Loxa, 230 miles south of Quito, where its use was first made known to Europeans; and the local name for the tree quina-quina, 'bark of bark,' indicates that it was believed to possess some special medicinal properties. . . . In 1638 the wife of Don Luis Geronimo Fernandez de Cabrera Bobadilla y Mendoza, fourth Count of Chinchon, and Viceroy of Peru, lay sick of an intermittent fever in the palace of Lima. . . . The news of her illness at Lima reached Don Francisco Lopez de Canizares, the Corregidor of Loxa, who had become acquainted with the febrifuge virtues of the bark. He sent a parcel of it to the Vice-Queen, and the new remedy, administered by her physician, Dr. Don Juan de Vega, effected a rapid and complete cure. . . . The Countess of Chinchon returned to Spain in the spring of 1640, bringing with her a supply of that precious quina bark which had worked so wonderful a cure upon herself, and the healing virtues of which she intended to distribute amongst the sick on her husband's estates. It thus gradually became known in Europe, and was most appropriately called Countess's powder (Pulvis Comitisse). By this name it was long known to druggists and in commerce. . . . In memory of the great service to humanity performed by the Countess of Chinchon, Linnaeus named the genus which yields Peruvian bark, *Chinchona*. Unfortunately the great botanist was misinformed as to the name of her whom he desired to honour. This is to be accounted for by his having received his knowledge of the Countess through a foreign and not a Spanish source. Thus misled, Linnaeus spelt the word *Cinchona* . . . and *Cinhona*, . . . omitting one or two letters. . . . After the cure of the Countess of Chinchon the Jesuits were the great promoters of the introduction of bark into Europe. In 1670 these fathers sent parcels of the powdered bark to Rome, whence it was distributed to members of the fraternity throughout Europe, by Cardinal de Lugo, and used for the cure of agues with great success. Hence the name of 'Jesuits' bark,' and 'Cardinal's bark;' and it was a ludicrous result of its patronage by the

Jesuits that its use should have been for a long time opposed by Protestants, and favoured by Roman Catholics. In 1679 Louis XIV. bought the secret of preparing quinquina from Sir Robert Talbor, an English doctor, for 2,000 louis-d'or, a large pension, and a title. From that time Peruvian bark seems to have been recognised as the most efficacious remedy for intermittent fevers."

—C. R. Markham, *Peruvian Bark*, ch. 2-4.

17th Century.—Sydenham, the Father of Rational Medicine.—"Sydenham [Thomas Sydenham, 1624-1689], the prince of practical physicians, whose character is as beautiful and as genuinely English as his name, did for his art what Locke did for the philosophy of mind—he made it, in the main, observational; he made knowledge a means, not an end. It would not be easy to over-estimate our obligations as a nation to these two men, in regard to all that is involved in the promotion of health of body and soundness of mind. They were among the first in their respective regions to show their faith in the inductive method, by their works. They both professed to be more of guides than critics, and were the interpreters and servants of Nature, not her diviners and tormentors." Of Sydenham, "we must remember in the midst of what a mass of errors and prejudices, of theories actively mischievous, he was placed, at a time when the mania of hypothesis was at its height, and when the practical part of his art was over-run and stultified by vile and silly nostrums. We must have all this in our mind, or we shall fail in estimating the amount of independent thought, of courage and uprightness, and of all that deserves to be called magnanimity and virtue, which was involved in his thinking and writing and acting as he did. 'The improvement of physic [he wrote] in my opinion, depends, 1st, Upon collecting as genuine and natural a description or history of diseases as can be procured; and, 2d, Upon laying down a fixed and complete method of cure. With regard to the history of diseases, whoever considers the undertaking deliberately will perceive that a few such particulars must be attended to: 1st, All diseases should be described as objects of natural history, with the same exactness as is done by botanists, for there are many diseases that come under the same genus, and bear the same name, that, being specifically different, require a different treatment. The word *carduus* or thistle, is applied to several herbs, and yet a botanist would be inaccurate and imperfect who would content himself with a generic description. Furthermore, when this distribution of distempers into genera has been attempted, it has been to fit into some hypothesis, and hence this distribution is made to suit the bent of the author rather than the real nature of the disorder. How much this has obstructed the improvement of physic any man may know. In writing, therefore, such a natural history of diseases, every merely philosophical hypothesis should be set aside, and the manifest and natural phenomena, however minute, should be noted with the utmost exactness. The usefulness of this procedure cannot be easily over-rated, as compared with the subtle inquiries and trifling notions of modern writers. . . . If only one person in every age had accurately described, and consistently cured, but a single disease, and made known his secret, physic would not be where it now is; but we have long since forsook

the ancient method of cure, founded upon the knowledge of conjunct causes, inasmuch that the art, as at this day practised, is rather the art of talking about diseases than of curing them.' . . . His friend Locke could not have stated the case more clearly or sensibly. It is this doctrine of 'conjunct causes,' this necessity for watching the action of compound and often opposing forces, and the having to do all this not in a machine, of which if you have seen one, you have seen all, but where each organism has often much that is different from, as well as common with, all others. . . . It is this which takes medicine out of the category of exact sciences, and puts it into that which includes politics, ethics, navigation and practical engineering, in all of which, though there are principles, and those principles quite within the scope of human reason, yet the application of these principles must, in the main, be left to each man's skill, presence of mind, and judgment, as to the case in hand. . . . It would not be easy to over-estimate the permanent impression for good, which the writings, the character, and the practice of Sydenham have made on the art of healing in England, and on the Continent generally. In the writings of Boerhaave, Stahl, Gaubius, Pinel, Bordeu, Haller, and many others, he is spoken of as the father of rational medicine; as the first man who applied to his profession the Baconian principles of interpreting and serving nature, and who never forgot the master's rule, 'Non fingendum aut excogitandum, sed inveniendum, quid natura aut faciat aut ferat.' . . . Like all men of a large practical nature, he could not have been what he was, or done what he did, without possessing and often exercising the true philosophizing faculty. He was a man of the same quality of mind in this respect with Watt, Franklin, and John Hunter, in whom speculation was not the less genuine that it was with them a means rather than an end."—Dr. John Brown, *Locke and Sydenham and other Papers*, pp. 54-90.

17th Century.—Closing period of the Humoral Pathology.—The Doctrines of Hoffmann, Stahl and Boerhaave.—"If we take a general survey of medical opinions, we shall find that they are all either subordinate to, or coincident with, two grand theories. The one of these considers the solid constituents of the animal economy as the elementary vehicle of life, and consequently places in them the primary seat of disease. The other, on the contrary, sees in the humors the original realization of vitality; and these, as they determine the existence and quality of the secondary parts, or solids, contain, therefore, within themselves, the ultimate principle of the morbid affection. By relation to these theories, the history of medicine is divided into three great periods. During the first, the two theories, still crude, are not yet disentangled from each other; this period extends from the origin of medicine to the time of Galen. The second comprehends the reign of Humoral Pathology—the interval between Galen and Fred-eric Hoffmann. In the last the doctrine of the Living Solid is predominant; from Hoffmann it reaches to the present day. . . . By Galen, Humorism was first formally expounded, and reduced to a regular code of doctrine. Four elementary fluids, their relations and changes,

sufficed to explain the varieties of natural temperament, and the causes of disease; while the genius, eloquence, and unbounded learning with which he illustrated this theory, mainly bestowed on it the ascendancy, which, without essential alteration, it retained from the conclusion of the second to the beginning of the eighteenth century. Galenism and Humorism are, in fact, convertible expressions. Not that this hypothesis during that long interval encountered no opposition. It met, certainly, with some partial contradiction among the Greek and Arabian physicians. After the restoration of learning Fernelius and Brissot, Argenterius and Joubert, attacked it in different ways. . . . Until the epoch we have stated, the prevalence of the Humoral Pathology was, however, all but universal. Nor was this doctrine merely an erroneous speculation; it exerted the most decisive, the most pernicious influence on practice. — The various diseased affections were denominated in accommodation to the theory. In place of saying that a malady affected the liver, the peritoneum, or the organs of circulation, its seat was assumed in the blood, the bile, or the lymph. The morbid causes acted exclusively on the fluids; the food digested in the stomach, and converted into chyle, determined the qualities of the blood; and poisons operated through the corruption they thus effected in the vital humors. All symptoms were interpreted in blind subservience to the hypothesis; and those only attracted attention which the hypothesis seemed calculated to explain. The color and consistence of the blood, mucus, feces, urine, and pus, were carefully studied. On the other hand the phenomena of the solids, if not wholly overlooked, as mere accidents, were slumped together under some collective name, and attached to the theory through a subsidiary hypothesis. By supposed changes in the humors, they explained the association and consecution of symptoms. Under the terms, crudity, coction, and evacuation, were designated the three principal periods of diseases, as dependent on an alteration of the morbid matter. In the first, this matter, in all its deleterious energy, had not yet undergone any change on the part of the organs; it was still crude. In the second, nature gradually resumed the ascendant; coction took place. In the third, the peccant matter, now rendered mobile, was evacuated by urine, perspiration, dejection, &c., and æquilibrium restored. When no critical discharge was apparent, the morbid matter, it was supposed, had, after a suitable elaboration, been assimilated to the humors, and its deleterious character neutralized. Coction might be perfect or imperfect; and the transformation of one disease into another was lightly solved by the transport or emigration of the noxious humor. . . . Examinations of the dead body confirmed them in their notions. In the redness and tumefaction of inflamed parts, they beheld only a congestion of blood; and in dropsies, merely the dissolution of that fluid; tubercles were simply coagula of lymph; and other organic alterations, in general, naught but obstructions from an increased viscosity of the humors. The plan of cure was in unison with the rest of the hypothesis. Venesection was copiously employed to renew the blood, to attenuate its consistency, or to remove a part of the morbid matter with which it was impregnated; and cathartics, sudorifics, diuretics, were largely

administered, with a similar intent. In a word, as plethora or cacochymia were the two great causes of disease, their whole therapeutic was directed to change the quantity or quality of the fluids. Nor was this murderous treatment limited to the actual period of disease. Seven or eight annual bleedings, and as many purgations — such was the common regimen the theory prescribed to insure continuance of health; and the twofold depletion, still customary, at spring and fall, among the peasantry of many European countries, is a remnant of the once universal practice. In Spain, every village has even now its Sangrador, whose only cast of surgery is blood-letting; and he is rarely idle. The medical treatment of Lewis XIII. may be quoted as a specimen of the humoral therapeutic. Within a single year this theory inflicted on that unfortunate monarch above a hundred cathartics, and more than forty bleedings. — During the fifteen centuries of Humorism, how many millions of lives did medicine cost mankind? The establishment of a system founded on the correcter doctrine of Solidism, and purified from the crudities of the Iatro-mathematical and Iatro-chemical hypotheses was reserved for three celebrated physicians toward the commencement of the eighteenth century — Frederic Hoffmann — George Ernest Stahl — and Hermann Boerhaave. The first and second of this triumvirate were born in the same year, were both pupils of Wedelius of Jena, and both professors, and rival professors, in the University of Halle; the third was eight years younger than his contemporaries, and long an ornament of the University of Leyden. — Sir W. Hamilton, *Discussions on Philosophy and Literature*, pp. 246-249. — “The great and permanent merits of Hoffmann [1660-1742] as a medical philosopher, undoubtedly consisted in his having perceived and pointed out more clearly than any of his predecessors, the extensive and powerful influence of the Nervous System, in modifying and regulating at least, if not in producing, all the phenomena of the organic as well as of the animal functions in the human economy, and more particularly in his application of this doctrine to the explanation of diseases. . . . It was reserved for Hoffmann . . . to take a comprehensive view of the Nervous System, not only as the organ of sense and motion, but also as the common centre by which all the different parts of the animal economy are connected together, and through which they mutually influence each other. He was, accordingly, led to regard all those alterations in the structure and functions of this economy, which constitute the state of disease, as having their primary origin in affections of the nervous system, and as depending, therefore, upon a deranged state of the imperceptible and contractile motions in the solids, rather than upon changes induced in the chemical composition of the fluid parts of the body.” — J. Thomson, *Account of the Life, Lectures and Writings of William Cullen*, pp. 195-196. — “George Ernest Stahl (1660-1734), chemist, was professor of medicine at Halle (1694) and physician to the King of Prussia (1716). He opposed materialism, and substituted ‘animism,’ explaining the symptoms of disease as efforts of the soul to get rid of morbid influences. Stahl’s ‘anima’ corresponds to Sydenham’s ‘nature’ in a measure, and has some relationship to the Archeus of Paracelsus and Van Helmont. Stahl

was the author of the 'phlogiston' theory in chemistry, which in its time has had important influence on medicine. Phlogiston was a substance which he supposed to exist in all combustible matters, and the escape of this principle from any compound was held to account for the phenomenon of fire. According to Stahl, diseases arise from the direct action of noxious powers upon the body; and from the reaction of the system itself endeavouring to oppose and counteract the effects of the noxious powers, and so preserve and repair itself. He did not consider diseases, therefore, pernicious in themselves, though he admitted that they might become so from mistakes made by the soul in the choice, or proportion of the motions excited to remove them, or the time when these efforts are made. Death, according to this theory, is due to the indolence of the soul, leading it to desist from its vital motions, and refusing to continue longer the struggle against the derangements of the body. Here we have the 'expectant treatment' so much in vogue with many medical men. 'Trusting to the constant attention and wisdom of nature,' they administered inert medicines as placebos, while they left to nature the cure of the disease. But they neglected the use of invaluable remedies such as opium and Peruvian bark, for which error it must be admitted they atoned by discountenancing bleeding, vomiting, etc. Stahl's remedies were chiefly of the class known as 'Antiphlogistic,' or anti-febrile." — E. Berdoe, *The Origin and Growth of the Healing Art*, bk. 5, ch. 7. — "The influence of Boerhaave [1668-1738] was immense while it lasted — it was world-wide; but it was like a ripple on the ocean — it had no depth. He knew everything and did everything better than any of his contemporaries, except those who made one thing, not everything, their study. He was familiar with the researches of the great anatomists, of the chemists, of the botanists, of historians, of men of learning, but he was not a great anatomist, chemist, or historian. As to his practice, we cannot pronounce a very decided opinion, except that he was a man of judgment and independence. Here his reputation made his success: a prescription of his would no doubt effect many a cure, although the patient had taken the remedy he prescribed fifty times without any benefit. His greatness depended upon his inexhaustible activity. He had the energy of a dozen ordinary men, and so he was twelve times as powerful as one. He mentions quite incidentally how he was in the habit of frequently spending whole nights in botanical excursions on foot; and we know he had no time to sleep in the day. He took an interest in everything, was always on the alert, had a prodigious memory, and indefatigable industry. On these great homely qualities, added to a kind disposition and an unaffected piety, his popularity was founded. It was all fairly won and nobly worn. It is startling, however, to find that a man whose name one hundred years ago was familiar to the ear as household words, and of whom historians predicted that he would always be regarded as one of the greatest as well as best of men, an example to his race, should be already almost forgotten. An example is of no use unless it is known; Boerhaave is now unknown. The reason is plain; — he was not the founder of any system, nor did he make any discovery. He simply

used with supreme success the thoughts and discoveries of others; as soon as he ceased to live, his influence began therefore to decline; and before his generation had passed away, his star had waned before the genius of Cullen, who succeeded in fixing the attention of Europe, and who, in his turn, was soon to be displaced by others." — J. R. Russell, *History and Heroes of the Art of Medicine*, pp. 297-298.

17-18th Centuries. — **Introduction of the Microscope in Medicine.** — **First glimmerings of the Germ Theory of Disease.** — "Since Athanasius Kircher [1601-1680] mistook blood and pus corpuscles for small worms, and built up on his mistake a new theory of disease and putrefaction, and since Christian Lange, the Professor of Pathological Anatomy in Leipzig, in the preface to Kircher's book (1671) expressed his opinion that the purpura of lying-in-women, measles, and other fevers were the result of putrefaction caused by worms or animalculæ, a 'Pathologia Animata' has, from time to time, been put forward to explain the causation of disease. . . . Remarkable as were Kircher's observations, still more wonderful were those of Anthony van Leeuwenhoek, a native of Delft in Holland, who in his youth had learned the art of polishing lenses, and who was able, ultimately, to produce the first really good microscope that had yet been constructed. Not only did Leeuwenhoek make his microscope, but he used it to such good purpose that he was able to place before the Royal Society of London a series of most interesting and valuable letters giving the result of his researches on minute specks of living protoplasm. . . . The world that Leeuwenhoek . . . opened up so thoroughly was rapidly invaded by other observers and theorists. The thoughtful physicians of the time believed that at last they had found the 'fons et origo mali,' and Nicolas Andry, reviewing Kircher's 'Contagium Animatum,' replaced his worms by these newly-described animalculæ or germs, and pushing the theory to its legitimate and logical conclusion, he also evolved a germ theory of putrefaction and fermentation. He maintained that air, water, vinegar, fermenting wine, old beer, and sour milk were all full of germs; that the blood and pustules of smallpox also contained them, and that other diseases, very rife about this period, were the result of the activity of these organisms. Such headway did he make, and such conviction did his arguments carry with them, that the mercurial treatment much in vogue at that time was actually based on the supposition that these organisms, the 'causæ causantes' of disease, were killed by the action of mercury and mercurial salts. With a kind of prophetic instinct, and certainly as the result of keen observation, Varro and Lancisi ascribed the dangerous character of marsh or swamp air to the action of invisible animalculæ; in fact the theory was so freely and forcibly propagated that even where no micro-organisms could be found their presence was inferred with the inevitable result, as Löffler points out, that these 'inconceivable' worms became the legitimate butts for the shafts of ridicule; and in 1726 there appeared in Paris a satirical work, in which these small organisms received the name of 'fainter,' 'body-pincher,' 'ulcerator,' 'weeping fistula,' 'sensualist'; the whole system was thus laughingly held up to satire, and the germ theory

of disease completely discredited. Linnæus [1707-1778], however, with his wonderful powers of observation and deduction, considered that it was possible that there might be rescued from this 'chaos' small living beings which were as yet insufficiently separated and examined, but in which he firmly believed might lie not only the actual contagium of certain eruptive diseases, and of acute fevers, but also the exciting causes of both fermentation and putrefaction. The man, however, who of all workers earliest recognized the importance of Linnæus' observations was a Viennese doctor, Marcus Antonius Plenciz. . . . He it was who, at this time, insisted upon the specific character of the infective agent in every case of disease; for scarlet fever there was a scarlet fever seed or germ—a seed which could never give rise to smallpox. He showed that it was possible for this organism to become disseminated through the air, and for it to multiply in the body; and he explained the incubation stage of a febrile disease as dependent on the growth of a germ within the body during the period after its introduction, when its presence had not yet been made manifest. . . . As regards putrefaction, having corroborated Linnæus' observations and found countless animalcules in putrefying matter, he came to the conclusion that this process was the result of the development, multiplication, and carrying on of the functions of nutrition and excretion by these germs; the products of fermentation being the volatile salts set free by the organisms, which, multiplying rapidly by forming seeds or eggs, rendered the fluid in which they developed thick, turbid, and foul. This theory, admirable as it was, and accurate as it has since been proved to be, could not then be based on any very extensive or detailed observation, and we find that some of the most prominent and brilliant men of the period did not feel justified in accepting the explanation that Plenciz had offered as to the causes of disease and fermentation processes."—G. S. Woodhead, *Bacteria and their Products*, ch. 3.

17-18th Centuries.—**Hahnemann and the origin of the System of Homœopathy.**—Samuel Hahnemann, originator of the system of medicine called "Homœopathy," was born in 1755, at Meissen, in Saxony. He studied medicine at Leipsic, and afterwards at Vienna. In 1784 he settled in Dresden, but returned to Leipsic in 1789. "In the following year, while translating Cullen's *Materia Medica* out of English into German, his attention was arrested by the insufficient explanations advanced in that work of the cure of ague by cinchona bark. By way of experiment, he took a large dose of that substance to ascertain its action on the healthy body. In the course of a few days he experienced the symptoms of ague; and it thus occurred to him that perhaps the reason why cinchona cures ague is because it has the power to produce symptoms in a healthy person similar to those of ague. To ascertain the truth of this conjecture, he ransacked the records of medicine for well-attested cures effected by single remedies; and finding sufficient evidences of this fact, he advanced a step further, and proposed, in an article published in Hufeland's *Journal*, in the year 1797, to apply this new principle to the discovery of proper medicines for every form of disease. Soon afterwards he published a case to illustrate

his method. It was one of a severe kind of colic cured by a strong dose of *veratrum album*. Before this substance gave relief to the patient it excited a severe aggravation of his symptoms. This induced Hahnemann, instead of drops or grains, to give the fraction of a drop or grain, and he thus introduced infinitesimal doses. Some years later he applied his new principle in the treatment of scarlet fever; and finding that belladonna cured the peculiar type of that disease, which then prevailed in Germany, he proposed to give this medicine as a prophylactic, or preventive against scarlet fever; from that time it has been extensively employed for this purpose. In the year 1810 he published his great work, entitled *Organon of Medicine*, which has been translated into all the European languages, as well as into Arabic. In this book he fully expounded his new system, which he called Homœopathy. His next publication was a *Materia Medica*, consisting of a description of the effects of medicines upon persons in health. These works were published between the years 1810 and 1821, at Leipsic, where he founded a school, and was surrounded by disciples. As his system involved the administration of medicines, each separately by itself, and in doses infinitely minute, there was no longer any need of the apothecaries' intervention between the physician and the patient. In consequence of this the Apothecaries Company brought to bear upon Hahnemann an act forbidding physicians to dispense their own medicines, and with such effect that he was obliged to leave Leipsic. The Grand Duke of Anhalt Köthen, appointed him his physician, and invited him to live at Köthen. Thither, accordingly, he removed in the year 1821, and there he prepared various new editions of his *Organon*, and new volumes of his *Materia Medica* for publication. In 1835 he married a second time; his wife was a French lady, of considerable position; and in the same year he left Köthen, and settled in Paris, where he enjoyed a great reputation till his death, which took place in the year 1843."—W. Bayes, *Origin and Present Status of Homœopathy (Trans. of the Homœopathic Medical Soc. of the State of N. Y., 1869, art. 21).*

Also in: W. Aneke, *Hist. of Homœopathy.*—J. C. Barnett, *Ecce Medicus; or Hahnemann as a man and as a physician.*

18th Century.—**The work of John Hunter in surgery and anatomy.**—"John Hunter [born 1728, died 1793] was not only one of the most profound anatomists of the age in which he lived, but he is by the common consent of his successors allowed to be one of the greatest men that ever practised surgery. One of the most striking discoveries in this part of his profession—indeed one of the most brilliant in surgery of his century—was the operation for the cure of popliteal aneurism by tying the femoral artery above the tumour in the ham, and without interfering with it. He improved the treatment of the rupture of the tendo achillis, in consequence of having experienced the accident himself when dancing. He invented the method of curing fistula lacrymalis by perforating the os unguis, and curing hydrocele radically by injection. His anatomical discoveries were numerous and important—amongst others the distribution of the blood-vessels of the uterus, which he traced till their disappearance in the placenta. He was the

first who demonstrated the existence of lymphatic vessels in birds; described the distribution of the branches of the olfactory nerve, as well as those of the fifth pair; and to him we owe the best and most faithful account of the descent of the testicle in the human subject, from the abdomen into the scrotum. Physiology is also indebted to him for many new views and ingenious suggestions. . . . 'Before his time surgery had been little more than a mechanical art, somewhat dignified by the material on which it was employed. Hunter first made it a science; and by pointing out its peculiar excellence as affording visible examples of the effects and progress of disease, induced men of far higher attainments than those who had before practised it to make it their study.' The best monument of his genius and talents, however, is the splendid museum which he formed by his sole efforts, and which he made, too, when labouring under every disadvantage of deficient education and limited means. It shows that as an anatomist and physiologist he had no superior."—W. Baird, *Hunter* (*Imperial Dict. of Univ. Biog.*).

18th Century.—Preventive Inoculation against Smallpox.—"One of the most notable events of the 18th century, or for that matter, in the history of medicine, was the introduction of the systematic practice of preventive inoculation against small-pox. We are so generally taught that this is entirely due to the efforts of Jenner, or rather we are so often allowed to think it without being necessarily taught otherwise, that the measure deserves a historical sketch. The communication of the natural disease to the healthy in order to protect them from the same natural disease, in other words, the communication of small-pox to prevent the same, reaches back into antiquity. It is mentioned in the Sanskrit Vedas as then performed, always by Brahmins, who employed pus procured from small-pox vesicles a year before. They rubbed the place selected for operation until the skin was red, then scratched with a sharp instrument, and laid upon the place cotton soaked in the variolous pus, moistened with water from the sacred Ganges. Along with this measure they insisted upon most hygienic regulations, to which in a large measure their good results were due. Among the Chinese was practised what was known as 'Pock-sowing,' and as long ago as 1000 years before Christ they introduced into the nasal cavities of young children pledgets of cotton saturated with variolous pus. The Arabians inoculated the same disease with needles, and so did the Circassians, while in the states of north Africa incisions were made between the fingers, and among some of the negroes inoculation was performed in or upon the nose. In Constantinople, under the Greeks, the custom had long been naturalized and was practised by old women instructed in the art, who regarded it as a revelation of St. Mary. The first accounts of this practice were given to the Royal Society by Timoni, a physician of Constantinople, in 1714. The actual introduction of the practice into the West, however, was due to Lady Mary Wortley Montagu, who died in 1762, and who was wife of the English ambassador to the Porte in 1717. She had her son inoculated in Constantinople by her surgeon Maitland, and after her return to Lon-

don, in 1721, it was also performed upon her daughter. During the same years experiments were undertaken by Maitland upon criminals, and as these turned out favorably, the Prince of Wales and his sisters were inoculated by Mead. The practice was then more or less speedily adopted on this side of the ocean as well as on that, but suffered occasional severe blows because of unfortunate cases here and there, such as never can be avoided. The clergy, especially, using the Bible, as designing men always can use it, to back up any view or practice, became warm opponents of vaccination, and stigmatized it as a very atrocious invasion of the Divine prerogative of punishment. But in 1746 the Bishop of Worcester recommended it from the pulpit, and established houses for inoculation, and thus made it again popular. In Germany the operation was generally favored, and in France and Italy a little later came into vogue."—Roswell Park, *Lects. on the Hist. of Medicine (in MS.)*.

18th Century.—Jenner and the discovery of Vaccination.—Many before the English physician, Dr. Jenner, "had witnessed the cow-pox, and had heard of the report current among the milkmaids in Gloucestershire, that whoever had taken that disease was secure against smallpox. It was a trifling, vulgar rumor, supposed to have no significance whatever; and no one had thought it worthy of investigation, until it was accidentally brought under the notice of Jenner. He was a youth, pursuing his studies at Sodbury, when his attention was arrested by the casual observation made by a country girl who came to his master's shop for advice. The smallpox was mentioned, when the girl said, 'I can't take that disease, for I have had cow-pox.' The observation immediately riveted Jenner's attention, and he forthwith set about inquiring and making observations on the subject. His professional friends, to whom he mentioned his views as to the prophylactic virtues of cow-pox, laughed at him, and even threatened to expel him from their society, if he persisted in harassing them with the subject. In London he was so fortunate as to study under John Hunter [1770-1778] to whom he communicated his views. The advice of the great anatomist was thoroughly characteristic: 'Don't think, but try; be patient, be accurate.' Jenner's courage was greatly supported by the advice, which conveyed to him the true art of philosophical investigation. He went back to the country to practise his profession, and carefully to make observations and experiments, which he continued to pursue for a period of twenty years. His faith in his discovery was so implicit that he vaccinated his own son on three several occasions. At length he published his views in a quarto of about seventy pages, in which he gave the details of twenty-three cases of successful vaccination of individuals, to whom it was found afterwards impossible to communicate the smallpox either by contagion or inoculation. It was in 1798 that this treatise was published; though he had been working out his ideas as long before as 1775, when they began to assume a definite form. How was the discovery received? First with indifference, then with active hostility. He proceeded to London to exhibit to the profession the process of vaccination and its successful results; but not a single doctor could be got to make a trial of it, and after fruitlessly waiting for nearly three months, Jenner

returned to his native village. He was even caricatured and abused for his attempt to 'bestialize' his species by the introduction into their systems of diseased matter from the cow's udder. Cobbett was one of his most furious assailants. Vaccination was denounced from the pulpit as 'diabolical.' It was averred that vaccinated children became 'ox-faced,' that abscesses broke out to 'indicate sprouting horns,' and that the countenance was gradually 'transmuted into the visage of a cow, the voice into the bellowing of bulls.' Vaccination, however, was a truth, and notwithstanding the violence of the opposition belief in it spread slowly. In one village where a gentleman tried to introduce the practice, the first persons who permitted themselves to be vaccinated were absolutely pelted, and were driven into their houses if they appeared out of doors. Two ladies of title,—Lady Ducie and the Countess of Berkeley,—to their honor be it remembered,—had the courage to vaccinate their own children; and the prejudices of the day were at once broken through. The medical profession gradually came round, and there were several who even sought to rob Dr. Jenner of the merit of the discovery, when its vast importance came to be recognized. Jenner's cause at last triumphed, and he was publicly honored and rewarded. In his prosperity he was as modest as he had been in his obscurity. He was invited to settle in London, and told that he might command a practice of £10,000 a year. But his answer was, 'No! In the morning of my days I have sought the sequestered and lowly paths of life,—the valley, and not the mountain,—and now, in the evening of my days, it is not meet for me to hold myself up as an object for fortune and for fame.' In Jenner's own lifetime the practice of vaccination had been adopted all over the civilized world; and when he died, his title as Benefactor of his kind was recognized far and wide. Cuvier has said, 'If vaccine were the only discovery of the epoch, it would serve to render it illustrious forever.'—S. Smiles, *Self-help*, ch. 4.

ALSO IN: J. Barron, *Life of Edward Jenner*.

18th Century.—The Brunonian System of Stimulation.—"John Brown, born of obscure parents in a village of Berwick, in Scotland, was remarkable, from his early youth, for an extraordinary aptitude for acquiring languages, a decided inclination for scholastic dispute, a pedantic tone and manner, and somewhat irregular conduct. Having abandoned theology for medicine, he fixed his residence in Edinburgh. . . . He was particularly entertained and countenanced by Cullen, who even took him into his family in the character of preceptor of his children. This agreeable relation subsisted during twelve consecutive years between these two men, whose characters and minds were so different. . . . But some trifling matters of mutual discontent grew at length into coldness, and changed the old friendship which had united them into an irreconcilable hatred. Their rupture broke out about the year 1778, and in a short time after, Brown published his *Elements of Medicine*. . . . Brown employed some of the ideas of his master to develop a doctrine much more simple in appearance, but founded entirely on abstract considerations; a doctrine in which every provision seems to be made for discussion, but none for practice. Cullen had said that the nervous sys-

tem receives the first impression of excitants, and transmits it afterwards to the other organs endowed with motion and vitality. Brown explains thus, the same thought: 'Life is only sustained by incitation. It is only the result of the action of incitants on the incitability of organs.' Cullen regarded the atony of the small vessels as the proximate cause of fever. Brown, improving on this hypothesis, admits, with hardly any exceptions, only hyposthenic diseases. . . . The Scotch physiologist distinguished only two pathological states—one consisting in an excess of incitability, which he names the sthenic diathesis; the other, constituted by a want, more or less notable, of the same faculty, which he designates as the asthenic diathesis. Besides, Brown considers these two states as affecting the entire economy, rather than any organ in particular. . . . After having reduced all diseases to two genera, and withdrawn from pathology the study of local lesions, Brown arrives, by a subtle argumentation, to consider the affections of the sthenic order as prevailing in a very small number of instances, so that the diseases of the asthenic type comprehend nearly the totality of affections. According to this theory, a physician is rarely ever mistaken if he orders in all his cases, remedies of an exciting nature. . . . Never since the days of Thessalus (of charlatan memory) had any one simplified to such a point the study and practice of medicine. We may even say that in this respect the Scotch pathologist left far in the rear the physician of Nero. To this attraction, well calculated to tempt students and practitioners, the doctrine of Brown joined the advantage of being presented in an energetic and captivating style, full of imagery, which suffices to explain its rapid progress. But this doctrine, so seductive in its exposition, so easy in its application, is one of the most disastrous that man has been able to imagine, for it tends to propagate the abuse of diffusible stimulants, of which spirituous liquors make a part, an abuse excessively injurious to health in general, and the intellectual faculties in particular—an abuse to which man is too much inclined, naturally, and which the sophisms of Brown may have contributed to spread in all classes of English society. . . . Notwithstanding its defects, the system of Brown made rapid progress, principally in Germany and Italy."—P. V. Renouard, *Hist. of Medicine*, pp. 555-560.

18th Century.—The System of Haller.—"About the time when we seniors commenced the study of medicine, it was still under the influence of the important discoveries which Albrecht von Haller [1708-1777] had made on the excitability of nerves; and which he had placed in connection with the vitalistic theory of the nature of life. Haller had observed the excitability in the nerves and muscles of amputated members. The most surprising thing to him was, that the most varied external actions, mechanical, chemical, thermal, to which electrical ones were subsequently added, had always the same result; namely, that they produced muscular contraction. They were only quantitatively distinguished as regards their action on the organism, that is, only by the strength of the excitation; he designated them by the common name of stimulus; he called the altered condition of the nerve the excitation, and its capacity of responding to a stimulus the excitability,

which was lost at death. This entire condition of things, which physically speaking asserts no more than the nerves, as concerns the changes which take place in them after excitation, are in an exceedingly unstable state of equilibrium; this was looked upon as the fundamental property of animal life, and was unhesitatingly transferred to the other organs and tissues of the body, for which there was no similar justification. It was believed that none of them were active of themselves, but must receive an impulse by a stimulus from without; air and nourishment were considered to be the normal stimuli. The kind of activity seemed, on the contrary, to be conditioned by the specific energy of the organ, under the influence of the vital force. Increase or diminution of the excitability was the category under which the whole of the acute diseases were referred, and from which indications were taken as to whether the treatment should be lowering or stimulating. The rigid one-sidedness and the unrelenting logic with which . . . [John] Brown had once worked out the system was broken, but it always furnished the leading points of view."—H. Helmholtz, *On Thought in Medicine* (Popular Lects., series 2, lect. 5).

18th Century. — Physiological Views of Bichat.—Marie Francis Xavier Bichat, was born in 1771 and died in 1802, accomplishing his extraordinary work as an anatomist and physician within a lifetime of thirty-one years. "The peculiar physiological views of Bichat are to be found stated more or less distinctly in all his works; and it is a merit of his that he has always kept in sight the necessary connexion of this part of the science of medicine with every other, and, so far as he has developed his ideas upon the subjects of pathology, materia medica, and therapeutics, they seem all to have been founded upon and connected with the principles of physiology, which he had adopted. . . . Everything around living bodies, according to Bichat, tends constantly to their destruction. And to this influence they would necessarily yield, were they not gifted with some permanent principle of reaction. This principle is their life, and a living system is therefore necessarily always engaged in the performance of functions, whose object is to resist death. Life, however, does not consist in a single principle, as has been taught by some celebrated writers, by Stahl, Van Helmont, and Barthez, &c. We are to study the phenomena of life, as we do those of other matter, and refer the operations performed in living systems to such ultimate principles as we can trace them to, in the same way that we do the operations taking place among inorganic substances. . . . His essential doctrine . . . is that there is no one single, individual, presiding principle of vitality, which animates the body, but that it is a collection of matter gifted for a time with certain powers of action, combined into organs which are thus enabled to act, and that the result is a series of functions, the connected performance of which constitutes it a living thing. This is his view of life, considered in the most general and simple way. But in carrying the examination farther, he points out two remarkable modifications of life, as considered in different relations, one common both to vegetables and animals, the other peculiar to animals. . . . Those which we have in

common with the vegetable, which are necessary merely to our individual, bodily existence, are called the functions of organic life, because they are common to all organized matter. Those, on the other hand, which are peculiar to animals, which in them are superadded to the possession of the organic functions, are called the functions of animal life. Physiologically speaking, then, we have two lives, the concurrence of which enables us to live and move and have our being; both equally necessary to the relations we maintain as human beings, but not equally necessary to the simple existence of a living thing. . . . The two lives differ, in some important respects, as to the organs by which their functions are performed. Those of the animal life present a symmetry of external form, strongly contrasted with the irregularity, which is a prominent characteristic of those of organic life. In the animal life, every function is either performed by a pair of organs, perfectly similar in structure and size, situated one upon each side of the median dividing line of the body, or else by a single organ divided into two similar and perfectly symmetrical halves by that line. . . . The organs of the organic life, on the contrary, present a picture totally different; they are irregularly formed, and irregularly arranged. . . . This symmetry of the form is accompanied by a corresponding harmony in the functions of the organs of the animal life. . . . The functions of the organic life are constantly going on; they admit of no interruption, no repose. . . . In those of the animal life, the case is widely different. They have intervals of entire repose. The organs of this life are incapable of constant activity, they become fatigued by exercise and require rest. This rest, with regard to any particular organ, is the sleep of that organ. . . . Upon this principle, Bichat founds his theory of sleep. General sleep is the combination of the sleep of particular organs. Sleep then is not any definite state, but is more or less complete rest of the whole system in proportion to the number of organs which require repose. . . . The two lives differ also in regard to habit; the animal being much under its control, the organic but slightly. . . . But the principal and most important feature in the physiological system of Bichat, is the complete, and entire, and exclusive explanation of all the phenomena of the living system upon the principles of vitality alone. Former physiologists have not always kept this distinctly in view. . . . The human body has been regarded, too often, as a mass of matter, organized to be sure, but yet under the direction of physical laws, and the performance of its functions has been ascribed to the powers of inorganic matter. Hence, physiology has generally been somewhat tinctured by the favorite science of the age, with some of its notions. . . . With Bichat the properties of life were all in all. The phenomena of the system, whether in health or disease, were all ascribed to their influence and operation."—J. Ware, *Life and Writings of Bichat* (North Am. Rev., July, 1822).

18-19th Centuries.—Pinel and the Reform in treatment of the Insane.—Philippe Pinel, "who had attained some distinction as an alienist, was appointed, 1792, to fill the post of superintendent of the Bicêtre, which then contained upwards of 200 male patients, believed not only to be incurable, but entirely uncontrollable. The

previous experience of the physician, here stood him in good stead. He had been a diligent student of the authorities of his own and foreign countries on diseases of the mind, and in his earlier years had been appointed by the French government to report on the condition of the asylums at Paris and Charenton. On assuming the oversight of the Bicêtre, he found 53 men languishing in chains, some of whom had been bound for a great number of years. These were regarded by the authorities as dangerous and even desperate characters; but the sight of men grown gray and decrepit as the result of prolonged torture, made a very different impression on the mind of Pinel. He addressed appeal after appeal to the Commune, craving power to release, without delay, the unhappy beings under his charge. The authorities tardily and unwillingly yielded to the importunity of the physician. An official, who was deputed by the Commune to accompany the superintendent and watch his experiment, no sooner caught sight of the chained maniacs than he excitedly exclaimed: 'Ah, ça! citoyen, es-tu fou toi-même de vouloir déchaîner de pareils animaux?' The physician was not to be deterred, however, from carrying out his benevolent project, and did not rest satisfied until all of the 53 men had been gradually liberated from their chains. Singular as it may appear, the man who had been regarded as the most dangerous, and who had survived forty years of this severe treatment, was afterwards known as the faithful and devoted servant of Pinel. The reforms of Pinel were not confined to the Bicêtre, an establishment exclusively for men, but extended to the Salpêtrière, an institution for women. There is, perhaps, no more touching event in history than that of this kind-hearted and wise physician removing the bands and chains from the ill-fated inmates of this place of horrors. The monstrous fallacy of cruel treatment once fully exposed, the insane came to be looked upon as unfortunate human beings, stricken with a terrible disease, and, like other sick persons, requiring every aid which science and benevolent sympathy could provide with a view to cure. Governmental inquiries were instituted with a view to the attainment of better treatment, and in different countries, almost simultaneously, the provision of suitable and adequate accommodation for the insane was declared to be a State necessity."—W. P. Letchworth, *The Insane in Foreign Countries*, ch. 1.

19th Century.—The Discovery of Anæsthetics.—"In 1798, Mr. Humphry Davy, an apprentice to Mr. Borlase a surgeon at Bodmin, had so distinguished himself by zeal and power in the study of chemistry and natural philosophy, that he was invited by Dr. Beddoes of Bristol, to become the 'superintendent of the Pneumatic Institution which had been established at Clifton for the purpose of trying the medicinal effects of different gases.' He obtained release from his apprenticeship, accepted the appointment, and devoted himself to the study of gases, not only in their medicinal effects, but much more in all their chemical and physical relations. After two years' work he published his 'Researches, Chemical and Philosophical, chiefly concerning Nitrous Oxide.' . . . He wrote, near the end of his essay: 'As nitrous oxide in its extensive operation appears capable of destroying physical pain, it may probably be used with advantage during surgical

operations in which no great effusion of blood takes place.' It seems strange that no one caught at a suggestion such as this. . . . The nitrous oxide might have been of as little general interest as the carbonic or any other, had it not been for the strange and various excitements produced by its inhalation. These made it a favourite subject with chemical lecturers, and year after year, in nearly every chemical theatre, it was fun to inhale it after the lecture on the gaseous compounds of nitrogen; and among those who inhaled it there must have been many who, in their intoxication, received sharp and heavy blows, but, at the time, felt no pain. And this went on for more than forty years, exciting nothing worthy to be called thought or observation, till, in December 1844, Mr. Colton, a popular itinerant lecturer on chemistry, delivered a lecture on 'laughing gas' in Hartford, Connecticut. Among his auditors was Mr. Horace Wells, an enterprising dentist in that town, a man of some power in mechanical invention. After the lecture came the usual amusement of inhaling the gas, and Wells, in whom long wishing had bred a kind of belief that something might be found to make tooth-drawing painless, observed that one of the men excited by the gas was not conscious of hurting himself when he fell on the benches and bruised and cut his knees. Even when he became calm and clear-headed the man was sure that he did not feel pain at the time of his fall. Wells was at once convinced—more easily convinced than a man of more scientific mind would have been—that, during similar insensibility, in a state of intense nervous excitement, teeth might be drawn without pain, and he determined that himself and one of his own largest teeth should be the first for trial. Next morning Colton gave him the gas, and his friend Dr. Riggs extracted his tooth. He remained unconscious for a few moments, and then exclaimed, 'A new era in tooth-pulling! It did not hurt me more than the prick of a pin. It is the greatest discovery ever made.' In the next three weeks Wells extracted teeth from some twelve or fifteen persons under the influence of the nitrous oxide, and gave pain to only two or three. Dr. Riggs, also, used it with the same success, and the practice was well known and talked of in Hartford. Encouraged by his success Wells went to Boston, wishing to enlarge the reputation of his discovery and to have an opportunity of giving the gas to some one undergoing a surgical operation. Dr. J. C. Warren, the senior Surgeon of the Massachusetts General Hospital, to whom he applied for this purpose, asked him to show first its effects on some one from whom he would draw a tooth. He undertook to do this in the theatre of the medical college before a large class of students, to whom he had, on a previous day, explained his plan. Unluckily, the bag of gas from which the patient was inhaling was taken away too soon; he cried out when his tooth was drawn; the students hissed and hooted; and the discovery was denounced as an imposture. Wells left Boston disappointed and disheartened; he fell ill, and was for many months unable to practise his profession. Soon afterwards he gave up dentistry, and neglected the use and study of the nitrous oxide, till he was recalled to it by a discovery even more important than his own. The thread of the history of nitrous oxide may be broken here. The inhalation of sulphuric ether was often, even

in the last century, used for the relief of spasmodic asthma, phthisis, and some other diseases of the chest. . . . As the sulphuric ether would 'produce effects very similar to those occasioned by nitrous oxide,' and was much the more easy to procure, it came to be often inhaled, for amusement, by chemist's lads and by pupils in the dispensaries of surgeons. It was often thus used by young people in many places in the United States. They had what they called 'ether-frolics.' . . . Among those who had joined in these ether-frolics was Dr. Wilhite of Anderson, South Carolina. In one of them, in 1839," a negro boy was unconscious so long that he was supposed for some time to be dead. "The fright at having, it was supposed, so nearly killed the boy, put an end to the ether-frolics in that neighbourhood; but in 1842, Wilhite had become a pupil of Dr. Crauford Long, practising at that time at Jefferson (Jackson County, Georgia). Here he and Dr. Long and three fellow-pupils often amused themselves with the ether-inhalation, and Dr. Long observed that when he became furiously excited, as he often did, he was unconscious of the blows which he, by chance, received as he rushed or tumbled about. He observed the same in his pupils; and thinking over this, and emboldened by what Mr. Wilhite told him of the negro-boy recovering after an hour's insensibility, he determined to try whether the ether-inhalation would make any one insensible of the pain of an operation. So, in March, 1842, nearly three years before Wells's observations with the nitrous oxide, he induced a Mr. Venable, who had been very fond of inhaling ether, to inhale it till he was quite insensible. Then he dissected a tumour from his neck; no pain was felt, and no harm followed. Three months later, he similarly removed another tumour from him; and again, in 1842 and in 1845, he operated on other three patients, and none felt pain. His operations were known and talked of in his neighbourhood; but the neighbourhood was only that of an obscure little town; and he did not publish any of his observations. . . . He waited to test the ether more thoroughly in some greater operation than those in which he had yet tried it; and then he would have published his account of it. While he was waiting, others began to stir more actively in busier places, where his work was quite unknown, not even heard of. Among those with whom, in his unlucky visit to Boston, Wells talked of his use of the nitrous oxide, and of the great discovery which he believed that he had made, were Dr. Morton and Dr. Charles Jackson. . . . Morton was a restless energetic dentist, a rough man, resolute to get practice and make his fortune. Jackson was a quiet scientific gentleman, unpractical and unselfish, in good repute as a chemist, geologist, and mineralogist. At the time of Wells's visit, Morton, who had been his pupil in 1842, and for a short time, in 1843, his partner, was studying medicine and anatomy at the Massachusetts Medical College, and was living in Jackson's house. Neither Morton nor Jackson put much if any faith in Wells's story, and Morton witnessed his failure in the medical theatre. Still, Morton had it in his head that tooth-drawing might somehow be made painless. . . . Jackson had long known, as many others did, of sulphuric ether being inhaled for amusement and of its producing effects like those of nitrous oxide; he knew also of its employment

as a remedy for the irritation caused by inhaling chlorine. He had himself used it for this purpose, and once, in 1842, while using it, he became completely insensible. He had thus been led to think that the pure ether might be used for the prevention of pain in surgical operations; he spoke of it with some scientific friends, and sometimes advised a trial of it; but he did not urge it or take any active steps to promote even the trial. One evening, Morton, who was now in practice as a dentist, called on him, full of some scheme which he did not divulge, and urgent for success in painless tooth-drawing. Jackson advised him to use the ether, and taught him how to use it. On that same evening, the 30th of September, 1846, Morton inhaled the ether, put himself to sleep, and, when he awoke, found that he had been asleep for eight minutes. Instantly, as he tells, he looked for an opportunity of giving it to a patient; and one just then coming in, a stout healthy man, he induced him to inhale, made him quite insensible, and drew his tooth without his having the least consciousness of what was done. But the great step had yet to be made. . . . Could it be right to incur the risk of insensibility long enough and deep enough for a large surgical operation? It was generally believed that in such insensibility there was serious danger to life. Was it really so? Jackson advised Morton to ask Dr. J. C. Warren to let him try, and Warren dared to let him. It is hard, now, to think how bold the enterprise must have seemed to those who were capable of thinking accurately on the facts then known. The first trial was made on the 16th of October, 1846. Morton gave the ether to a patient in the Massachusetts General Hospital, and Dr. Warren removed a tumour from his neck. The result was not complete success; the patient hardly felt the pain of the cutting, but he was aware that the operation was being performed. On the next day, in a severer operation by Dr. Hayward, the success was perfect; the patient felt nothing, and in long insensibility there was no appearance of danger to life. The discovery might already be deemed complete; for the trials of the next following days had the same success, and thence onwards the use of the ether extended over constantly widening fields. . . . It might almost be said that in every place, at least in Europe, where the discovery was promoted more quickly than in America, the month might be named before which all operative surgery was agonising, and after which it was painless.—Sir J. Paget, *Escape from Pain* (Nineteenth Century, Dec. 1879).

19th Century.—The Study of Fermentation and its results.—"It was some time ago the current belief that epidemic diseases generally were propagated by a kind of malaria, which consisted of organic matter in a state of motor-decay; that when such matter was taken into the body through the lungs, skin, or stomach, it had the power of spreading there the destroying process by which itself had been assailed. Such a power was visibly exerted in the case of yeast. A little leaven was seen to leaven the whole lump—a mere speck of matter, in this supposed state of decomposition, being apparently competent to propagate indefinitely its own decay. Why should not a bit of rotten malaria act in a similar manner within the human frame? In 1836 a very wonderful reply was given to this question. In that year Cagniard de la Tour

discovered the yeast-plant—a living organism, which when placed in a proper medium feeds, grows, and reproduces itself, and in this way carries on the process which we name fermentation. By this striking discovery fermentation was connected with organic growth. Schwann, of Berlin, discovered the yeast-plant independently about the same time.”—J. Tyndall, *Fragments of Science*, v. 1, ch. 5.—The question of fermentation “had come to present an entirely new aspect through the discovery of Cagniard de la Tour that yeast is really a plant belonging to one of the lowest types of fungi, which grows and reproduces itself in the fermentable fluid, and whose vegetative action is presumably the cause of that fermentation, just as the development of mould in a jam-pot occasions a like change in the upper stratum of the jam, on whose surface, and at whose expense, it lives and reproduces itself. Chemists generally—especially Liebig, who had a fermentation theory of his own—pooh-poohed this idea altogether; maintaining the presence of the yeast-plant to be a mere concomitant, and refusing to believe that it had any real share in the process. But in 1843, Professor Helmholtz, then a young undistinguished man, devised a method of stopping the passage of organic germs from a fermenting into a fermentable liquid, without checking the passage of fluids; and as no fermentation was then set up, he drew the inference that the ‘particulate’ organic germs, not the soluble material of the yeast, furnish the primum mobile of this change,—a doctrine which, though now universally accepted, had to fight its way for some time against the whole force of chemical authority. A little before Cagniard de la Tour’s discovery, a set of investigations had been made by Schulze and Schwann, to determine whether the exclusion of air was absolutely necessary to prevent the appearance of living organisms in decomposing fluids, or whether these fluids might be kept free from animal or vegetable life, by such means as would presumably destroy any germs which the air admitted to them might bring in from without, such as passing it through a red-hot tube or strong sulphuric acid. These experiments, it should be said, had reference rather to the question of ‘spontaneous generation,’ or ‘abiogenesis,’ than to the cause of fermentation and decomposition; its object being to determine whether the living things found by the microscope in a decomposing liquid exposed to the air, spring from germs brought by the atmosphere, or are generated ‘de novo’ in the act of decay—the latter doctrine having then many upholders. But the discovery of the real nature of yeast, and the recognition of the part it plays in alcoholic fermentation, gave an entirely new value to Schulze’s and Schwann’s results; suggesting that putrefactive and other kinds of decomposition may be really due, not (as formerly supposed) to the action of atmospheric oxygen upon unstable organic compounds, but to a new arrangement of elements brought about by the development of germinal particles deposited from the atmosphere. It was at this point that Pasteur took up the inquiry; and for its subsequent complete working-out, science is mainly indebted to him: for although other investigators—notably Professor Tyndall—have confirmed and extended his conclusions by ingenious variations on his mode of research, they would be the first

to acknowledge that all those main positions which have now gained universal acceptance—save on the part of a few obstinate ‘irreconcilables’—have been established by Pasteur’s own labours. . . . The first application of these doctrines to the study of disease in the living animal was made in a very important investigation, committed to Pasteur by his old master in chemistry (the eminent and eloquent Dumas), into the nature of the ‘pébrine,’ which was threatening to extinguish the whole silk culture of France and Italy. . . . Though it concerned only a humble worm, it laid the foundation of an entirely new system and method of research into the nature and causes of a large class of diseases in man and the higher animals, of which we are now only beginning to see the important issues. Among the most immediately productive of its results, may be accounted the ‘antiseptic surgery’ of Professor Lister; of which the principle is the careful exclusion of living bacteria and other germs, alike from the natural internal cavities of the body, and from such as are formed by disease, whenever these may be laid open by accident, or may have to be opened surgically. This exclusion is effected by the judicious use of carbolic acid, which kills the germs without doing any mischief to the patient; and the saving of lives, of limbs, and of severe suffering, already brought about by this method, constitutes in itself a glorious triumph alike to the scientific elaborator of the germ-doctrine, and to the scientific surgeon by whom it has been thus applied. A far wider range of study, however, soon opened itself. The revival by Dr. Farr of the doctrine of ‘zymosis’ (fermentation),—long ago suggested by the sagacity of Robert Boyle, and practically taken up in the middle of the last century by Sir John Pringle (the most scientific physician of his time),—as the expression of the effect produced in the blood by the introduction of a specific poison (such as that of small-pox, measles, scarlatina, cholera, typhus, &c.), had naturally directed the attention of thoughtful men to the question (often previously raised speculatively), whether these specific poisons are not really organic germs, each kind of which, a real ‘contagium vivum,’ when sown in the circulating fluid, produces a definite ‘zymosis’ of its own, in the course of which the poison is reproduced with large increase, exactly after the manner of yeast in a fermenting wort. Pasteur’s success brought this question to the front, as one not to talk about, but to work at.”—W. B. Carpenter, *Disease-Germs* (*Nineteenth Century*, Oct., 1881).

19th Century.—Virchow and Cellular Pathology.—“That really gifted scholar and paragon of industry and attainment, Rudolph Virchow, announced in 1858 a theory known as Modern Vitalism which was borrowed from natural scientific medicine and is distinguished from the vitalism of the previous century in this, that it breaks up the old vital force, which was supposed to be either distributed throughout the entire body, or located in a few organs, into an indefinite number of associate vital forces working harmoniously, and assigns to them all the final elementary principles without microscopic seat. ‘Every animal principle has a sum of vital unities, each of which bears all

the characteristics of life. The characteristics and unity of life cannot be found in any determinate point of a higher organism, e. g., in the brain, but only in the definite, ever recurring arrangements of each element present. Hence it results that the composition of a large body amounts to a kind of social arrangement, in which each one of the movements of individual existence is dependent upon the others, but in such a way that each element has a special activity of its own, and that each, although it receives the impulse to its own activity from other parts, still itself performs its own functions.' This it will be seen is nothing but another way of expressing the cell doctrine to which most medical men are now committed, which means that our bodies are built up with cells, and that each cell has a unity and a purpose of its own. Sir Robert Hooke in 1677 discovered plant cells. Schwann discovered animal cells, and Robert Brown discovered cell nuclei, but it remained for Virchow, using the microscope, to supply the gap which had risen between anatomical knowledge and medical theory, that is, to supply a 'cellular pathology,' since which time the cell has assumed the role which the fibre occupied in the theories of the 17th and 18th centuries. Time alone can decide as to the ultimate validity of these views. This theory was from its announcement most enthusiastically received, and so far has responded to nearly all the requirements which have been made of it. Even its author was almost startled with its success. . . . As a result of Virchow's labors there has arisen in Germany what has been called the medical school of natural sciences of which Virchow is the intellectual father. This school seeks mainly by means of pathological anatomy and microscopy, experimental physiology and pathology, and the other applied sciences, or rather by their methods, to make medicine also an exact science."—Roswell Park, *Lects. on the Hist. of Medicine (in MS.)*.

19th Century.—The development of Bacteriology.—"The traditional expression *contagium vivum* received a more precise meaning in 1840 from Henle, who in his 'Pathologischen Untersuchungen,' showed clearly and distinctly that the contagia till then invisible must be regarded as living organisms, and gave his reasons for this view. . . . If we are forced to recognise the characteristic qualities of living beings in these contagia, there is no good reason why we should not regard them as real living beings, parasites. For the only general distinction between their mode of appearance and operation and that of parasites is, that the parasites with which we are acquainted have been seen and the contagia have not. That this may be due to imperfect observation is shown by the experiments on the itch in 1840, in which the contagium, the itch-mite, though almost visible without magnifying power, was long at least misunderstood. It was only a short time before that the microscopic Fungus, Achorion, which causes favus, was unexpectedly discovered, as well as the Fungus which gives rise to the infectious disease in the caterpillar of the silkworm known as muscardine. Other and similar cases occurred at a later time, and among them that of the discovery of the Trichinae between 1850 and 1860, a very remarkable instance of a contagious parasite long overlooked. Henle repeated his statements in 1853 in his 'Rationelle Pathologie,' but

for reasons which it is not our business to examine, his views on animal pathology met with little attention or approval. It was in connection with plant-pathology that Henle's views were first destined to further development, and obtained a firmer footing. It is true that the botanists who occupied themselves with the diseases of plants knew nothing of Henle's pathological writings, but made independent efforts to carry on some first attempts which had been made with distinguished success in the beginning of the century. But they did in fact strike upon the path indicated by Henle, and the constant advance made after, about the year 1850, resulted not only in the tracing back of all infectious diseases in plants to parasites as their exciting cause, but in proving that most of the diseases of plants are due to parasitic infection. It may now certainly be admitted that the task was comparatively easy in the vegetable kingdom, partly because the structure of plants makes them more accessible to research, partly because most of the parasites which infect them are true Fungi, and considerably larger than most of the contagia of animal bodies. From this time observers in the domain of animal pathology, partly influenced, more or less, by these discoveries in botany, and partly in consequence of the revival of the vitalistic theory of fermentation by Pasteur about the year 1860, returned to Henle's vitalistic theory of contagion. Henle himself, in the exposition of his views, had already indicated the points of comparison between his own theory and the theory of fermentation founded at that time by Cagniard-Latour and Schwann. Under the influence, as he expressly says, of Pasteur's writings, Davaine recalled to mind the little rods first seen by his teacher, Rayer, in the blood of an animal suffering from anthrax, and actually discovered in them the exciting cause of the disease, which may be taken as a type of an infectious disease both contagious and miasmatic also, in so far as it originates, as has been said, in anthrax districts. This was, in 1863, a very important confirmation of Henle's theory, inasmuch as a very small parasite, not very easy of observation at that time, was recognised as a contagium. It was some time before much further advance was made. . . . The latest advance to be recorded begins with the participation of Robert Koch in the work of research since 1876."—A. De Bary, *Lectures on Bacteria*, pp. 145-148.—"M. Pasteur is no ordinary man; he is one of the rare individuals who must be described by the term 'genius.' Having commenced his scientific career and attained great distinction as a chemist, M. Pasteur was led by his study of the chemical process of fermentations to give his attention to the phenomena of disease in living bodies resembling fermentations. Owing to a singular and fortunate mental characteristic, he has been able, not simply to pursue a rigid path of investigation dictated by the logical or natural connection of the phenomena investigated, but deliberately to select for inquiry matters of the most profound importance to the community, and to bring his inquiries to a successful practical issue in a large number of instances. Thus he has saved the silkworm industry of France and Italy from destruction, he has taught the French wine-makers to quickly mature their wine, he has effected an enormous improvement

and economy in the manufacture of beer, he has rescued the sheep and cattle of Europe from the fatal disease 'anthrax,' and it is probable—he would not himself assert that it is at present more than probable—that he has rendered hydrophobia a thing of the past. The discoveries made by this remarkable man would have rendered him, had he patented their application and disposed of them according to commercial principles, the richest man in the world. They represent a gain of some millions sterling annually to the community. . . . M. Pasteur's first experiment in relation to hydrophobia was made in December 1880, when he inoculated two rabbits with the mucus from the mouth of a child which had died of that disease. As his inquiries extended he found that it was necessary to establish by means of experiment even the most elementary facts with regard to the disease, for the existing knowledge on the subject was extremely small, and much of what passed for knowledge was only ill-founded tradition."—E. R. Lankester, *The Advancement of Science*, pp. 121-123.—"The development of our knowledge relating to the bacteria, stimulated by the controversy relating to spontaneous generation and by the demonstration that various processes of fermentation and putrefaction are due to microorganisms of this class, has depended largely upon improvements in methods of research. Among the most important points in the development of bacteriological technique we may mention, first, the use of a cotton air filter (Schröder and Von Dusch, 1854); second, the sterilization of culture fluids by heat (methods perfected by Pasteur, Koch, and others); third, the use of the aniline dyes as staining agents (first recommended by Weigert in 1877); fourth, the introduction of solid culture media and the 'plate method' for obtaining pure cultures, by Koch in 1881. The various improvements in methods of research, and especially the introduction of solid culture media and Koch's 'plate method' for isolating bacteria from mixed cultures, have placed bacteriology upon a scientific basis. . . . It was a distinguished French physician, Davaine, who first demonstrated the etiological relation of a microorganism of this class to a specific infectious disease. The anthrax bacillus had been seen in the blood of animals dying from this disease by Pollender in 1849, and by Davaine in 1850, but it was several years later (1863) before the last-named observer claimed to have demonstrated by inoculation experiments the causal relation of the bacillus to the disease in question. The experiments of Davaine were not generally accepted as conclusive, because in inoculating an animal with blood containing the bacillus, from an infected animal which had succumbed to the disease, the living microorganism was associated with material from the body of the diseased animal. This objection was subsequently removed by the experiments of Pasteur, Koch, and many others, with pure cultures of the bacillus, which were shown to have the same pathogenic effects as had been obtained in inoculation experiments with the blood of an infected animal."—G. M. Sternberg, *Manual of Bacteriology*, p. 6.—"In 1876 the eminent microscopist, Professor Cohn, of Breslau, was in London, and he then handed me a number of his 'Beiträge,' containing a memoir by Dr. Koch on Splenic Fever (Milzbrand, Charbon, Malignant

Pustule), which seemed to me to mark an epoch in the history of this formidable disease. With admirable patience, skill, and penetration Koch followed up the life-history of bacillus anthracis, the contagium of this fever. At the time here referred to he was a young physician holding a small appointment in the neighbourhood of Breslau, and it was easy to predict, and indeed I predicted at the time, that he would soon find himself in a higher position. When I next heard of him he was head of the Imperial Sanitary Institute of Berlin. . . . Koch was not the discoverer of the parasite of splenic fever. Davaine and Rayer, in 1850, had observed the little microscopic rods in the blood of animals which had died of splenic fever. But they were quite unconscious of the significance of their observation, and for thirteen years, as M. Radot informs us, strangely let the matter drop. In 1863 Davaine's attention was again directed to the subject by the researches of Pasteur, and he then pronounced the parasite to be the cause of the fever. He was opposed by some of his fellow-countrymen; long discussions followed, and a second period of thirteen years, ending with the publication of Koch's paper, elapsed before M. Pasteur took up the question. I always, indeed, assumed that from the paper of the learned German came the impulse towards a line of inquiry in which M. Pasteur has achieved such splendid results."—J. Tyndall, *New Fragments*, pp. 190-191.—"On the 24th of March, 1882, an address of very serious public import was delivered by Dr. Koch before the Physiological Society of Berlin. . . . The address . . . is entitled 'The Etiology of Tubercular Disease.' Koch first made himself known, and famous, by the penetration, skill, and thoroughness of his researches on the contagium of anthrax, or splenic fever. . . . Koch's last inquiry deals with a disease which, in point of mortality, stands at the head of them all. 'If,' he says, 'the seriousness of a malady be measured by the number of its victims, then the most dreaded pests which have hitherto ravaged the world—plague and cholera included—must stand far behind the one now under consideration.' Then follows the startling statement that one-seventh of the deaths of the human race are due to tubercular disease. Prior to Koch it had been placed beyond doubt that the disease was communicable; and the aim of the Berlin physician has been to determine the precise character of the contagium which previous experiments on inoculation and inhalation had proved to be capable of indefinite transfer and reproduction. He subjected the diseased organs of a great number of men and animals to microscopic examination, and found, in all cases, the tubercles infested by a minute, rod-shaped parasite, which by means of a special dye, he differentiated from the surrounding tissue. 'It was,' he says, 'in the highest degree impressive to observe in the centre of the tubercle-cell the minute organism which had created it.' Transferring directly, by inoculation, the tuberculous matter from diseased animals to healthy ones, he in every instance reproduced the disease. To meet the objection that it was not the parasite itself, but some virus in which it was imbedded in the diseased organ, that was the real contagium, he cultivated his bacilli artificially for long periods of time and through many successive generations.

With a speck of matter, for example, from a tuberculous human lung, he infected a substance prepared, after much trial, by himself, with the view of affording nutriment to the parasite. In this medium he permitted it to grow and multiply. From the new generation he took a minute sample, and infected therewith fresh nutritive matter, thus producing another brood. Generation after generation of bacilli were developed in this way, without the intervention of disease. At the end of the process, which sometimes embraced successive cultivations extending over half a year, the purified bacilli were introduced into the circulation of healthy animals of various kinds. In every case inoculation was followed by the reproduction and spread of the parasite, and the generation of the original disease. . . . The moral of these experiments is obvious. In no other conceivable way than that pursued by Koch could the true character of the most destructive malady by which humanity is now assailed be determined. And however noisy the fanaticism of the moment may be, the common-sense of Englishmen will not, in the long run, permit it to enact cruelty in the name of tenderness, or to debar us from the light and leading of such investigations as that which is here so imperfectly described."—J. Tyndall, *New Fragments*, pp. 423-428.

19th Century.—The Theory of Germ Diseases.—"An account of the innumerable questions and investigations in this department of modern pathogenesis, of the various views on certain questions, etc., does not fall within the compass of our brief sketch. Nor are we able to furnish a consistent theory, simply because such an one does not [1889] exist. One fact alone is agreed upon, to wit, that certain of the lower fungi, as parasites within or upon the body, excite diseases (infectious diseases). As regards the *modus operandi* of these parasites two main theories are held. According to one theory, these parasites, by their development, deprive the body of its nutriment and endanger life particularly when, thronging in the blood, they deprive this of the oxygen necessary for existence. According to the other theory, they threaten life by occasioning decompositions which engender putrid poisons (*ptomaines*). These latter poisons were first isolated by P. L. Panum in 1856, and have been recently specially studied by Brieger (Ueber *Ptomaine*, Berlin, 1885-86). They act differently upon bodies according to the variety of the alkaloidal poison. Metschnikoff regards the white blood-corpuscles as antagonists of these parasites (thus explaining the cases of recovery from parasitic diseases), and in this point of view calls them 'phagocytes.' On the other hand E. Salmon and Theodore Smith ('Transactions of the Washington Biological Society, Feb. 22d, 1886) were the first to demonstrate that sterilized nutritive solutions or germ-free products of change of matter of the virulent excitors of disease, when injected, afford protection. A. Chauveau as early as 1880 had brought forward evidence of the probability of this fact, and Hans Buchner in 1879 admitted the possibility of depriving bacteria of their virulence. Pasteur, however, believes he has demonstrated that by continued cultures (also a sort of bacillary isopathy) 'debilitated' germs act as prophylactics against the corresponding parasitic diseases, and he even thinks he has con-

firmed this by his inoculations against hydrophobia—a view, at all events, still open to doubt. . . . The chief diseases regarded as of parasitic origin at present are: anthrax (Davaïne, 1850); relapsing fever (Obermeier, 1873); gonorrhœa and blenorrhœa neonatorum (Neisser, 1879); glanders (Struck, 1882, Loeffler and Schütz); syphilis (Sigm. Lustgarten, 1884); diphtheria (Oertel, Letzerich, Klebs); typhus (Eberle, Klebs); tuberculosis (Koch, 1882); cholera (Koch, 1884); lepra (Armauer-Hansen); actinomycosis (Bollinger in cattle, 1877; Israel in man, 1884); septicæmia (Klebs); erysipelas (Fehleisen); pneumonia (Friedländer); malarial fever (Klebs, Tommasi-Crudeli, Marchiafava); malignant œdema (Koch); tetanus (Carle and Rattone, Nicolaier, Roeschlaub assumed a tetania occasioned by bacilli); cancer (Scheuerlen; priority contested by Dr. G. Rappia and Prof. Domingo Freire of Rio Janeiro); yellow fever (microbe claimed to have been discovered by Freire); dysentery (bacillary diphtheritis of the large intestine); cholera nostras (Finkler and Prior); scarlet fever (Coze and Feltz, '72); variola and vaccina (Keber, Zülzer, Weigert, Klebs); acute yellow atrophy of the liver (Klebs, Wald-eier, Eppinger); endocarditis (Ziegler); hæmophilia neonatorum (Klebs, Eppinger); trachoma (Sattler); keratitis (Leber—aspergillus); ulcer rodens corneæ (Sattler); gonorrhœal rheumatism (Petrone, Kammerer). If the bacterial theory of infection, constantly threatening life by such numerous pathogenic varieties of infecting organisms, must be looked upon as a gloomy one, the anti-bacterial Phagocyte Theory of Metschnikoff, professor of zoology in Odessa, is adapted to make one feel more comfortable, inasmuch as it brings into view the possibility of an antagonism to these infecting organisms, and explains the method of nature's cures. Metschnikoff observed that the wandering cells—the white blood corpuscles—after the manner of amœbæ, surround, hold fast, digest ('devour,' hence 'phagocytes'), and thus render harmless the bacteria which have entered the body. . . . The prophylactic effects of inoculation are explained on the theory that by means of this operation the wandering cells are prepared, as it were, for subsequent accidental irruptions of similar pathogenic bacteria, are habituated or compelled thereby to at once devour such organisms when they enter the body spontaneously, and thus to render them harmless. Inoculation would thus be a sort of training or education of the phagocytes. The immunity of many persons from infectious diseases, so far as it is not effected by inoculations, would by analogy be explained on the theory that with such individuals the phagocytes are from the outset so constituted that they at once render harmless any stray bacteria which come within their domain by immediately devouring them. . . . When . . . in spite of the phagocytes, the patients die of infectious diseases, the fact is to be explained by the excessive number of the bacteria present, which is so great that the phagocytes are unequal to the task of 'devouring' them all."—J. H. Baas, *Outlines of the History of Medicine*, pp. 1007-1009.

19th Century.—Sanitary Science and Legislation.—"Together with the growth of our knowledge of the causes of disease there has been . . . slowly growing up also a new kind of warfare against disease. It is this science

of hygiene which is now promising to transform all the old traditional ways of dealing with disease, and which now makes possible the organisation of the conditions of health. And this science of hygiene, it must be repeated, rests on the exact knowledge of the causes of disease which we are now obtaining. . . . At the beginning of the eighteenth century Mead, a famous physician of that day, whose reputation still lives, had proposed the formation of a central board of health to organise common measures for the public safety. It was not, however, until more than a hundred years later, in 1831, under the influence of the terror of cholera, that this first step was taken; so that, as it has been well said and often since proved, 'panic is the parent of sanitation.' In 1842 Sir Edwin Chadwick issued his report on 'The Sanitary Condition of the Labouring Population of Great Britain.' This report produced marked effect, and may truly be said to have inaugurated the new era of collective action, embodying itself in legislation directed to the preservation of national health, an era which is thus just half a century old. Chadwick's report led to a Royal Commission, which was the first step in the elevation of public health to a State interest; and a few years later (1847) Liverpool, and immediately afterwards London, appointed the first medical officers of health in Great Britain. In 1848 another epidemic of cholera appeared, and a General Board of Health was established. During this epidemic Dr. Snow began those inquiries which led to the discovery that the spread of the disease was due to the contamination of drinking-water by the intestinal discharges of patients. That discovery marked the first great stage in the new movement. Henceforth the objects to be striven for in the evolution of sanitation became ever more clear and precise, and a succession of notable discoveries in connection with various epidemics enlarged the sphere of sanitation, and revealed new possibilities in the prevention of human misery."—H. Ellis, *The Nationalisation of Health*, pp. 21-24.—"Of all countries of the civilized world, none has a sanitary code so complete and so precise as England. In addition, English legislation is distinguished from that of other countries, by the fact that the principal regulations emanate from Parliament instead of being simple administrative orders. Thus the legislation is the work of the nation, which has recognised its necessity in its own interest. Consequently the laws are respected, and, as a rule, religiously observed, without objection or murmur. In the whole country, the marvellous results which have been produced can be seen. Thanks to these laws, the rate of mortality has been lowered, the mean duration of life increased, the amount of sickness decreased. They have greatly alleviated the misery in the houses of the poor, who, thanks to sanitary measures, have a better prospect of recovering their health and the means of providing for their subsistence and that of their families. . . . The sanitary administration of England is, in accordance with the Public Health Act of 1875, in the hands of a central authority, the Local Government Board; and local authorities, the Local Boards of Health. The Local Government Board consists of a president, nominated by the Queen, and the following ex-officio members:—the Lord President of the

Privy Council, all the principal Secretaries of State for the time being, the Lord Privy Seal, the Chancellor of the Exchequer, a Parliamentary Secretary, and a permanent Secretary. The President and Secretaries are, properly speaking, the directors of the Local Government Board, the other members being only consulted on matters of prime importance. Nine special departments are controlled by the Local Government Board: 1. Poor-law administration. 2. Legal questions. 3. Sanitary regulations respecting buildings. 4. Sanitary regulations respecting sewers, streets, etc. 5. Medical and hygienic matters. 6. Vaccination. 7. The Hygiene of factories. 8. The water supply of London. 9. Statistics. Medical and sanitary matters are under the direction of a Medical Officer, and an Assistant Medical Officer."—A. Palmberg, *Treatise on Public Health: England, ch. 1.*—"The United States have no uniform legislation for the organization of public hygiene to the present day. Each State organizes this service as it chooses. . . . That which characterizes the sanitary organization of the States is the fact that, in a large number of States, the right is granted to the sanitary administrations to carry before the justices the infractions of the regulations on this subject. It is a similar organization to that of Great Britain, with a little less independence, and it is the logical result of the general system of administration which exists in the American Union. . . . Without doubt the day will come when the National Board of Health will be by act of Congress, with the consent of all the States, the real superior council of public hygiene of the American Union."—E. Sève, *On the General Organization of Public Hygiene (Proceedings, Internat'l Sanitary Conference, 1881).*—"The General Government [of the United States] can do little in the way of compulsory legislation, which might interfere with the action of the several States to control their own sanitary affairs. It is possible that upon the ground of power to legislate with regard to commerce, it might establish some general system of quarantine and do something toward the prevention of the pollution of navigable streams; but it could probably only do this with such restrictions and exceptions as would make its action of little practical value, unless, indeed, it should resort to its right of eminent domain, and become liable for all damages, individual or municipal, which its action might cause. . . . No one would deny that the General Government can properly create an organization for the purpose of collecting and diffusing information on sanitary matters; but comparatively few understand how much real power and influence such an organization might acquire without having the slightest legal authority to enforce any of its recommendations. The passing of sanitary laws, and the granting to a certain department the power to enforce these laws, will not ensure good public health unless the public at large supports those laws intelligently, and it can only do this through State and municipal sanitary organizations. The General Government might do much to promote the formation of such organizations, and to assist them in various ways. . . . By the 'act to prevent the introduction of infectious or contagious diseases into the United States, and to establish a national board of health,' approved March 3, 1879, the first step has been taken in

the direction above indicated. The act provides for a national board of health, to consist of seven members, appointed by the President, and of four officers detailed from the Medical Department of the Army, Medical Department of the Navy, and the Marine Hospital Service, and the Department of Justice respectively. No definite term of Office is prescribed, the Board being essentially provisional in character. The duties of the board are 'to obtain information upon all matters affecting the public health, to advise the several departments of the government, the executives of the several States, and the Commissioners of the District of Columbia, on all ques-

B. C. 222.—Destruction and restoration.—The last exploit of Cleomenes of Sparta, in his struggle with the Achaean League and its ally, the king of Macedonia, before the fatal field of Sellasia, was the capture of Megalopolis, B. C. 222. Most of the citizens escaped. He offered to restore their town to them if they would forsake the League. They refused, and he destroyed it, so utterly that its restoration was believed to be impossible. But in the following year the inhabitants were brought back and Megalopolis existed again, though never with its former importance.—Polybius, *Histories*, bk. 2, ch. 55 and after (v. 1).

B. C. 194-183.—In the Achaian League.—"The city of Megalopolis held at this time [B. C. 194-183] the same sort of position in the Achaian League which the State of Virginia held in the first days of the American Union. Without any sort of legal preëminence, without at all assuming the character of a capital, Megalopolis was clearly the first city of the League, the city which gave the nation the largest proportion of its leading statesmen. Megalopolis, like Virginia, was 'the Mother of Presidents,' and that too of Presidents of different political parties. As Virginia produced both Washington and Jefferson, so Megalopolis, if she produced Philopoimen and Lykortas, produced also Aristainos and Diophanes."—E. A. Freeman, *Hist. of Federal Gov't*, ch. 9, sect. 2.

MEGARA.—Megara, the ancient Greek city and state whose territory lay between Attica and Corinth, forming part of the Corinthian isthmus, "is affirmed to have been originally settled by the Dorians of Corinth, and to have remained for some time a dependency of that city. It is farther said to have been at first merely one of five separate villages—Megara, Heræa, Peiræa, Kynosura, Tripodiskus—inhabited by a kindred population, and generally on friendly terms, yet sometimes distracted by quarrels [see CORINTH: B. C. 745-725]. . . . Whatever may be the truth respecting this alleged early subjection of Megara, we know it in the historical age, and that too as early as the 14th Olympiad, only as an independent Dorian city, maintaining the integrity of its territory under its leader Orsippus, the famous Olympic runner, against some powerful enemies, probably the Corinthians. It was of no mean consideration, possessing a territory which

MEGARA.

extended across Mount Geraneia to the Corinthian Gulf, on which the fortified town and port of Pôge, belonging to the Megarians, was situated. It was mother of early and distant colonies,—and competent, during the time of Solon, to carry on a protracted contest with the Athenians, for the possession of Salamis; wherein, although the latter were at last victorious, it was not without an intermediate period of ill-success and despair.” —G. Grote, *Hist. of Greece*, pt. 2, ch. 9.—See, also, GREECE: THE MIGRATIONS.

MEGARA OF CARTHAGE, The. See CARTHAGE: DIVISIONS.

MEGIDDO.—The valley of Megiddo, forming the western part of the great Plain of Esdraelon, in northern Palestine—stretching from the valley of the Jordan to the Mediterranean Sea, along the course of the river Kishon—was the field of many important battles in ancient times. Thothmes III. of the eighteenth Egyptian dynasty, whose reign is placed about 1600 B. C., met there, near the city of Megiddo, and defeated a confederacy of Syrian and Canaanite princes who attempted to throw off his yoke. A remarkable account of his victory and of the spoils he took is preserved in inscriptions on the walls of the temple at Karnak.—H. Brugsch, *Hist. of Egypt*, ch. 13 (v. 1).—It was at Megiddo, also, that Sisera, commanding the forces of the Canaanites, was beaten and driven to flight by the Israelites under Barak. Gideon's assault on the Midianites was from the slope of Mount Gilboa, which rises out of the same valley. The latter battle has been called by historians the Battle of Jezreel, and Jezreel is one of the forms of the name of the valley of Esdraelon. It was there that the Philistines were arrayed when Saul fought his last battle with them, and on the slopes of Gilboa he fell on his sword and died. On the same historic plain, near the city of Megiddo, Josiah, king of Judah, fought against Necho, the Pharaoh of Egypt, B. C. 609, and was defeated and mortally wounded. The plain of Megiddo was so often, in fact, the meeting place of ancient armies that it seems to have come to be looked upon as the typical battle-ground, and apparently the name Armageddon in Revelations is an allusion to it in that sense. The ancient city of Megiddo has been identified in site with the present town of Ladjûn, which is the Legio of the Romans—the station of a Roman legion.

MEGISTANES, The.—“The king [of the Parthian monarchy] was permanently advised by two councils, consisting of persons not of his own nomination, whom rights, conferred by birth or office, entitled to their seats. One of these was a family conclave, . . . or assembly of the full-grown males of the Royal House; the other was a senate comprising both the spiritual and the temporal chiefs of the nation, the Sophi, or ‘Wise

MEMPHIS.

Men,’ and the Magi, or ‘Priests.’ Together these two bodies constituted the Megistanes, the ‘Nobles’ or ‘Great Men’—the privileged class which to a considerable extent checked and controlled the monarch. The monarchy was elective; but only in the house of the Arsacidæ.”—G. Rawlinson, *Sixth Great Oriental Monarchy*, ch. 6.

MEMLUKS. See MAMELUKES.

MEMPHIS, Egypt.—“The foundation of Memphis is the first event in Egyptian history, the one large historical incident in the reign of the first king, who emerges a real man from the shadowland which the Egyptians called the reign of the gods. . . . Menes, the founder of Memphis and Egyptian history, came from the south. Civilisation descended the Nile. His native place was Thinis, or This, in Upper Egypt, a still older town, where his shadowy predecessors ruled. . . . A great engineering work was the first act of the builder. He chose his site . . . but the stream was on the wrong side, flowing below the Libyan chain, flowing over where the city should be, offering no water-bulwark against the invader from the eastern border. So he raised, a few miles to the south, a mighty dyke, and turned the river into the present course, founding the city on the west bank, with the desert behind and the Nile before. . . . The new city received a name which reflects the satisfaction of the ancient founder; he called it Mennufre, ‘the Good’ or ‘Perfect Mansion.’ This was the civil name. . . . The civil name is

the parent of the Greek Memphis and the Hebrew Moph, also found in the form Noph."—R. S. Poole, *Cities of Egypt*, ch. 2.—See, also, EGYPT: THE OLD EMPIRE AND THE MIDDLE EMPIRE.

MENDICANT ORDERS.—Franciscans.—Dominicans.—"This period [12-13th centuries], so prolific in institutions of every sort, also gave birth to the Mendicant orders, a species of spiritual chivalry still more generous and heroic than that which we have just treated [the military-religious orders], and unique in history. . . . Many causes combined to call them into existence. In proportion as the Church grew wealthy her discipline relaxed, and dangers menaced her on every side. . . . The problem thus presented to the Church was taken up at the opening of the 13th century, and thrown into practical shape by two men equally eminent in intellectual endowments and spiritual gifts. While each solved it in his own way, they were both attached to each other by the closest friendship. Dominic, a member of the powerful house of Guzman, was born in the year 1170, at Callaruega (Calahorra, in Old Castile), a village in the diocese of Osma. While pursuing his studies in the university of Valencia, he was distinguished by a spirit of charity and self-sacrifice. . . . Diego, Bishop of Osma, . . . a man of severe character, and ardently devoted to the good of the Church, found in Dominic one after his own heart. He took the young priest with him on a mission which he made to the south of France." Dominic was finally left in charge of the mission. "His peaceful disposition, his spirit of prayer, his charity, forbearance, and patient temper formed a consoling contrast to the bloody crusade which had recently been set on foot against the Albigenses. After spending ten years in this toilsome and thankless mission, labouring only for love of God and the profit of souls, he set out for Rome, in 1215, with his plans fully matured, and submitted to Pope Innocent III. the project of giving to the Church a new method of defence, in an order which should combine the contemplative life of the monk with the active career of a secular priest. . . . Innocent gave his sanction to Dominic's project, provided he would manage to bring it under some of the existing Rules. Dominic accordingly selected the Rule of St. Augustine, introducing a few changes, with a view to greater severity, taken from the Rule of the Premonstratensians. That the members of the new order might be free to devote themselves entirely to their spiritual labours, they were forbidden to accept any property requiring their active administration, but were permitted to receive the incomes of such as was administered by others. Property, therefore, might be held by the Order as a body, but not administered by

its members. Pope Honorius III. confirmed the action of his illustrious predecessor, and approved the Order in the following year, giving it, from its object, the name of the 'Order of Friars Preachers' ('Ordo Prædicatorum, Fratres Prædicatorum'). . . . Dominic founded, in the year 1206, an Order of Dominican nuns. . . . The dress of the Dominicans is a white garment and scapular, resembling in form that of the Augustinians, with a black cloak and a pointed cap. Francis of Assisi, the son of a wealthy merchant named Bernardini, was born in the year 1182, in Assisi, in Umbria. His baptismal name was John, but from his habit of reading the romances of the Troubadours in his youth, he gradually acquired the name of Il Francesco, or the Little Frenchman. . . . When about twenty-four years of age, he fell dangerously ill, and, while suffering from this attack, gave himself up to a train of religious thought which led him to consider the emptiness and uselessness of his past life. . . . He . . . conceived the idea of founding a society whose members should go about through the whole world, after the manner of the apostles, preaching and exhorting to penance. . . . His zeal gradually excited emulation, and prompted others to aspire after the same perfection. His first associates were his townsmen, Bernard Quintavalle and Peter Cattano, and others soon followed. Their habit consisted of a long brown tunic of coarse woolen cloth, surmounted by a hood of the same material, and confined about the waist with a hempen cord. This simple but ennobling dress was selected because it was that of the poor peasants of the surrounding country. . . . He sent his companions, two-and-two, in all directions, saying to them in taking leave: 'Go; always travel two-and-two. Pray until the third hour; then only may you speak. Let your speech be simple and humble.' . . . With St. Francis, absolute poverty was not only a practice, it was the essential principle on which he based his Order. Not only were the individual members forbidden to have any personal property whatever, but neither could they hold any as an Order, and were entirely dependent for their support upon alms. . . . Hence the chief difference between mendicant and other monastic orders consists in this, that, in the former, begging takes the place of the ordinary vow of personal poverty. . . . In 1223, Pope Honorius III. approved the Order of Franciscans (Fratres Minores), to which . . . Innocent III. had given a verbal sanction in 1210."—J. Alzog, *Manual of Univ. Church Hist.*, sect. 247 (v. 2).—"They were called 'Friars' because, out of humility, their founders would not have them called 'Father' and 'Dominus,' like the monks, but simply 'Brother' ('Frater,' 'Frère,' Friar). . . . Dominic gave to his order the name of Preaching Friars; more commonly they were styled Dominicans, or, from the colour of their habits, Black Friars. . . . The Franciscans were styled by their founder 'Fratres Minori'—lesser brothers, Friars Minors; they were more usually called Grey Friars, from the colour of their habits, or Cordeliers, from the knotted cord which formed their characteristic girdle."—E. L. Cutts, *Scenes and Characters of the Middle Ages*, ch. 5.—"People talk of 'Monks and Friars' as if these were convertible terms. The truth is that the difference between the Monks and the Friars was

MENDICANT ORDERS.

almost one of kind. The Monk was supposed never to leave his cloister. The Friar in St. Francis' first intention had no cloister to leave." —A. Jessopp, *The Coming of the Friars*, 1.

MERCEd, The order of La.—"Jayme [king of Aragon, called El Conquistador], when a captive in the hands of Simon de Montfort [see SPAIN: A. D. 1212-1238], had—mere baby as he was—made a vow that, when he should be a man and a king, he would endeavour to do something for the redemption of captives. So, before he was a man in age, he instituted another religious order of knighthood, called La Merced, which added to their other duties that of collecting alms and using them for the ransoming of captives to the Moors."—C. M. Yonge, *The Story of the Christians and Moors of Spain*, p. 184.

MERCENARIES, Revolt of the. See CARTHAGE: B. C. 241-238.

MERCHANT ADVENTURERS.—"The original Company of the Merchant Adventurers carried on trade chiefly with the Netherlands. Their principal mart was at first Bruges, whence it was removed to Antwerp early in the fifteenth century. In distinction from the staplers, who dealt in certain raw materials, the Merchant Adventurers had the monopoly of exporting certain

MERCY FOR THE REDEMPTION.

manufactured articles, especially cloths. Though of national importance, they constituted a strictly private company, and not, like the staplers, an administrative organ of the British government. The former were all subjects of the English crown; the staplers were made up of aliens as well as Englishmen. In the sixteenth and seventeenth centuries frequent dissensions broke out between these two bodies regarding the exportation of cloth. To carry on foreign trade freely in wool as well as in cloth, a merchant had to join both companies. Much obscurity hangs over the early history of the Merchant Adventurers. They claimed that John, Duke of Brabant, founded their society in 1216 or 1248, and that it originally bore the name of the Brotherhood of St. Thomas à Becket. But it could scarcely have existed in its later form before the reign of Edward III., when the cloth industry began to flourish in England. The earliest charter granted to it as an organized association dates from the year 1407. Their powers were greatly increased by Henry VII. The soul of this society, and perhaps its original nucleus, was the Mercers' Company of London. . . . Though the most influential Merchant Adventurers resided in London, there were many in other English towns. . . . The contrast between the old Gild Merchant and the Company of Merchant Adventurers is striking. The one had to do wholly with foreign trade, and its members were forbidden to exercise a manual occupation or even to be retail shopkeepers; the other consisted mainly of small shopkeepers and artisans. The line of demarkation between merchants and manual craftsmen was sharply drawn by the second half of the sixteenth century, the term 'merchant' having already acquired its modern signification as a dealer on an extensive scale. Besides the Company of Merchant Adventurers trading to the Low Countries—which during the eighteenth century was called the Hamburg Company—various new Companies of Merchant Adventurers trading to other lands arose in the sixteenth and seventeenth centuries, especially during the reigns of Elizabeth and her immediate successors. Among them were the Russian or Muscovy Company, the Turkey or Levant Company, the Guinea Company, the Morocco Company, the Eastland Company, the Spanish Company, and the East India Company, the last-mentioned being the most powerful of them all." —C. Gross, *The Gild Merchant*, pp. 148-156.

MERCIA, The Kingdom of.—A kingdom formed at the close of the 6th century by the West Angles, on the Welsh border, or March. The people who formed it had acquired the name of Men of the March, from which they came to be called Mercians, and their kingdom Mercia. In the next century, under King Penda, its territory and its power were greatly extended, at the expense of Northumbria.—J. R. Green, *The Making of England*.—See, also, ENGLAND: A. D. 547-633.

MERCY FOR THE REDEMPTION OF CHRISTIAN CAPTIVES, The Order of.—"For the institution of this godlike order, the Christian world was indebted to Pope Innocent

III., at the close of the 12th century. . . . The exertions of the order were soon crowned with success. One third of its revenues was appropriated to the objects of its foundation, and thousands groaning in slavery were restored to their country. . . . The order . . . met with so much encouragement that, in the time of Alberic, the monk (who wrote about forty years after its institution), the number of monastic houses amounted to 600, most of which were situated in France, Lombardy and Spain."—S. A. Dunham, *Hist. of Spain and Portugal*, bk. 3, sect. 3, ch. 4 (v. 4).

MERU. See MERV.

MERV, OR MERU: A. D. 1221.—Destruction by Jingis Khan.—In the merciless march through Central Asia of the awful Mongol horde set in motion by Jingis Khan, the great city of Meru (modern Merv) was reached in the autumn of A. D. 1220. This was "Meru Shahjan, i. e., Meru the king of the world, one of the four chief cities of Khorassan, and one of the oldest cities of the world. It had been the capital of the great Seljuk Sultans Melikshah and Sanjar, and was very rich and populous. It was situated on the banks of the Meri el rond, also called the Murjab. . . . The siege commenced on the 25th of February, 1221. The governor of the town . . . sent a venerable imam as an envoy to the Mongol camp. He returned with such fair promises that the governor himself repaired to the camp, and was loaded with presents; he was asked to send for his chief relations and friends; when these were fairly in his power, Tului [one of the sons of Jingis Khan] ordered them all,

including the governor, to be killed. The Mongols then entered the town, the inhabitants were ordered to evacuate it with their treasures; the mournful procession, we are told, took four days to defile out. . . . A general and frightful massacre ensued; only 400 artisans and a certain number of young people were reserved as slaves. The author of the 'Jhankushai' says that the Seyid Yzz-ud-din, a man renowned for his virtues and piety, assisted by many people, were thirteen days in counting the corpses, which numbered 1,300,000. Ibn al Ethir says that 700,000 corpses were counted. The town was sacked, the mausoleum of the Sultan Sanjar was rifled and then burnt, and the walls and citadel of Meru levelled with the ground."—H. H. Howorth, *Hist. of the Mongols*, v. 1, p. 87.—See, also, KHORASSAN: A. D. 1220-1221.

B. C. 338.—Territories restored by Philip of Macedon. See GREECE: B. C. 337-336.

B. C. 184.—Revolt from the Achæan League.

—A faction in Messene which was hostile to the Achæan League having gained the ascendancy, B. C. 184, declared its secession from the League. Philopæmen, the chief of the League, proceeded at once with a small force to reduce the Messenians to obedience, but was taken prisoner and was foully executed by his enemies. Bishop Thirlwall pronounces him "the last great man whom Greece produced." The death of Philopæmen was speedily avenged on those who caused it and Messene was recovered to the League.—C. Thirlwall, *Hist. of Greece*, ch. 65.

Also in: Plutarch, *Philopæmen*.

MESSENE (MODERN MESSINA), in Sicily.—The founding of the city.—“Zancle was originally colonised by pirates who came from Cyme the Chalcidian city in Opieia. . . . Zancle was the original name of the place, a name given by the Sicels because the site was in shape like a sickle, for which the Sicel word is Zancleon. These earlier settlers were afterwards driven out by the Samians and other Ionians, who when they fled from the Persians found their way to Sicily. Not long afterwards Anaxilas, the tyrant of Rhegium, drove out these Samians. He then repopled their city with a mixed multitude, and called the place Messene, after his native country.”—Thucydides, *History*, trans. by Jowett, bk. 6, sect. 4.

MESSENIAN WARS, The First and Second.—The Spartans were engaged in two successive wars with their neighbors of Messenia, whose territory, adjoining their own in the southwestern extremity of Peloponnesus, was rich, prosperous and covetable. “It was unavoidable that the Spartans should look down with envy from their bare rocky ridges into the prosperous land of their neighbours and the terraces close by, descending to the river, with their well-cultivated plantations of oil and wine. Besides, the Dorians who had immigrated into Messenia had, under the influence of the native population and of a life of comfortable ease, lost their primitive character. Messenia seemed like a piece of Arcadia, with which it was most intimately connected. . . . Hence this was no war of Dorians against Dorians; it rather seemed to be Sparta’s mission to make good the failure of the Dorization of Messenia which had sunk back into Pelasgic conditions of life, and to unite with herself the remains of the Dorian people still surviving there. In short, a variety of motives contributed to provoke a forcible extension of Spartan military power on this particular side.”—E. Curtius, *Hist. of Greece*, bk. 2, ch. 1 (v. 1).—The First Messenian War was commenced B. C. 745 and lasted twenty years, ending in the complete subjugation of the Messenians, who were reduced to a state of servitude like that of the Helots of Sparta. After enduring the oppression for thirty-nine years, the Messenians rose in revolt against their Spartan masters, B. C. 685. The leader and great hero of this Second Messenian War was Aristomenes, whose renown became so great in the despairing struggle that the latter was called among the ancients the Aristomenean War. But all the valor and self-sacrifice of the unhappy Messenians availed nothing. They gave up the contest, B. C. 668; large numbers of them escaped to other lands and those who remained were reduced to a more wretched condition than before.—C. Thirlwall, *Hist. of Greece*, ch. 9.—See, also, SPARTA: B. C. 743–510.

The Third.—“The whole of Laconia [B. C. 464] was shaken by an earthquake, which opened great chasms in the ground, and rolled down huge masses from the highest peaks of Taygetus: Sparta itself became a heap of ruins, in which not more than five houses are said to have

been left standing. More than 20,000 persons were believed to have been destroyed by the shock, and the flower of the Spartan youth was overwhelmed by the fall of the buildings in which they were exercising themselves at the time.”—C. Thirlwall, *Hist. of Greece*, ch. 17.—The Helots of Sparta, especially those who were descended from the enslaved Messenians, took advantage of the confusion produced by the earthquake, to rise in revolt. Having secured possession of Ithome, they fortified themselves in the town and withstood there a siege of ten years, —sometimes called the Third Messenian War. The Spartans invited the Athenians to aid them in the siege, but soon grew jealous of their allies and dismissed them with some rudeness. This was one of the prime causes of the animosity between Athens and Sparta which afterward flamed out in the Peloponnesian War. In the end, the Messenians at Ithome capitulated and were allowed to quit the country; whereupon the Athenians settled them at Naupactus, on the Corinthian gulf, and so gained an ardent ally, in an important situation.—Thucydides, *History*, bk. 1, sect. 101–103.—Nearly one hundred years later (B. C. 369) when Thebes, under Epaminondas, rose to power in Greece and Sparta was humiliated, it was one of the measures of the Theban statesman to found at Ithome an important city which he named Messene, into which the long oppressed Messenians were gathered, from slavery and from exile, and were organized in a state once more, free and independent.—C. Thirlwall, *Hist. of Greece*, ch. 39.

METHODISTS: Origin of the Religious Denomination.—“The term Methodist was a college nickname bestowed upon a small society of students at Oxford who met together between 1729 and 1735 for the purpose of mutual improvement. They were accustomed to communicate every week, to fast regularly on Wednesdays and Fridays, and on most days during Lent: to read and discuss the Bible in common, to abstain from most forms of amusement and luxury, and to visit sick persons and prisoners in the gaol. John Wesley, the master-spirit of this society, and the future leader of the religious revival of the eighteenth century, was born in 1703, and was the second surviving son of Samuel Wesley, the Rector of Epworth, in Lincolnshire. . . . The society hardly numbered more than fifteen members, and was the object of much ridicule at the university; but it included some men who afterwards played considerable parts

METHODISTS.

in the world. Among them was Charles, the younger brother of John Wesley, whose hymns became the favourite poetry of the sect, and whose gentler, more submissive, and more amiable character, though less fitted than that of his brother for the great conflicts of public life, was very useful in moderating the movement, and in drawing converts to it by personal influence. Charles Wesley appears to have been the first to originate the society at Oxford; he brought Whitefield into its pale, and besides being the most popular poet he was one of the most persuasive preachers of the movement. There, too, was James Hervey, who became one of the earliest links connecting Methodism with general literature."—W. E. H. Lecky, *History of Eng. in the 18th Century*, ch. 9 (v. 2).

METHUEN, Rout of.—The first Scotch army assembled by Robert Bruce after he had been crowned king of Scotland, was surprised and routed by Aymer de Valence, June 26, 1306. —C. H. Pearson, *Hist. of Eng. during the Early and Middle Ages*, v. 2, ch. 14.

METŒCI.—"Resident aliens, or Metœci, are non-citizens possessed of personal freedom, and settled in Attica. Their number, in the flourishing periods of the State, might amount to 45,000, and therefore was about half that of the citizens."—G. F. Schömann, *Antiq. of Greece: The State*, pt. 3, ch. 3, sect. 2.

METON, The year of.—"Hitherto [before the age of Pericles] the Athenians had only had the Octaëteris, i. e., the period of eight years, of which three were composed of thirteen months, in order thus to make the lunar years correspond to the solar. But as eight such solar

MEXICO.

years still amount to something short of 99 lunar months, this cycle was insufficient for its purpose. . . . Meton and his associates calculated that a more correct adjustment might be obtained within a cycle of 6,940 days. These made up 235 months, which formed a cycle of 19 years; and this was the so-called 'Great Year,' or 'Year of Meton.'"—E. Curtius, *Hist. of Greece*, bk. 3, ch. 3 (v. 2).

MEXICO.

Ancient: The Maya and Nahua peoples and their civilization.—"Notwithstanding evident marks of similarity in nearly all the manifestations of the progressional spirit in aboriginal America, in art, thought, and religion, there is much reason for and convenience in referring all the native civilization to two branches, the Maya and the Nahua, the former the more ancient, the latter the more recent and wide-spread. . . . It is only, however, in a very general sense that this classification can be accepted, and then only for practical convenience in elucidating the subject; since there are several nations that must be ranked among our civilized peoples, which, particularly in the matter of language, show no Maya nor Nahua affinities. Nor is too much importance to be attached to the names Maya and Nahua, by which I designate these parallel civilizations. The former is adopted for the reason that the Maya people and tongue are commonly regarded as among the most ancient in all the Central American region, a region where formerly flourished the civilization that left such wonderful remains at Palenque, Uxmal, and Copan; the latter as being an older designation than either Aztec or Toltec, both of which stocks the race Nahua includes. The civilization of

what is now the Mexican Republic, north of Tehuantepec, belonged to the Nahua branch, both at the time of the conquest and throughout the historic period preceding. Very few traces of the Maya element occur north of Chiapas, and these are chiefly linguistic, appearing in two or three nations dwelling along the shores of the Mexican gulf. In published works upon the subject the Aztecs are the representatives of the Nahua element; indeed, what is known of the Aztecs has furnished material for nine tenths of all that has been written on the American civilized nations in general. The truth of the matter is that the Aztecs were only the most powerful of a league or confederation of three nations, which in the 16th century, from their capitals in the valley, ruled central Mexico."—H. H. Bancroft, *Native Races of the Pacific States*, v. 2, ch. 2.—"The evidence . . . has pointed—with varying force, but with great uniformity of direction—towards the Central or Usumacinta region [Central America], not necessarily as the original cradle of American civilization, but as the most ancient home to which it can be traced by traditional, monumental, and linguistic records. . . . Throughout several centuries preceding the Christian era, and perhaps one or

two centuries following, there flourished in Central America the great Maya empire of the Chances, Culhuas, or Serpents, known to its foes as Xibalba, with its centre in Chiapas at or near Palenque, and with several allied capitals in the surrounding region. Its first establishment at a remote period was attributed by the people to a being called Votan, who was afterwards worshipped as a god. . . . From its centre in the Usumacinta region the Votanic power was gradually extended north-westward towards Anáhuac, where its subjects vaguely appear in tradition as Quinames, or giants. It also penetrated north-eastward into Yucatan, where Zamná was its reputed founder, and the Cocomes and Itzas probably its subjects. . . . The Maya empire seems to have been in the height of its prosperity when the rival Nahua power came into prominence, perhaps two or three centuries before Christ. The origin of the new people and of the new institutions is as deeply shrouded in mystery as is that of their predecessors. . . . The Plumed Serpent, known in different tongues as Quetzalcoatl, Gucumatz, and Cukulkan, was the being who traditionally founded the new order of things. The Nahua power grew up side by side with its Xibalban predecessor, having its capital Tulan apparently in Chiapas. Like the Maya power, it was not confined to its original home, but was borne . . . towards Anáhuac. . . . The struggle on the part of the Xibalbans seems to have been that of an old effete monarchy against a young and progressive people. Whatever its cause, the result of the conquest was the overthrow of the Votanic monarchs at a date which may be approximately fixed within a century before or after the beginning of our era. From that time the ancient empire disappears from traditional history. . . . Respecting the ensuing period of Nahua greatness in Central America nothing is recorded save that it ended in revolt, disaster, and a general scattering of the tribes at some period probably preceding the 5th century. The national names that appear in connection with the closing struggles are the Toltecs, Chichimecs, Quichés, Nonohualcas, and Tutul Xius, none of them apparently identical with the Xibalbans. . . . Of the tribes that were successively defeated and forced to seek new homes, those that spoke the Maya dialects, although considering themselves Nahuas, seem to have settled chiefly in the south and east. Some of them afterwards rose to great prominence in Guatemala and Yucatan. . . . The Nahua-speaking tribes as a rule established themselves in Anáhuac and in the western and north-western parts of Mexico. . . . The valley of Mexico and the country immediately adjoining soon became the centre of the Nahuas in Mexico."—The same, *v. 5, ch. 3*.—See, also, *AMERICAN ADORIGINES: MAYAS; and AZTEC AND MAYA PICTURE-WRITING*.

Ancient: the Toltec empire and civilization.—Are they mythical?—"The old-time story, how the Toltecs in the 6th century appeared on the Mexican table-land, how they were driven out and scattered in the 11th century, how after a brief interval the Chichimecs followed their footsteps, and how these last were succeeded by the Aztecs who were found in possession,—the last two, and probably the first, migrating in immense hordes from the far north-west,—all this is sufficiently familiar to readers of Mexican history, and is furthermore

fully set forth in the 5th volume of this work. It is probable, however, that this account, accurate to a certain degree, has been by many writers too literally construed; since the once popular theory of wholesale national migrations of American peoples within historic times, and particularly of such migrations from the north-west, may now be regarded as practically unfounded. The 6th century is the most remote period to which we are carried in the annals of Anáhuac by traditions sufficiently definite to be considered in any proper sense as historic records. . . . At the opening . . . of the historic times, we find the Toltecs in possession of Anáhuac and the surrounding country. Though the civilization was old, the name was new, derived probably, although not so regarded by all, from Tollan, a capital city of the empire, but afterwards becoming synonymous with all that is excellent in art and high culture. Tradition imputes to the Toltecs a higher civilization than that found among the Aztecs, who had degenerated with the growth of the warlike spirit, and especially by the introduction of more cruel and sanguinary religious rites. But this superiority, in some respects not improbable, rests on no very strong evidence, since this people left no relics of that artistic skill which gave them so great traditional fame; there is, however, much reason to ascribe the construction of the pyramids at Teotihuacan and Cholula to the Toltec or a still earlier period. Among the civilized peoples of the 16th century, however, and among their descendants down to the present day, nearly every ancient relic of architecture or sculpture is accredited to the Toltecs, from whom all claim descent. . . . So confusing has been the effect of this universal reference of all traditional events to a Toltec source, that, while we can not doubt the actual existence of this great empire, the details of its history, into which the supernatural so largely enters, must be regarded as to a great extent mythical. There are no data for fixing accurately the bounds of the Toltec domain, particularly in the south. There is very little, however, to indicate that it was more extensive in this direction than that of the Aztecs in later times, although it seems to have extended somewhat farther northward. On the west there is some evidence that it included the territory of Michoacan, never subdued by the Aztecs; and it probably stretched eastward to the Atlantic. . . . During the most flourishing period of its traditional five centuries of duration, the Toltec empire was ruled by a confederacy, similar in some respects to the alliance of later date between Mexico, Tezcuco and Tlaxopan. The capitals were Culhuacan, Otompan, and Tollan, the two former corresponding somewhat in territory with Mexico and Tezcuco, while the latter was just beyond the limits of the valley toward the north-west. Each of these capital cities became in turn the leading power in the confederacy. Tollan reached the highest eminence in culture, splendor, and fame, and Culhuacan was the only one of the three to survive by name the bloody convulsions by which the empire was at last overthrown, and retain anything of her former greatness. Long-continued civil wars, arising chiefly from dissensions between rival religious factions, . . . gradually undermine the imperial thrones. . . . So the kings of Tollan, Culhuacan, and Otompan, lose, year by year,

their prestige, and finally, in the middle of the 11th century, are completely overthrown, leaving the Mexican tableland to be ruled by new combinations of rising powers."—H. H. Bancroft, *Native Races of the Pacific States*, v. 2, ch. 2.—"Long before the Aztecs, a Toltec tribe called the Acolhuas, or Culhuas, had settled in the valley of Mexico. The name is more ancient than that of Toltec, and the Mexican civilization might perhaps as appropriately be called Culhua as Nahua. The name is interpreted 'crooked' from coloa, bend; also 'grandfather' from colli. Colhuacan might therefore signify Land of Our Ancestors."—The same, *Hist. of the Pacific States*, v. 4, p. 23, foot-note.—"The most venerable traditions of the Maya race claimed for them a migration from 'Tollan in Zuyva.' . . . This Tollan is certainly none other than the abode of Quetzalcoatl. . . . The cities which selected him as their tutelary deity were named for that which he was supposed to have ruled over. Thus we have Tollan and Tollantzinco ('behind Tollan') in the Valley of Mexico, and the pyramid Cholula was called 'Tollan-Cholollan,' as well as many other Tollans and Tulas among the Nahuatl colonies. The natives of the city of Tula were called, from its name, Tolteca, which simply means 'those who dwell in Tollan.' And who, let us ask, were these Toltecs? They have hovered about the dawn of American history long enough. To them have been attributed not only the primitive culture of Central America and Mexico, but of lands far to the north, and even the earthworks of the Ohio Valley. It is time they were assigned their proper place, and that is among the purely fabulous creations of the imagination, among the giants and fairies, the gnomes and sylphs, and other such fancied beings which in all ages and nations the popular mind has loved to create. Toltec, Toltecatl, which in later days came to mean a skilled craftsman or artificer, signifies, as I have said, an inhabitant of Tollan—of the City of the Sun—in other words, a Child of Light. . . . In some, and these I consider the original versions of the myth, they do not constitute a nation at all, but are merely the disciples or servants of Quetzalcoatl. They have all the traits of beings of supernatural powers."—D. G. Brinton, *American Hero-Myths*, ch. 3, sect. 3.

Also in: The same, *Essays of an Americanist*, pp. 83-100.—A recent totally contrary view, in which the Toltecs are fully accepted and modernized, is presented by M. Charnay.—D. Charnay, *Ancient Cities of the New World*.

A. D. 1325-1502.—The Aztec period.—The so called empire of Montezuma.—"The new era succeeding the Toltec rule is that of the Chichimec empire, which endured with some variations down to the coming of Cortés. The ordinary version of the early annals has it, that the Chichimecs, a wild tribe living far in the north-west, learning that the fertile regions of Central Mexico had been abandoned by the Toltecs, came down in immense hordes to occupy the land. . . . The name Chichimec at the time of the Spanish conquest, and subsequently, was used with two significations, first, as applied to the line of kings that reigned at Tezcuco, and second, to all the wild hunting tribes, particularly in the broad and little-known regions of the north. Traditionally or historically, the name has been applied to nearly every people men-

tioned in the ancient history of America. This has caused the greatest confusion among writers on the subject, a confusion which I believe can only be cleared up by the supposition that the name Chichimec, like that of Toltec, never was applied as a tribal or national designation proper to any people, while such people were living. It seems probable that among the Nahua peoples that occupied the country from the 6th to the 11th centuries, a few of the leading powers appropriated to themselves the title Toltecs, which had been at first employed by the inhabitants of Tollan, whose artistic excellence soon rendered it a designation of honor. To the other Nahua peoples, by whom these leading powers were surrounded, whose institutions were identical, but whose polish and elegance of manner were deemed by these self-constituted aristocrats somewhat inferior, the term Chichimecs, barbarians, etymologically 'dogs,' was applied. After the convulsions that overthrew Tollan, and reversed the condition of the Nahua nations, the 'dogs' in their turn assumed an air of superiority and retained their designation, Chichimecs, as a title of honor and nobility."—H. H. Bancroft, *Native Races of the Pacific States*, v. 2, ch. 2.—"We may suppose the 'Toltec period' in Mexican tradition to have been simply the period when the pueblo-town of Tollan was flourishing, and domineered most likely over neighbouring pueblos. One might thus speak of it as one would speak of the 'Theban period' in Greek history. After the 'Toltec period,' with perhaps an intervening 'Chichimec period' of confusion, came the 'Aztec period;' or, in other words, some time after Tollan lost its importance, the city of Mexico came to the front. Such, I suspect, is the slender historical residuum underlying the legend of a 'Toltec empire.' The Codex Ramirez assigns the year 1168 as the date of the abandonment of the Serpent Hill by the people of Tollan. We begin to leave this twilight of legend when we meet the Aztecs already encamped in the Valley of Mexico. Finding the most obviously eligible sites preoccupied, they were sagacious enough to detect the advantages of a certain marshy spot through which the outlets of lakes Chalco and Xochimilco, besides sundry rivulets, flowed northward and eastward into Lake Tezcuco. Here in the year 1325 they began to build their pueblo, which they called Tenochtitlan,—a name whereby hangs a tale. When the Aztecs, hard pressed by foes, took refuge among these marshes, they came upon a sacrificial stone which they recognized as one upon which some years before one of their priests had immolated a captive chief. From a crevice in this stone, where a little earth was imbedded, there grew a cactus, upon which sat an eagle holding in its beak a serpent. A priest ingeniously interpreted this symbolism as a prophecy of signal and long-continued victory, and forthwith diving into the lake he had an interview with Tlaloc, the god of waters, who told him that upon that very spot the people were to build their town. The place was therefore called Tenochtitlan, or 'place of the cactus-rock,' but the name under which it afterward came to be best known was taken from Mexitl, one of the names of the war-god Huitzilopochtli. The device of the rock and cactus, with the eagle and serpent, formed a tribal totem for the Aztecs, and has been adopted as the coat-of-

arms of the present Republic of Mexico. The pueblo of Tenochtitlan was surrounded by salt marshes, which by dint of dikes and causeways the Aztecs gradually converted into a large artificial lake, and thus made their pueblo by far the most defensible stronghold in Anahuac,—impregnable, indeed, so far as Indian modes of attack were concerned. The advantages of this commanding position were slowly but surely realized. A dangerous neighbour upon the western shore of the lake was the tribe of Tecpanecas, whose principal pueblo was Azcaputzalco. The Aztecs succeeded in making an alliance with these Tecpanecas, but it was upon unfavourable terms and involved the payment of tribute to Azcaputzalco. It gave the Aztecs, however, some time to develop their strength. Their military organization was gradually perfected, and in 1375 they elected their first tlacatecutli, or 'chief-of-men,' whom European writers, in the loose phraseology formerly current, called 'founder of the Mexican empire.' The name of this official was Acamapichtli, or 'Handful-of-Reeds.' During the eight-and-twenty years of his chieftancy the pueblo houses in Tenochtitlan began to be built very solidly of stone, and the irregular water-courses flowing between them were improved into canals. Some months after his death in 1403 his son Huitzilihuitl, or 'Humming-bird,' was chosen to succeed him. This Huitzilihuitl was succeeded in 1414 by his brother Chimalpopoca, or 'Smoking Shield,' under whom temporary calamity visited the Aztec town. The alliance with Azcaputzalco was broken, and that pueblo joined its forces to those of Tezcucō on the eastern shore of the lake. United they attacked the Aztecs, defeated them, and captured their chief-of-men, who died a prisoner in 1427. He was succeeded by Izcoatzin, or 'Obsidian Snake,' an aged chieftain who died in 1436. During these nine years a complete change came over the scene. Quarrels arose between Azcaputzalco and Tezcucō; the latter pueblo entered into alliance with Tenochtitlan, and together they overwhelmed and destroyed Azcaputzalco, and butchered most of its people. What was left of the conquered pueblo was made a slave mart for the Aztecs, and the remnant of the people were removed to the neighbouring pueblo of Tlacopan, which was made tributary to Mexico. By this great victory the Aztecs also acquired secure control of the springs upon Chapultepec, or 'Grasshopper Hill,' which furnished a steady supply of fresh water to their island pueblo. The next step was the formation of a partnership between the three pueblo towns, Tenochtitlan, Tezcucō, and Tlacopan, for the organized and systematic plunder of other pueblos. All the tribute or spoils extorted was to be divided into five parts, of which two parts each were for Tezcucō and Tenochtitlan, and one part for Tlacopan. The Aztec chief-of-men became military commander of the confederacy, which now began to extend operations to a distance. The next four chiefs-of-men were Montezuma, or 'Angry Chief,' the First, from 1436 to 1464; Axayacatl, or 'Face-in-the-Water,' from 1464 to 1477; Tizoc, or 'Wounded Leg,' from 1477 to 1486; and Ahuizotl, or 'Water-Rat,' from 1486 to 1502. Under these chiefs the great temple of Mexico was completed, and the aqueduct from Chapultepec was increased in capacity until it not only sup-

plied water for ordinary uses, but could also be made to maintain the level of the canals and the lake. In the driest seasons, therefore, Tenochtitlan remained safe from attack. Forth from this well-protected lair the Aztec warriors went on their errands of blood. Thirty or more pueblo towns, mostly between Tenochtitlan and the Gulf coast, scattered over an area about the size of Massachusetts, were made tributary to the Confederacy; and as all these communities spoke the Nahuatl language, this process of conquest, if it had not been cut short by the Spaniards, might in course of time have ended in the formation of a primitive kind of state. This tributary area formed but a very small portion of the country which we call Mexico. If the reader will just look at a map of the Republic of Mexico in a modern atlas, and observe that the states of Queretaro, Guanajuato, Michoacan, Guerrero, and a good part of La Puebla, lie outside the region sometimes absurdly styled 'Montezuma's Empire,' and surround three sides of it, he will begin to put himself into the proper state of mind for appreciating the history of Cortes and his companions. Into the outlying region just mentioned, occupied by tribes for the most part akin to the Nahuas in blood and speech, the warriors of the Confederacy sometimes ventured, with varying fortunes. They levied occasional tribute among the pueblos in these regions, but hardly made any of them regularly tributary. The longest range of their arms seems to have been to the eastward, where they sent their tax-gatherers along the coast into the isthmus of Tehuantepec, and came into conflict with the warlike Mayas and Quiches. . . . Such was, in general outline, what we may call the political situation in the time of the son of Axayacatl, the second Montezuma, who was elected chief-of-men in 1502, being then thirty-four years of age."

—J. Fiske, *The Discovery of America*, ch. 8 (v. 2).
A. D. 1517-1518.—First found by the Spaniards. See AMERICA: A. D. 1517-1518.

A. D. 1519 (February–April).—The coming of Cortés and the Spaniards.—Some time in the latter part of the year 1517, the Spaniards in Cuba had acquired definite knowledge of a much civilized people who inhabited "terra firma" to the west of them, by the return of Hernandez de Cordova from his involuntary voyage to Yucatan (see AMERICA: A. D. 1517-1518). In the spring of 1518 the Cuban governor, Velasquez, had enlarged that knowledge by sending an expedition under Grijalva to the Mexican coast, and, even before Grijalva returned, he had begun preparations for a more serious undertaking of conquest and occupation in the rich country newly found. For the command of this second armament he selected Hernando Cortés, one of the boldest and most ambitious of the adventurers who had helped to subdue and settle the island of Cuba. Before the fleet sailed, however, a jealous distrust of his lieutenant had become excited by some cause in the governor's mind, and he attempted to supersede him in the command. Cortés slipped out of port, half prepared as he was for the voyage, defied the orders of his superior, and made his way (February, 1519) to the scene of his future conquests, actually as a rebel against the authority which commissioned him. "The squadron of Cortés was composed of eleven small vessels. There were 110 sailors, 553 soldiers, of

which 13 were armed with muskets, and 32 with arquebuses, the others with swords and pikes only. There were 10 little field-pieces, and 16 horses. Such were the forces with which the bold adventurer set forth to conquer a vast empire, defended by large armies, not without courage, according to the report of Grijalva. But the companions of Cortés were unfamiliar with fear. Cortés followed the same route as Grijalva. . . . At the Tabasco River, which the Spanish called Río de Grijalva, because that explorer had discovered it, they had a fight with some natives who resisted their approach. These natives fought bravely, but the fire-arms, and above all the horses, which they conceived to be of one piece with their riders, caused them extreme terror, and the rout was complete. . . . The native prince, overcome, sent gifts to the conqueror, and, without much knowing the extent of his agreement, acknowledged himself as vassal of the king of Spain, the most powerful monarch of the world." Meantime, tidings of a fresh appearance of the same strange race which had briefly visited the shores of the empire the year before were conveyed to Montezuma, and the king, who had sent envoys to the strangers before, but not quickly enough to find them, resolved to do so again. "The presents prepared for Grijalva, which had reached the shore too late, were, alas! all ready. To these were now added the ornaments used in the decoration of the image of Quetzalcoatl, on days of solemnity, regarded as the most sacred among all the possessions of the royal house of Mexico. Cortés accepted the rôle of Quetzalcoatl and allowed himself to be decorated with the ornaments belonging to that god without hesitation. The populace were convinced that it was their deity really returned to them. A feast was served to the envoys, with the accompaniment of some European wine which they found delicious. . . . During the feast native painters were busy depicting every thing they saw to be shown to their royal master. . . . Cortés sent to Montezuma a gilt helmet with the message that he hoped to see it back again filled with gold. . . . The bearer of this gift and communication, returning swiftly to the court, reported to the monarch that the intention of the stranger was to come at once to the capital of the empire. Montezuma at once assembled a new council of all his great vassals, some of whom urged the reception of Cortés, others his immediate dismissal. The latter view prevailed, and the monarch sent, with more presents to the unknown invader, benevolent but peremptory commands that he should go away immediately. . . . Meanwhile the Spanish camp was feasting and reposing in huts of cane, with fresh provisions, in great joy after the weariness of their voyage. They accepted with enthusiasm the presents of the emperor, but the treasures which were sent had an entirely different effect from that hoped for by Montezuma; they only inflamed the desire of the Spaniard to have all within his grasp, of which this was but a specimen. It was now that the great mistake in policy was apparent, by which the Aztec chieftain had for years been making enemies all over the country, invading surrounding states, and carrying off prisoners for a horrible death by sacrifice. These welcomed the strangers and encouraged their presence."—S. Hale, *The Story of Mexico*, ch. 13.

A. D. 1519 (June—October).—The advance of Cortés to Tlascala.—"Meanwhile Cortés, by his craft, quieted a rising faction of the party of Velasquez which demanded to be led back to Cuba. He did this by seeming to acquiesce in the demand of his followers in laying the foundations of a town and constituting its people a municipality competent to choose a representative of the royal authority. This done, Cortés resigned his commission from Velasquez, and was at once invested with supreme power by the new municipality. The scheme which Velasquez had suspected was thus brought to fruition. Whoever resisted the new captain was conquered by force, persuasion, tact, or magnetism; and Cortés became as popular as he was irresistible. At this point messengers presented themselves from tribes not far off who were unwilling subjects of the Aztec power. The presence of possible allies was a propitious circumstance, and Cortés proceeded to cultivate the friendship of these tribes. He moved his camp day by day along the shore, inuring his men to marches, while the fleet sailed in company. They reached a large city [Compoalla, or Zempoalla, the site of which has not been determined], and were regaled. Each chief told of the tyranny of Montezuma, and the eyes of Cortés glistened. The Spaniards went on to another town, slaves being provided to bear their burdens. Here they found tax-gatherers of Montezuma collecting tribute. Emboldened by Cortés' glance, his hosts seized the Aztec emissaries and delivered them to the Spaniards. Cortés now played a double game. He propitiated the servants of Montezuma by secretly releasing them, and added to his allies by enjoining every tribe he could reach to resist the Aztec collectors of tribute. The wandering municipality, as represented in this piratical army, at last stopped at a harbor where a town (La Villa Rica de Vera Cruz) sprang up, and became the base of future operations." At this point in his movements the adventurer despatched a vessel to Spain, with letters to the king, and with dazzling gifts of gold and Aztec fabrics. "Now came the famous resolve of Cortés. He would band his heterogeneous folk together—adherents of Cortés and of Velasquez—in one common cause and danger. So he adroitly led them to be partners in the deed which he stealthily planned. Hulk after hulk of the apparently worm-eaten vessels of the fleet sank in the harbor, until there was no flotilla left upon which any could desert him. The march to Mexico was now assured. The force with which to accomplish this consisted of about 450 Spaniards, six or seven light guns, fifteen horses, and a swarm of Indian slaves and attendants. A body of the Totonacs accompanied them. Two or three days brought them into the higher plain and its enlivening vegetation. When they reached the dependencies of Montezuma, they found orders had been given to extend to them every courtesy. They soon reached the Anahuac plateau, which reminded them not a little of Spain itself. They passed from cacique to cacique, some of whom groaned under the yoke of the Aztec; but not one dared do more than orders from Montezuma dictated. Then the invaders approached the territory of an independent

people, those of Tlascala, who had walled their country against neighboring enemies. A fight took place at the frontiers, in which the Spaniards lost two horses. They forced passes against great odds, but again lost a horse or two, — which was a perceptible diminution of their power to terrify. The accounts speak of immense hordes of the Tlascalans, which historians now take with allowances, great or small. Cortés spread what alarm he could by burning villages and capturing the country people. His greatest obstacle soon appeared in the compacted army of Tlascalans arrayed in his front. The conflict which ensued was for a while doubtful. Every horse was hurt, and 60 Spaniards were wounded; but the result was the retreat of the Tlascalans. Divining that the Spanish power was derived from the sun, the enemy planned a night attack; but Cortés suspected it, and assaulted them in their own ambush. Cortés now had an opportunity to display his double-facedness and his wiles. He received embassies both from Montezuma and from the senate of the Tlascalans. He cajoled each, and played off his friendship for the one in cementing an alliance with the other. But to Tlascala and Mexico he would go, so he told them. The Tlascalans were not averse, for they thought it boded no good to the Aztecs, if he could be bound to themselves. Montezuma dreaded the contact, and tried to intimidate the strangers by tales of the horrible difficulties of the journey. Presently the army took up its march for Tlascala, where they were royally received, and wives in abundance were bestowed upon the leaders. Next they passed to Cholula, which was subject to the Aztecs."—J. Winsor, *Narrative and Critical Hist. of Am.*, v. 2, ch. 6.

A. D. 1519 (October).—The Massacre at Cholula.—The march to Mexico.—"The distance from Tlascala to Chololan [or Cholula] is but from 15 to 20 miles. It was a kind of holy place, venerated far and wide in Anahuac; pilgrimages were made thither, as the Mahometans go to Mecca, and Christians to Jerusalem or Rome. The city was consecrated to the worship of Quetzalcoatl, who had there the noblest temple in all Mexico, built, like all the temples in the country, on the summit of a truncated pyramid. The traveller of the present day beholds this pyramid on the horizon as he approaches Puebla, on his route from Vera Cruz to Mexico. But the worship of the beneficent Quetzalcoatl had been perverted by the sombre genius of the Aztecs. To this essentially good deity 6,000 human victims were annually immolated in his temple at Chololan. . . . The Spaniards found at Chololan an eager and, to all appearance at least, a perfectly cordial welcome." But this hospitality masked, it is said, a great plot for their destruction, which Montezuma had inspired and to aid which he had sent into the neighborhood of the city a powerful Mexican army. The plot was revealed to Cortez — so the Spanish historians relate — and "he took his resolution with his accustomed energy and foresight. He made his dispositions for the very next day. He acquainted the caciques of Chololan that he should evacuate the city at break of dawn, and required them to furnish 2,000 porters or 'tam-anes,' for the baggage. The caciques then organized their attack for the morrow morning, not without a promise of the men required, whom, in fact, they brought at dawn to the great court

in which the foreigners were domiciled. The conflict soon began. The Spaniards, who were perfectly prepared, commenced by massacring the caciques. The mass of Chololans that attempted to invade their quarters were crushed under the fire of their artillery and musketry, and the charges of their cavalry. Hearing the reports, the Tlascalans, who had been left at the entrance of the city, rushed on to the rescue. . . . They could now glut their hatred and vengeance; they slaughtered as long as they could, and then set to work at plunder. The Spaniards, too, after having killed all that resisted, betook themselves to pillage. The unfortunate city of Chololan was thus inundated with blood and sacked. Cortez, however, enjoined that the women and children should be spared, and we are assured that in that he was obeyed, even by his cruel auxiliaries from Tlascala. . . . To the praise of Cortez it must be said that, after the victory, he once more showed himself tolerant: he left the inhabitants at liberty to follow their old religion on condition that they should no longer immolate human victims. After this signal blow, all the threats, all the intrigues, of Montezuma, had no possible effect, and the Aztec emperor could be under no illusion as to the inflexible intention of Cortez. The latter, as soon as he had installed new chiefs at Chololan, and effaced the more hideous traces of the massacre and pillage that had desolated the city, set out with his own troops and his Indian auxiliaries from Tlascala for the capital of the Aztec empire, the magnificent city of Tenochtitlan."—M. Chevalier, *Mexico, Ancient and Modern*, pt. 2, ch. 4 (p. 1).

The Capital of Montezuma as described by Cortés and Bernal Diaz.—"This Province is in the form of a circle, surrounded on all sides by lofty and rugged mountains; its level surface comprises an area of about 70 leagues in circumference, including two lakes, that overspread nearly the whole valley, being navigated by boats more than 50 leagues round. One of these lakes contains fresh, and the other, which is the larger of the two, salt water. On one side of the lakes, in the middle of the valley, a range of highlands divides them from one another, with the exception of a narrow strait which lies between the highlands and the lofty Sierras. This strait is a bow-shot wide, and connects the two lakes; and by this means a trade is carried on between the cities and other settlements on the lakes in canoes without the necessity of travelling by land. As the salt lake rises and falls with its tides like the sea, during the time of high water it pours into the other lake with the rapidity of a powerful stream; and on the other hand, when the tide has ebbed, the water runs from the fresh into the salt lake. This great city of Temixtitan [Tenochtitlan—Mexico] is situated in this salt lake, and from the main land to the denser parts of it, by whichever route one chooses to enter, the distance is two leagues. There are four avenues or entrances to the city, all of which are formed by artificial canseways, two spears' length in width. The city is as large as Seville or Cordova; its streets, I speak of the principal ones, are very wide and straight; some of these, and all the inferior ones, are half land and half water, and are navigated by canoes. All the streets at intervals have openings, through which the water flows, crossing from one street

to another; and at these openings, some of which are very wide, there are also very wide bridges, composed of large pieces of timber, of great strength and well put together; on many of these bridges ten horses can go abreast. . . . This city has many public squares, in which are situated the markets and other places for buying and selling. There is one square twice as large as that of the city of Salamanca, surrounded by porticoes, where are daily assembled more than 60,000 souls, engaged in buying and selling; and where are found all kinds of merchandise that the world affords, embracing the necessities of life, as for instance articles of food, as well as jewels of gold and silver, lead, brass, copper, tin, precious stones, bones, shells, snails, and feathers.

. . . Every kind of merchandise is sold in a particular street or quarter assigned to it exclusively, and thus the best order is preserved. They sell everything by number or measure; at least so far we have not observed them to sell any thing by weight. There is a building in the great square that is used as an audience house, where ten or twelve persons, who are magistrates, sit and decide all controversies that arise in the market, and order delinquents to be punished.

. . . This great city contains a large number of temples, or houses for their idols, very handsome edifices, which are situated in the different districts and the suburbs. . . . Among these temples there is one which far surpasses all the rest, whose grandeur of architectural details no human tongue is able to describe; for within its precincts, surrounded by a lofty wall, there is room enough for a town of 500 families. Around the interior of this enclosure there are handsome edifices, containing large halls and corridors, in which the religious persons attached to the temple reside. There are full 40 towers, which are lofty and well built, the largest of which has 50 steps leading to its main body, and is higher than the tower of the principal church at Seville. The stone and wood of which they are constructed are so well wrought in every part that nothing could be better done. . . . This noble city contains many fine and magnificent houses; which may be accounted for from the fact that all the nobility of the country, who are the vassals of Muteezuma, have houses in the city, in which they reside a certain part of the year; and, besides, there are numerous wealthy citizens who also possess fine houses."—H. Cortés, *Despatches [Letters]* (trans. by G. Folsom), letter 2, ch. 5.

"We had already been four days in the city of Mexico, and neither our commander nor any of us had, during that time, left our quarters, excepting to visit the gardens and buildings adjoining the palace. Cortés now, therefore, determined to view the city, and visit the great market, and the chief temple of Huitzilopochtli.

. . . The moment we arrived in this immense market, we were perfectly astonished at the vast numbers of people, the profusion of merchandise which was there exposed for sale, and at the good police and order that reigned throughout.

. . . Every species of goods which New Spain produces were here to be found; and everything put me in mind of my native town Medina del Campo during fair time, where every merchandise has a separate street assigned for its sale.

. . . On quitting the market, we entered the spacious yards which surround the chief temple. . . . Motecusuma, who was sacrificing on the

top to his idols, sent six papas and two of his principal officers to conduct Cortés up the steps. There were 114 steps to the summit. . . . Indeed, this infernal temple, from its great height, commanded a view of the whole surrounding neighbourhood. From this place we could likewise see the three causeways which led into Mexico. . . . We also observed the aqueduct which ran from Chapultepec, and provided the whole town with sweet water. We could also distinctly see the bridges across the openings, by which these causeways were intersected, and through which the waters of the lake ebbed and flowed. The lake itself was crowded with canoes, which were bringing provisions, manufactures and other merchandise to the city. From here we also discovered that the only communication of the houses in this city, and of all the other towns built in the lake, was by means of drawbridges or canoes. In all these towns the beautiful white plastered temples rose above the smaller ones, like so many towers and castles in our Spanish towns, and this, it may be imagined, was a splendid sight."—Bernal Díaz del Castillo, *Memoirs* (trans. by Lockhart), ch. 92 (v. 1).

The same as viewed in the light of modern historical criticism.—"In the West India Islands the Spanish discoverers found small Indian tribes under the government of chiefs; but on the continent, in the Valley of Mexico, they found a confederacy of three Indian tribes under a more advanced but similar government. In the midst of the valley was a large pueblo, the largest in America, surrounded with water, approached by causeways; in fine, a water-girt fortress impregnable to Indian assault. This pueblo presented to the Spanish adventurers the extraordinary spectacle of an Indian society lying two ethnical periods back of European society, but with a government and plan of life at once intelligent, orderly, and complete. . . . The Spanish adventurers who captured the pueblo of Mexico saw a king in Montezuma, lords in Aztec chiefs, and a palace in the large joint-tenement house occupied, Indian fashion, by Montezuma and his fellow-householders. It was, perhaps, an unavoidable self-deception at the time, because they knew nothing of the Aztec social system. Unfortunately it inaugurated American aboriginal history upon a misconception of Indian life which has remained substantially unquestioned until recently. The first eye-witnesses gave the keynote to this history by introducing Montezuma as a king, occupying a palace of great extent crowded with retainers, and situated in the midst of a grand and populous city, over which, and much besides, he was reputed master. But king and kingdom were in time found too common to express all the glory and splendor the imagination was beginning to conceive of Aztec society; and emperor and empire gradually superseded the more humble conception of the conquerors. . . . To every author, from Cortés and Bernal Díaz to Brasseur de Bourbourg and Hubert H. Bancroft, Indian society was an unfathomable mystery, and their works have left it a mystery still. Ignorant of its structure and principles, and unable to comprehend its peculiarities, they invoked the imagination to supply whatever was necessary to fill out the picture. . . . Thus, in this case, we have a grand historical romance, strung upon the conquest of

Mexico as upon a thread; the acts of the Spaniards, the pueblo of Mexico, and its capture, are historical, while the descriptions of Indian society and government are imaginary and delusive. . . . There is a strong probability, from what is known of Indian life and society, that the house in which Montezuma lived, was a joint-tenement house of the aboriginal American model, owned by a large number of related families, and occupied by them in common as joint proprietors; that the dinner [of Montezuma, in his palace, as described by Cortes and Bernal Diaz] . . . was the usual single daily meal of a communal household, prepared in a common cook-house from common stores, and divided, Indian fashion, from the kettle; and that all the Spaniards found in Mexico was a simple confederacy of three Indian tribes, the counterpart of which was found in all parts of America. It may be premised further that the Spanish adventurers who thronged to the new world after its discovery found the same race of Red Indians in the West India Islands, in Central and South America, in Florida, and in Mexico. In their mode of life and means of subsistence, in their weapons, arts, usages, and customs, in their institutions, and in their mental and physical characteristics, they were the same people in different stages of advancement. No distinction of race was observed, and none in fact existed. . . . Not a vestige of the ancient pueblo of Mexico (Tenochtitlan) remains to assist us to a knowledge of its architecture. Its structures, which were useless to a people of European habits, were speedily destroyed to make room for a city adapted to the wants of a civilized race. We must seek for its characteristics in contemporary Indian houses which still remain in ruins, and in such of the early descriptions as have come down to us, and then leave the subject with but little accurate knowledge. Its situation, partly on dry land and partly in the waters of a shallow artificial pond formed by causeways and dikes, led to the formation of streets and squares, which were unusual in Indian pueblos, and gave to it a remarkable appearance. . . . Many of the houses were large, far beyond the supposable wants of a single Indian family. They were constructed of adobe brick and of stone, and plastered over in both cases with gypsum, which made them a brilliant white; and some were constructed of a red porous stone. In cutting and dressing this stone flint implements were used. The fact that the houses were plastered externally leads us to infer that they had not learned to dress stone and lay them in courses. It is not certainly established that they had learned the use of a mortar of lime and sand. In the final attack and capture, it is said that Cortes, in the course of seventeen days, destroyed and levelled three-quarters of the pueblo, which demonstrates the flimsy character of the masonry. . . . It is doubtful whether there was a single pueblo in North America, with the exception of Tlascala, Cholula, Tezcuco, and Mexico, which contained 10,000 inhabitants. There is no occasion to apply the term 'city' to any of them. None of the Spanish descriptions enable us to realize the exact form and structure of these houses, or their relations to each other in forming a pueblo. . . . It is evident from the citations made that the largest of these joint-tenement houses would accommodate from 500 to 1,000 or more people, living in the fashion of In-

dians; and that the courts were probably quadrangles, formed by constructing the building on three sides of an inclosed space, as in the New Mexican pueblos, or upon the four sides, as in the House of the Nuns, at Uxmal."—L. H. Morgan, *Houses and House-life of the Am. Aborigines* (*U. S. Geog. and Geol. Surv. of Rocky Mt. Reg.: Contrib. to N. Am. Ethnology*, v. 4), ch. 10.

A. D. 1519-1520.—Captivity of Montezuma, Cortés ruling in his name.—The discomfiture of Narvaez.—The revolt of the capital.—When Cortés had time to survey and to realize his position in the Mexican capital, he saw that it was full of extreme danger. To be isolated with so small a force in the midst of any hostile, populous city would be perilous; but in Mexico that peril was immeasurably increased by the peculiar situation and construction of the island-city—Venice-like in its insulation, and connected with the mainland by long and narrow causeways and bridges, easily broken and difficult to secure for retreat. With characteristic audacity, the Spanish leader mastered the danger of the situation, so to speak, by taking Montezuma himself in pledge for the peace and good behavior of his subjects. Commanded by Cortés to quit his palace, and to take up his residence with the Spaniards in their quarters, the Mexican monarch remonstrated but obeyed, and became from that day the shadow of a king. "During six months that Cortes remained in Mexico [from November, 1519, until May, 1520], the monarch continued in the Spanish quarters, with an appearance of as entire satisfaction and tranquillity as if he had resided there, not from constraint, but through choice. His ministers and officers attended him as usual. He took cognizance of all affairs; every order was issued in his name. . . . Such was the dread which both Montezuma and his subjects had of the Spaniards, or such the veneration in which they held them, that no attempt was made to deliver their sovereign from confinement, and though Cortes, relying on this ascendant which he had acquired over their minds, permitted him not only to visit his temples, but to make hunting excursions beyond the lake, a guard of a few Spaniards carried with it such a terror as to intimidate the multitude, and secure the captive monarch. Thus, by the fortunate temerity of Cortes in seizing Montezuma, the Spaniards at once secured to themselves more extensive authority in the Mexican empire than it was possible to have acquired in a long course of time by open force; and they exercised more absolute sway in the name of another than they could have done in their own. . . . Cortes availed himself to the utmost of the powers which he possessed by being able to act in the name of Montezuma. He sent some Spaniards, whom he judged best qualified for such commissions, into different parts of the empire, accompanied by persons of distinction, whom Montezuma appointed to attend them both as guides and protectors. They visited most of the provinces, viewed their soil and productions, surveyed with particular care the districts which yielded gold or silver, pitched upon several places as proper stations for future colonies, and endeavoured to prepare the minds of the people for submitting to the Spanish yoke." At the same time, Cortes strengthened his footing in the capital by building and launching two brigantines on the lake, with an equipment and

armament which his royal prisoner caused to be brought up for him from Vera Cruz. He also persuaded Montezuma to acknowledge himself a vassal of the King of Castile, and to subject his kingdom to the payment of an annual tribute. But, while his cunning conquest of an empire was advancing thus prosperously, the astute Spanish captain allowed his prudence to be over-ridden by his religious zeal. Becoming impatient at the obstinacy with which Montezuma clung to his false gods, Cortes made a rash attempt, with his soldiers, to cast down the idols in the great temple of the city, and to set the image of the Virgin in their place. The sacrilegious outrage roused the Mexicans from their tame submission and fired them with an inextinguishable rage. At this most unfortunate juncture, news came from Vera Cruz which demanded the personal presence of Cortes on the coast. Velasquez, the hostile governor of Cuba, to whom the adventurer in Mexico was a rebel, had sent, at last, an expedition, to put a stop to his unauthorized proceedings and to arrest his person. Cortes faced the new menace as boldly as he had faced all others. Leaving 150 men in the angry Mexican capital, under Pedro de Alvarado, he set out with the small remainder of his force to attack the Spanish intruders. Even after picking up some detachments outside and joining the garrison at Vera Cruz, he could muster but 250 men; while Narvaez, who commanded the expedition from Cuba, had brought 800 foot soldiers and 80 horse, with twelve pieces of cannon. The latter had taken possession of the city of Zempoalla and was strongly posted in one of its temples. There Cortes surprised him, in a night attack, took him prisoner, in a wounded state, and compelled his troops to lay down their arms. Nearly the whole of the latter were soon captivated by the commanding genius of the man they had been sent to arrest, and enlisted in his service. He found himself now at the head of a thousand well armed men; and he found in the same moment that he needed them all. For news came from Mexico that Alvarado, thinking to anticipate and crush a suspected intention of the Mexicans to rise against him, had provoked the revolt and made it desperate by a most perfidious, brutal massacre of several hundred of the chief persons of the empire, committed while they were celebrating one of the festivals of their religion, in the temple. The Spaniards at Mexico were now beleaguered, as the consequence, in their quarters, and their only hope was the hope that Cortes would make haste to their rescue,—which he did.—W. Robertson, *Hist. of America*, bk. 5 (v. 2).

A. D. 1520 (June—July).—The return of Cortés to the Mexican Capital.—The battle in the city.—The death of Montezuma.—The disastrous Retreat of the Spaniards.—The alarming intelligence which came to him from the Mexican capital called out in Cortés the whole energy of his nature. Hastily summoning back the various expeditions he had already sent out, and gathering all his forces together, he "reviewed his men, and found that they amounted to 1,300 soldiers, among whom were 96 horsemen, 80 cross-bowmen, and about 80 musketeers. Cortez marched with great strides to Mexico, and entered the city at the head of

this formidable force on the 24th of June, 1520, the day of John the Baptist. Very different was the reception of Cortez on this occasion from that on his first entry into Mexico, when Montezuma had gone forth with all pomp to meet him. Now, the Indians stood silently in the doorways of their houses, and the bridges between the houses were taken up. Even when he arrived at his own quarters he found the gates barred, so strict had been the siege, and he had to demand an entry." The Mexicans, strangely enough, made no attempt to oppose his entrance into the city and his junction with Alvarado; yet the day after his return their attack upon the Spanish quarters, now so strongly reinforced, was renewed. "Cortez, who was not at all given to exaggeration, says that neither the streets nor the terraced roofs ('azoteas') were visible, being entirely obscured by the people who were upon them; that the multitude of stones was so great that it seemed as if it rained stones; and that the arrows came so thickly that the walls and the courts were full of them, rendering it difficult to move about. Cortez made two or three desperate sallies, and was wounded. The Mexicans succeeded in setting fire to the fortress, which was with difficulty subdued, and they would have scaled the walls at the point where the fire had done most damage but for a large force of cross-bowmen, musketeers, and artillery, which Cortez threw forward to meet the danger. The Mexicans at last drew back, leaving no fewer than 80 Spaniards wounded in this first encounter. The ensuing morning, as soon as it was daylight, the attack was renewed. . . . Again, and with considerable success, Cortez made sallies from the fortress in the course of the day; but at the end of it there were about 60 more of his men to be added to the list of wounded, already large, from the injuries received on the preceding day. The third day was devoted by the ingenious Cortez to making three movable fortresses, called 'mantas,' which, he thought, would enable his men, with less danger, to contend against the Mexicans upon their terraced roofs. . . . It was on this day that the unfortunate Montezuma, either at the request of Cortez, or of his own accord, came out upon a battlement and addressed the people." He was interrupted by a shower of stones and arrows and received wounds from which he died soon after. The fighting on this day was more desperate than it had been before. The Spaniards undertook to dislodge a body of the Indians who had posted themselves on the summit of the great temple, which was dangerously near at hand. Again and again they were driven back, until Cortez bound his shield to his wounded arm and led the assault. Then, after three hours of fighting, from terrace to terrace, they gained the upper platform and put every Mexican to the sword. But 40 Spaniards perished in the struggle. "This fight in the temple gave a momentary brightness to the arms of the Spaniards and afforded Cortez an opportunity to resume negotiations. But the determination of the Mexicans was fixed and complete. . . . They would all perish, if that were needful, to gain their point of destroying the Spaniards. They bade Cortez look at the streets, the squares, and the terraces, covered with people; and then, in a business-like and calculating manner, they told him that if 25,000 of them were to die for each

Spaniards, still the Spaniards would perish first. . . . It generally requires at least as much courage to retreat as to advance. Indeed, few men have the courage and the ready wisdom to retreat in time. But Cortez, once convinced that his position in Mexico was no longer tenable, wasted no time or energy in parleying with danger. Terror had lost its influence with the Mexicans, and superior strategy was of little avail against such overpowering numbers. . . . Cortez resolved to quit the city that night [July 1, 1520]. . . . A little before midnight the stealthy march began. The Spaniards succeeded in laying down the pontoon over the first bridge-way, and the vanguard with Sandoval passed over; but, while the rest were passing, the Mexicans gave the alarm with loud shouts and blowing of horns. . . . Almost immediately upon this alarm the lake was covered with canoes. It rained, and the misfortunes of the night commenced by two horses slipping from the pontoon into the water. Then the Mexicans attacked the pontoon-bearers so furiously that it was impossible for them to raise it up again." After that, all seems to have been a confused struggle in the darkness, where even Cortez could do little for the unfortunate rear-guard of his troops. "This memorable night has ever been celebrated in American history as 'la noche triste.' In this flight from Mexico all the artillery was lost, and there perished 450 Spaniards, . . . 4,000 of the Indian allies, 46 horses, and most of the Mexican prisoners, including one son and two daughters of Montezuma, and his nephew the King of Tezcoco. A loss which posterity will ever regret was that of the books and accounts, memorials and writings, of which there were some, it is said, that contained a narrative of all that had happened since Cortez left Cuba. . . . In the annals of retreats there has seldom been one recorded which proved more entirely disastrous." —Sir A. Helps, *Spanish Conquest in America*, bk. 10, ch. 7-8 (v. 2).

A. D. 1520-1521.—The retreat to Tlascalala. —Reinforcements and recovery.—Cortés in the field again.—Preparations to attack Mexico.—"After the disasters and fatigues of the 'noche triste,' the melancholy and broken band of Cortés rested for a day at Tacuba, whilst the Mexicans returned to their capital, probably to bury the dead and purify their city. It is singular, yet it is certain, that they did not follow up their successes by a death blow at the disarmed Spaniards. But this momentary paralysis of their efforts was not to be trusted, and accordingly Cortés began to retreat eastwardly, under the guidance of the Tlascalans, by a circuitous route around the northern limits of lake Zumpango. The flying forces and their auxiliaries were soon in a famishing condition, subsisting alone on corn or on wild cherries gathered in the forest, with occasional refreshment and support from the carcase of a horse that perished by the way. For six days these fragments of the Spanish army continued their weary pilgrimage, and, on the seventh, reached Otumba." At Otumba their progress was barred by a vast army of the Aztecs, which had marched by a shorter road to intercept them; but after a desperate battle the natives fled and the Spaniards were troubled no more until they reached the friendly shelter of Tlascalala. The Tlascalans held faithfully to their alliance

and received the flying strangers with helpful hands and encouraging words. But many of Cortés' men demanded permission to continue their retreat to Vera Cruz. "Just at this moment, too, Cuitlahua, who mounted the throne of Mexico on the death of Montezuma, despatched a mission to the Tlascalans, proposing to bury the hatchet, and to unite in sweeping the Spaniards from the realm." A hot discussion ensued in the council of the Tlascalcan chiefs, which resulted in the rejection of the Mexican proposal, and the confidence of Cortés was restored. He succeeded in pacifying his men, and gave them employment by expeditions against tribes and towns within reach which adhered to the Mexican king. After some time he obtained reinforcements, by an arrival of vessels at Vera Cruz bringing men and supplies, and he began to make serious preparations for the reconquest of the Aztec capital. He "constructed new arms and caused old ones to be repaired; made powder with sulphur obtained from the volcano of Popocatepetl; and, under the direction of his builder, Lopez, prepared the timber for brigantines, which he designed to carry, in pieces, and launch on the lake at the town of Tezcoco. At that port, he resolved to prepare himself fully for the final attack, and, this time, he determined to assault the enemy's capital by water as well as by land." The last day of December found him once more on the shores of the Mexican lake, encamped at Tezcoco, with a Spanish force restored to 600 men in strength, having 40 horses, 80 arquebuses and nine small cannon. Of Indian allies he is said to have had many thousands. Meantime, Cuitlahua had died of smallpox—which came to the country with the Spaniards—and had been succeeded by Guatemozin, his nephew, a vigorous young man of twenty-five. "At Tezcoco, Cortés was firmly planted on the eastern edge of the valley of Mexico, in full sight of the capital which lay across the lake, near its western shore, at the distance of about twelve miles. Behind him, towards the sea-coast, he commanded the country, . . . while, by passes through lower spurs of the mountains, he might easily communicate with the valleys of which the Tlascalans and Cholulans were masters." One by one he reduced and destroyed or occupied the neighboring towns, and overran the surrounding country, in expeditions which made the complete circle of the valley and gave him a complete knowledge of it, while they re-established the prestige of the Spaniards and the terror of their arms. On the 28th of April the newly built brigantines, 12 in number, were launched upon the lake, and all was in readiness for an attack upon the city, with forces now increased by fresh arrivals to 87 horse and 818 Spanish infantry, with three iron field pieces and 15 brass falconets.—B. Mayer, *Mexico, Aztec, Spanish and Republican*, bk. 1, ch. 6-8 (v. 1).

A. D. 1521 (May-July).—The siege of the Aztec capital begun.—"The observations which Cortés had made in his late tour of reconnaissance had determined him to begin the siege by distributing his forces into three separate camps, which he proposed to establish at the extremities of the principal causeways," under three of his captains, Alvarado, Olid and Sandoval. The movement of forces from Tezcoco began on the 10th of May, 1521. Alvarado and Olid occupied

Tacuba, cut the aqueduct which conveyed water from Chapoltepec to the capital, and made an unsuccessful attempt to get possession of the fatal causeway of "the noche triste." Holding Tacuba, however, Alvarado commanded that important passage, while Sandoval, seizing the city of Iztapalapan, at the southern extremity of the lake, and Olid, establishing himself near the latter, at Cojohuacan, were planted at the two outlets, it would seem, of another of the causeways, which branched to attain the shore at those two points. When so much had been accomplished, Cortés, in person, set sail with his fleet of brigantines and speedily cleared the lake of all the swarm of light canoes and little vessels with which the unfortunate Mexicans tried vainly though valorously to dispute it with him. "This victory, more complete than even the sanguine temper of Cortés had prognosticated, proved the superiority of the Spaniards, and left them, henceforth, undisputed masters of the Aztec sea. It was nearly dusk when the squadron, coasting along the great southern causeway, anchored off the point of junction, called Xoloc, where the branch from Cojohuacan meets the principal dike. The avenue widened at this point, so as to afford room for two towers, or turreted temples, built of stone, and surrounded by walls of the same material, which presented altogether a position of some strength, and, at the present moment, was garrisoned by a body of Aztecs. They were not numerous; and Cortés, landing with his soldiers, succeeded without much difficulty in dislodging the enemy, and in getting possession of the works." Here, in a most advantageous position on the great causeway, the Spanish commander fortified himself and established his headquarters, summoning Olid with half of his force to join him and transferring Sandoval to Olid's post at Cojohuacan. "The two principal avenues to Mexico, those on the south and the west, were now occupied by the Christians. There still remained a third, the great dike of Tepejacac, on the north, which, indeed, taking up the principal street, that passed in a direct line through the heart of the city, might be regarded as a continuation of the dike of Iztapalapan. By this northern route a means of escape was still left open to the besieged, and they availed themselves of it, at present, to maintain their communications with the country, and to supply themselves with provisions. Alvarado, who observed this from his station at Tacuba, advised his commander of it, and the latter instructed Sandoval to take up his position on the causeway. That officer, though suffering at the time from a severe wound, . . . hastened to obey; and thus, by shutting up its only communication with the surrounding country, completed the blockade of the capital. But Cortés was not content to wait patiently the effects of a dilatory blockade." He arranged with his subordinate captains the plan of a simultaneous advance along each of the causeways toward the city. From his own post he pushed forward with great success, assisted by the brigantines which sailed along side, and which, by the flanking fire of their artillery, drove the Aztecs from one barricade after another, which they had erected at every dismantled bridge. Fighting their way steadily, the Spaniards traversed the whole length of the dike and entered the city; penetrated to the great square; saw once more their

old quarters; scaled again the sides of the pyramid-temple, to slay the bloody priests and to strip the idols of their jewels and gold. But the Aztecs were frenzied by this sacrilege, as they had been frenzied by the same deed before, and renewed the battle with so much fury that the Spaniards were driven back in thorough panic and disarray. "All seemed to be lost;—when suddenly sounds were heard in an adjoining street, like the distant tramp of horses galloping rapidly over the pavement. They drew nearer and nearer, and a body of cavalry soon emerged on the great square. Though but a handful in number, they plunged boldly into the thick of the enemy," who speedily broke and fled, enabling Cortés to withdraw his troops in safety. Neither Alvarado nor Sandoval, who had greater difficulties to overcome, and who had no help from the brigantines, reached the suburbs of the city; but their assault had been vigorously made, and had been of great help to that of Cortés. The success of the demonstration spread consternation among the Mexicans and their vassals, and brought a number of the latter over to the Spanish side. Among these latter was the prince of Tezeuco, who joined Cortés, with a large force, in the next assault which the latter made presently upon the city. Again penetrating to the great square, the Spaniards on this occasion destroyed the palaces there by fire. But the spirit of the Mexicans remained unbroken, and they were found in every encounter opposing as obstinate a resistance as ever. They contrived, too, for a remarkable length of time, to run the blockade of the brigantines on the lake and to bring supplies into the city by their canoes. But, at length, when most of the great towns of the neighborhood had deserted their cause, the supplies failed and starvation began to do its work in the fated city. At the same time, the Spaniards were amply provisioned, and their new allies built barracks and huts for their shelter. Cortés "would gladly have spared the town and its inhabitants. . . . He intimated more than once, by means of the prisoners whom he released, his willingness to grant them fair terms of capitulation. Day after day, he fully expected his proffers would be accepted. But day after day he was disappointed. He had yet to learn how tenacious was the memory of the Aztecs." —W. H. Prescott, *Hist. of the Conq. of Mexico*, bk. 6, ch. 4-5.

A. D. 1521 (July).—Disastrous repulse of the Spaniards.—"The impatience of the soldiers grew to a great height, and was supported in an official quarter—by no less a person than Alderete, the king's treasurer. Cortez gave way, against his own judgment, to their importunities" and another general attack was ordered. "On the appointed day Cortez moved from his camp, supported by seven brigantines, and by more than 3,000 canoes filled with his Indian allies. When his soldiers reached the entrance of the city, he divided them in the following manner. There were three streets which led to the market-place from the position which the Spaniards had already gained. Along the principal street, the king's treasurer, with 70 Spaniards and 15,000 or 20,000 allies, was to make his way. His rear was to be protected by a small guard of horsemen. The other two streets were smaller, and led from the street of Tlacuba to the market-place. Along the broader of these

two streets Cortez sent two of his principal captains, with 80 Spaniards and 10,000 Indians; he himself, with eight horsemen, 75 foot-soldiers, 25 musketeers, and an 'infinite number' of allies, was to enter the narrower street. At the entrance to the street of Tlacuba he left two large cannon, with eight horsemen to guard them, and at the entrance of his own street he also left eight horsemen to protect the rear. . . . The Spaniards and their allies made their entrance into the city with even more success and less embarrassment than on previous occasions. Bridges and barricades were gained, and the three main bodies of the army moved forward into the heart of the city." But in the excitement of their advance they left unrepaid behind them a great breach in the causeway, ten or twelve paces wide, although Cortez had repeatedly enjoined upon his captains that no such dangerous death-trap should be left to catch them in the event of a retreat. The neglect in this case was most disastrous. Being presently repulsed and driven back, the division which had allowed this chasm to yawn behind it was engulfed. Cortez, whose distrust had been excited in some way, discovered the danger, but too late. He made his way to the spot, only to find "the whole aperture so full of Spaniards and Indians that, as he says, there was not room for a straw to float upon the surface of the water. The peril was so imminent that Cortez not only thought that the Conquest of Mexico was gone, but that the term of his life as well as of his victories had come, and he resolved to die there fighting. All that he could do at first was to help his men out of the water; and, meanwhile, the Mexicans charged upon them in such numbers that he and his little party were entirely surrounded. The enemy seized upon his person, and would have carried him off but for the resolute bravery of some of his guard, one of whom lost his life there in succouring his master. . . . At last he and a few of his men succeeded in fighting their way to the broad street of Tlacuba, where, like a brave captain, instead of continuing his flight, he and the few horsemen who were with him turned round and formed a rear guard to protect his retreating troops. He also sent immediate orders to the king's treasurer and the other commanders to make good their retreat."—Sir A. Helps, *The Spanish Conquest in America*, bk. 11, ch. 1 (v. 2).—"As we were thus retreating, we continually heard the large drum beating from the summit of the chief temple of the city. Its tone was mournful indeed, and sounded like the very instrument of Satan. This drum was so vast in its dimensions that it could be heard from eight to twelve miles distance. Every time we heard its mournful sound, the Mexicans, as we subsequently learnt, offered to their idols the bleeding hearts of our unfortunate countrymen. . . . After we had at last, with excessive toil, crossed a deep opening, and had arrived at our encampment, . . . the large drum of Huitzilopochtli again resounded from the summit of the temple, accompanied by all the hellish music of shell trumpets, horns, and other instruments. . . . We could plainly see the platform, with the chapel in which those cursed idols stood; how the Mexicans had adorned the heads of the Spaniards with feathers, and compelled their victims to dance round the god Huitzilopochtli; we saw how they stretched

them out at full length on a large stone, ripped open their breasts with flint knives, tore out the palpitating heart and offered it to their idols. Alas! we were forced to be spectators of all this, and how they then seized hold of the dead bodies by the legs and threw them headlong down the steps of the temple, at the bottom of which other executioners stood ready to receive them, who severed the arms, legs, and heads from the bodies, drew the skin off the faces, which were tanned with the beards still adhering to them, and produced as spectacles of mockery and derision at their feasts; the legs, arms, and other parts of the body being cut up and devoured. . . . On that terrible day the loss of the three divisions amounted to 60 men and 7 horses."—Bernal Diaz del Castillo, *Memoirs*, ch. 152 (v. 2).

A. D. 1521 (August).—The last days of the Siege.—The taking of the ruined city.—The end of the Aztec dominion.—"Guatemozin's victory diffused immense enthusiasm among the Aztecs and those who remained united to them. The priests proclaimed that the gods, satiated by the sacrifice of the Spanish prisoners, had promised to rid the country of the foreigners, and that the promise would be fulfilled within eight days. This intelligence spread alarm among the allies of the Spaniards. They deserted in great numbers—not to go over to the Aztecs, whose anger they dreaded, but to return to their homes. Cortez had good watch kept in the camp. The sorties of the besieged were repulsed; the eight days passed without the Spaniards having lost more than a few marauders. The allies, seeing that the oracle was wrong, came back to their former friends. The aggressive ardour of the besieged grew cooler, and they soon found themselves assailed by the plagues that ordinarily attack troops massed in a city—not only famine, but epidemic diseases, the result of want and overcrowding. . . . Famine pinched them more cruelly day after day. Lizards and such rats as they could find were their richest nourishment; reptiles and insects were eagerly looked for, trees stripped of their bark, and roots stealthily sought after by night. Meanwhile, Cortez, seeing that there was no other means of bringing them to submission, pursued the work of destruction he had resolved on with so much regret. . . . Heaps of bodies were found in every street that was won from them; this people, so punctilious in their customs of sepulture, had ceased to bury their dead. . . . Soon there was left to the besieged but one quarter, and that the most incommensurable of all, forming barely an eighth of the city, where there were not houses enough to give them shelter. . . . The 13th August, 1521, had now arrived, and that was to be the last day of this once flourishing empire. Before making a final assault, Cortez once more invited the emperor to his presence. His envoys came back with the 'cihuacoatl,' a magistrate of the first rank, who declared, with an air of consternation, that Guatemozin knew how to die, but that he would not come to treat. Then, turning towards Cortez, he added: 'Do now whatever you please.' 'Be it so,' replied Cortez; 'go and tell your friends to prepare; they are going to die.' In fact, the troops advanced; there was a last mêlée, a last carnage, on land and on the lake. . . . Guatemozin, driven to the shore of the

lake, threw himself into a canoe with a few warriors, and endeavoured to escape by dint of rowing; but he was pursued by a brigantine of the Spanish fleet, taken and brought to Cortez, who received him with the respect due to a crowned head. . . . The Aztec empire had ceased to exist; Spanish sway was established in Mexico. The Cross was triumphant in that fine country, and there was no sharer in its reign. The number of persons that perished in the siege has been differently estimated. The most moderate calculation puts it at 120,000 on the side of the Aztecs. Very many Indians fell on the side of the besiegers. The historian Ixtlixochitl says there were 30,000 dead of the warriors of Tezencu alone. All that were left alive of the Aztecs were, at the request of Guatemozin, allowed to leave the city in freedom, on the morning after it was taken. . . . They dispersed in all directions, everywhere spreading a terror of the Spaniards, and the feeling that to resist them was impossible. That conviction must have been established speedily and firmly, for there was no further attempt at resistance, unless it were at one point, in the territory of Panuco, near the Atlantic Ocean."—M. Chevalier, *Mexico, Ancient and Modern*, pt. 2, ch. 8-9 (v. 1).

A. D. 1521-1524.—The rebuilding of the capital.—The completion and settlement of the Conquest.—"The first ebullition of triumph was succeeded in the army by very different feelings, as they beheld the scanty spoil gleaned from the conquered city;" and Cortés was driven, by the clamors and suspicions of his soldiers, to subject his heroic captive, Guatemozin, to torture, in the hope of wringing from him a disclosure of some concealment of his imagined treasures. Its only result was to add another infamy to the name and memory of the conquerors. "The commander-in-chief, with his little band of Spaniards, now daily recruited by reinforcements from the Islands, still occupied the quarters of Cojohuacan, which they had taken up at the termination of the siege. Cortés did not immediately decide in what quarter of the Valley to establish the new capital which was to take the place of the ancient Tenochtitlan. . . . At length he decided on retaining the site of the ancient city, . . . and he made preparations for the reconstruction of the capital on a scale of magnificence which should, in his own language, 'raise her to the rank of Queen of the surrounding provinces, in the same manner as she had been of yore.' The labor was to be performed by the Indian population, drawn from all quarters of the Valley, and including the Mexicans themselves, great numbers of whom still lingered in the neighborhood of their ancient residence. . . . In less than four years from the destruction of Mexico, a new city had risen on its ruins, which, if inferior to the ancient capital in extent, surpassed it in magnificence and strength. It occupied so exactly the same site as its predecessor that the 'plaza mayor,' or great square, was the same spot which had been covered by the huge 'teocalli' and the palace of Montezuma; while the principal streets took their departure as before from this central point, and, passing through the whole length of the city, terminated at the principal causeways. Great alterations, however, took place in the fashion of the archi-

tecture." Meantime, Cortés had been brought into much danger at the Spanish court, by the machinations of his enemies, encouraged by Bishop Fonseca, the same minister who pursued Columbus with hostility. His friends in Spain rallied, however, to his support, and the result of an investigation, undertaken by a board to which the Emperor Charles V. referred all the charges against him, was the confirmation of his acts in Mexico to their full extent. "He was constituted Governor, Captain-General, and Chief Justice of New Spain, with power to appoint to all offices, civil and military, and to order any person to leave the country whose residence there he might deem prejudicial to the interests of the Crown. This judgment of the council was ratified by Charles V., and the commission investing Cortés with these ample powers was signed by the emperor at Valladolid, October 15th, 1522. . . . The attention of Cortés was not confined to the capital. He was careful to establish settlements in every part of the country which afforded a favourable position for them. . . . While thus occupied with the internal economy of the country, Cortés was still bent on his great schemes of discovery and conquest." He fitted out a fleet to explore the shores of the Pacific, and another in the Gulf of Mexico—the prime object of both being the discovery of some strait that would open one ocean to the other. He also sent Olid in command of an expedition by sea to occupy and colonize Honduras, and Alvarado, by land, at the head of a large force, to subdue Guatemala. The former, having partly accomplished his mission, attempted to establish for himself an independent jurisdiction, and his conduct induced Cortés to proceed to Honduras in person. It was in the course of this expedition that Guatemozin, the dethroned Mexican chief, who had been forced to accompany his conqueror, was accused of a plot against the Spaniards and was hung to a tree. We have the testimony of Bernal Diaz, one of the Spaniards on the spot, that the execution "was most unjust, and was thought wrong by all of us." "Within three short years after the Conquest [Cortés] had reduced under the dominion of Castile an extent of country more than 400 leagues in length, as he affirms, on the Atlantic coast, and more than 500 on the Pacific; and, with the exception of a few interior provinces of no great importance, had brought them to a condition of entire tranquillity."—W. H. Prescott, *Hist. of the Conquest of Mexico*, bk. 7, ch. 1-3.

A. D. 1535-1540.—Introduction of Printing. See PRINTING, &c.: A. D. 1535-1709.

A. D. 1535-1822.—Under the Spanish viceroys.—"Antonio de Mendoza, Conde de Tendilla, was the first viceroy sent by Charles V. to New Spain. He arrived in the autumn of 1535. . . . He had a well-balanced and moderate character, and governed the country with justice and generosity combined. He . . . set himself to reform the abuses which had already appeared, protected the Indians from the humiliations which the newly arrived Spaniards were disposed to put upon them; he stimulated all branches of agriculture, and finding the natives were already well informed in the cultivation of land, he encouraged them in this pursuit by all possible

efforts. . . . To the religious orders in Mexico is due in great measure the firm base upon which the government of Spain was established there. The new viceroy fully recognized this, and encouraged the foundations of colleges and schools already undertaken by them. In every way he promoted the prosperity and growth of the country, and had the satisfaction in the course of his government, which lasted 15 years, to see everything bear the marks of his judgment and enterprise. It was he who founded two cities [Guadalajara and Valladolid] which have reached great importance. . . . Cortés was away when the Viceroy Mendoza arrived in Mexico. He still retained his title as governor, with the same powers always conferred upon him; but his long absences from the capital made it necessary, as he fully recognized, that some other strong authority should be established there. Nevertheless, he never got on very well with such other authorities, and on his return soon became at odds with Mendoza, who, in his opinion, interfered with his prerogatives. It was then that Cortés bade farewell to his family, and taking with him his eldest son and heir, Don Martín, then eight years old, he embarked for Spain, leaving Mendoza undisturbed in the execution of his office. . . . In 1536 was issued the first book printed in Mexico, on a press imported by Mendoza, and put into the hands of one Juan Pábolos. . . . In 1550 this good ruler [Mendoza] sailed away from Mexico. . . . He passed on to take charge of the government of Peru, by a practice which came to be quite common — a sort of diplomatic succession by which the viceroys of New Spain were promoted to the post at Peru. Don Luis de Velasco, second viceroy of New Spain, made his entrance into the capital with great pomp, at the end of the year 1550. He, like his predecessor, had been selected with care by the orders of Charles V. . . . His first decree was one liberating 150 Indians from slavery, who were working chiefly in the mines. . . . He established in Mexico, for the security of travellers upon the highway, the tribunal of the Holy Brotherhood, instituted in Spain for the same purpose in the time of Isabella. He founded the Royal University of Mexico, and the Royal Hospital for the exclusive use of the natives. . . . The good Viceroy Velasco died in 1564, having governed the country for 14 years. . . . During the government of this ruler and his predecessor all the administration of New Spain, political, civil, and religious was established upon so firm a foundation that it could go on in daily action like a well regulated machine." In the meantime, Charles V. had resigned the burden of his great sovereignty, transferring all his crowns to his narrow-souled son, Philip II., who cared nothing for the New World except as a source of gold and silver supply and a field for religious bigotry. Under Philip "the character of the viceroys was lowered from the high standard adhered to when Charles the Emperor selected them himself. To follow the long list of them would be most tedious and useless, as they passed in rotation, governing according to the best of their lights for several years in Mexico, and then passing on, either by death or by promotion to Peru. In 1571 the Inquisition was fully established. . . . and the next year the Jesuits arrived. . . . The first 'auto-da-fé' was celebrated in the year 1574, when, as its chroni-

cler mentions cheerfully, 'there perished 21 pestilent Lutherans.' From this time such ceremonies were of frequent occurrence, but the Inquisition never reached the point it did in Old Spain. . . . The viceroys of New Spain under Philip III. [1578-1621] were, for the most part, men of judgment and moderation. While the government at home, in the hands of profligate favorites, was growing weaker and weaker, that of Mexico was becoming more firmly established." It was not shaken nor disturbed by the War of the Spanish Succession, during the early years of the eighteenth century; but the Revolution in France, which convulsed Europe before that century closed, wrought changes which were lasting in the New World as well as the Old. "There were in all 64 viceroys, beginning with Don Antonio de Mendoza, 1535, and ending with Juan O'Donoju in 1822."—S. Hale, *The Story of Mexico*, ch. 20-22.

A. D. 1810-1819.—The first Revolutionary movement.—Hidalgo.—Allende.—Morelos.—"The causes of the coming revolution were not hidden. The law that excluded Spaniards born in America from equal rights with those who were immigrants was a natural, not to say necessary, source of discontent among people whose good-will was much needed by any viceroy. There was inevitably not a little mutual repugnance between the Mexican and Spanish stocks, and the home government did nothing to mollify such asperities. There were commercial monopolies militant against public interests. The clergy were alienated, and since they were not thus so serviceable as formerly in the part of mediators in enforcing governmental aims, it was found necessary to use force where the people were not accustomed to it. The Viceroy José de Iturrigaray practised a seeming condescension that deceived no one, and he pursued his exactions partly by reason of self-interest, and partly in order to supply Madrid with means to meet the financial troubles that the Napoleonic era was creating. After some years of these conditions in New Spain, a conspiracy, resulting from a reaction, sent the viceroy back to Spain a prisoner. This gave strength to revolutionary sentiments, and a few trials for treason increased the discontent. The men who were now put successively in the vice-regal place had few qualities for the times, and a certain timidity of policy was not conducive to strength of government. . . . The outbreak, when it came, brought to the front a curate of Dolores, a native priest, Miguel Hidalgo, who commanded the confidence of the disaffected, and was relied upon to guide the priesthood. Ignacio de Allende had some of the soldierly qualities needed for a generalissimo. The purpose of these men and their allies, before they should openly proclaim a revolt, was to seize some of the leading Spaniards; but their plot being discovered, they hastily assembled at Dolores and raised the standard of revolt (1810). Thus banded together, but badly organized and poorly armed, a body of 5,000 insurgents marched from Dolores, headed by Hidalgo and Allende, and approached Guana-
